The Nation.

NEW YORK, THURSDAY, JANUARY 5, 1871.

The Week.

THE latter half of 1870, so wonderfully memorable in the history of Europe, has closed with a series of events fully worthy to be reckoned among the most momentous or most interesting of that extraordinary period. The Prussians have, for the first time, achieved the reduction of one of the forts defending Paris, and thus advanced a considerable step towards the reduction of that capital itself. The South-western States of Germany, with the exception of Bavaria, have ratified the treaties with the North German Confederation, which expand the latter into a new German Empire, under the rule of the victorious Prussian Hohenzollern. Another Hohenzollern prince, Charles of Roumania, has proclaimed the full independence of his country, which adds another complication to the Eastern question. Victor Emanuel has entered Rome, the new capital of Italy, now truly and completely united from the Alps to the Adria, and from the Alps to the Straits. And the fortunate Italian king's son, Amadeus, has entered his new country, Spain, there to ascend a throne offered him by the most brilliant of modern Spanish statesmen, Juan Prim, who, however, at that very moment—at the moment he seemed to have crowned a revolution begun by himself—falls a victim to assassination, inspired by party rage; thus, perhaps, saving the new king from a similar fate.

General Prim was assassinated just as he was about to witness the consummation of his long labors for the establishment of a monarchy, and 'his death' is certainly, taken in connection with the insurrections with which the Republicans have sought to lighten the tedium of the interregnum, as good proof as he could desire of the soundness of his position that there were no republicans—that is, republicans of the kind required for setting up a republic—in Spain. There are in Spain, as in France, large numbers of persons who desire a republic, but the number of those who have patience and self-control enough to make one is very small. Prim was nearer being a statesman than any Spaniard of his time—nearer than Espartero, Narvaez, O'Donnell, or Serrano. But he belonged to a type of statesman found only in Spain—the ready, dashing, brave, unscrupulous, intriguing sort, made up of soldier, conspirator, filibuster, and adventurer in about equal parts, never much cast down, nor much elated, having about the same feeling towards the crown and the people that the Prætorian Guard may be supposed to have had at Rome, but more patriotism. He was the best soldier Spain has produced for a long while—an army which makes revolutions being always a poor school—and probably wished to give Spaniards peace and good government more than most of his comrades. His military exploits have been exaggerated by the daily papers. His 'valuable service in Turkey,' in 1853, of which the *Tribune* speaks, was simply a promenade. His share in the affair of Oltenitza consisted in looking at it from the opposite bank of the Danube, and he had nothing to do with the siege of Silistria, having returned to Spain long before it occurred. His only glimpse worth mention of real war was obtained in Morocco, in his short and brilliant campaign against the Moors.

The probability is that the assassination will affect Spanish feeling favorably to the new King, who, the latest despatches say, has been receiving an enthusiastic reception on the road to the capital, and his speeches have produced a very favorable impression, but it yet remains to be seen whether it is really possible any longer, even by taking as young a man as the Duc d'Aosta, and one sprung from as famous a house as his, to make a king to order. The founding of dynasties in foreign countries seems to be a thing of the past. Isabella has, in the meantime, from her retirement at Geneva, solemnly protested against the whole business on behalf of her son, Don Alfonso de Bourbon, in whose favor she has abdicated, and whose advent to the throne would not only make the Spaniards perfectly happy, but fill 'her maternal heart' with joy.

Contrary to the general expectation that an attempt by the Prussians to reduce some of the forts encircling Paris would be made—if made at all—from the south, and that Issy, Vanves, or Montrouge would be their first target, the fire of the besiegers was first directed in earnest against Fort Avron, an outer stronghold in front of Forts Rosny and Noisy, on the east. The bombardment was opened on the morning of December 27, by heavy batteries posted at intervals from Noisy-le-Grand, on the Marne, to Raincy, near the southern border of the Forest of Bondy. The assailed fort replied furiously, but irregularly, and its fire soon slackened. The Germans continued their shelling on the following day until the fort was silenced, and, in the evening, as it appears, the garrison retired into Paris, leaving some arms and munitions of war behind them. The loss in men on either side was insignificant. The Germans also shelled Noisy-le-Sec, Merlan, Bondy, and other villages and stations on the east and northeast of the city, dislodging the French from a number of advanced posts lately occupied and covered with batteries. The generals commanding in the city made no attempt to interrupt the bombardment by a new sortie, and the fire of the forts in the rear proved ineffective to quell it; but no attempt by the besiegers to reduce the latter, which would render them masters of Paris, has yet been reported.

Like Pfalzburg and Montmédy, Mézières has finally surrendered after a number of frustrated attacks. Thus of the fortified places in all the northeast section of France, between the Rhine and the Meuse, embracing all Alsace, the main parts of Lorraine, and a portion of Champagne, only the little mountain fastness Bitsch, Longwy, and the citadel of Givet—on the northern border—and Belfort, at the southwest extremity of Alsace, remain unreduced by the Germans. Of all these only Belfort is important, both by its strength and position, and its besiegers have lately made vigorous but unsuccessful attempts to capture it, meeting, according to somewhat vague reports, with severe repulses. Its capture would be the more desirable to the Germans, the more uncertain their occupation of the adjoining parts of Franche-Comté has become in consequence of the advance of the French from Burgundy under Garibaldi, Cremer, and others, before whom General Von Werder has successively evacuated Dijon, Gray, and Vesoul. A battle is said to be imminent near Héricourt, between the latter place and Belfort. Von Werder's hasty retreat makes it probable that the French forces lately operating against him on the defensive, between Autun and Dijon, have been reinforced by a portion of Bourbaki's command, or aided by a co-operative movement on the part of that French general, whose doings after his retreat from Orléans, in a southeast direction along the Loire, almost entirely escaped the observation of our Cable reporters, until they were told from Bordeaux that he was marching eastward on a mission 'to cut the Prussian lines of communication in all directions in that quarter.' This may possibly mean an advance from the Loire through northern Nivernais and Burgundy, in the direction of Langres.

North of the Loire, too, some retrograde movements are reported in the operations of the Prussians, owing, perhaps, to a desire of strengthening the besieging circle around Paris at the moment when assaults on the forts without and famine within might drive its defenders to more desperate efforts to break through that circle than those hitherto made. There was some desultory fighting, without important results on either side, near St. Calais and La Chartre, in the Department

of Sarthe, and at Montoire and Vendôme, in Loir-et-Cher; but no serious attack on General Chanzy's army in its positions near Le Mans has as yet been made by either Prince Frederic Charles or the Grand-Duke of Mecklenburg. Some fighting south-east of Orléans is reported, and also the investment of Meung, between that city and Blois. Much more activity is displayed by the forces commanded by General Manteuffel in the north, and simultaneously operating against Havre, which they threaten from the north-east, occupying positions between the Seine and the Channel, mainly near Bolbec; against Honfleur, opposite Havre, south of the Seine; against Peronne, on the Somme, which they have invested; and against General Faidherbe, whom they have forced to abandon Arras and to seek a stronger position near Douai, the fortified centre of the powerful quadrilateral formed by Arras, Lille, Valenciennes, and Cambrai.

The pertinacity of the French resistance is exciting astonishment and doubt as to the result, solely because of the rapidity and completeness of the earlier victories of the campaign. Nobody dreamed last June that Germany would, under the most favorable circumstances, have overcome all resistance and brought France to her knees in six months; and yet, because she has not done it, and because France has in six months managed to raise and equip two very indifferent armies, many people are disposed to imagine the position of the Germans very precarious, and the result of the war uncertain. The fighting of the new French armies has been very poor; there is nothing to praise in them but the fact that they fought at all, and were not captured wholesale like the Imperial forces; and nothing that is known of their spirit will warrant any calm observer in looking for a conflict *à outrance*. Gambetta, Crémieux, and Glais-Bizoin have let the world know that D'Aurelles de Paladines had 200,000 men and 500 guns before the recent battles at Orleans. He had, moreover, three strong and fortified lines, not one of which he was able to hold, and he crossed the Loire, not in absolute flight, but in great disorder. The English Commissioner at the Prussian headquarters was with Prince Frederic Charles during these engagements, and has sent home an account of the Prussian strength, which shows that it fell short of 90,000 all told.

We have, moreover, read carefully a great mass of the European correspondence from both camps, written during the operations, and they agree throughout as to the want of discipline, organization, and enthusiasm on the part of the French, and as to the extraordinary excellence of the Germans on all these points, and the strong French partisans give even a more dismal account of the condition of the French than their enemies. Gambetta's readiness to call for an armistice after the defeat at Orléans, which seems to be well authenticated, shows that he has himself no great reliance on the popular tenacity, and feels that he may any moment reach the end of his tether. There is no doubt, however, that French armies will continue to move about and give the Prussians more or less trouble and fighting till Paris falls. As long as that holds out, it is comparatively easy to keep alive the hope of some great blow; but once it has fallen, and 400,000 men more are disarmed and prisoners, there is little doubt that there will be no disposition left to keep up an exhausting struggle, even to save Alsace and Lorraine, which the Prussians now hold, and hold impregnably. We have been unable to discover in any quarter any evidence of readiness on the part of the French people 'to die in the last ditch' or 'fight to the bitter end.' Those who remember the amount of this kind of stuff which was talked at the South towards the close of our rebellion know what it is worth. France is far from exhausted, but in modern times men do not fight till they have nothing left in the world, except to avoid death or slavery. Frenchmen are not threatened with either.

It looks as if Victor Hugo or Wendell Phillips, whichever of them occupies the position of Head Sentimentalist, would have to resign it in favor of M. de Chaudordy, the French 'Minister Delegate for Foreign Affairs.' He has published an appeal to neutral nations on behalf of France which, for indifference to facts, surpasses any composition which has yet issued from the school. He says that for 'two months appalled Europe has been at a loss to understand the continuance of an unexampled war, which has become as purposeless as disastrous.' 'People,' he says, 'ask with amazement what can be the cause and what the object of such a struggle.' 'What are we to think?' he enquires; 'can it be that our enemies really wish to destroy us?' And he declares 'that it is a war of extermination Prussia pursues,' and that she 'pursues it in disregard of all ideas of justice, right, and civilization in the world. When you have destroyed the armies of your enemy and overturned that enemy himself, is it just you should continue the war for no other purpose than that of annihilating or forcing to surrender a great capital teeming with the riches of art, science, and industry?'

When one remembers that Prussia has again and again made known that her object in continuing the war is to secure a 'better strategic frontier,' namely, the surrender of Alsace and part of Lorraine; that the cession of territory by the vanquished has been a usual result of war since the dawn of history; that France is herself largely made up of annexations procured through war; that she obtained Alsace and Lorraine in this way; that she asked Prussia for the Rhine Provinces, and took Savoy from the Italians, for the very same reason for which Germany now seeks to push her dominion to the Vosges; and that Paris is an immense stronghold, with great fortifications, prepared expressly, thirty years ago, for the reception of French armies in case they were worsted when making forays on neighboring nations; that it now contains 400,000 fighting men ready to pursue the Prussians in their retreat, in case they should retire—it must be admitted that M. de Chaudordy surpasses even our own Phillips in effrontery. He reminds one strongly of the burglar who, having been detected in a gentleman's bedroom removing his watch and jewellery, and having fired a pistol at the owner, and offered a determined resistance when he attempted to arrest him, but having been finally secured, and the police called in, thus expostulated with his captors: 'You have taken my swag and my pistol and knife from me, and you know perfectly well that, if you let me go, I am ready to leave the house; what then are you holding me for? Do you want to tear the clothes off my back or to murder me? Are you civilized men, as you pretend to be, or savage cut-throats? It is true I have robbed you before, but my name was then Smith; I now change it to Brown, so that from Smith you have nothing to fear hereafter. I am well-educated, and have been brought up under Christian influences, and have a house in which I can show a well-selected library, and a few pictures, which, though I say it that shouldn't, are of no small value. I long to be back among them, and pursue my studies in peace. I have tried to rob and murder you, to be sure, but I have failed, and I own myself beaten. What more do you want? Is there no justice in heaven?'

Victor Emanuel has made his appearance at Rome, where he was enthusiastically received, the only portion of the population which testified their hatred to him being the Papal office-holders, a sorry and incapable lot, whose numbers the new Government is about to cut down by one-half, and who will hereafter be compelled to attend to their official duties exclusively, instead of running about Rome and doing odd jobs besides as hitherto. As might be supposed, they consider this kind of reform impracticable; it might do in England, or France, or Prussia, but any change in Rome will work ruin. The Pope has launched his last thunderbolt at the usurper in the shape of the *excommunicatio major*, which he has hitherto held in reserve. This is the most comprehensive of modern curses, and leaves its victims in a very bad way.

The San Domingo business has, of course, made no further progress owing to the holidays. The story goes that the opponents of the measure intend to stave it off as long as possible, in the hope that the next Congress may deal differently with it, or that it may die of inanition—a course which its friends pronounce 'unmanly.' There is talk of the President having sent for Mr. Horace Greeley, and remained 'closeted' with him a long time, from which it is inferred that Mr.

Greeley is to have a place offered him in the proposed commission of enquiry. Senator Sumner is severely rated by the country press, even that portion of it which is opposed to the San Domingo scheme, for the violence of his language about the President. They say they are 'pained' by his conduct, though some are simply surprised. One would think he had been long remarkable for the calm, moderation, and accuracy of his language. We ought to mention, in connection with this San Domingo business, a fact on which we have commented elsewhere, that the promoters of a meeting to be held here to celebrate the completion of the great work of Italian unification have found it impossible to get a single politician of note either to attend the meeting or express sympathy with its objects—so great and widespread is the terror already inspired amongst this class by the Catholic Church in this country. That church is, as we have said, virtually established in this State, and there are absolutely no limits to its pretensions. Of any man who, in view of this fact, works to secure the admission to the Union of a State peopled by Spanish Catholic blacks, we shall only say that he must be a remarkable person.

In business circles the year closes rather gloomily. The extraordinary decline in the Union Pacific Railroad securities is having a more widespread influence than was at first expected. At least one New England firm, reputed immensely wealthy, is announced as in difficulties; though how even a much worse decline on two millions of bonds, to which the suspension is attributed, could cripple a concern estimated to be worth many millions, seems to need explanation, unless the concern was otherwise expanded. A large fire insurance company, likewise belonging to New England, and likewise presided over by one of the recent Union Pacific directors, though this may be a mere accidental coincidence, succumbed at the same time; while, in addition to acknowledged facts, rumors of every kind continue to be spread for speculative purposes. The price of the Pacific securities rallied on the last day of the year; but apart from its being known that the rally was effected by interested persons, the blow to credit has been too serious to be looked upon as a mere Wall-Street manœuvre. Money has continued scarce, in spite of the utmost liberality on the part of the banks, who show great confidence in the state of affairs, and who attribute all recent disturbances to tricks of speculators. General business, thought light, continues steady and apparently healthy. Cotton receipts have fallen off materially, still the price has barely held its own. Meats are coming forward freely, and breadstuffs have been firm in price. The great commerce of the country appears to be sound enough; the undeniable and widespread uneasiness now prevailing appears to be more directed to great corporations and to the speculation in real estate, which latter appears to great disadvantage in the public sales under foreclosure, now taking place almost daily, while the investigation of the Hartford Home Insurance Company discloses a state of affairs positively scandalous. Reduction of wages is going on in almost every branch of industry, and large numbers of people are reported out of employment.

We spoke a fortnight ago of the preparations made by Governor Holden of North Carolina for his approaching trial and impeachment, by being converted and publicly baptized. Recently, the negro members of the Legislature have issued an address, adopting him as a martyr to his advocacy of their cause, and comparing him to Mordecai, and his enemies to Haman, and alleging that 'since Haman plotted the destruction of the Jews that dwelt in the Persian dominion, no wickedness hath been devised that will bear any comparison with some of the measures proposed by the dominant party in the present General Assembly.' They say that after his impeachment his enemies will not be satisfied till he is hanged, and that 'the arm of flesh' is powerless to save him. They have therefore appointed January 13 as a day of fasting and prayer for his deliverance, and direct abstinence from 'luxuries' for the three days preceding it, and request maid-servants who cannot stop work in the morning to devote the afternoon to praying for the governor. The proclamation, as a political document, will look funny to a good many, but the signers are evidently in sober earnest, and their extravagance falls on the whole short of that of the crazier white brethren engaged in the impeachment of Andrew Johnson. Some of these shouted for prayer-meetings all over the country, to pray not that justice might be done, but that the verdict might be guilty.

There is something pleasant in the spectacle of Mr. Seward's peregrinations, whether viewed as the sequel of his career as a minister of foreign affairs, or as the intelligent choice of an old man released from civil duties. His reception, even in Mexico, where some things were conveniently forgotten, has been everywhere flattering not only to himself, but to his country. In October last, he had the extraordinary, indeed unprecedented, honor of a reception in Yedo, by the Mikado, the full details of which have but just reached us. It appears that the Foreign Ministers of the Japanese monarch were prepared on Mr. Seward's arrival at Yokohama to offer him a state breakfast, at which the Prime Minister and other functionaries would be present. This was subsequently abandoned on representations from the American Minister, who informed them that Mr. Seward intended going up to Yedo, and would be pleased to pay his respects to them. This was responded to by an invitation to meet the Mikado in person, in an informal manner, on the morning of the 8th of October. Mr. Seward's acceptance having been signified, provision was made by the Japanese to avoid all embarrassment on the occasion; and with a delicacy and forethought not surpassed at European courts, the American party were furnished with a plan of the room where the ceremony was to take place, the position to be occupied by every participant, and a copy of the proposed remarks of the Mikado. In return, a copy of the replies was requested, and, thus arranged beyond the possibility of failure or awkwardness, the interview came off. The remarkable feature of it was the absence of any concealment of the Mikado's person, and of any display of guards and attendants. The Prime Minister neatly observed, that 'your majesty having graciously invited him to this audience, it is altogether unnecessary that I should dwell upon the character or fame of this eminent statesman;' which led the way for words of welcome from the Mikado, a proper acknowledgment from Mr. Seward, a request from his majesty for suggestions (to the Prime Minister) towards promoting friendly intercourse between Japan and the Treaty Powers, and a disclaimer from Mr. Seward of any authority to speak for his government; but a desire to be instructed as to 'what policy and measures may have a tendency as well to secure the happiest possible relations between Japan and the United States, as also to promote civilization and progress throughout both hemispheres.'

Gen. Howard's annual report brings the Freedmen's Bureau for nearly the last time to public notice, it being now occupied in winding up its affairs as expeditiously as possible. Besides its educational work during the past year, which has not been extensive nor extended for want of funds, the Bureau has been chiefly occupied in pension, pay, prize, and bounty settlements with colored soldiers and sailors, whom it has saved as far as it could from excessive attorney's fees, as well as the national Treasury from fraudulent claims. In spite of all the mismanagement that has been charged upon its officers—and that some has been proved at headquarters we cannot deny—we believe the general action of the Bureau to have been truly economic, both in a pecuniary and a moral sense, to the country. The entire cost of its operations from the beginning would make but a small item in the plunder of the Ring of this city during the same period. As a purely charitable organization, it has been worth all it ever cost, if only in discharging a national obligation to those whom the war left homeless and friendless. Its greatest value and largest claim to grateful remembrance undoubtedly have been in establishing schools in a land of almost heathen ignorance. It has accomplished little, measured by the field in which it worked, but it is no mean record of accomplishment to be able to say, as does Superintendent Alvord on retiring, that a majority of the teachers now employed in the Bureau's schools are colored men and women, who have been trained, moreover, in high, normal, or industrial schools.

THE GAINS OF THE YEAR.

If events had merely a spectacular interest for those not engaged in them, the year 1870 would probably, for lookers-on, have to yield precedence in point of interest to several that have gone before it. A good many have contained things that made a far deeper impression on the imagination of mankind than anything it has produced. The capture of Rome by Alaric, the fall of Constantinople and of the Eastern Empire, the discovery of America, the outbreak of the Reformation, and the downfall of Napoleon I., were all events which, whether the significance was great or small, produced a far greater sensation than anything that has occurred, and, we might almost say, anything that can occur in our day. Politics has not been reduced to a science; but the relation of cause and effect in the political world has been sufficiently studied to prepare people in a general way for results which came on our forefathers like a thunderclap. And then our imaginations have been nearly dried up by the white light of science; with hardly a corner left for mystery, with security firmly established, and with law substituted for authority, there is little left to feed the fancy or shake the nerves.

But if we judge the dead year by the importance of its contributions to the work of human progress, it would perhaps be difficult to find one to match it. It has delivered the world from one great anxiety by the overthrow and discredit of French imperialism. There were many, and these by no means the least shrewd or thoughtful, who feared that Louis Napoleon had set up in France the goal to which modern democracy was everywhere tending, and that the first use the majority would make of their newly acquired rights would be to lay them at the feet of a Cæsar, asking nothing in return but bread and amusement. Some of the best Frenchmen of our day turned to Tacitus for a faithful picture of their own times, and heard with a shudder the Bonapartist lawyers preaching before venal judges the old doctrine of Justinian, which really formed the basis of the French constitution, that the Emperor's will was law, because by electing him 'the people' had bestowed on him all its own power and authority. The best French liberals, too, those who dread revolutions most, felt reluctant to come to any compromise with the dynasty, lest they should help it to escape that sudden and violent end which, only, they thought would suffice to undo the evil it had wrought and dissipate the base hopes it had raised. Their patience has certainly had its reward. The whole system of which the dynasty was the embodiment has perished, and perished miserably. Justice overtook it, *flagrante delicto*, and slew it in the light, after not only its badness, but its incapacity had been fully revealed. Eighteen-hundred-and-seventy will, therefore, be famous as the year in which the world was taught that, wherever the majority undertakes the work of government, it must do it; that it can find no substitute or lieutenant; that, whether it governs well or ill, govern it must, and that anybody who is not satisfied with its government must try not to take its burdens off its shoulders, but to make the shoulders better able to bear them.

The year has been not more fortunate, however, in the death of imperialism than in the instruments by which it was wrought. We care little, and everybody may care little, about King William's toryism, or Bismarck's unscrupulousness, or the arrogance of the Prussian Junkers. The King will pass away, and so will Bismarck, and so will the Junkers. It is not they who have conquered France, and delivered Europe from a foul and dangerous example. The foes under whose mighty blows Cæsarism has perished are knowledge, training, fidelity, exactness, and punctuality—the qualities, in short, which make man the only great thing in this world, and which, as long as the race lasts, will prove its glory and salvation. Renan said in 1866 that 'it was the universities which conquered at Sadowa,' by which he meant that it was the general culture of the German people which made them such good soldiers. But culture does not mean the possession of knowledge simply; it means, most of all, a proper appreciation of the value of knowledge. And a man who has this cannot be called wholly uncultivated, even if he cannot write. The Germans have been able to overrun France in half a year simply because Germans have learnt what Frenchmen have not learnt—that training is essential to efficiency, and that without training a man is only half a man after all. This is simply another way of saying that they have learnt the value of truth; for the readiness to look facts in the face, and regulate their lives by them, is nothing but the spirit of truthfulness. Disinclination to look at one's defects, or acknowledge one's ignorance or weakness; eagerness to take comfortable views of one's own capacity, and to paint one's own powers and tendencies in gorgeous colors, though ordinarily called vanity, are really forms of falsehood. The German military system may not be the best, but its principles are applicable nôt only to all military systems, but to the whole conduct of life; and their striking vindication on the battle-field has come most opportunely at the moment when democracy is just entering into power under the full influence of a reaction against everything mediæval, including obedience and authority of all kinds, and of what might almost be called frantic cultivation of individualism.

The overthrow of the temporal power of the Pope, too, is in itself a small matter. He has been deprived of his dominions before now, and has come back again. What gives the recent revolution in Rome its significance is, that it is but the expression of an idea, which has only taken hold of the world in our day, that the state and the church are two separate and distinct interests, to be transacted on different bases for different ends, and secured by different sanctions. The identity of the church and state was a cardinal doctrine of the creed of Christendom for fifteen hundred years. It has been decaying slowly ever since the Reformation, but has, nevertheless, exercised a powerful influence on the civilization of the Western world. The complete separation of the two in the United States gave it a serious blow, and the rapid democratization of European institutions has for the last thirty years been giving it the air of a dream. The Pope's loss of his temporal power virtually gives it a death-blow. It was a great and noble idea when it first took its rise, and for centuries gave a miserable world almost its only glimpses of heaven. It has perished before the growth of the very civilization which it saved and cherished. The effect of its disappearance on religion and society it is too soon to speculate about; but our experience here justifies the belief that religion everywhere will gain greatly in real influence by its loss of all official recognition.

The whole history of the temporal power has been in the highest degree dramatic. That power took its rise amidst the desolation of a decayed and ruined Italy; it vanishes after a thousand years before the advent of the new Italian nation; and it would be foolish either for Italians or for the rest of the world to forget that, of all the great creations of Italian genius, the Papacy has not been the least wonderful. The race whose patient hands and valiant hearts built up the Roman empire, and whose cunning brains wrought the great web of the Roman law, might perhaps afford to treat the Popedom as a mere reminder of its weakness or misfortunes; but the new Italy, which the Popedom neither frets nor oppresses, will hardly so regard it. To have erected, in a world made up of crouching slaves and barbarian invaders, a dominion vaster and more powerful than that of the Cæsars, which found its authority and distributed its rewards in an unseen world, and which, through ages of the darkest periods of human history, raised the only voice that spoke for justice, for truth, and for purity, was certainly a rare exploit, and it was Italians who performed it.

The Italians in America are to celebrate in a few days, after fifteen hundred weary and woful years, the re-entrance of an Italian king and army to the old capital, and the relegation of the Pope to those purely spiritual functions which in the earlier and better days of the church were his only ones, and for which the decayed and destroyed civil power, whose place he mercifully took, is now once more ready to release him. The occasion is solemn and splendid, and the year which witnesses it is certainly a great and memorable year. One would imagine that in the country which afforded the first successful example of the separation of church and state, and whose whole life is a constant protest against the doctrines and maxims of government and society of which the Papacy has made itself the exponent, there would be no lack of politicians, as well as of ministers and philanthropists, to rejoice with them; and yet, we believe, such is the emasculating effect on mind and morals of a political career as the average politician pursues it, that the committee

find themselves not only unable to extract speeches, but even expressions of interest and sympathy for the celebration of the greatest event of our time, the downfall of a decrepit and soul-destroying despotism, and the resurrection of a great people. For the transparent imposture called the French 'Republic,' there is not a politician among us who has not his breeches pockets bursting with felicitations; but over the restoration of Rome to Italians not one of them—we speak by authority—can be got to utter a word of rejoicing. We doubt if a more significant fact has made its way to the light for a long while, and we call the attention of the public to it as a striking indication of the extent to which the coarse and brutal despotism, half-thievish, half-priestly, to which we are subjected here in New York, has extended its sway over the *political class* in all parts of the country. We suppose it would be possible to collect a hundred professional politicians, even of high standing, in a room together, and not find heart or courage enough for one honest man among them all; and he would not be a rash or uncharitable person who should deduce from their cowardly silence with regard to this revolution at Rome, contrasted with their ebullient 'sympathy' for all other rows, tumults, and rebellions, the conclusion that they are preparing another series of the base compliances which marked the whole course of the slavery struggle, and which at last made its end bloody and disastrous.

THE NEXT PHASE OF THE EASTERN QUESTION.

THE 'Black Sea question,' which is the name now given to what every one feels, but nobody likes to admit, is really the old Eastern question, a little disguised, does not make much progress toward satisfactory solution, and, in fact, has received fresh complication during the week from the declaration of independence which is reported to have been issued by Roumania. Russia is undoubtedly getting ready for war, but it is quite plain she is not nearly as ready for it as she wishes to have it appear. In the Emperor Nicholas's day, her influence in Germany and in Eastern Europe was largely maintained by the circulation of reports about her armaments which the state of her press, and the difficulties of travel and investigation within her borders, made it impossible to check, but of which the war of 1853 exposed the wild exaggeration. The force which invaded the Principalities was stopped easily and forced to retire by a small Turkish entrenchment, and the garrison 100,000 strong which, in all the philo-Russian papers, held Sebastopol, dwindled on the approach of the allies to 40,000, and the rapid exhaustion wrought by the siege proved how little 'staying power' even the largest empire can boast in the absence of a dense population, of great accumulated wealth, and a high stage of manufacturing industry. The approach of another attempt to restore her influence in Eastern Europe is being heralded now by the usual flight of rumors about her prodigious naval and military resources, but the secrecy of the Nicholas régime has passed away, and we hear enough of what is passing in the interior to enable us to calculate pretty accurately the extent of her preparations.

The most important of these is, of course, the remodelling of her army on the Prussian plan. Her own system of a conscription of grossly ignorant peasants, practically for a life-service, with noble officers, and a severe discipline maintained by the stick, is as much out of date as the flint-lock musket, and it is creditable to the intelligence and patriotism of the people that they should see it, and accept with satisfaction the proposed imposition of the military burden on all classes alike. Along with it comes the substitution of breech-loaders for muzzle-loaders, which is going on, though apparently slowly, the expense being great and money scarce. It is very probable, however, that the modifications in the army and armament are serious enough to make war just now somewhat inconvenient, and there is every reason to believe that though a great military harbor, and probably the materials for a great fleet, are accumulated at Nicolaieff, there is nothing as yet in the Black Sea or the adjacent waters capable of making head against the Turkish and much less against the British fleet. While, therefore, Russia declares herself released from the restrictions imposed on her with regard to the Black Sea by the treaty of 1856, she does nothing, for the present, to prove her release, and bides her time. Time, it must be admitted, works for her. The longer the treaty remains in its present condition, and the more familiar Europe becomes with the idea of its being broken, the less heinous does the act of breaking it appear, and the weaker will be the resolution of the co-signataries to oppose it. Moreover, the spirit of the Russian population is likely to rise and the efficiency of her armies to increase with delay.

In the meantime, the difficulties of the co-signataries certainly do not diminish. That Austria will ever let Russia go down to Constantinople by land, and take possession of it, or that England and France will ever permit it by sea, supposing France to have recovered from her domestic troubles sufficiently to take hold once more of the broken threads of her foreign policy, no rational and well-informed person believes. A vast military empire, stretching from the Arctic Ocean to the Bosphorus, and controlling the Black Sea and Mediterranean, is something which Europe will not permit to be set up in our time. There is just as little chance of Germany submitting to it as of France, if the work of unification were once off her hands. And we can already picture to ourselves the cynical sneer with which Bismarck will reply to a Russian demand for his connivance at any such scheme, as soon as he gets either the King or his successor safely seated on the imperial throne. But, then, nothing is plainer than that the hostility of Western Europe to the Russian pretensions must speedily secure some better basis than the right of the Sultan as an independent sovereign to the integrity of his dominions. A claim so purely technical does not last long, and in the Sultan's case it is fairly worn out. The defences of him which were put forward in England in 1853 on this ground would now sound ridiculous.

The fact is that better materials for the establishment of a young, vigorous, and progressive state do not exist anywhere than are to be found in the region which is roughly designated as European Turkey, if Western Europe could be got to undertake the task of building it up after having given the Turks notice to quit. The theory on which the Crimean War was undertaken, was that Turkey had entered on a process of transformation which, if let alone, the Turks were capable of carrying out, and that the result would be the creation of a great modern state in which Mussulman and Christian would be equal before the law, and participate equally in the work of government. After fourteen years' trial, and every assistance that money could give from England, this theory has now been thoroughly exploded. The Turks are not capable either of establishing or maintaining any régime in which equality is a leading element. Indeed, to all Turks in a healthy moral condition, the very notion of equality is blasphemous folly, and the attempts of the Sultan and his semi-Gallicized ministers to carry it out so many signs of corruption and degeneracy. What is still more fatal to the scheme is, that the Christian population does not want equality with Turks, and will make no active exertions to bring it about. Sitting with Turks in a legislative body is, to those who have grown up under Turkish rule, repulsive and ridiculous. Co-operation between the two races for any purpose is impossible, and the notion that the Sultan can acquire any real hold on the allegiance of the rayahs an idle dream. The idea of law, too, as a rule based on considerations of utilitarianism, and having no necessary religious source, is an idea foreign to the Turkish mind and manners, and which, if we may judge from the history of the race, it would take the exposure of many generations to new influences to work into its brains. This is a strange assertion to make of a people whose cousins, the Magyars, stand in the very first rank in point of political sense; but the Magyars have been European Christians for 800 years. In short, no settlement of the Eastern question is possible in which the Turks are not excluded from the problem as far as Europe is concerned.

The question, What is to take their place? would then come up for discussion; and it is by frankly addressing themselves to its solution that the Western powers will put an end to Russian designs on Constantinople, and not by keeping Russian fleets out of the Black Sea. And in dealing with this, one of the great defects of Turkish rule turns out to be one of its most valuable legacies. Its great peculiarity is that it attempted nothing in the shape of administration. It taxed the Christians, and gave them nothing in return for their taxes—neither justice, police, nor roads; but it interfered in no way with the

management of their own affairs, either civil or ecclesiastical. More complete local self-government than that which the European rayahs have long enjoyed, or more complete religious freedom, is not to be found anywhere—not even in New England. Every Bulgarian and Roumelian village has for ages managed its own affairs without any guidance or interference except from the bishop. To be sure, its affairs were few and simple; but the habit of dealing with them, and of expecting nothing from the general government, is none the less strong, healthy, and useful for the building-up of a new state. With what facility and success a people long ground down by Turkish oppression, at the time when the pasha was really a robber and murderer, can pass into the full enjoyment of political independence, and the skilful and progressive conduct of its own affairs, has been shown in the case of Servia. There is every reason to expect results little less gratifying in the case of Bosnia and Bulgaria, though in Bosnia the Mussulman (not Turkish) element in the Slave population is unfortunately large. As we get into Roumelia and approach Constantinople, the preponderance of the Greek or blatherskite element would throw difficulties in the way of building up a stable government; for the Greek, though a very shrewd business man, is in politics a confirmed Sentimentalist; and to work him into any healthy, rational, and decent political organization will for a long while prove a very difficult task. Nevertheless, after every allowance has been made for the obstacles of all kinds —ethnological, religious, historical—there can hardly be a question that the same amount of effort and sacrifice in blood and money which the Western powers have been making on behalf of Turkey since 1829, would long ere this have set up and firmly established on the Bosphorus a young, strong, and growing Christian state, which would command the sympathy and moral support of the civilized world, and put an end for ever to the Russian dream of a southern capital. If Servia could be got to cast in her lot with it, she would supply skill and experience both in civil and military organization, which is all the Bosnians and Bulgarians need to make them really good politicians. As regards the Turkish population, it might be left to take care of itself. There would be no need to provide for its expulsion. The Turks retire of their own accord from Christian rule and even Christian preponderance. They have disappeared from Hungary, Servia, Moldavia, and Wallachia, in all of which they were once numerous. For many years they have been steadily moving out of Bulgaria, unable to bear the growth of their Christian neighbors in wealth, intelligence, and independence; and, indeed, the stream of Mussulman emigration flows over the Bosphorus into Asia, if not in a strong, in a very steady current. The genuine Turk will not accept modern ideas; and with his declining faith in the durability of Ottoman rule in Europe, his desire to lay his bones in Asia—the soil from which his fathers sprang, on which his creed is still deeply rooted—grows stronger. Whatever becomes of European Turkey, it will before many years contain but few Turks outside the great towns.

THE TREASURY CASH BALANCE.

According to the last debt statement, Mr. Boutwell had on hand somewhat over 125 millions of dollars in cash—nearly 100 millions in coin, and 25 millions in currency. During the recent stringency of money, repeatedly referred to in these columns, a very animated discussion arose among business-men as to the propriety of so large an amount of money being locked up in the Treasury and withdrawn from the uses of commerce and trade. The discussion is deserving of more general interest than it receives, for it concerns the whole community far more nearly than it does the men of business, who seldom trouble themselves about public measures, except when they think they directly influence their interests of the moment. Indeed, as far as the condition of the money market is concerned, it cannot possibly be benefited by the discussion; for no action of Congress, which alone could interfere, can be speedy enough to affect the present stringency, and before the influence of any legislation can be felt the markets may have returned to the condition of ease and abundance which characterized them some months ago. But the interest of the general public is permanent, and requires that so important a subject as the long-continued hoarding of so much public money be thoroughly examined.

For the last five years the Treasury balance has rarely fallen below 100 millions, and has repeatedly exceeded 140 millions, the average probably being rather above than below 120 millions, the interest on which sum amounts to over seven millions of dollars per annum, and for the whole period would reach the large figure (at compound interest) of nearly forty millions of dollars. For a people suffering from excessive taxation, this sum is surely large enough to be well worth the enquiry whether the whole or any portion of it can be saved in future.

Of the balance of 125 millions of dollars, an average of twenty millions consists of coin deposits belonging to private individuals, on which the Treasury pays no interest; so that, as far as the annual cost to the country in interest is concerned, these might be omitted in the account. But the question at once arises, Why should the Treasury be burdened with the care, responsibility, and expense of taking charge of the money of private individuals? That it is an expense is evident from the simple fact that these deposits are incessantly, daily, almost hourly, changing, and that for each deposit new certificates are issued, the old ones being invariably cancelled. That it is a care and a very grave responsibility, such as no government should incur unnecessarily, is too palpable to need explanation. At the time when these deposits were first authorized, there was much to be said in their favor; they were a real boon to the community, and a convenience to the Treasury itself. But to-day, especially in view of the evident disposition of the country to return to specie payments at an early day, there is absolutely not one single reason for the continuance of the system that would not apply with greater force to the immediate substitution of greenbacks for every dollar of national bank-notes in existence. If there is to be any change in the Treasury system, these coin certificates should be one of the first things to be abolished, and the money of all individuals transferred to their own keeping, where it properly belongs.

The withdrawal of the deposits represented by these certificates would reduce the average Treasury balance to about 105 millions, on which sum alone the people lose the interest, and which alone is the sum that we have now to deal with. Why should the Treasury hold this enormous hoard, costing the people from six to seven millions per annum in interest? There are only two reasons that have ever been given. One is, that the Treasury requires a portion of this amount as a working balance; and the other, that the rest is held in anticipation of resumption. That the Treasury requires a certain amount as a working balance is no doubt true; but when the income of an institution like our Government exceeds its expenditures at the rate of a hundred millions or more per annum, and is estimated by the present Secretary to exceed them at least fifty millions even under the most unfavorable circumstances, it is evident that the working balance need not be a large one. Indeed, we have frequently seen this working balance fall to fifteen millions and below, without any inconvenience; and the best financial authorities are agreed that a sum of fifteen millions in currency, in the present condition of our revenues, would be ample for all practical purposes. On the 1st of December, Mr. Boutwell held nearly double this amount *in currency*, so that he certainly held nearly fifteen millions more than was necessary.

The *gold* balance, after deducting the private deposits just referred to, amounted to 81 millions of dollars. Of this amount over ten millions was due for interest which the owners had failed to collect, many persons being dilatory in presenting their coupons. It would seem that this is an amount which the Treasury should wisely have on hand always; yet the very fact that at all times, under all circumstances, a certain number of persons invariably fail to cash their interest until long after its maturity, shows that the holding of this amount is not by any means imperative. But let it, for prudence' sake, be considered necessary to have it on hand always. Beyond this amount, and the trifling sums required for our naval and diplomatic expenditures abroad, the Treasury has only its annual coin interest on the debt to provide for. The largest amount of interest maturing at any one time is now about 27 millions of dollars; so that, if the Secretary starts on January 1 with a coin balance of 27 millions, it is as absolutely certain as any human calculation can make it that he will be in receipt of coin income enough from month to month to meet his interest am-

ply as it matures. The coin receipts throughout the present year have exceeded the interest requirements fully fifty per cent., so that a corresponding reduction, due to a great commercial or financial crisis, might take place without in the least endangering the ability of the Treasury to meet its engagements promptly. But even a great commercial or financial crisis could scarcely, by any conceivable result, reduce our income in the proportion named. On the 1st of January next, the balance in the Treasury will have risen from 81 millions, as it stood December 1, to very near, if not over, 90 millions. If we deduct the 27 millions of interest then maturing, and the 10 millions of uncollected interest, together with 3 millions for national expenses abroad, in all, 40 millions, we make full allowance for all possible calls upon the Treasury, and yet find that it has a surplus of 50 millions of coin on hand beyond its wants.

These figures may seem unnecessary and tedious; but the loose opinions that prevail on all matters connected with our finances can only be met by a strict adherence to figures, and only by correcting the prevalent loose opinions can intelligent, practical action be obtained. We find, then, the condition of the Treasury cash balance to be, that the Secretary has on hand fifteen millions in currency and fifty millions in gold more than he has any practical use or occasion for; while he is, at the same time, paying six and seven per cent. interest on the money which the people owe. In other words, the people are annually taxed from four to five millions of dollars for the privilege of having a uselessly, unnecessarily, mischievously large 'balance in bank.' For the fifteen millions of currency held in this way, there can be no intelligible reason assigned. But the fifty millions of gold have been looked upon by the people as in some indefinite way connected with the resumption of specie payments. Let us examine.

Without now discussing the possible or probable methods of resumption, suffice it to say that no prudent financier would for one moment justify an attempt at resumption with only 50 millions in coin to meet 400 millions of outstanding paper. That we have no more than fifty millions to devote to the purpose is clear from what we have stated. It is also clear that the calculations daily paraded before us of the ease with which we could resume upon our present coin balance of 100 millions, lack nothing but a basis of fact. But many able financiers believe that with a coin balance of 100 millions, with a real balance of that amount *belonging to the Treasury*, resumption might be attempted with safety. Now, if the fifty millions of coin at present in the Treasury are to be used as a nucleus for the accumulation of the 100 millions or more necessary for resumption—well and good. But let it be understood that they are held for that purpose, *and let the accumulation go on until completed!* At present, the sole object which could excuse or justify the holding of this coin balance is entirely lost sight of, as the habitual sale of all the gold that comes into the Treasury above that amount renders accumulation impossible. If accumulation is the object, let us accumulate! If accumulation is not the object, then let the idle balance in the Treasury be disposed of, and the people be saved the enormous expense which it has heretofore involved. If this superfluous balance of fifty millions of coin could have been permanently disposed of five years ago, it would have produced almost enough by this time with compound interest to buy the whole sum of gold necessary for resumption. The apparent loss to the people by the hoarding of these fifty millions of coin for five years is not much less than fifty millions additional in currency. The continued hoarding of this amount, even to-day, involves a loss of nearly four millions per annum; and what certainty have we that five years from to-day we shall not be as far off from resumption as we are now? Unless this national waste is to continue indefinitely, it is absolutely necessary that the public should positively decide what to do in regard to resumption. Either fix an amount of coin hoards which, when reached, shall be the signal for resumption, and accumulate all surplus coin in the Treasury until that amount is reached; or else allow the present hoard to be disposed of, so that this utterly unnecessary annual loss may be avoided. The present system is mere helpless drifting, and very expensive drifting at that. It is time that the general public should understand that they are very directly interested in the question of resumption.

Notes.

The publishers of the *Radical*, which was lately suspended, announce its revival next month, with a full list of its old contributors and new ones in addition. It will again be issued from Boston, beginning its eighth volume, at the price of three dollars a year. 'It will endeavor to represent, as heretofore, the thoughtful radical sentiment of the country on religious, social, scientific, and political questions.'

.—We have of late, upon one or two occasions, alluded to the probability that one result of the great war now raging in Europe would be to place collections of books and works of art within the reach of English and American purchasers. It appears now that the Count de Gobineau offers for sale a valuable set of Persian manuscripts and of engraved stones; the latter containing over five hundred specimens, and illustrating the whole history of the art in Asia, from its very earliest beginnings down to modern times. Of the manuscripts there are about a hundred, all of exceptional value, either from their rarity or from the elegance of their workmanship and the splendor of their decoration. There is a full descriptive catalogue of them in existence; but it is not accessible until the Prussians shall have opened the gates of Paris. It is doubtful whether any American institution is in condition to make a bid for these unique collections; but there are many American gentlemen who could well enough procure them as a New Year's gift to some institution, and gain the eternal gratitude of the lovers of art and literature in our country. The Smithsonian Institution at Washington would put any such person in communication with the collector and present owner. M. Gobineau is celebrated both as literary man and as diplomatist, and his long residence in Persia as French Ambassador furnished the opportunity, as the preparation of his 'History of Persia' gave in part the occasion, of the collections. Upon these last, we should add, no fixed price has been set; they are open to competition.

—It may also interest some of our readers to learn that Mr. Frederick Muller, bookseller of Amsterdam, is in the possession of a collection of Hebrew and Jewish works, comprising about 2,800 volumes, which he intends to sell *en bloc*. Amongst these books are a large number of the greatest variety and highest importance. So far as we know, there is not a single public library in the United States, nor, we believe, a private library either—unless some Rabbi is the lucky owner of a thousand Hebrew volumes or more—in which the immensely rich post-biblical Hebrew literature has, to a respectable degree, found a place. The great Hebrew libraries of London and Oxford, of Leyden and Paris, of Berlin and Munich, of Vienna and Parma, have not the least parallel in America. Is not the present a fit opportunity to lay the *foundation* of a decent Hebrew library, by acquiring Mr. Muller's collection for this country? This is not the place to reproduce the whole catalogue. But in order to give an idea of what the collection contains, it may be proper to summarize somewhat, and to state that the *Hebraica* of this collection comprise: I. of Bibles and Parts of the Bible, with and without commentaries, 280 vols.; II. Commentaries and Versions of the Bible and Parts thereof, 760 vols.; III. Talmud, 115 vols.; IV. Commentaries of the Talmud, 200 vols.; V. Ritualism, 380 vols.; VI. Responses, 90 vols.; VII. Midrash, 25 vols.; VIII. Cabala, 80 vols.; IX. Sermons, 95 vols.; X. Liturgy, 150 vols.; XI. Philosophy and Ethics, 220 vols.; XII. Medicine, Astronomy, Geometry, etc., 30 vols.; XIII. Grammar, Dictionaries, Concordances, etc., 310 vols.; XIV. Geography, History, Biography, 225 vols.; XV. Belles-lettres, Criticisms, Periodicals, Literary History, Bibliography, 225 vols., etc., etc.

—The widespread fame of the late Rev. Albert Barnes, who died on the 23d of December in Philadelphia, is, above all his other works, due to his 'Notes on the Gospels,' of which upward of a million copies have been sold. They came as a relief from the pious dulness of Scott and even from the elaborate quaintness of Matthew Henry; there was a freshness of style, a fertility of illustration, a simplicity of statement, a candor of judgment, a pointedness of application, and a fervor of devotion, that threw a charm over the 'Notes' for the family and the Sunday-school, and even for the pulpit, in regions where libraries were scarce and small. The progress of Biblical criticism and of Oriental research has led the present generation far beyond the starting-point of Mr. Barnes; the results of German scholarship have been made accessible through English translations—notably through Clark's 'Foreign Theological Library;' and English scholarship has given us Alford, Conybeare and Howson, Eadie, Ellicott, Henderson, Wordsworth, and the great Bible Dictionary of Smith, now amplified by

Dr. Hackett of Rochester and Mr. Abbot of Cambridge. But the popularity and usefulness of Mr. Barnes's 'Notes' are attested by their immense circulation in this country and in Great Britain, their translation into many foreign tongues, including the Welsh, and their steady sale in face of all competition. Indeed, these 'Notes' created a market for all that have come after them. Some of Mr. Barnes's later commentaries, as those on Isaiah, Job, Daniel, and Psalms, without deviating from his practical plan, have a more scholarly tone and a higher method of treatment, which will give them permanent value as books of reference. Others, especially the 'Notes on the Epistle to the Romans,' are a valuable contribution to the theological literature of the country, and are inseparably connected with the history of polemics. It was these 'Notes' that gave color to the prosecution of Mr. Barnes for heresy before the Presbytery of Philadelphia, —a prosecution which resulted in his acquittal by that body, then his condemnation by the Synod of Philadelphia in 1835, and his suspension from the exercise of the functions of a Gospel minister, until he was restored upon his own appeal to the General Assembly at Pittsburgh. The acquittal of Mr. Barnes by that Assembly rankled in the minds of his opponents, and in 1837, finding themselves in an accidental majority, they exscinded by wholesale the Presbyteries and Synods supposed to be infected with the 'New School' Theology. The spirit of reunion is at present so strong in the Presbyterian Church, that justice will hardly be done to what Mr. Barnes achieved toward emancipating theology from the rigors of a necessarian philosophy, and bringing it again within the sphere of reason and free-will. The defects of Mr. Barnes's style are too obvious to call for animadversion: chief among them is the redundancy both of words and of illustration. This may be in part excused by his own statement that he wrote 'for the young and the uneducated;' but the same fault appears in his more elaborate treatises—his introduction to Butler's 'Analogy' and his 'Lectures on the Evidences of Christianity'—works which do the highest credit to his intellect as a Christian apologist. In the endeavor to be simple and emphatic, Mr. Barnes was unconsciously repetitious to a fault; and he wrote too easily and too much to prune his style or to condense his thoughts. He was ever in sympathy with humanity and progress; wrote ably against slavery, and used his pen freely in good causes. He published several volumes of sermons, a book of prayers, and essays and reviews upon a great variety of subjects. In character, he was a man of rare simplicity and of uniform kindliness; and his quiet, instantaneous death, while on a visit of condolence to a friend, was in harmony with the serenity of his life and the dignity of his faith.

—In the death, last week, of Professor Cutler, of Harvard, American literature suffered a considerable loss. For though Mr. Cutler was not widely known, and though he had published but little, and though it would not be true to say that the little he published was of high excellence, it nevertheless gave to such as had knowledge of it, and had knowledge of our literature and its needs, sufficient proof that its author had claims to respect. It showed him to be a man with a sedulously cultivated taste, a mind well stored, possessed of some of the sterling gifts of the poet, as well as of more of the superficial and acquired graces, and possessed, too, of a literary conscience which, while sometimes it revealed itself as fastidiousness, yet made its owner always incapable of slovenly workmanship. These are not common qualities. If an examination of the two little volumes—one entitled 'War Poems' and the other entitled 'Stella'—which, unless we are mistaken, constitute Mr. Cutler's entire acknowledged contribution to literature, should be thought to give indications of less of strength and cheerfulness and hopefulness than is to be seen in those minds and spirits from which thoroughly valuable work may with any confidence be expected, it is at the same time to be remembered that for many years—and he died when not far past thirty—he had been in ill-health, and that not the quantity only of his work was, in consequence of his wearing illness, made small, but that its tone also was injuriously affected. Further, it is to be remembered that, to his unacknowledged work, consisting of criticisms written for several journals—the New York *Evening Post*, the *North American Review*, and the Boston *Advertiser* among others—Mr. Cutler brought both abilities and acquirements; and these are so rare among American critics that American criticism, speaking generally, may almost be said to be without knowledge and without sense. Still further, we have to regret in this loss the loss of a translation of the 'Iliad,' which, if we are to judge by some small specimens given in 'War Poems,' would have been worth having. Probably his best-known piece is that called 'Reveille,' which obtained its circulation in a rather curious way. It was written and published at some time during the early part of the late rebellion, and is expressive of patriotic determination, and of the belief that the cause of the North was sacred, and would in virtue of its justice at last prevail. In the copy of 'War Poems' now before us we find a manuscript note in the author's hand, which is in these words: '"Reveille" was reprinted in the South during the war with such changes as made it serve the Confederate cause. It was afterwards reprinted in England as evincing the spirit which animated the Confederates.' We may here say of this poem, as of the author's other poems, that its chief merits are smoothness of versification, occasional happiness of phrase due to a clear perception of the thing to be expressed, and an absence of any but morally good sentiments. We should say, too, that a perusal of them will confirm the author's friends and acquaintances in the belief—of which it is necessary oftener than many of us think to give some kind of assurance, even to those who know most about us—that close beneath an exterior which may have seemed to promise something of cynicism there was an affectionate heart, perhaps a heart too dependent upon sympathy. Indeed, as for cynicism, it might doubtless be plausibly maintained that usually it is no more than armor of defense—as if the turtle's bonelessness were the reason of its shell. Mr. Cutler had long been sick with a spinal disease; and though it appeared likely that he would recover from his last prostrating attack, he himself, we believe, had little faith in the hopes held out to him, but felt a presentiment that he should never fill the chair to which he had been newly elected—that of Modern Languages. Doubtless there was in this something morbid and chargeable to the low spirits of continued illness. At all events, it was an unforeseen attack of erysipelas which at last ended his life. As an instructor, Professor Cutler was very successful in gaining the confidence of his pupils and interesting them in their studies.

—Apropos of the unlimited grant of condemned ordnance to Mr. Clark Mills for the casting of his remarkable equestrian statue of Gen. Rawlins, a correspondent sends us the annexed extract from the N. Y. *Evening Post* (apparently an issue of March, 1865). We presume the document to be authentic, and while Mr. Mills's sympathies with the late rebellion have nothing to do with his artistic capacity, they certainly seem repugnant to the work last committed to him—that of commemorating a conspicuous Federal officer. What Gen. Rawlins had done to merit this double infliction, we do not know:

The march of our troops through the insurgent States is making some singular disclosures. Here is the copy of a letter, for instance, found in the State House at Columbia, South Carolina, which our correspondent with General Sherman's army sends for our instruction. The original has been transmitted to the War Department:

'WASHINGTON, December 7, 1861.

'Hon. H. W. Gist, Governor:

'SIR: So deep is the interest which I feel in South Carolina, my adopted State, that under present circumstances I cannot refrain from offering to her my services in what I consider her need.

'I propose for her sake to lay aside my favorite art, and to engage in the manufacture of bronze cannon, and these to be of a quality, both in regard to material and effect, much superior to any now in use in the United States.

'I am not aware that there are in use now (with the exception, perhaps, of those belonging to the General Government) any cannon foundries in the South, and never while I live, for price or favor, will I aid in any manner to advance in the slightest degree the interests of the North.

'You will greatly oblige me by the favor of an early answer on the subject.

'Most truly and respectfully, CLARK MILLS.'

This Mr. Clark Mills, who wrote this precious epistle, is, we believe, the sculptor who made the very bad statue of Jackson which now stands in one of the squares at Washington, and who since, if we mistake not, has been in the employ of the Government.

—Mr. William H. Whitmore, whose last work that we had the pleasure of noticing was 'The American Genealogist,' has just completed another valuable work, which will render much assistance to those engaged in genealogical researches. 'The Massachusetts Civil List, for the Colonial and Provincial Periods, 1630–1774: being a list of the names and dates of appointment of all the civil officers constituted by authority of the charters, or the local government' (Albany: Joel Munsell), is the full title. The List is preceded by an account of the various modes of electing the charter officers during the colonial period, 1629–1686, and is supplemented throughout by historical notes, which add materially to its usefulness. The compiler in his preface hints at some of the topics suggested by a study of the List, but confines himself to stating one general conclusion—viz., 'that, prior to the Revolution, the offices, if not the controlling power, were in the hands of a few families; and other investigations will show these families to have been closely allied by marriages. From this state of affairs the Revolution rescued us; the reader will doubtless form

his own opinion as to the influence the presence of such an oligarchy had in causing that event.' Some idea may be had of the patience necessary for Mr. Whitmore's task by considering that the index (the least part of it) contains some 1,200 names, which are found scattered among 150 pages.

—We lately, as our readers will remember, asked for some information as to the nature and value of the examinations instituted by Mr. Boutwell in his department. All we have received up to this date has been copies of two of the papers of questions for candidates; but these, as we pointed out, amounted to no more than the examiners chose to make of them. Meantime, we have been favored with a fragment of a note addressed by a customs employee to a gentleman of this city. As nearly as we can decipher it and represent it with types, it reads as follows:

Dec 1 1870.

—— i Did Not For got yu Note as i Had No Money But as Sune as I get Som i Will giv yu all or iff i Cant giv yu all i Will give you as Mutch as i Can at Wounce Soe Dont Think That i Hav Fo got yu.

—The new 'Atlantic Almanac,' like its two or three predecessors, and unlike most almanacs, contains some things designed for a class of purchasers quite different from those of whom it may be said that they read nothing except what the almanac beguiles them into spelling through. It might perhaps be doubted if this latter class does not include pretty much all readers for whom the wise man should undertake to produce almanacs. Certainly it is true that the almanac-maker, as known to history, has never seen fit to set himself any very difficult task of literary beguilement. The wood-cut which refers the signs of the zodiac to the nobler and ignobler viscera, the limbs and other members of the human body; the list of church feasts and fasts; the table of the hours of high and low tides; the golden number and the dominical letter; the days of the week upon which fall the days of the month; the hours of sunrise and sunset, and moonrise and moonset; the total eclipses and partial eclipses; the days which are anniversaries of old battles with the British—these and similar matters it will not be found that the typical almanac ever mingles with anything nearer to literature than the exhortation to the farmer to mend his fences in the idle winter months; or the new-fangled recipe which the farmer's ambitious daughter may try; or the recommendations of patent apple-peelers and clothes-wringers which the pedlar will bring to the door in the summer when 'the going is good;' or the rebuses and sums in the Rule of Three which the boys may work out in the winter evenings; or the aged jokes of which the farmer's father has pleasant recollection; or the tables of state and county majorities in the last election. So far as experience teaches, the chances would seem to be all in favor of the unliterary almanacs, of the conservative *ephemerides*, of the 'biblia a-biblia,' as Lamb calls them, which, faithful to tradition, pretend to nothing of literary consideration, and offer themselves as little more than substitutes for the notched sticks and chalk-marks of the times before Faust and Gutenberg. Of late years, however, another opinion has possessed the astrologers and astronomers, and our calendars have brought us pictures and learning, and wit and poetry, as well as chronology. In pictures, the 'Atlantic Almanac' for 1871 abounds. Perhaps it abounds to superabundance, the pictures but seldom having reference to the times of the year, and being of the kind which is not for eternity either. All of them, we believe, are from *Every Saturday*, and it is somewhat puzzling to guess what was the principle of selection which governed the choice of the editor. He had at command the *Every Saturday* pictures, designed by Gavarni, pleasantly illustrative of the various months, but these he rejected, and in their place gives his readers 'Tennyson's New House,' 'The Prince Imperial,' 'The Cuban Girl,' 'The Old Bird-Tamer,' and others not more closely connected than these with meteorological record, and prognostication, and the lapse of seasons. Of literature, this 'Atlantic Almanac' offers less than that of last year or that of the year before. 'Dust; or, Ugliness Redeemed,' is a 'prose poem' of the kind which Mr. Dickens was fond of producing in the latter part of his life, when his humanitarianism and his lyrical tendencies had definitively got the better of his high spirits, and, without destroying them, had subdued and alloyed his love of humorous caricature, and his early habit of making his sketches and stories the expression of his marvellous power of observation—when, in short, he was subjective and poetical rather than objective and fun-making. 'The Beau Miser,' by Leigh Hunt, and 'Saturday Night,' by Charles Lamb, are essays of no particular merit, but interesting by reason of their authorship, which have recently been unearthed by Mr. J. E. Babson, an enthusiastic admirer of Lamb, and a warm admirer of Hunt, to whom the other admirers of those writers are perhaps under a greater degree of obligation than would be felt by the authors themselves if they were alive to witness this 'resurrecting' of a portion of their 'mortal part.' To have one's very bones and shreds of skin hunted up and preserved is, however, one of the penalties of being a literary immortal. To the strictly calendar portion of the new 'Atlantic Almanac' much attention has been paid, and the book is very well worth having. There are, besides, tables of foreign money, with statements of equivalent values in our own currency; of postal regulations; of reigning sovereigns; of stamp duties; of metrical weights and measures; of members of the House, Senate, and Cabinet; of members of the various State Governments; and of notable events at home and abroad occurring between the 1st of last January and the 1st of October. Necessarily the lists of Senators and Representatives do not hold good for the Forty-second Congress.

—We have received from Shanghai a literary curiosity in the shape of a pamphlet, translated from the Chinese by the missionaries at Tungchow, and entitled: "Death-Blow to Corrupt Doctrines: A Plain Statement of Facts. Published by the Gentry and People." It may be characterized in brief as a villanously artful attempt to slander the Christian religion and cast odium on its professors and missionaries in China, and probably to incite the ignorant natives to violence against them. In fact, the book is more than suspected of having been a principal occasion of the Tientsin massacre, and the translators assert that it has been assiduously circulated by the mandarins 'in three districts and two departmental cities,' and, they have reason to believe, 'extensively distributed throughout the north of China.' In one case 'it is currently reported that copies were given by the magistrate to the petty local officers, with orders to pass them round for the school teachers and principal men of the villages to read, and then to return them to the yamun, taking care that none should fall into the hands of the Christians.' Other evidence of the high authorship of the work is found in the 'first-class literary abilities' of the compiler, who besides 'has had extensive facilities for consulting public documents and for ransacking all that has ever been written in China against foreigners and Christianity.'

—We shall not disgust our readers with extracts from the filthy farrago called 'A Collection of Facts respecting the False Religion of Tien chu.' It is enough to say that the worst licentiousness which we associate with the Chinese character is here brought forward, in passages from many native authors, as the essence of the Christian religion, both Catholic and Protestant, making a series of obscene anecdotes in which the force of lying could no further go, and which only too well reflect the degraded intellect which devised them. In like manner, the mutilations of the human body which make Chinese annals so sickening, and which the mob at Tientsin charged upon the Catholic missionaries, are attributed to Christian rites, as, for instance, scooping out the eyes of the dead. This is said, on p. 53, to be done 'while the man still breathes,' and at the same time his heart is cut out, 'to be used secretly in the manufacture of counterfeit foreign silver.' On p. 15, it is noted that only Chinese eyes are of any value for this purpose—a reason, of course, for making converts among the natives—and that by compounding them with 100 pounds of Chinese lead eight pounds are converted into silver, and the remainder 'can be sold at the original cost.' 'The method by which this silver is obtained has never been discovered by any of the native Christians during the long period in which this religion has been propagated here.'

—Bad as it is, however, no one, we think, who ought to read the 'Death-Blow' can do so without instruction. We do not mean simply the light it throws on the animus of the literary class in China and on the question of foreign relations with the Empire—though this much is clear to us, that such atrocious lying can only be corrected by a freer intercourse between the Chinese and other people, either on their own soil or elsewhere. We allude to the comparative study of mankind, and of the civilization of the Flowery Kingdom with that of Europe, both in past ages and at the present time. The passage we have cited about the manufacture of silver is easily matched in the history of Western alchemy, while like superstitions in medicine are still vigorous in many parts of Europe. This sentence, too, might without difficulty be paralleled in the same quarter: 'Many would fain have us believe that these foreigners have searched out the principles of astronomy in the most thorough manner; yet when we see them fix upon four elements [fire, air, water, and earth] and ignore the five planets, we may know that their knowledge of astronomy is not thorough.' If printing could once be a black art in Europe, the daguerreotype may well seem supernatural in China. So, when Hsü Yung-fu 'joined the [Christian] sect and learned the art of taking likenesses,' no wonder that 'subsequently, the greater part of the persons whose likenesses Hsü had taken sickened and died, and it was evident to all that his

art was destructive to the constitution.' And have not these words of the Emperor the true Papal ring? 'With respect to heterodox books not in accordance with the teachings of the sages, and those tending to excite and disturb the people, to give rise to difficulties and irregularities, and to undermine the foundations of all things—all such teach corrupt and dangerous doctrines, which must be suppressed and exterminated.' Here, finally, is the very voice of the *World* or the *Herald* dissuading the mob from violence: 'Although you are not permitted to seize the battle-axe and sword for vengeance, you can destroy them by the power of your mouths and tongues.' There follow abolition riots, draft riots, and Tientsin massacres.

—Whatever at any time has been Russia's European policy, she has so conducted herself as steadily and almost unnoticed to annex large portions of Central Asia. The Anglo-Indian press has kept the world pretty well informed as to her acts (her intentions form a standing puzzle to most writers), so far as they affect the British possessions in Hindostan. But no remark has been excited by her successful attempts to filch from her most easterly neighbor on the Asiatic continent slice after slice of territory. The Russian frontier has been 'rectified' Chinawards no less than three times since the commencement of hostilities at Canton in 1859. During 1868, a confidential agent of the Government travelled extensively through the western provinces bordering on Thibet, and made himself minutely acquainted with the resources, productions, climate, etc., of the country, and with the temper of the inhabitants. It is asserted that a considerable amount of money was spent in securing secret agents (native), whose business it is to make the Russian name familiar to their countrymen, and to tell them of her greatness and the impossibility of successfully resisting her should she ever assume the offensive. A few months ago, a mercantile firm in St. Petersburg applied to the Government for aid in discovering and establishing a direct route from Nertchinsk to Peking, or, more strictly, to Tientsin, and this aid was readily given. Hitherto all trade had been conducted *via* Kalgan, a border town between China and Mongolia, and Kiachta, a Russian city in Southern Siberia, upon the confines of the desert of Gobi. To save time, the new route was suggested, and, a St. Petersburg letter informs us, has been successfully followed out. Fortunately for China proper, the desert of Gobi protects from annexation a large proportion of the northern boundary. But there is a goodly strip of Manchooria yet remaining, and Russia may desire to have it. The additional coast-line would immensely increase her naval resources for offensive purposes. If she persists in this system of quiet annexation, we may hear of another 'Eastern question' before very long. With a few more good ports on the Asiatic coast under her flag, Russia could destroy the China carrying-trade of England and Germany in a few weeks.

—This month there appears in England the first number of the *Rugby Review and Magazine*, which, it is expected, will be sustained by the writing of present or former masters and old pupils of Rugby School. As it will 'deal comprehensively with current topics and events,' it is clear that this magazine does not belong to the class of gymnasial periodicals which, in Germany, are at once an aid and an honor to the teacher's profession. It identifies itself with Rugby chiefly for the sake of a well-defined and intellectually-associated corps of contributors, and, while critical as well as political, will not, we infer, confine itself to the reviewing of text-books and methods of instruction. Announcement is also made of the early publication of a shilling monthly, the *Woodbury Gallery of Nature and Art*, to be regularly illustrated with three specimens of the Woodbury process, which, it will be remembered, is a printing in ink from a metal plate, obtained from a photographic image, in relief, on gelatine. This makes, if we mistake not, the third art-journal employing autotype illustrations in England alone.

—An enterprise with which the late Charles Dickens was prominently connected—if, indeed, he is not to be considered the originator of it—has recently followed him to the grave. The Guild of Literature and Art, designed to rival the Royal Literary Fund, and to be a sort of insurance company for authors, furnishing them a home when needy or aged, and only requiring of them some nominal return—such as lecturing three times a year, etc.—is no more. It received the enthusiastic support of Mr. Dickens's friends, who raised money for it in all sorts of ways, Lord Lytton giving the land on which to build the houses of refuge, which were actually put up, and well adapted for the end in view. Unlike the trades-unions, however, which err in confounding good workmen and bad, the Guild of necessity called public attention to the distinction between successful and unsuccessful authors, which did not save the former from the appearance of patronage, nor the latter from the humiliation of receiving charity. As a result, no one was found to confess himself a poor author, and the homes went tenantless. They are now to be sold, and with them will disappear the last vestige of the Guild, except the newspaper reports of the speeches made, during the last fifteen years, to prove the uselessness of the Royal Literary Fund, the noble aims of the Guild, and the fine prospects which have now ended in smoke.

PALMERSTON.*

If ever a man had his good things in this life, and plenty of them, and just the kind of good things he liked best, it was the late Lord Palmerston. We have not a word to say against this way of having one's good things. Quite otherwise. It is a most excellent way of having them, and we should not have the least objection to having our own, if any, dispensed unto us in like manner. Nor would we be understood as implying that our subject is now lifting up his eyes in torments as a set-off against the satisfactions they discounted to him in advance on this side the grave. We claim no prevision of what is written in the doomsday book of eternity such as was vouchsafed to those holy seers who were thus enabled to pronounce upon the everlasting destiny of Charles Dickens. It is not likely that the hard-working, pleasure-loving man of the world would fare better at their judgment-seat than the wise-hearted, kindly, beneficent novelist. But we cannot help thinking it possible that it may be found at last that both of these publicans went up to the house appointed for all living, justified rather than their pharisaic censors. However, be all this as it may, there can be no question that, as far as this world was concerned, Lord Palmerston had a life of as unmixed prosperity as has often fallen to the lot of man. Length of days, unbroken health, uninterrupted success in affairs, constant occupation such as he liked best, family affection and domestic happiness, made up a life the only melancholy circumstance about which, as far as we can judge, was that it had to come to an end at last. The inevitable catastrophe of death cast the only shadow that the outside world at least could discern upon the sunshine of his long day. But these two volumes stop short by a quarter of a century of that conclusion of the whole matter which, we dare say, we shall find that he met as courageously and jauntily as he did the various events of his life.

Though Lord Palmerston was an Irish viscount, he came of good English blood. He was the great-grandnephew of Sir William Temple, famous two hundred years ago as a diplomatist, whose works in formidable folios used to stand on the lower shelf of every gentleman's library, and who would, doubtless, have been surprised that his chief claim on modern memory would be through his kindness to his awkward young secretary, Jonathan Swift, whom King William, of glorious and immortal memory, once taught how to cut asparagus in the Dutch way, while attending his majesty in the gardens of Moor Park. Lord Palmerston's good luck began even before his birth, for he sprang from a love-match between his father and the beautiful and clever daughter of a Dublin tradesman, into whose house he was carried in consequence of an accident. His father was a man of wit as well as pleasure about town, and a lover and patron of the arts. His principal distinction, however, Sir Henry Bulwer forgets to mention, to wit, that he was a member of Johnson's Literary Club, warmly supported at his election by the great Doctor, as appears by a letter of his to Boswell. Sir Henry devotes but three or four pages to the boyhood and youth of young Temple, and does not much more than indicate the course of his education. From Harrow he went to Edinburgh, where he lived with Dugald Stewart for three years, and was so diligent a scholar of that philosopher that when Sir William Hamilton undertook to print Stewart's extensive lectures on Economical Science, he found the notes of young Temple the most complete for his purpose. In 1802 he succeeded his father in the title, and, the next year, went to St. John's College, Cambridge. Of his life there Sir Henry gives no particulars whatever, and it is from his own autobiographic sketch that we learn that he took the honorary degree of Master of Arts—so-called to distinguish it, as some *grondeur* once said, from an *honorable* one—then given to noblemen without examination, in 1806. He was then barely of age, yet he greatly dared to contest the University election in that year, and was handsomely beaten by Lord Henry Petty, afterwards the Marquis of Lansdowne. The next year, when Parliament was dissolved on the fall of the Grenville ministry, he attempted the University again, and then came within four votes of an election. But those were the good old days of rotten boroughs, and a clever young lord seldom had to stay out of Parlia-

* 'The Life of Henry John Temple, Viscount Palmerston, etc., etc., by the Rt. Hon. Sir Henry Lytton Bulwer.' Philadelphia: J. B. Lippincott & Co. 1871.

ment for want of a seat. So Sir Leonard Holmes brought him in for his borough of Newtown, in the Isle of Wight, on condition, however, that he should never so much as set foot in the place, lest he might disturb the allegiance of his voters to their owner.

Thus Lord Palmerston was introduced upon the arena in the conflicts of which he took part for all but sixty years. In 1810, he was elected by the University of Cambridge, and continued to represent it for twenty-one years, when his support of the Reform Bill ejected him; and, after sitting for Blechingly and South Hants successively, he settled down as member for Tiverton in 1835 for the rest of his life. Of course, no justice can be done to a career like his in the narrow room of our columns. Its main points can only be indicated. On his first entering Parliament he was made a Junior Lord of the Admiralty by the Duke of Portland, being then twenty-three. Two years later, in 1809, being then twenty-five, he received the brilliant offer of the Chancellorship of the Exchequer from Mr. Perceval, which he had the wise prudence to decline, taking instead the Secretaryship-at-War. This was a subordinate office, since abolished, which did not give the holder of it necessarily a seat in the Cabinet, as the Secretaryship *for* War did. It was charged with the superintendence of military disbursements and the settlement of military accounts. This office Lord Palmerston held for nineteen years under Mr. Perceval, Lord Liverpool, Mr. Canning, Lord Goderich, and the Duke of Wellington, till May, 1828, when he resigned with the other friends of Mr. Canning, on the quarrel of the Duke with Mr. Huskisson. This last-named gentleman was an 'awful example' to all office-holders to warn them never to resign unless they are in earnest. On the question of the disposition of the franchise forfeited by two rotten boroughs, Mr. Huskisson voted against the Duke, and then placed his resignation in his grace's hands, in the faith that it would not be received. But the Duke wished to be rid of him for sundry reasons, and at once laid it before the King and had it accepted, in spite of the elaborate and not too dignified explanations of the ousted minister. Lord Palmerston, after this, remained out of office for two years and a half, until Lord Grey succeeded the Duke, and the revolution of the Reform Bill set in. The twenty-one years of Lord Palmerston's subordinate official positions of Lord of the Admiralty and Secretary at War were most important ones in the foreign and domestic history of England. They included the most brilliant period of Bonaparte's career and his downfall, the dreadful years of distress following the peace of 1815, the disturbances in the manufacturing districts and in London, the repeal of the Test and Corporation Acts, and Catholic Emancipation. Lord Palmerston was faithful and laborious in his office, into which he introduced some important reforms. He uniformly supported Liberal measures, and opposed the violent and unconstitutional measures of the Tory administration of which he was a subordinate.

When the Duke was striving to prop up his tottering administration, shaken to its foundation by the Revolution of July, he tried to obtain the help of Lord Palmerston. Huskisson was just dead, almost the first victim of a railway accident, and his personal grievance had died with him. But Lord Palmerston would not come into the arrangement without his Canningite friends, with the addition of Lords Grey and Lansdowne. After the accession of Lord Grey he was made Secretary for Foreign Affairs, which he held, with the exception of Sir Robert Peel's short intercalated ministry, until the Melbourne administration finally gave way to that statesman in the summer of 1841, at which point the second volume of this work ends. During the period of his Foreign Secretaryship, Lord Palmerston was the object of the bitterest attacks of the Tory writers. The Canning *tail* had incorporated themselves with the Whigs for good, and they had crowned their iniquitous relief of the Dissenters and the Catholics by voting for the Reform Bill. Those of our readers whose memory runs back forty years may yet recall the malignant wit with which he was pursued by Theodore Hook in the columns of the *John Bull*, how he was laughed at as 'Cupid,' and abused as 'Lord Protocol,' and excellent fun made of him as 'Lord Pummicestone' by that model British matron, Mrs. Ramsbottom, in her cacographic epistles from Margate. The solemn Sir Henry Bulwer, however, passes all these things over in decorous silence, though he indicates the kind of hawk-and-buzzard position of his hero—between the Tories who hated him, and the Whigs who did not love him, and the Radicals who loved him still less. Still, he attended diligently to his business, and his work in those difficult years was well done. The erection of Belgium into a kingdom, the intrigues of Louis Philippe for an extension of French territory towards the Rhine, the miserable wars of succession in Spain and Portugal, the establishment of the kingdom of Greece, the settlement of the Eastern question by the subordination of Mehemet Ali, as Pacha of Egypt, to the Sultan, all came within the period of his secretaryship. His diplomacy was informed by the principle of straightforwardness and truth, which he held to be the best method for carrying on the business of nations as of individuals, and they answered his purpose well; for he maintained the influence and dignity of England in her relations with the Continent without any general war, and with very little bloodshed for which he was responsible. He was so absorbed in his business that he scarcely mentions the tremendous conflict over the Reform Bill in his letters to his brother. During that stormy period he seems to have had his mind fuller of his efforts to baffle the schemes of the Citizen-king—whom he denounced later as 'a man in whom no trust whatever can be reposed'—than in the great revolution going on at home. Of course, it was only *seeming*.

Sir Henry Bulwer is not a good biographer. Indeed, he is not a biographer at all; and for an odd reason—he stands too much in awe of his hero, and fails in his duty towards him from the very excess of his reverence and gratitude. He apologizes more than once for the refreshing glimpses he gives us of Lord Palmerston's private life. He should apologize for not giving us more of them. Now and then we get a sight of him on the race-course, or in the hunting-field, in his shooting-jacket among the pheasants, at Almack's, or at the dinner-table. But it is a glimpse only through the crack of the door, which his careful attendant shuts in our faces as soon as possible. Still we are obliged to Sir Henry for what he has given us. He has made up his book mainly of Lord Palmerston's letters to his brother, Sir William Temple, who died before him, and who was in foreign diplomatic service for the chief of his life. These letters are largely filled with the writer's occupations as a minister and his opinions on public affairs—mainly on foreign affairs. But they, together with two or three to his sister, give one the impression of an amiable and affectionate heart. The letters which describe what he did for his Irish tenantry, and for the improvement at once of their condition and of his estates, show him to have been a man of intelligent humanity and large practical wisdom. Sir Henry's work will be of service to the biography of Lord Palmerston yet to be written, and an entertaining book it will be when time enough shall have elapsed to make all amusing revelations possible. It will not describe the life of a great man intellectually, nor of the highest moral tone of character, but of a man of strong sense, excellent talents, indefatigable industry, as devoted to pleasure as to business. The men with whom he was associated in public affairs for the first twenty years were his inferiors in ability. Those wars of the giants were directed by pigmies. Canning was the only great man of that connection during those years, and he was mostly in the background and under the 'cold shade of the aristocracy,' and his brief day of power soon closed in night. The claim of the Duke of Wellington to greatness will hardly be disputed now, though Lord Melbourne is here recorded as having said that 'he did not happen to think him a great man;' but he was not a great minister. Lord Grey certainly stood in the first rank as a statesman and orator. But, officially or in society, Lord Palmerston knew every man eminent for genius or rank in politics or literature, every woman famous for beauty or talent or fashion. He must have had a childish recollection of the beginning of the French Revolution, and he lived to see the end of our Rebellion. When his 'Life and Times' comes to be written, and well written, though there may have been lives more instructive and edifying, it is safe to say that there was never one more entertaining.

GOETHE'S CONVERSATIONS WITH FRIEDRICH VON MÜLLER.*

Those who are already familiar with Eckermann's 'Conversations with Goethe' will gladly welcome this work, which not only supplements Eckermann for the years 1822–32, but also contains reports from as early a date as 1814. But, notwithstanding the fact that von Müller's book covers a longer time, it is the briefer of the two. The author was Chancellor of the Grand-Duchy of Weimar, and, from Goethe's appointment of him as one of the executors of his will, we can see that he stood high in the poet's estimation. He was a man of marked intelligence, and seems to have been far less oppressed by the greatness of Goethe than was Eckermann, who attached himself so devotedly to the object of his admiration. Goethe is here looked at with a cooler and more critical eye than that of Eckermann; he is met by a man more nearly his equal, and one not afraid to give us frequent reports of the poet's moodiness and variability of temper. Thus, in regard to his first meeting with Goethe, in 1801, von Müller says: 'Goethe speaks very quietly and calmly—rather like a cautious,

* 'Goethe's Unterhaltungen mit dem Kanzler Friedrich von Müller.' Stuttgart. 1870.

shrewd tradesman.' Later, we find frequent mention of his moodiness and cynicism, and occasional outbursts of irritability which are almost Johnsonian. For instance, on p. 88, Müller writes: 'I mentioned that some writer had said, "Humor is nothing else than the wit of the heart." Goethe became extremely angry (ergrimmte sich auf's Heftigste) at the phrase "nothing else than." He cried out, "So Cicero once said, 'Friendship is "nothing else than."' Oh! you ass, narrow-minded fellow, irredeemable boor, who ran to Greece to get wisdom, and brought back nothing better than that meaningless phrase, 'nothing else than.' Wit of the heart, forsooth! I don't know what the heart is, but yet must ascribe wit to it,"' etc. On this day, however, it is to be remembered that the 'highly groomed' Goethe was 'sitting in his shirt sleeves, drinking.' Not always was he Olympian.

At other times we find recorded remarks, by the great critic and poet, which are characteristically full of insight and wisdom. Thus: 'Every one should strive to acquire some one good habit, for his pleasure in cheerful days and for consolation in time of trouble. Let him accustom himself, for example, to read daily in the Bible, or in Homer, or to look at medals, or good pictures, or to hear good music. But it must be something excellent—of real merit—to which he accustoms himself, in order that he may preserve his respect for it.' Or thus: 'I must confess I should not know what to do with eternal bliss if it did not offer me new problems and difficulties to be mastered. But that is probably well provided for; we need only look at the planets and suns—nuts enough for us to crack there.' Of Byron's death he said, that 'it took place at exactly the right time. His Greek undertaking had something false about it, and could never have ended happily. It is a misfortune that such imaginative natures should wish to carry out their ideal in their life. They can never succeed; the ideal and the real must be kept far apart.'

Talking one day in October, 1823, he remarked that at Marienbad he had heard no authors spoken of except Byron and Walter Scott. 'But Scott's charm,' said he, 'is due to the superiority of the three kingdoms of Great Britain, and the inexhaustible variety of their history; whereas, in Germany there is no fertile field for the romancer between the Thuringian forest and the sand plains of Mecklenburg, so that I was obliged to use the most worthless material imaginable in "Wilhelm Meister"—such as strolling actors and wretched country nobility—simply to bring some life into my picture'—a strange enough remark, when one reminds himself that Scott was at his very best when he was depicting 'wretched country' lairds and city magistrates, and that Goethe lived in the Germany of 'Goetz von Berlichingen' and had seen the Italy of the Guelphs and Ghibellines. On the same occasion, he said: 'Old friends should not meet.' He says, in another place, 'They do not understand one another. Each has learned a new language. Whoever is interested in his own culture should especially avoid this, for the inevitable misunderstanding can only work upon us unfavorably, and destroy the image of the former relations.'

And here, again, is a semi-cynical prudence: 'Were I, to my misfortune, obliged to be in the opposition, I would excite uproar and revolution rather than occupy myself continually with eternal abuse of those in authority. I have never in my life desired to place myself against the irresistible stream of the multitude or of the ruling principle. I have rather withdrawn into my shell, and lived there after my own fashion.' And here is a bit of practical wisdom which has about it something of what will seem to some people a cruel prudence: 'What difference does it make if a few couples fight and embitter one another's lives, as long as the common idea of the sanctity of marriage is maintained? They would only suffer other troubles if they were rid of these.'

These extracts, which are taken almost at random, will serve to show the character of the book. It is a valuable addition to what we know of Goethe, and as such—as light upon the figure of a great man, to say nothing of the wisdom and wit which it brings within view—it is well worth attention. We may add, for the information of the curious and puzzled reader, that 'the young American, from Boston, named Boxwell,' who is mentioned under date of May 10, 1819, is Doctor Cogswell, formerly librarian of the Astor Library, in New York.

THE LIFE OF GEORGE READ.*

THERE is a real satisfaction, in reading history, in making the acquaintance of a class of men who have no claim whatever to genius, and whose names are hardly known to the world at large, and yet who, by good sense, fidelity, and thorough competency to the work they undertook, have made a mark in their own generation, and made the world better for their having lived in it. George Read, of Delaware, appears to have been a man of this stamp. One has a vague recollection of seeing his name appended to the Declaration of Independence and the Federal Constitution, and that is all; but when one follows his career through these eventful years, the positions of honor and trust that he held—member of State Assembly, National Congress, and Constitutional Convention of both State and nation, chief magistrate of his native State, United States Judge, United States Senator, and, finally, Chief Justice of Delaware—it is plain that he was a man of mark; one of those who modestly and noiselessly do the best work in their power, and whom the world would less willingly spare than many of more fame and brilliancy. In all this varied and useful career, we find hardly a striking act or word of his; and yet we have received real pleasure from the contemplation of a character so marked by earnestness, faithfulness, and sound judgment.

George Read would seem to have been, on the whole, the leading man in Delaware during the period of the Revolution and the years that followed. His life, therefore, written by his grandson, is very properly made the centre of a history of Delaware and account of her leading men during this period. Without this, indeed, the book would have been but a slender one, there is really so little to be said of the man himself. Even the correspondence quoted in the volume consists more of letters to Mr. Read than of letters from him. This is no loss to the interest of the reader; his quiet, almost commonplace style of letter-writing is far less readable than that of more vehement characters like Dickinson and McKean. But, interesting as many of these letters are, we have derived more satisfaction, on the whole, from the numerous biographical sketches of contemporary characters. This work the editor has done excellently, as a labor of love; and these alone would entitle the volume to the notice of students of Revolutionary history, and, in especial, of all citizens of Delaware. We will mention particularly the lives of Gen. William Thompson, Cæsar Augustus Rodney, and Thomas McKean.

However much we enjoy digressions and addenda of this sort, there is a good deal of quite irrelevant matter which we must set down as 'padding.' Of this sort are the author's opinions on all sorts of subjects, as lotteries, cremation of the dead, and the French Revolution, which are frequently judicious and well put, but which have no place in this work. So with the current history, which is given a good deal more fully than is any way desirable. Much of it may be assumed to be already familiar to readers; much of it—as the account of the expedition to Canada in 1775 and of the revolt in St. Domingo—has only the most remote connection with the life of Mr. Read. On the other hand, there is a lack of definiteness and continuousness in the history which does really belong here, and which one would be glad to have given more fully than it is. The peculiar relation existing between Pennsylvania and Delaware, which permitted Delaware to be represented in Congress by Pennsylvania citizens (on account of the convenience of residence), and gave the two States a common President, McKean, just as had been the case when they were proprietary colonies belonging to one proprietor, is a case in point. We should have liked, too, a fuller account of the state of parties in Delaware, and the internal history of the province during the Revolution. For this we should gladly have spared the account of the causes which led to the Revolution, its campaigns, and the general political history afterwards.

We have said that there is little that is striking in Mr. Read's words or acts; one gets a better impression of the reputation of the man, and the confidence that his associates had in his judgment and efficiency, from what they say to him than from what he says himself. We find, in 1777, two letters which illustrate this excellently well. Mr. James Sykes, who had just been appointed delegate of Delaware in Congress, finds himself, to his horror, sole representative of that State, his two colleagues, Messrs. Reade and Van Dyke, being necessarily detained. He writes in an almost comical state of distress to Mr. Read, showing how helpless he is from his lack of presence of mind and speaking power. He says of a measure passed touching the interests of Delaware: 'Though I utterly disapproved the measure, . . . I could not open my mouth in objection.' And as to part of his duties: "I am totally unfit for it, and miserable in consequence.' Shortly after, Chief-Justice Killen writes to Mr. Read to ask help in some difficult and perplexing cases in the disaffected portion of the State: 'This new task is really too arduous for me. In essaying to execute it, I find both a want of knowledge and firmness of mind—the latter most.' All seem to have turned instinctively to George Read as the best source to look for counsel and aid.

* 'Life and Correspondence of George Read, a Signer of the Declaration of Independence, with Notices of some of his Contemporaries. By his grandson, William Thompson Read.' Philadelphia: J. B. Lippincott & Co. 1870. 8vo, pp. 575.

We will close with a short extract from the account of the Battle of Brandywine, which gives a vivid and entertaining picture (p. 271):

'As the British advanced toward Birmingham Meeting-house, they were surprised and amused by a number of Quakers mingling and moving forward with them. The spectacle was magnificent—a great body of disciplined troops marching in military order, the scarlet uniforms, and muskets and bayonets, bright as silver, gleaming in the sun, which shone unclouded. It had a fascination for these simple rustics, who followed on, all fear swallowed up by curiosity, till the battle began, about four o'clock P.M. They were surprised by the smooth and white skins of the British officers, mostly short and portly men, neat and clean, and elegantly attired, in strong contrast to the dingy uniforms and gaunt forms of the Americans, who had passed the preceding winter under privations and discomforts to which ordinary patriotism and fortitude would have succumbed, while their enemies were housed, warmly clad, and well fed. They came upon a group of mounted officers, flashing in scarlet and gold; one of these is prominent, evidently a general, of large body, on a stately charger, but reduced in flesh [qu. the charger?], his features coarse and large, and his mouth fallen in from loss of teeth; it was Sir William Howe. The fields before them were *red* with the British regiments moving rapidly forward, and covered with the knapsacks and blankets of which they had disencumbered themselves.'

MAGAZINES FOR JANUARY.

The *Atlantic* contains the full January allowance of articles by well-known writers—Mr. Longfellow, Dr. Holmes, Mr. Whittier, Senator Wilson, Mr. Howells, Mrs. Harriet Prescott Spofford, Colonel Higginson, Major De Forest, and Mr. James T. Fields, being among the number. Mr. Fields's article is the first of what promises to be a very interesting series; and it marks his re entrance into the active circles of literature, and his abandonment of the active circles of business—except so far as the work of editing the *Atlantic* and taking counsel with his former partners may still bind him to business work. Years ago—perhaps twenty-odd—when he was new at the business of bookselling, which has made his name so well known in most places where English is spoken, he was the author of a small volume of poems, some of which were successful in striking the popular fancy, and one of which is, we suppose, still remembered by most New Englanders who used to read out of Reading Books, or 'speak pieces' out of 'Speakers' in the district schools of almost a quarter of a century ago. We, at any rate, can recollect the certainty with which once in so often, as 'declamation day' came round—that most remarkable of days to succeed in existing in New England—the story used to be told of Jonathan Marden, the skipper, and the casting of the lead. The companion pieces in the volume we do not recollect, but whatever they were they were not such—and their success, we may suppose, was not such—as to induce Mr. Field to prosecute the pursuit of literary distinction, and, so far as the public is informed, he has of late years had nothing more direct to do with literature than some such work as the collecting for publication and for the submission to his firm's imprint the scattered papers of De Quincey or of Thackeray, and the practice of friendly and free intimate communication with celebrated authors, whom the just and liberal policy of his house—long exceptionally just and liberal among American publishing houses—had disposed to regard him or any representative of the firm with great good-will. The preserved records of this honorable intimacy will constitute various instalments of a set of serial essays, to be called 'Our Whispering Gallery,' which Mr. Fields now begins to contribute to the *Atlantic*, and, judging by this instalment, which contains reminiscences of Thackeray, there will be nothing in our magazine literature of the coming year which will at all equal these recollections. In such things, the manner of relation is nothing, or next to nothing; and what the reader wants is as much as possible, as directly told as possible, of the man who is talked about. We have not space to quote any of the very pleasant gossip about Thackeray to which Mr. Fields treats us in this number of the *Atlantic*, but it will be found not only entertaining to the general reader, but instructive to the student of literary history and the literary character. It is curious to know that in Thackeray's own opinion his best work was 'Henry Esmond'—a book in which he is more undilutedly a sentimentalist than in any other of his books, and as to which one would have thought that most of the pleasure which it could have given a person of its author's peculiar turn of mind would have been the subtly humorous enjoyment of noting the masqueradelike character of puppets begotten in the nineteenth century, and doing duty in the imperfectly revived days of Queen Anne.

'A Year in a Venetian Palace' is the title of Mr. Howells's latest essay, which we suppose will be as well liked by those who admire this writer as anything which he has done for a long time. The same might be said, and with emphasis, of Doctor Holmes's 'Dorothy Q.,' which is in what we think it will be agreed his very best manner, and which is certainly very good. It should be classed among *vers de société*, probably; but a sort of slightly glorified *vers de société*, in which sense, gaiety, humor, tenderness, and pathos are all present, and all find restrained and elegant expression.

Of other articles, the January *Atlantic* has a poem by Mr. Whittier; the beginning of a story by Mr. De Forest; and an article by Senator Wilson, entitled 'The New Departure of the Republican Party,' in which, besides much talk now for a long time trite, there is some talk which, it is to be feared, is the merest talk, in favor of universal education at the expense of the country in general.

In the *Overland Monthly* for January, a clever and observant traveller gives us a glimpse of Japan, and will be found an interesting talker. Mr. Bret Harte has some verses, called 'Further Language from Truthful James,' which we find perfectly unintelligible—except that they record the death, at the hands of 'Injin Dick,' of Mr. William Nye, who would seem to have found that, whatever may be the state of the case as regards the Mongolian on the Pacific coast, the American Indian, when there are to be any 'sinful games' practised by the Caucasian, it is better to leave to Senator Harlan, or Senator Pomeroy, or some Indian agent.

Old and New comes this month in double form. 'The Christmas Locket' is a 'holiday number' of this magazine, and is full of the kind of writing, dripping with an unnatural good-nature, which passes for seasonable, but which, one doubts, may not be the best thing to keep its readers true to really Christian aims. Perhaps its most noticeable article is a translation, by Mr. Charles T. Brooks, of a striking legend as to the Crucifixion of Saint Peter; and next it is a story—with a characteristic helping-out of the fiction by facts and real names—which is the work of Mr. E. E. Hale. *Old and New* itself has a pleasant essay, by a new writer, who bids fair to become a writer of name and consideration, and whose work is already deserving of praise and will give pleasure, Mr. Charles Warner.

The *Catholic World* has a review of Rev. Henry Ward Beecher's exposition of Christian doctrine, which it may not be unprofitable if the logical adherents of the Plymouth Church Confession of Faith will logically ponder. Also, it renews its attacks on Mr. Froude and his treatment of Mary Queen of Scots, and makes statements, not without an array of evidence, which, left unanswered, almost remove that gentleman from the ranks of respectable historians, and leave him in a very uncomfortable position. 'The Sources of American History,' dealing with Mexican muniments, is another valuable essay to which we shall be glad if we can to call the attention of scholars.

Lippincott's brings us round to Thackeray again, its 'monthly gossip' gossiping very pleasantly about him. Indeed, there seems to be little gossip about him which is not pleasant, and which does not increase one's impression that, while he was something like other people as regards perfectness, he was rather unlike some of the rest of us as regards perfectibility; and as regards *ad interim* likableness, until such time as we shall all be saints and heroes. It is not much worth while to say anything about Carlyle at this time of day, for he is now found out; and probably there is no doubt, as Mr. Emerson says of Plutarch, that he will be found out again, and more to his advantage, for there is that in him which ensures a rediscovery; but there is no harm, either, in repeating this, which is Thackeray's remark about him: 'Why don't he hang up his d—d old fiddles?' It hits well enough Carlyle's monotonous preachment of a single not very fruitful sermon. 'Yes, a wonderful writer,' Thackeray added, not forgetting the pictures of 'The French Revolution.' There is also something about Dickens in this reported conversation with his great contemporary.

In the *Galaxy* and *Harper's* the readers of these magazines will find the usual bill of fare, but nothing, we believe, which calls for special mention. Perhaps we might except the new set of articles called 'Types of American Beauty' which the *Galaxy* has begun to publish, and each of which is to be accompanied by a picture of some young lady. Question has been made, we see, as to whether a magazine should lend itself to such publication—a question the answer to which would seem to be dependent upon the consideration whether it would or would not be a nice sort of young lady who would allow her portrait to be so printed, and to be descanted upon in the accompanying letterpress. According as she might be would, we suppose, be the niceness or unniceness of editorially pleasing her.

The Life and Times of David Zeisberger, the Western Pioneer and Apostle to the Indians. By Edmund De Schweinitz. (Philadelphia: J. B. Lip-

pincott & Co. 1870.)—This name, not widely known, but dearly cherished within certain limits, deserves a more general acquaintance, and will, we trust, acquire it with the help of the volume which Mr. Edmund De Schweinitz, who is, we imagine, pastor of the Moravian Church of the United Brethren of Bethlehem, Pa., has so carefully prepared. The admirable work of Parkman on 'The Jesuits in North America' has made known the splendid courage and devotion shown by the Jesuit missionaries in the seventeenth century, and it is only fair that a like tribute should be paid to men who, though the servants of a very humble church compared with the great Roman hierarchy, encountered even greater difficulties and exhibited a force and temper no less admirable. Mr. De Schweinitz has brought many qualifications to the performance of his task: a sympathetic spirit, a simple faith akin to that of Zeisberger himself, an easy, pleasant style, sometimes a little too suggestive of the pulpit rhetorician, and, best of all, a patient industry that seems to have left no stone unturned which seemed at all likely to conceal anything bearing upon his subject. His handsomely printed volume contains an excellent index and geographical glossary. It should have contained a map showing at least the relative positions of the main points of interest. Such a map would make the narrative much more interesting and intelligible.

Besides the life of Zeisberger, the book contains a great deal of interesting collateral matter which gives the setting of the man, and enables the reader to 'put himself in his place.' Thus we have an account of the Moravian Church, its institution, and its various wanderings till it came to Bethlehem, which has ever since been the centre of its American activity. Then we have a description of the colonies at the time Zeisberger came on the stage, their civil and social aspects, an account, drawn from the best sources, of the Indians as they were at the time of the first settlements, and again as they were in the middle of the last century, when, without having availed themselves of the blessings of civilization, they had adopted many of its curses, especially the curse of intemperance. We see a good deal of Count Zinzendorf, and catch a glimpse or two of Benjamin Franklin, and one of John Woolman with his mind 'covered with the spirit of prayer' and desiring to speak to the Indians without an interpreter; doing so, and moving them greatly—a story that recalls the day of Pentecost, and some of the experiences of the great European missionaries of the Middle Ages.

Zeisberger was born in 1721, and died in 1808. He came to America in 1736, and entered on the labors of a missionary in 1744. These labors engaged him till his death, a period of more than sixty years. His life was one great hardship and much suffering and danger. It abounded in adventures, some of them equal to the imaginary ones of Captain Mayne Reid and writers of his school. His journeys were lonely, long, and arduous; one of them, occupying about three months, is reckoned to have been sixteen hundred miles, for the most part on foot, the rest in a canoe. His escapes were wonderful—he thought miraculous; and his biographer agrees with him. His whole life was a tragedy, the elements of which were various. Prominent among them were the suspicions that attached to the Moravian Indians during the French and Indian and the Revolutionary wars—suspicions which De Schweinitz proves to have been mainly groundless, making some good points against Parkman. Another element was the massacre of a band of missionaries by the Indians in 1755, and the far more horrible massacre in cold blood of ninety Christian Indians by the Pennsylvania Militia in 1782. A third element was the compulsory removals of the converts from place to place: Pennsylvania, Michigan, Ohio, and Canada being the four seats of operation. But greatest of all was the hopelessness of the work in which Zeisberger was engaged. After all his labors and self-sacrifice, not one prosperous church or village testified before his death to his faithfulness. The settlement in Western Canada was on the decline. Around his own little settlement, in Goshen, clustered the huts of barely a score of natives, and even these Zeisberger could not restrain from the most beastly intoxication. But his character must not be measured by his accomplishment. Indeed, his failures were to a considerable extent owing to the purity and loftiness of his ideal. He was not content to make proselytes, he aimed at moral reformation. He withheld baptism till he saw his converts bring forth the fruits of repentance. He was an honor to the Moravian Church and to our common humanity, and his biographer has done the public a good service in commemorating his career.

Treatment and Utilization of Sewage. By W. H. Corfield. Prepared for the Committee of the British Association. (New York: Macmillan & Co.)—The plan which Mr. Corfield advocates—of pouring sewage over the earth, letting it soak through into drains, and carrying the drainage water to the sea—has met with numerous theoretical objections. Sewage thus spread out, it has been averred, 'would foul the air;' 'the amount coming from any great city would drown the land and convert it into a marsh;' 'the crops would be rank and bad;' 'disease would certainly follow such a system;' 'it would cost too much.' These and similar objections the book before us completely answers by examples drawn from experience. Agriculturists had found very profitable results from the use of sewage on a small scale near Edinburgh, Milan, in Flanders, and in China; and at last the local boards of health in England were obliged by act of Parliament to try what could be done with sewage on a large scale. When sufficient evidence had been gathered to show that the sewage of any town, including all the rainfall, could be poured over the fields in enormous quantities, and yet give corresponding crops, it was alleged that it could only be used on land very near the source, as in its flow, from contact with the air, gravity, and by chemical changes, it grew poorer, or at least less valuable as a manure, in proportion to the distance it was carried; and since it would be impossible to find sufficient land for the proper distribution of sewage near a city, that the irrigative plan must be considered impracticable. Careful trials, however, were made, which showed that a stream of sewage running in a shallow conduit two inches deep and open to the air for seventy-two miles, did not lose any appreciable amount of its strength other than as it was diminished in volume by evaporation.

The theoretical value of very dilute sewage on the land as manure, including all the waste water and rainfall of a city—which is not less than 100 tons per head—is 1½ cents per ton, or $1 50 per head; but it appears that the actual waste of the family, exclusive of rainfall or hydrant water, is worth 3 cents per head. This would give an annual loss for New York in its sewage, which both pollutes the water and air and promotes disease of 1½ to 3 millions of dollars a year. On page 188 of Mr. Corfield, we find that the bed of the river Mersey has been permanently raised by the deposits from sewage; that the drainage of Glasgow adds to the harbor of the Clyde 1,000,000 cubic yards of silt a year. On page 225 we are told that when sewage is delivered on the surface, the purification it receives varies with the kind of soil: a cubic yard of sand will clean in twenty-four hours 4¼ gallons, whilst a cubic yard of Dursley soil cleaned 9 9-10 gallons in the same time—equivalent to 100,000 gallons per day per acre; and the same soil acts equally well continuously. Even peat is a good filter, improving by use, and the Commissioners are satisfied by test that 'the sewage of a water-closet town of 10,000 inhabitants could, at a very moderate estimate, be cleansed upon five acres of land.' Experiment showed that Italian rye-grass could be perfectly grown on sea-sand a foot in depth when sewage was properly supplied to it. The Lochend Farm and the Craigentinney meadow near Edinburgh are for the most part reclaimed from the sea-sand, and have been raised from $15 per acre to an annual rent of $150 per acre. During the year 1869, the highest rent paid per acre was $210. The Earl of Essex gives the increased value of land from the use of sewage at $12 per acre. The Sewage Company of the town of Worthing received in the year 1869 $9,000, and paid out $5,050; profit on the use of sewage $4,000. This farm consists of 96 acres, of which 83 received the sewage of 7,600 people, or a daily volume of 480,000 gallons, of which 130,000 gallons are spring or surface water. The net profit in this case is 50 cents per head. The experiment at Norwood, conducted by the Croydon Board of Health, gave a revenue of about 90 cents per head. At Aldershot farm, the revenue was 80 cents a head. The sewage of Woking invalid prison was applied to an exceedingly porous sand, and raised it from no value to $150 an acre for cow feeding. The Lodge Farm at Barking returns $1 25 per head for each individual supplying the sewage. The largest yield following the use of this mauure is 33 tons of green grass, equal to at least 7 tons of hay per acre. The grass value of the milk from the increased produce of each thousand tons of sewage was between $25 and $30.

Our space forbids further illustration. We cannot too earnestly commend Mr. Corfield's report to every city and town government in the United States. We have seen that New York annually throws into the ocean three millions of dollars which, spread over the sandy soil of New Jersey, would produce crops too great to be calculated. The city of Worcester is just completing a system of sewers to pour into a river the wealth of that town, which, distributed over 50 acres of land, would in a few years enrich the corporation and actually reduce the taxes. Other instances of this kind might readily be cited, but none, so far as we know, of the sanitary economy concerning which this book supplies all the necessary information.

PUBLISHED BY

LITTLE, BROWN & CO., 110 WASHINGTON STREET, BOSTON.

PARKMAN'S HISTORICAL WORKS.

THE CONSPIRACY OF PONTIAC AND THE INDIAN WAR AFTER THE CONQUEST OF CANADA. Sixth edition. Revised, with additions. 2 vols. 8vo, cloth, $5.

The additions to this edition are made chiefly from a mass of correspondence added within a few years to the British Museum, and known as the 'Bouquet and Haldimand Papers.' The letters of officers in the Pontiac War are several hundred in number, and exceedingly curious and interesting as vivid and lifelike reflections of the experience of those most actively engaged. There are many from Sir Jeffrey Amherst, the commander-in-chief; and many more from officers of every grade, from colonels to ensigns, part of the correspondence being official, and part friendly and familiar. Brother officers are not always spared; and the perplexities of those highest in command and the shameful practices to which Amherst resorted to in order to overcome an enemy of which he was continually proclaiming his contempt, appear in a light which is rather surprising. Considerable portions of the book have been rewritten, and many extracts from the letters incorporated.

'Mr. Parkman's "Conspiracy of Pontiac" takes rank, among competent judges, as the most satisfactory historical monograph that our literature has produced.'—*The Nation, New York.*

'This brilliant and authentic contribution to our history is the result of original researches. The author presents in this volume an elaborately wrought but concisely digested historical sketch of the Indian tribes on our northern and western frontiers a century ago. His personal experience as an explorer of our wilderness regions, and a keen-sighted observer of Indian life and character, in actual companionship with them in the wigwam and hunting-path, make him a most skilful commentator on the aborigines. There are many pages of the volume which have a perfectly fascinating power and charm through their scenic descriptions and their woodcraft. There is no single volume of history, dealing with what has been done and suffered on our soil, which surpasses Mr. Parkman's volume in the interest or even the importance of its subject, or in vigor and ability of treatment.'—*Boston Advertiser.*

THE PIONEERS OF FRANCE IN THE NEW WORLD. I. Huguenots in Florida. II. Samuel de Champlain. Seventh Edition. 8vo, cloth, $2 50.

This volume is the first of an historical series of narratives of the rise and growth of North America, and the conflict of nations, races, and principles for its mastery.

'Like Washington Irving, he is enamored of the fragrance and beauty of the aboriginal forest, of the glory of ancient streams, and the wild vitality of savage life. Like that delightful master of fascination, he colors his style with the fresh hues of nature, and almost reproduces the spirit of the landscape in his glowing page. In vigor and pointedness of description, he may be counted superior to Irving, while frequent passages in his narrative recall the seductive enticements with which the best beloved writer of our country invested his magic portraitures of external nature. We cordially congratulate Mr. Parkman on his eminent success, and rejoice in his promise to disclose further treasures of the mine which he has so happily opened.'—*New York Tribune.*

'It is a narrative which has all the animation, variety, and interest of a romance, and to most readers it will be as fresh and novel as a pure creation of the imaginative faculty.'—*New York World.*

'In interest this work exceeds any novel which has been published during the year. Every page bears unmistakable impress of power—power of patient investigation, power of dramatic conception, power of philosophic thought, power of pictorial diction.'—*Boston Evening Transcript.*

'One of the very finest contributions to the historical literature of this country.'—*Providence (R. I.) Press.*

'This book will live as an addition of incalculable value to American history.'—*Philadelphia Inquirer.*

'To the illustrious list of American historians may now fairly be added the name of Parkman, whose works display learning and research fully equal to his great compeers; while in beauty, grace, and vividness of style, and graphic force of narration, he is scarcely rivalled by any of them.'—*Rochester Democrat.*

THE JESUITS IN NORTH AMERICA IN THE SEVENTEENTH CENTURY. Fifth edition. 8vo, cloth, $2 50.

The period covered by this work is the seventeenth century, and it records the efforts of the earlier French Jesuits to convert the Indians. It deals extensively with the character and habits of the Indians and their would-be proselyters, and closes with the failure of the Jesuits at the fall of the Hurons at the last of the century.

'We know of few historical writers who combine such rare gifts as this American author. In his attention to minute incidents, he reminds us often of Dean Stanley; often, also, in his vivid portraiture, he recalls Lord Macaulay. He is generous and ready to give all their due; though himself a Protestant—probably of the most broad school—he does homage to the piety, devotedness, and self-sacrifice of the noble men whose lives and labors he sketches. His power of description, which first became known by his "History of the Conspiracy of Pontiac," never flags. The book is written with even force throughout, and possesses an intensity of interest rarely equalled. Mr. Parkman's sketches of lake and forest scenery in the glory of summer or in the gloom of winter are of exquisite beauty; and his delicate delineations of character prove him to be an equally accomplished portrait-painter.'—*The Christian Remembrancer, London.*

'Mr. Parkman has that prime merit of an historian, the conscientious duty and comparison of original documents. He has that hearty enthusiasm which gives warmth and life alike to subject and reader, making his books wholesome reading for both old and young.'—*North American Review.*

'Parkman's work is as fascinating as the best of Scott's novels. Once commenced, you cannot lay the book down; you will read every line of it.'—*Boston Pilot.*

THE DISCOVERY OF THE GREAT WEST. Fourth edition. 8vo, cloth, $2 50.

This volume embodies the exploits and adventures of the first European explorers of the Valley of the Mississippi; the efforts of the French to secure the whole interior of the Continent; the attempt of La Salle to find a westward passage to India; his colony on the Illinois; his scheme of invading Mexico; his contest with the Jesuits, and his assassination by his own followers. The narrative is founded entirely on contemporary documents, including many unpublished letters and journals of the chief explorers, which, for the first time, place in a clear light one of the most interesting and striking portions of American History.

'These volumes, as our readers know, or should know, form together a general history of "France and England in North America." It is a subject which Mr. Parkman has made as much his own as Motley the Dutch Republic or Macaulay the English Revolution. He is thorough master of his material, which is much scattered, and exists largely in manuscript; and his imagination, his picturesque narrative style and his admirable perception of the true point of interest, give to his historical works a wonderful charm and symmetry. It is to the pages of Mr. Parkman that we must go for the American Indian. Cooper so bewitches our young fancies with Uncas and the red heroes, that it is very difficult to divest our estimate of the Indian of a false and foolish glamour. Mr. Parkman, however, knows him by personal experience and long and thoughtful study."—*Harper's Weekly.*

'He is undoubtedly not only one of our best historians, but one of the best living historians in the world.'—*Philadelphia City Item.*

'"The Discovery of the Great West," a book full of the romance of adventure, thrilling in the details of the obstacles overcome, the dangers encountered, the discoveries accomplished.'—*Christian Register.*

BANCROFT'S HISTORY OF THE UNITED STATES, from the Discovery of the American Continent. By Hon. George Bancroft; with Portraits, Maps, etc. Vols. I. to IX. 8vo, cloth, $22 50.

PALFREY'S HISTORY OF NEW ENGLAND during the Stuart dynasty. Third edition. 3 vols. 8vo, cloth, $10.

THE LIFE AND WORKS OF JOHN ADAMS. Second President of the United States. Edited by his Grandson, Chas. Francis Adams. 10 vols. 8vo, cloth, portraits, $30.

THE LIFE AND PUBLIC SERVICES OF SAMUEL ADAMS. By William V. Wells. Being a narrative of his Acts and Opinions, and of his Agency in producing and forwarding the American Revolution; with Extracts from his Correspondence, State Papers, and Political Essays. 3 vols. 8vo, cloth, with three Portraits on steel. $12.

SABINE'S LOYALISTS OF THE AMERICAN REVOLUTION. With an Historical Essay. By Lorenzo Sabine. Second Edition, enlarged. 2 vols. 8vo, cloth, $10.

THE WRITINGS OF GEORGE WASHINGTON. Being his Correspondence, Addresses, Messages, and other papers, official and private; with a Life of the Author, Notes, and Illustrations. By Hon. Jared Sparks. 12 vols. 8vo, cloth, with portraits, $24.

WEBSTER'S SPEECHES, FORENSIC ARGUMENTS, AND DIPLOMATIC PAPERS: with a Notice of his Life and Works. By Edward Everett. Twelfth edition. 6 vols. 8vo, with portraits, cloth, $18.

WEBSTER'S PRIVATE CORRESPONDENCE, with his Biography. 2 vols. 8vo, cloth, $7 50.

EVERETT'S ORATIONS AND SPEECHES ON VARIOUS OCCASIONS. By Hon. Edward Everett. With fine portrait. (Vol. III. contains a very full Analytical Index of the 3 vols. prepared by Austin Allibone, Esq.) 4 vols. 8vo, cloth. $12.

RIVES'S LIFE AND TIMES OF JAMES MADISON. By William C. Rives. 3 vols. 8vo, cloth, $10 50.

SPARKS'S LIBRARY OF AMERICAN BIOGRAPHY. Conducted by Hon. Jared Sparks. New Series. Complete in 15 vols, each volume containing a Portrait or a neatly engraved Historical Sketch. 5 vols. 12mo, cloth, $15.

SAVAGE'S GENEALOGICAL DICTIONARY OF THE FIRST SETTLERS OF NEW ENGLAND. By James Savage, formerly President of the Massachusetts Historical Society. 4 vols. 8vo, cloth, $12.

OLIVER'S PURITAN COMMONWEALTH. An Historical Review of the Puritan Government in Massachusetts, in its Civil and Ecclesiastical Relations, from its Rise to the Abrogation of the First Charter. By the late Peter Oliver. 8vo, cloth, $2 25.

LIFE AND TIMES OF JOSEPH WARREN. By Richard Frothingham. 8vo, cloth, $3 50.

WINTHROP'S ADDRESSES AND SPEECHES ON VARIOUS OCCASIONS. By Robert C. Winthrop. 2 vols. 8vo, cloth, $7.

SPARKS'S LIFE OF WASHINGTON. The Life of George Washington. By Jared Sparks. New edition, with portraits. 8vo, cloth, $3.

PICKERING'S LIFE. Vol. I. The Life of Timothy Pickering. By his son, Octavius Pickering. With portrait. 8vo, cloth, $3 50.

Harper's Catalogue.

The attention of gentlemen, in town or country, designing to form Libraries or enrich their Literary Collections, is respectfully invited to Harper's Catalogue, which will be found to comprise a large proportion of the standard and most esteemed works in English Literature—comprehending over three thousand volumes—which are offered, in most instances, at less than one-half the cost of similar productions in England.

To Librarians and others connected with Colleges, Schools, etc., who may not have access to a trustworthy guide in forming the true estimate of literary productions, it is believed this Catalogue will prove especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by the titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the title of every work on the subject. Persons desirous of obtaining information regarding any foreign land, will find under the name of the country the title of all books of travel, history, or biography relating thereto.

The Publishers believe this will meet a long-felt want.

To prevent disappointment, it is suggested that, whenever books cannot be obtained through any bookseller or local agent, applications with remittance should be addressed direct to the Publishers, which will receive prompt attention.

Sent by mail on receipt of Six Cents.

Special attention given to orders by letter.

NOW READY.
A SHORTER COURSE IN
ENGLISH GRAMMAR.
BY SIMON KERL.
Author of "Common School Grammar," "Comprehensive Grammar," "Composition and Rhetoric," etc.
1 vol., 240 pages, price 80 cents.

This work aims to be just such a manual as the great majority of schools and academies now require. The classification is exceedingly compact, and all that belongs to the same topic is carefully grouped together. It is specially adapted for use in schools where only one text-book in grammar is desired.

We shall be pleased to have the work extensively examined by teachers, and for this purpose we will send it, free of postage, on receipt of *half* the above price.

RECENTLY PUBLISHED.
ELEMENTS OF
Composition and Rhetoric.
BY SIMON KERL.
Author of "First Lessons in English Grammar," "Common School Grammar," and "Comprehensive Grammar."
1 vol. 12mo. 400 pages, price $1 25.

This is a simple, concise, progressive, thorough, and practical work on a new plan. It occupies an intermediate position between Common Grammar and Higher Rhetoric, and has been commended by many eminent scholars and critics as the best work of the kind now published.

We shall be pleased to furnish it, free of postage, for examination, with a view to introduction, at half retail price.

IVISON, BLAKEMAN, TAYLOR & CO.,
138 and 140 Grand Street, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 12, 1871.

The Week.

We have seen in two or three cases remarks upon our promising no 'new features' and offering no 'inducements' to subscribers for the coming year, after the example of many of our contemporaries. The explanation is that after careful observation of several other papers which do promise 'new features,' we have been pained by the strikingly close resemblance which the numbers of each year bear to those of the preceding year, and have come to the conclusion that, if it was not for the name of the thing, a paper is just about as valuable without 'new features' as with them. Anybody who has subscribed to any leading periodical for a long time must confess with sorrow that he has rarely found that the high hopes excited in his palpitating breast by a perusal of the January prospectus have lasted beyond February, and that, year in and year out, the mental sustenance he got from it was about the same. We consequently have reached the conclusion that, without casting any reflection on anybody else, we, for our part, celebrate the New Year most becomingly and profitably by promising nothing new. We have no undiscovered genius in reserve; our hatred of evil, and our love of the True, the Beautiful, and the Good were, to the best of our knowledge and belief, about as strong on the 1st of January as they were in September and October, and our determination to administer telling stabs to the Man of Sin, the Man of Sedan, and the Greatest Criminal of the Age, whoever he may be, we can assure our readers is independent of the weather. No virtuous glow comes over us about the time that subscriptions expire, nor does our zeal wax cold after the holidays. Satan would find himself just as uncomfortable on our premises in April as in December, as he well knows.

The great Motley mystery has at last been revealed in the publication of a dense mass of correspondence between Mr. Motley and Mr. Fish relating to the removal and its causes. The facts of the case seem to be that Mr. Motley, before going to England, prepared a 'Memoir' on the *Alabama* question, which reproduced in substance Mr. Sumner's speech at the rejection of the Johnson-Clarendon Treaty, and followed implicitly that gentleman's lead as to the nature of the wrong done to the United States. This Memoir was presented to Mr. Fish, who returned it to the writer, according to both parties, without any expression of dissent, but also without any expression of approval, and with an intimation that the discussion of the *Alabama* affair had better be suspended till the passions roused by the Sumner speech had had time to cool. This was sufficient to indicate that Mr. Motley's views did not meet with approval at the State Department, and if he had retained any doubts on the subject, they should have been removed by his instructions, which repudiated Mr. Sumner's theory about belligerency, and confined the American complaint strictly to the British breaches of neutrality committed after the Queen's proclamation, and towards which the proclamation, in so far as it was premature, stood in the relation not of cause but of evidence of animus. Mr. Motley, however, though refraining as directed from opening the negotiations, had a conversation with Lord Clarendon, in which he not only brought up the belligerency question, but spoke of it as 'the fountain-head of the subsequent disasters of the American people' and of 'a long series of misdeeds,' and assumed a minatory tone towards England, by talking of the 'grave responsibility she assumed in issuing it,' and making use of strong expressions with regard to American feeling, such as 'rankle,' 'fester,' 'wounds,' and so on, in all of which, according to Mr. Fish, he departed from the spirit of his instructions, and followed the spirit of the 'Memoir,' which, again, was inspired by Mr. Sumner's speech. When his report of this reached America, the President was greatly dissatisfied, and he was directed to tell Lord Clarendon that his talk had not been altogether in accordance with the President's instructions, which he did.

Mr. Motley refused to resign when called on because he had never received any intimation that his course had been unsatisfactory to the Administration, and because resignation, in compliance with a peremptory demand, would under these circumstances be equivalent, he thought, to an acknowledgment of shortcoming. On this point, the misunderstanding is very curious. Mr. Fish says he forbore criticising Mr. Motley's official conduct as they went along out of regard for his feelings and respect for his high literary standing, and evidently supposed that various little things would be taken by Mr. Motley for snubs which Mr. Motley evidently never noticed. He was apparently quite unconscious that he had gone beyond his instructions in his interview with Lord Clarendon, or that his being directed to correct himself to Lord Clarendon contained an implied rebuke; or that his failure to report his formal submission of his report of the conversation to Lord Clarendon was a grave breach of duty, and accounted for the absence of friendliness in the tone of Mr. Fish's reply. What with Mr. Fish's over-delicacy, and Mr. Motley's want of perspicacity, the final blow came like a thunder-clap. The peremptoriness of the request that Mr. Motley should resign, made in July, was due, Mr. Fish says, to anxiety to have his successor confirmed before the Senate adjourned. But what brought matters to a crisis was his submitting his report of the conversation to Lord Clarendon for verification before transmitting it, without telling his own Government that it had been so verified. This information he did not communicate till Mr. Fish had replied to the despatch, and, indeed, it did not reach Mr. Fish, who was absent from Washington, till October. But, as soon as it came to the President's knowledge, his removal was determined on, and his resignation asked for.

The controversy is conducted with dignity and moderation on both sides, and with considerable advantage for Mr. Fish, till he reaches the close of his despatch, where he loses temper over Mr. Motley's assertion that revenge for Mr. Sumner's hostility to the San Domingo treaty had something to do with his dismissal, and indulges in illustrations and sarcasms more worthy of the columns of our esteemed contemporary, the *Tom-tom*, than of a grave official paper. It is altogether a sorry and discreditable affair, and, though the correspondence reveals in Mr. Motley an absence of the temper and habit of mind necessary to the proper conduct of an international controversy, and especially one of a quasi-legal character, it certainly shows want of tact on the part of the Administration. No man of Mr. Motley's standing, or of any standing, filling his office, ought to be turned adrift at a week's notice without acquainting him in full with the causes of his dismissal. We are afraid the San Domingo quarrel will be seriously embittered by the light and depreciatory tone in which Mr. Fish speaks of Mr. Sumner's 'great speech'—we mean that on the *Alabama* claims.

The civil service got early attention on the reassembling of Congress on Wednesday week. We may, we suppose, credit Mr. Morrill, of Vermont, with a reformatory purpose rather than a regard for the revenue when he moved an enquiry of the Senate Committee on Finance as to the expediency of imposing stamp duties on every application, and every signature to an application, for office to the President or heads of departments. Mr. Trumbull's bill, to make it a penal offence for Congressmen to solicit, advise, or recommend the same officers to make appointments to office, was reintroduced, somewhat modified by his committee, and we should characterize the short debate that followed as hopeful. Mr. Sherman gave in his adhesion to the measure, while Mr. Morton, who has undoubtedly made some of the worst recommendations with which the President has been afflicted, declared it to be unconstitutional and false in principle, and that the Government could not be carried on without the present system.

The only other noteworthy proceedings in the Senate have been the passage of an amendment to the Funding Act, increasing

the 5 per cent. issue from two hundred to five hundred millions, which is simply child's play, and listening to documents from the Secretary of War touching Senator Sprague's alleged complicity with Texas cotton frauds during the war, and from Secretary Fish concerning Mr. Motley's recall. In the House, the Paraguayan difficulty has been debated with a result favorable to ex-Minister Washburn's part in it—a court of enquiry being ordered for Admirals Godon and Davis, whose conduct on the Plate River is censured. San Domingo came up on Wednesday, the 4th, Fernando Wood asking for information, which the House refused to follow the precedent of the Senate by allowing him. Gen. Butler, the next day, was permitted to call for certain venerable reports made concerning the island in Polk's and Pierce's administrations. On Monday, after numerous rebuffs, Judge Orth persuaded two-thirds of his colleagues to take up the Senate resolution, and on Tuesday it was carried with an amendment declaring Congress not thereby committed to annexation.

The January Treasury statement of the national debt, which had not yet appeared when we wrote last week, confirms everything we then said concerning the cash balance in the Treasury. It has risen from 125 millions, on December 1, to 138 millions in January, although over nine millions of the increase is due to a corresponding increase in the private coin deposits—a circumstance which we are, however, totally unable to account for by any known operations of the Treasury. After paying all its obligations maturing on the 1st instant, the Secretary will have over 50 millions in gold, and nearly 20 millions in currency, more than he has any intelligent use for, while in his published programme for the month he proposes to sell only his probable surplus of monthly receipts in coin, and to invest, besides the proceeds of these, only two additional millions of currency in the purchase of bonds. In other words, of his 70 millions of surplus, he proposes to employ two millions during the month of January! The reduction of the debt during December was small, a trifle over two millions. The balance of interest due the United States by the Pacific railroads is shown to be over six millions of dollars.

The new year has brought a rather improved tone into business. The export trade continues large and active, with some improvement in breadstuffs and meats, but with a further decline in cotton, which is now very near ante-war prices, having sold a trifle below fifteen cents a pound. Country trade is generally quiet, but in spite of further decline in many kinds of dry goods, dealers are more cheerful. Money has again returned to its normal figure of six to seven per cent., and on the Stock Exchange prices have been advancing, but the effect of the recent failures can scarcely be said to have exhausted itself, especially since each further detail seems to place them in a worse light. The failure of the two insurance companies is reviving the entire question of insurance management, and is likely to bring to light whatever is rotten. Gold continues unexpectedly steady, although the number of States, towns, and corporations that are paying the interest on their ante-war engagements in coin is steadily increasing. The apparent failure of the State of Alabama to pay the interest on its bonds lent to a railroad company has had a less damaging effect on Southern securities than was generally anticipated, but the management of the finances of some of the Southern States is discouraging in the extreme. The coal strike has now become very general, and coal has advanced somewhat, but less than the manipulators expected. Real estate is dull, but with less pressure to sell than was looked for about this time.

An event apparently unimportant, yet possibly of wide-reaching consequences, is the contract just concluded between the Pacific Mail Steamship Company and the Central Pacific Railroad, by which the former agree to abandon their line of steamers between San Francisco and Panama, and to put additional vessels on the route from San Francisco to China and Japan, virtually converting the Steamship Company into a continuation of our Pacific railroads, and forcing the freight and passenger traffic of the East to come across the continent, instead of going around it. The Pennsylvania Central Railroad Company are at the same time constructing vessels for a transatlantic line of steamers to connect with their railroad, and the Baltimore and Ohio road are contracting in Glasgow for English-built vessels for the same purpose. The expanding power and influence of these great railroad corporations appears to know no limit; they are not satisfied with the control of the land, they now seek the control of the sea as well. In the meantime, the same aggressive, expansive tendency is visible in other financial quarters. American bankers are everywhere competing with old-established English firms for the money business of the world, and so remarkable has been the increase in the number of American banking-houses in London that the owner of a new bank-building in Lombard Street, London, has thought it worth his while to advertise his 'Offices to Let' in the New York daily papers.

The Chicago *Tribune*, while warmly endorsing some recent remarks of ours on the subject of land-grants, takes exception to what it calls 'some serious errors' in our statement of facts relating thereto. If we had been in error we might be excusable, for no harder task is ever performed by the journalist than that of extracting the grain of important fact from the bushel of irrelevant detail and opinion, which constitute the bulk of our official reports. To this the Land Office Report is no exception. We have searched it vainly for a precise statement of the 'total area of the United States,' which we gave at about 2,200,000,000 acres, and which the Chicago *Tribune* thinks we overestimated by several hundreds of millions of acres. After considerable labor, we ascertain the total area of the United States to be 2,290,170,880 acres, or nearly one hundred million more than our figures. The figures of the public domain were likewise given by us correctly as 1,820,000,000 acres (in precise figures, 1,834,998,400 acres), which constitute the subject-matter of the 'public land problem.' The context clearly showed that we referred to the past as well as the present. Of the 2,290,000,000 acres which constitute the total area of the United States, about 400,000,000 had passed into private ownership before the establishment of the Land Office. The remaining 1,800,000,000 and more formed the public domain which we stated had been in process of gradual settlement ever since. Of these 1,800,000,000, about 400,000,000 have been thus gradually settled, or at least have passed out of the control of the Government, in addition to the 400,000,000 which the Government, as such, never owned. Perhaps our words admitted of the construction that the whole 1,800,000,000 acres remained *to-day* in the possession of the nation at large, which would, of course, be incorrect. The precise facts are: The total area of the United States is 2,290,000,000 acres. Of these, 455,000,000 acres had passed into the ownership of States, corporations, or individuals before the establishment of the Land Office, leaving 1,835,000,000 acres at the disposal of the nation at large. Of these latter, 439,000,000 acres have been disposed of at various times up to November 1, 1869, the date of the last published official report, and 1,396,000,000 remained then to be disposed of, including in the latter the amounts granted to railroads, but not yet received. We repeat these figures for the benefit of readers who may, like the Chicago *Tribune*, have put upon our words a misconstruction to which they were no doubt liable. But the figures can in no way affect the force of the argument.

We asserted last week on excellent authority that the manager of the meeting for the celebration of the union of Italy had been unable to get any politicians of note to attend it. The committee since inform the *Evening Post* that they have got favorable replies from some politicians of note, but do not say how many. We suspect they are very few in number, and have come in since we received our information. We now suggest that the committee publish the list of persons whom they invited to attend the meeting, and append the replies, or otherwise indicate the result of the invitation. It would be both interesting, instructive, and refreshing. A politician driven shivering to the wall, and forced to confess that he had no convictions, and had long lost the art of forming them, or the courage to utter them if he had them, is and will always be a delightful spectacle, and its attractions are heightened when the poor creature, though bred a Presbyterian, or Congrega-

tionalist, or Baptist, is detected trying to persuade Irishmen that he feels sorry for the Pope and the Temporal Power. Schuyler Colfax has relieved himself of all imputation arising out of this matter by writing a very sensible letter, expressing warm sympathy with the Italian cause.

Confinement in the state prison in some parts of the country is rapidly ceasing to constitute a stain on a man's character, and becoming simply 'an experience,' like another. Few persons are without some congenital peculiarity which will account for their presence in that institution without burdening them with much responsibility. In other words, we are gradually shifting the guilt of our robberies, and murders, and frauds, and adulteries on our ancestors, which, as it does not hurt our ancestors, and saves us a good deal of annoyance and inconvenience, is an excellent arrangement. The most remarkable illustration of the growing respectability of the penitentiary as a place of residence has just been furnished by a biographical account, appearing in various papers, of an aged scoundrel, named Ruloff, now on trial for robbery and murder, at Binghamton, in this State. He had previously killed his wife and child, but escaped hanging for that owing to his successful concealment of the *corpora delicti*. His life has, however, been one of continuous crime, and he has worn half-a-dozen aliases. He passed most of his time from 1856 to 1859 in Ithaca jail, where, says the *Tribune*, he occupied himself 'in studying criminal law and in teaching the languages. He received students in jail, and at times would have a number of young men and even young ladies reciting to him.' The jailer seems to have committed to him the education of his son, a young man who repaid his instructions by assisting his preceptor to break jail, which he did successfully, but was recaptured a year or two later.

The bombardment of the forts on the east of Paris has been continued, after the reduction of Fort Avron, steadily and effectively, as the reports from the Prussian camps say, but hardly without intermission. The fall of Fort Avron, coupled with the continued attacks of the Germans, gave rise to intense excitement in the besieged city, and to clamors for a sortie on a grander scale than heretofore made. Trochu, who was charged with weakness, answered in a proclamation, in which he deprecated the efforts made by his assailants to destroy the harmony to which Paris owed her prolonged resistance, and promised that the army, which needed rest, but was preparing to act, would do its duty. A council of war subsequently adopted measures for the consolidation of the National and Mobile Guards with the regular army for a 'more vigorous defence of the city,' which were immediately to be carried into effect. The besiegers in the meanwhile not only kept up a 'most violent bombardment,' as Trochu designated it, from the east, to which only Fort Nogent was able effectively to reply, but on Thursday, Jan. 5, also opened a heavy fire against the southern forts, Issy, Vanves, and Montrouge, as well as on the entrenchments at Villejuif, further east, and on the gunboats in the Seine. This bombardment was energetically continued on the following days, and 'was proceeding favorably' on the 8th, according to King William. The barracks in Fort Vanves were then on fire. A crisis was evidently approaching.

In the North, considerable engagements took place, on the 2d and 3d, between the armies of Faidherbe and Manteuffel, near Bapaume, south of Arras. The French had the offensive, and, after the first day's fighting, Faidherbe telegraphed to the Government at Bordeaux that he had 'driven the Prussians from all the positions and villages occupied by them,' with 'enormous loss,' his own being 'serious.' On his part, Manteuffel reported a repulse, on that day, of the enemy, 'with small Prussian loss and a heavy loss to the French.' On the 3d, Faidherbe renewed the attack, which, after an obstinate contest, General von Goeben, the commander of the Prussian Eighth Corps, 'victoriously repelled,' according to the German official despatch, forcing the enemy to 'a retreat which soon became disastrous.' The French general, however, though actually retreating towards Arras, took a different view of the affair, telling his soldiers, in an order of the day, that [they 'had well deserved of the country,' and that even the enemy could this time not deny them victory—on which point, as we have seen, he was decidedly mistaken. On the other hand, his pursuit by the Prussians does not seem to have been vigorous. On the same day, the 3d, General Bentheim, commander of the First Corps, forming the western division of Manteuffel's army, and operating on the Lower Seine, defeated a French force on the left bank of that river, driving it beyond Bourgachard. This place, however, as well as Bourgtheroude, the French claim to have reoccupied a few days later, after a victory by General Roy, to which German reports make no allusion. At the opposite extremity of the northern theatre of war, the Prussians have captured Rocroy.

Concerning military operations in the West and East, our information is more scanty than ever. Bordeaux despatches for a number of days gave us vague news of successes achieved by General Chanzy's flying columns, and exaggerated accounts of his forces, and finally a more detailed account of a victory won, after some disadvantages, near St. Arnoult and Montoire, in the valley of the Loir (a river which most of our papers continue to ignore, transferring the operations to the better-known Loire, just as they obstinately cling to the erroneously accepted name Chauzy). In consequence of this action, the Germans were said to have fallen back on Vendôme. These reports, however, are contradicted, or at least made insignificant, by later despatches from German sources, which announce the steady and 'victorious' advance of the forces under Prince Frederic Charles and the Grand-Duke of Mecklenburg towards Le Mans, and the occupation of Montoire, Sargé, Savigny, La Chartre, and St. Calais, by the former, and of Nogent-le-Rotrou by the latter. A separate force, belonging to Frederic Charles's army, seems to be looking after Bourbaki—about whose advance eastward we continue to receive mysterious hints—as we hear of some fighting near Briare, on the Loire, above Gien. In the East, in spite of Bourbaki's threatening movements, General von Werder seems to have resumed the offensive, but the report that his troops have 'reoccupied Auxonne,' on the Saône, between Dôle and Dijon, can hardly be correct, if there be any truth in the statement accompanying it that 'there are forty thousand French near Rioz,' between Vesoul and Besançon. The siege of Belfort continues uninterrupted.

Contrary to the Cable announcement, which we reproduced last week, of the declaration of Roumanian independence by Prince Charles, we now hear—and this is in itself much more likely to be correct—that 'the Roumanian Government has assured the Sublime Porte of its fidelity to the Treaty of 1856.' This simplifies the Eastern question, the speedy treatment of which by a conference to be held at London is again looked for with lively interest. Jules Favre's going or not going to attend that conference is a matter much talked about in contradictory reports from various quarters. We also hear of the unwillingness on the part of Prussia to support the demand of Austria for a fresh guaranty—against Russia—for the security of the navigation of the Lower Danube. Notwithstanding this, the Austrian Chancellor, Count Beust, in answer to a notification by his Prussian rival of the restoration of the German Empire, expresses in strong terms his satisfaction with that 'act of historical significance and paramount importance.' The sincerity of his words, however, in spite of what Austria has gained in real strength and cohesiveness by her compulsory separation, in 1866, from Germany, may be doubted, especially when he adds that 'the glorious history of the Hapsburgs, as linked with the history of Germany, will be remembered by the Emperor only with feelings of the warmest sympathy'—which is saying too much for the generosity of Francis Joseph. In opposition to the demands and intrigues of Russia, Count Beust displays a more decidedly frank and manly policy, which is quite distasteful to the Czechs and Slovens, who, emboldened by Gortchakoff's late moves, so threatening to Austria, have tried to intimidate the Chancellor into compliance with their demands by half-traitorous demonstrations in favor of Panslavism.

THE FRENCH RESISTANCE.

PARIS was not generally expected to hold out more than two months; it has held out four, and may hold out another. The reverses of the French army in August and September were so tremendous as to seem irretrievable. People supposed, and not unnaturally, that any people capable of upholding and obeying the set of soldiers and statesmen whom Bismarck carried off captive at Sedan, could hardly have any recuperative energy, and that once down they would stay down. Nevertheless, since then a force of six or seven hundred thousand men has been organized and armed. To have raised and disciplined such a force so as to enable it to stand long enough in the field for the enemy to get near it, is no mean exploit. To have done it, as it has been done, in the absence of all enthusiasm or initiative or habit of self-dependence on the part of the people, makes it all the more creditable still. Indeed, considering the condition in which the surrender at Sedan and the revolution in Paris left France, it would be hard to find a match for it in history. It is not at all unnatural that the sight of these unlooked-for displays of vigor should rouse more or less sympathy amongst those who, though they have no liking for Prussia, were so appalled by the revelation made by the war of the meanness and rottenness of the system under which France had sat contentedly for eighteen years, that they had nearly come to the conclusion that she did not even deserve pity. There is in human nature, generally, a laudable and irresistible disposition to side with the weaker party in every contest, and in addition to this there is in Anglo-Saxon human nature a kind of savage gratitude to anybody, be it dog, cock, pugilist, or nation, who, though badly beaten, and with nothing to hope from fighting on, shows spectators good sport by refusing to give in. The French are appealing both to the higher and the lower feeling. They are horribly unfortunate, and yet they are by sheer persistence bringing back to the war the interest of its first stage, and making the issue appear still a little uncertain. The consequence is, that a great number of people, both here and in England, who gave them up as lost last September, are now to be found not only praising them highly, but predicting their ultimate success.

There is, as it seems to us, no ground for anticipating anything of the kind; and in reading the elaborate prophecies of what France will do which are now appearing in the columns of some of our contemporaries, we are irresistibly reminded of the attempts which were made to bolster up the Southern cause in the last year of the rebellion, and the influence of which on persons engaged in the cotton trade caused such widespread ruin in 1865. Not only do we hear the most extraordinary stories of French resources, as regards men and the *materiel* of war, but we are gravely told to look for the display of a dourness, desperation, and tenacity, on the part of Frenchmen, such as not only they have never displayed, but no people similarly situated has ever displayed. The illusion—for such we cannot help calling it—has gone so far that even the London *Spectator* draws hope for France from the example of the Prussians under Frederick the Great in the Seven Years' War, and actually bids us expect, from the property-loving, ease-loving, unadventurous, materialistic, undisciplined, and unloyal Frenchmen of to-day, the desperate courage of the devout, grim, hardy, poor, enthusiastic, and devotedly loyal Prussians who stood round their hero-king in that wonderful struggle a century ago.

Let us look the facts in the face. The occupation of the whole Prussian force with the two great sieges of Paris and Metz may be said to have given the French Government complete freedom, during the months of September, October, and November, to call out, arm, and organize fresh levies; and that, owing to their command of the sea, they have done this with success, there is no denying. But it must be remembered that if the calculations made in 1867–8 by the Minister of War, when bringing in the bill for the reorganization of the army, were correct, the whole fighting population of France is now under arms. It was then declared, and by those who were anxious to make the most of her resources, that the new organization would sweep into the line the reserves and national guard (mobile and sédentaire), 1,200,000 men. Anybody who knows anything whatever about military organization, however, knows that the estimates on paper are never reached in practice, and that when it is said that a country can put 1,200,000 men under arms, what is really meant is that she can, perhaps, bring 1,000,000 into the field. Now France has had since the beginning of the present war over 350,000 men taken prisoners, and sent to Germany. She has had, on a very moderate calculation, 150,000 killed and wounded. If we say that altogether 200,000 Frenchmen of the fighting age have since the 1st of August been consigned to their graves or are now in hospital, we shall certainly be under the mark. So here we have at one blow 550,000 of the million *hors de combat*. Allowing 200,000, most probably an exaggeration, for the Army of the Loire or for the First and Second Armies into which it has been divided, we leave 250,000 for the garrison of Paris and for the forces in the North and East. We will, however, make the garrison of Paris 300,000, and give Faidherbe and the other generals 100,000, which will make the total French force 600,000. It must be remembered, however, in judging of the effectiveness of this force, that it is largely composed of very young men and men past their prime, totally undisciplined, unused to hardships, and unfamiliar with the work of taking care of themselves in the field; and that its officers have no more experience than the privates, and that the French commissariat, never very good, is now in a state of complete disorganization; and that French soldiers bear reverses badly, and, according to the almost unanimous testimony of those who have seen them in the field, suffer physically in an extraordinary degree from mental depression. Any one who considers these things can hardly help feeling a good deal astonished by the calm assurance of writers who tell us that France has 2,800,000 fighting-men to draw on, while Germany has her last man in the field; and who talk of the melting away of the Prussian hosts under the influence of the hardships and casualties of the campaign, as if it was only the Prussians who were melting away, and as if trained soldiers, under good officers, in an army which carries efficiency in every department to the verge of pedantry, was at all likely to lose as heavily from the ordinary campaign hardships as raw levies, however enthusiastic. We may take it for granted that for one German who succumbs to the cold and fatigue two Frenchmen do so. We must bear in mind, too, that Germany is drawing her supplies of men from a population as large as that of France, and that supposing her to have lost man for man from casualties and disease, France has lost through surrenders about 400,000 men more than Germany has done. That is a large army, and one-third at least of her total fighting force, so that, supposing the determination of the two parties to be equal, and their powers of endurance to be equal, and their capacity for destruction to be equal, Germany has still an enormous advantage over France. That the Germans are operating in an enemy's country is constantly spoken of as a disadvantage, and so it is. But then it is, on another side, a great advantage. It leaves their lines of communication in danger, but it enables them to draw a large proportion of their supplies from French soil, and by disorganizing French society and industry, and breaking up French highways, it greatly increases the difficulties of the French resistance. Germany is doubtless suffering dreadfully from the war, but not in the same way, or in the same degree, as France. The male population of Germany is being slowly and remorselessly drawn into the field, and so is that of France; but the devastation of the war, properly so called, falls on France only.

People who are flattering themselves with the notion that because Prince Frederic Charles has given up pursuing the Army of the Loire,* and because Werder has fallen back from Dijon, the German resources must be failing, and the position of the army becoming critical, must have forgotten what the problem is which the Germans have to solve. Their main object is now, and has been since September last, the capture of Paris, and this for two reasons: first, because it is the enemy's capital, the seat of his government, and, in a peculiar degree, the centre of his political system; and secondly, because it is a great fortress, and contains over 300,000 men, or, in other words, over one-half the remaining French army, and enormous quantities of munitions and artillery. An operation which aims at the seizure of the capital and

* News has since come that he is continuing the pursuit.

the destruction of the force by one and the same stroke, is an operation of the first magnitude. Everything else is subsidiary to it. Therefore, the work of the Germans has, during the last four months, been the siege of Paris. Whatever force they can spare from the immediate work of keeping Trochu shut up, is employed, not in overrunning the country, as some people seem to imagine—a futile and disastrous undertaking at midwinter—but in preventing interference with the besieging force from the outside. This they have very successfully and very easily done thus far; this, it is quite plain, they will do without much difficulty to the end. The late operations of the French have been mainly interesting as exhibitions of the national capacity; their influence on the progress of the war has been very slight indeed.

Ample justice has been done on all sides to the constancy and pluck of the members of the Provisional Government, and especially to that of Gambetta, who appears to have entire charge of the conduct of the war outside Paris. But those who are disposed to forgive this gentleman and his colleagues everything in consideration of the energy they have shown in raising and arming troops, would do well to read the rebuke administered to them in the late letter of M. Guizot, translated in *Macmillan's Magazine*, and which is none the less severe for being sugared over with compliments to their honesty and patriotism. The substance of what he says is this, and every careful observer will heartily concur with him: that it is not possible to bring the full force of a nation into play for military purposes, unless through an assembly of its representatives; that a representative government necessary at all times, is doubly necessary in time of war; that to dispense with such an assembly, and go on raising troops, borrowing money, and keeping the whole male population of the fighting age under arms, is a responsibility which no man, or six or twelve men, have any right to assume; that its assumption by M. Gambetta is neither more nor less than a usurpation, particularly as—M. Guizot might have added—he derives his authority wholly and solely from a *coup d'état* performed on a regularly constituted legislature by a mob rushing in from the street; and that the very readiness with which he is obeyed by the armies and the country, which some people think so very fine, is a most deplorable sign of the disposition of the French to rely, in all scrapes and perplexities, on the 'one man power'—a disposition which has been their political ruin thus far, and which M. Gambetta is doing everything he can to foster. We may add, as an expression of our own opinion, that a worse offence against the principle of popular sovereignty—which this Provisional Government professes to have at heart—has never been committed than its persistent neglect and refusal to call together a national assembly, no matter how small, or in what nook or corner it meets; and it is aggravated by the unblushing avowal which Louis Blanc has made, that the reason of the refusal is the fear that, if such an assembly met, it would not set up a republic. We may go further, and say that a greater crime than this same Gambetta is committing in taking on his shoulders the sole responsibility, without counsellors, and without regular communication with his colleagues in Paris, of continuing a bloody and disastrous war, and of offering the unfortunate French people, already far too familiar with the processes of despotism, no alternative but unconditional surrender, or continued resistance under the orders of a self-appointed dictator, no French politician, except Louis Napoleon, has been guilty of. The admiration his performances meet with, too, from some Americans and Englishmen, is but one degree removed from the glorifications which another set of Americans and Englishmen bestowed in the days of his glory on 'the Man of Sedan.' Gambetta, like Bonaparte, is trying 'to save France,' out of his own head, and in his own way; but France can never be saved but by herself; and France only speaks and acts, and can only speak or act, through a regularly elected representative assembly.

A NOVEL SCHEME FOR SECURING RAILROAD COMPETITION.

A NOVEL method of creating a competition among railroads is something the suggestion of which, at this late day, is calculated to excite surprise. The Board of Railroad Commissioners of Massachusetts have, however, undertaken to do it, and the development of their plan constitutes the essential feature in their report for the year 1871. Not only have they undertaken the task, but they have fortified themselves in their attempt by a formidable array both of facts and statistics, drawn from practical experience elsewhere.

The curious results produced by what is called competition in transportation by rail have frequently been discussed in the columns of the *Nation*. Year by year, this system is working its way out to its logical conclusion, which is now becoming alarmingly apparent. A few weeks ago, representatives of three of the great trunk thoroughfares between the West and the East met in conclave and concluded a solemn treaty. The war of rates was to cease; competition was to be an indiscretion of the past, and combination was established as the law of the future. The several corporations were not, indeed, to 'pool' their profits, and so merge themselves into one closely cemented monopoly. This final lesson of experience was reserved for a not very remote future; for the present they simply swore a peace, sure, before long, to vanish in a new war. Meanwhile, what was this very competition thus brought to a close? How far did it extend? What are, indeed, the limits of any competition between private railroad corporations? This subject, even yet, is little understood, and there is a species of cant about it which the experience of years seems unable to dissipate. A real and healthy competition, under an active law of supply and demand, is one which permeates the whole community, and the advantages of which are participated in by all persons and in all places. It does not create an unnatural fulness in one locality, to be balanced by a corresponding dearth in another; it does not give control of the markets of the world to the residents in one section of the same country, and surrender those of another wholly to the mercies of a monopoly; it does not produce wild fluctuations, running perhaps through hundreds per cent., subject to no law, and brought about without notice; it does not admit of conventions and combinations, and 'poolings of profits;' it does not defy all calculation, and, in the twinkling of an eye, transform the feast of to-day into the famine of the morrow. All these rapid changes and strong contrasts are, however, produced by what is miscalled the competition of railways.

The reason of all this is obvious—it is equally obvious that the difficulty is one inherent in the system. There are two insuperable obstacles placed by the nature of things in the way of a full and healthy operation of the laws of supply and demand on any system of transportation by rail carried on through the medium of private corporations. In the first place, the number of these corporations cannot but be very limited—so limited, indeed, that combination is always perfectly practicable. In the second place, competition is necessarily confined to competing points. The first of these limitations has been so much dwelt upon of late, that it may now be considered as fairly established in the popular mind. The second is rapidly working itself into general acceptance. Every one at all interested in railroad investments is perfectly familiar with the suspicion with which capitalists regard every road which makes a great display of heavy receipts from through business. Competition, experience has taught them, eats up all their profits—the more they do, not seldom the poorer they become. It is the local business which makes dividends certain, and it does so because the local business is not subject to competition. In plain English, it is a sure monopoly. Competition is thus at best confined to points where railroads converge; and throughout the country, irrespective of population, not one place in twenty on our railroads is a point of convergence, and, consequently, not one point in twenty enjoys any competition, or experiences, except in some remote degree, the operation of those laws of supply and demand to which we have been contented to leave all regulation of our railroad system. The community now, therefore, as the result of thirty years of experience, finds itself placed in this position—nineteen points, perhaps, out of every twenty on our railroads are wholly at the mercy of close monopolies; each twentieth point enjoys the advantages of such effects of a law of supply and demand as may be evolved out of fierce competition alternating with strict combination.

Such is the condition of affairs with which apparently the course of their investigations brought the Massachusetts Commissioners face to face. The way in which they have met the difficulty is worthy of notice. They say in their report that it is true competition has failed, but they argue that as yet the failure is limited to competition between

private corporations. It therefore remains to be seen if the same result would ensue were competition to be established between private and public corporations. In other words, they shift the essential element of competition—they would no longer seek it in a multiplication of competing roads in private hands, but they would find it in establishing a mixed ownership of the roads already existing. Or, stated in yet another way, they seek to break the power of combination by introducing into the system an element which will not combine. The idea of working out the problem in this way is, they acknowledge, in no respect new with them; they only seek to introduce it into America. They refer to the experience of Belgium, where such a mixed system of ownership has existed even from the beginning. In 1864, it appears that there were in that country 1,247 miles of railroad; of this amount 347 miles had been built, and had from the first been owned and operated, by the Government; 117 miles more, constructed by private parties, had been leased and were operated on the same footing as the public roads; all of the remainder, 780 miles, or nearly two-thirds of the whole, were the property of private corporations, and operated solely for their benefit. In regard to the practical working of this system, they produce the testimony of one certainly most competent to judge, M. Fessiaux, the Belgian Minister of Posts, Telegraphs, and Railways. In a statement submitted to the Royal Commission on Railways of 1866, this official declared 'the state railways thus (through a mixed system of ownership) find themselves placed in constant comparison with the railways worked by private companies; on the one hand stimulating them to general improvements, and on the other hand acting as a sort of check against any attempt to realize extravagant profits at the cost of the public.' And these results, the commissioners naturally intimate, are exactly those which they wish to see produced in Massachusetts, and which competition ought, but has hitherto lamentably failed to produce.

Though they carefully avoid all expression of opinion on the subject, it is sufficiently apparent that the Massachusetts Commissioners, however it may have resulted in Belgium, have no very implicit confidence in the results of any general ownership of railroads by the State, under our system of government. They very distinctly limit themselves at present to a proposal to temper, as it were, a general rule of ownership by private corporations by a very limited infusion of public management. They therefore now propose the purchase by the State of the railroad between Boston and Fitchburg, with a view to its management, not by the Government, they are careful to say, but by a board of trustees, to be selected by the Legislature from the community at large. The road, it seems, is only about fifty miles long, but it lies wholly within the jurisdiction of Massachusetts, and is so placed among the other roads of the State as to hold a commanding position—competing, in fact, in every direction. This road, the commissioners, it would seem, rather desire to convert into a standing menace upon all the other corporations of the commonwealth, directly influencing them through it; creating, in fact, an inevitable competition between two systems of management, public and private, the continuation of each of which will depend on its not allowing the other to surpass it in the accommodation furnished to the public. The tenure of official life would, in fact, be simply during good behavior.

Of course, it is a wholly open question whether that which has been successful in Belgium would be successful in Massachusetts. It certainly would not be successful in New York. Such a snug nest for the hungry disciples of our numerous 'rings' could hardly long be kept from partisan control; soon or late, and probably very soon, it would share the fate of Central Park. Massachusetts enjoys a somewhat purer political atmosphere, and it might, by a mighty effort of ingenuity, so hedge about the direction of this road that the well-nigh ubiquitous 'man inside politics' could not effect a lodgment in it. The commissioners by no means ignore the danger from this quarter, and very distinctly give it as their opinion that the whole results of the experiment depend on avoiding it. Whether it is possible to do so or not remains to be seen. If it is possible, then there is no reason why the material results which have flowed from this form of competition in Belgium should not reproduce themselves in Massachusetts. Should they do so, the effects on the industrial development of that State would be incalculable—its rate of increase would more than double. In any case, a new principle of railroad competition has been suggested, and certainly it has not been suggested before the need for it was felt.

THE NEW GERMAN EMPIRE.

The empire which was destroyed by the conquering sword of Napoleon I. has been resuscitated by the folly of Napoleon III. In 1806, Francis II., yielding to facts too patent to be ignored, laid down the Roman Imperial crown which, some eight hundred and forty years before, Otho I. permanently connected with the dignity of the King of Germany. Seven years of Napoleonic aggression and oppression followed, until the Corsican yoke was broken at Leipzig, and the oppressor driven beyond the Rhine. But Germany was not restored by the Congress of Vienna as an empire, but as a union of the loosest character. The German Kaiser had disappeared, and the Emperor of Austria was but a member of the Confederation, of which some of his largest possessions—Hungary, Galicia, and Lombardo-Venetia—formed no component parts. His constant rival in its leadership was the King of Prussia; and between the two, the minor kingdoms—Saxony and Hanover in the north, Bavaria and Würtemberg in the south—exerted themselves to hold the balance of power. In fact, however, Germany herself, as such, was powerless. The people yearned for real unity, but this yearning was considered criminal by their numerous and divided rulers. On one occasion, in 1849, unity came near being created by a revolutionary assembly. But Frederic William IV. refused to accept the crown of united Germany from the hands of the people, and the revolutionary movement expired. His brother and successor, King William, in 1866, cut with the sword the Frankfort knot, and on the fields of Bohemia conquered the right of proclaiming himself the head of a new Bund. This was founded in the following year, but embraced only the North of Germany. The loose ties which had connected the various sections of the German's fatherland were thus severed, and some believed this severance final. But Bismarck's skilful diplomacy had partially replaced them by secret alliances; the national feeling of the people was aroused; and what neither diplomacy nor common patriotism could rapidly achieve was consummated by the mad attack of Napoleon III. The blood spilt at Weissenburg and Wörth recemented the union of Germany, and to him who at Sedan trampled the Imperial crown of France into the dust, his peers of Bavaria, Saxony, and Würtemberg offered the Kaiser's diadem, and, as it came from royal hands, it was accepted. On the First of January, 1871, the constitution of reconstructed Germany—of the German Empire, into which the North German Confederation has been expanded—went into active operation.

This reconstructed Empire, however, is far from being complete. First, it is not intended to embrace the German possessions of the House of Austria—Bohemia, Moravia, Silesia, Austria Proper, Salzburg, Tyrol, etc.—which belonged both to the Empire which expired in 1806 and to the Bund which was dissolved in 1866, and now form the Cis-Leithan division of the Austro-Hungarian Empire. Secondly, it does not embrace Luxemburg and Limburg, possessions of the King of Holland, which equally belonged both to the former Empire and Bund. Thirdly, the King of Bavaria, the very prince who took the initiative in the movement for uniting Southwestern Germany with the Confederation of the North, and who was amply rewarded for his share in the work by exceptional and extravagant concessions on the part of Prussia, has failed to secure the ratification of his treaty with her by the lower branch of the legislature of his kingdom, which thus remains out of the Empire, at least until a dissolution of the Chamber and a new election procure the 'national' party the number of votes still wanting for the sanction. As now constituted, the German Empire embraces the following states: Prussia with all her territories—including the Provinces of East and West Prussia and Posen, which did not belong to the Bund of 1815–1866; Lauenburg, which she acquired in 1865; and her acquisitions of 1866—Hanover, Hesse-Cassel, Nassau, Frankfort, and Schleswig-Holstein; the kingdoms of Saxony and Würtemberg; the Grand-Duchies of Baden, Hesse-Darmstadt, Mecklenburg-Schwerin, Saxe-Weimar, Mecklenburg-Strelitz, and Old-

enburg; the Duchies of Brunswick, Saxe-Meiningen, Saxe-Altenburg, Saxe-Coburg-Gotha, and Anhalt; the Principalities of Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, Waldeck, Reuss of the older line, Reuss of the younger line, Schaumburg-Lippe, and Lippe-Detmold; and the Hanse towns, Lübeck, Bremen, and Hamburg. The population of the Bund comprises, in round numbers, 34,000,000, of whom 4,000,000 belong to the new associates of Prussia—Würtemberg (1,800,000), Baden, and Grand-Ducal Hesse (south of the Main). Of the 30,000,000 that formed the North German Confederation, 24,000,000 belong to Prussia (19,000,000 Prussians of 1865, and 5,000,000 inhabitants of the countries annexed in 1866), and 2,500,000 to the Kingdom of Saxony. The accession of Bavaria would add other 5,000,000.

The new Empire is, in fact, the Confederation founded by Prussia in 1867, expanded beyond the Main, its southern boundary, and slightly modified in its constitution, which is that of a government based on a mixture of national and federal principles, dictated by unavoidable compromises. From the former Imperial constitution the new essentially differs in the most important features. The former Emperor was the elective and generally powerless president of a loose union of more or less centrifugal states, some of which preponderated in turn, and each of which wielded a separate military power and followed a separate international policy. In the present Imperial union, Prussia is not only decidedly and vastly preponderating, and therefore naturally central and leading, but to her crown also belongs the executive presidency—that is, the Imperial dignity—by hereditary right; and this executive presidency is invested with prerogatives which, in international and military affairs, almost amount to exclusive rule. The Kaiser (the King of Prussia)—an irresponsible monarch without a responsible ministry—represents the Empire in all its international relations; is the commander-in-chief of all its armies and naval power; receives the oath of fidelity of the troops, and appoints their superior commanders; declares war—with the consent of the Federal (Imperial) Council, which limitation is one of the most important of Prussia's recent concessions; repels aggression—without authorization of the Council; makes peace; concludes treaties—which require ratification by the Reichstag only in cases belonging to its legislative sphere; manages or controls the common finances and customs, the posts and telegraphs (except in Würtemberg), and the military roads; convokes, opens, prorogues, and closes both branches of the common legislature—the Federal Council and the Reichstag; promulgates the Federal laws, and superintends their execution; and appoints the Federal Chancellor, who presides over the Council. In this, which consists of representatives of the state governments, and not of parliamentary districts, Prussia has 17 votes (out of 52)—the same number it had in the North German Confederation—against 4 each of Saxony and Würtemberg, 3 each of Baden and Hesse, 2 each of Mecklenburg-Schwerin and Brunswick, and 1 each of all other members. Six additional votes were granted to Bavaria by the treaty which failed to be ratified.

The Reichstag—or Diet—which is the popular branch of the Federal legislature, consists of 334 members, whose number the accession of Bavaria would increase to 382—that is, one to each 100,000 of the population. They are chosen by universal suffrage, direct vote, and secret ballot, for a legislative period of three years. A dissolution of the Reichstag can be ordered by the Federal Council, with the consent of the executive. It has the initiative of legislation, and the right of address and interpellation. The laws it passes, however, must be sanctioned by a majority of the Federal Council. It elects its president and vice-presidents. Its deliberations are public. No member is responsible out of the Reichstag for words spoken in debate. The Federal legislative sphere embraces: the military and naval organization of the Empire; regulations concerning the common citizenship and settlement and colonization within and abroad; customs, commerce, banking, and Federal imposts; the regulation of weights and measures, coin and currency; patents, copyright, and public documents; Federal representation in foreign countries; the control of roads and water-courses essential for Federal military purposes; navigation on rivers common to various states; mails and telegraphs; penal law, civil procedure, and reciprocal execution of judgments; sanitary police; press and public meetings. The Federal control over the press and public meetings is a feature peculiar to the new constitution, in contradistinction to that of the North German Confederation, and one of those which are most distasteful to the liberal portions of the German people. In other points, the leading power has lost some of the influence it wielded under the late Confederation, as the number of votes it had in the Federal Council and the Reichstag remains the same now, while the general number of members has been increased by the representatives of Würtemberg, Baden, and South Hesse. The accession of Bavaria would still more diminish the relative preponderance of Prussia, and—if accepted on the terms lately granted—would also circumscribe the privileges of the Imperial commander-in-chief in relation to that kingdom. Of these modifications, however, we shall not speak before they take place. With them, or possibly before them, will also come the abrogation of the Zollverein, which is now almost entirely merged in the Empire.

ENGLAND.—THE WAR—THE STATE CHURCH.

LONDON, December 23, 1870.

ONCE more, as I look through the papers, I find an absolute dearth of all news that does not relate to the war. The only thing worth remark is the rapid growth of sympathy with France. The *Times* writes now more frequently on the French than the German side; for the *Times* has begun to doubt whether France may not possibly pull through. Yet the *Times*, and indeed the press at large, is still convinced that our one duty in regard to the war is to keep out of it. The only prominent exception is the little school of Positivist writers who are trying to stir us to a crusade on behalf of Paris—their new Jerusalem. If any of your readers would like to see a specimen of good hard-hitting controversy, they should look at a recent number of the *Pall Mall Gazette*, in which Mr. Frederick Harrison—the most powerful of the Positivist prophets—attacks the clever writer 'W. R. G.' Those initials, as everybody knows, thinly veil the name of Mr. W. R. Greg, who has a singular talent for giving ingenious reasons for an untenable view of any question of which he treats. Mr. Greg, on the present occasion, had argued that the French should submit to the Prussian terms, because—of all reasons in the world—if they held out they would have a fair chance of baffling Bismarck's demands. That people who had been beaten in fair fight should defeat their conquerors by a protracted resistance shocked—so he put it—all his feelings of equity. Mr. Harrison, it must be admitted, had an unusually good chance for upsetting an antagonist who had assumed such a position; and he smote without sparing. As another specimen of good invective on the same topic, I may refer you to Mr. Harrison's article on Bismarckism in the December number of the *Fortnightly*. Mr. Harrison, however, charm he never so wisely, will, I suspect, find that the British public will turn a deaf ear to his voice until the time of possible action has passed. Whether they do well or ill, is a matter which I leave to your reflection.

And now, I turn once more from a topic which leads me beyond my proper sphere, and look about for another. From the Continental war to the prospects of the Church of England is rather a long stride; but certain law proceedings which have recently taken place seem to me to be so curious, that I shall venture to say a few words about them. Two prosecutions have been brought before the highest court of appeals—the Judicial Committee of the Privy Council—the object in each case being to expel one extreme party from the church. Mr. Mackonochie has been attacked for ritualism, and Mr. Voysey for rationalism. Mr. Mackonochie is in fact a close imitation of a Catholic priest; Mr. Voysey's tenets, in the eyes of the outside world, are quite indistinguishable from Unitarianism. The peculiar wisdom of the Church of England has been to hit off a judicious *via media*; but the latitude permitted on either side of that medial line is so enormous that it is almost impossible to see how the balance can be maintained. In illustration of this, I will give you a short summary of Mr. Voysey's argument, which has recently been published. I will attempt rather to give the pith of it than to follow precisely in his footsteps.

The Articles of the Church of England, says Mr. Voysey, deal in great part with matters altogether above human comprehension. The doctrines of the Trinity, of the atonement, of justification by faith, and so on confessedly deal with mysteries too high for us. The consequence is that the Articles include two sets of propositions, each of them intelligible when taken separately, but apparently contradictory when taken together. The doctrine of the Trinity, for example, may be interpreted as teaching either monotheism, or something indistinguishable to our human understandings from tritheism. The doctrine of the atonement implies that in some

incomprehensible sense the Father and Son must be considered as two distinct beings, and in some other incomprehensible sense as one being. Further, one set of propositions leads directly to the most blasphemous and degrading doctrines. The ordinary interpretation of the atonement, for example—the belief that the first person of the Trinity sentenced all human beings to hell-fire because their ancestor ate an apple, and that afterwards his wrath was pacified by punishing the innocent for the guilty—is altogether revolting and preposterous. The opposite set of propositions, on the other hand, inculcates an elevating neology, which I, Mr. Voysey, teach to the best of my ability, and which is flatly contradictory to the popular interpretation of the Creed. What, then, is the consequence? It is admitted that I may not contradict the Articles in terms; I may not take any distinct proposition and insert a 'not' between the subject and the predicate; for that is against the law. But so long as I avoid this error, I may say precisely what I please. For the Articles, dealing confessedly with matters above human comprehension, do not supply trustworthy premises for any inference whatever. If we once admit reasoning, we are landed in the most direct and unequivocal contradictions. Therefore, though I may not contradict the Article, I may contradict any interpretation put upon it, or any inference drawn from it. Using this liberty, I declare that the whole popular theology is demoralizing in the highest degree. I have denounced what are ordinarily taught as the doctrines of the atonement, of original sin, of the incarnation, and of the inspiration of the Bible. I maintain that I have a perfect legal right to do so, so long as I do not in terms contradict any statement in the Creed or Articles, and that I have scrupulously and carefully avoided.

As one specimen of Mr. Voysey's application of this ingenious theory, I may say that he argues that he has a perfect right to say, if he pleases, that the doctrine of Christ's incarnation takes its rise in the grossest unbelief. The Articles affirm, indeed, that the doctrine in question is true; but they do not say in so many words whether or not it takes its rise in unbelief. Thus the elaborate system of tests imposed by the legislature is thrown aside altogether as being nothing more than an unintelligible shibboleth; and the statements, for example, of the Athanasian Creed are of no more account than an assertion that a hocus-pocus is an abracadabra. You may not say that a hocus-pocus is not an abracadabra; but you may deny any interpretation whatever that anybody chooses to put upon those words. The whole network of propositions is relegated to some dim transcendental region, whence they can never be brought to bear upon any opinions of the concrete human intellect. So long as a clergyman does not deny the existence of God, there is scarcely any conceivable doctrine which he may not substantially put forward. Mr. Voysey will, of course, be turned out of his living, but he has only put into plain language a line of argument which the Broad Church party are constantly maintaining in practice.

It is, of course, an essential part of this doctrine that a clergyman's duties in regard to teaching are accurately measured by the law, and by nothing but the law. The tests which it imposes turn out to be illusory, and there is no other authority to which an appeal is possible. The position occupied by Mr. Mackonochie and his friends is precisely the reverse of this. They look upon the law as tyrannical, and the authority of the state as representing an unjustifiable usurpation. Their inference, however, is in one respect the same with that of Mr. Voysey; they do not, indeed, assert that the law is necessarily illusory, but they equally do their best to evade it; and when they are stopped, consider themselves as martyrs. It was decided, for example, that Mr. Mackonochie had no right to raise the sacramental wafer above his head. It was attempted to evade this, if I remember rightly, by raising the paten without raising the wafer, or by raising the wafer only to the level of his eyes instead of lifting it clear of his head. When some of these evasions failed to satisfy the lawyers, and Mr. Mackonochie was suspended for three months from his office, he took the airs of a Christian bishop who had been restrained from performing his duty by a Roman emperor. There is something so inexpressibly childish about the whole business that it is impossible to wade through the pages of solemn argument in which it is discussed, or to feel very much interest in the matter one way or another. We content ourselves for the most part in drawing two or three very simple inferences, which are summed up in the one conclusion, that the theory of a state church is rapidly breaking down. The most active, which is at the same time the most feeble-minded, party in the church is openly denouncing it. The able and amiable men, such as Dean Stanley, Mr. Maurice, and their friends, who really cling to it, are obliged to put upon it an interpretation more or less approximating to that of Mr. Voysey. That is to say, they advocate so wide a latitude of opinion that the purest deism might be preached side by side with doctrines indistinguishable from Romanism. Few people believe that such a system is practicable, or that a church can have any real vitality in which anybody can preach anything that he pleases. The Broad Church party themselves admit that something must be done to give more vigor to the institution; but they have hitherto failed to show how anything can be done short of removing altogether the control of the state. Meanwhile, the great practical scandal—though it may not be the most deeply rooted evil—which attracts public attention is the attempt of the clergy of almost every party to play fast and loose with words, and, after solemnly subscribing certain professions of faith and ostensibly undertaking to teach them, they proceed elaborately to show that they do and can mean nothing, or that they are tyrannical impositions of illegitimate authority. In one way or other we are growing sick of the incessant exhibition of intellectual dishonesty which seems to be the natural result of the present system. Mr. Voysey deserves a certain credit for openly avowing the system on which he proceeds; but his attempt to make out that his course is honorable, because it is aboveboard, will convince few people. Mr. Voysey is, indeed, personally an unmistakably honorable man; he has sacrificed his pecuniary interests by remaining as a hard-working and poorly paid curate, and avowing opinions which make professional advancement impossible. The more we see respecting his character, the more one regrets to see him driven to such quibbles; and the plain practical conclusion of simple-minded observers is that men who think the popular theology utterly demoralizing had better renounce the Articles which sanction it, instead of trying to evade them, and that men who consider state interference an unwarrantable tyranny had better leave a state church.

Correspondence.

THE LEE PEDIGREE.

To the Editor of the Nation:

Sir: In your issue of December 29, 1870, your correspondent, 'W. H. W.,' has labored most assiduously to overthrow the lineage of the Lees of Virginia, as given in my little work, 'The Lee Family,' and has endeavored to give them 'a valid claim to a more illustrious lineage.'

Your correspondent says: 'There can be hardly a doubt that Colonel Richard Lee, the emigrant to Virginia, was the seventh son of Sir Robert Lee, of Hulcott, and youngest brother of Sir Henry Lee, of Quarendon and Ditchly, Bart.' If there is 'hardly a doubt' of the fact, why not state his authority, and give us the full pedigree? The will of Richard Lee, which he partly quotes, and upon which he bases his suppositions, is hardly sufficient, since there is *another* Richard Lee, of the house of Litchfield, spoken of as emigrating to Virginia in 1641, just twenty-two years previous to the writing of this will. It is a pity that 'W. H. W.' has not taken 'only a little care in the identification' to make this part of the pedigree 'as satisfactory as could be desired.'

Your correspondent also gives *several* coats-of-arms for the family, but wisely adds: 'Either may be used by the descendants of Colonel Richard Lee, but that bearing the three crescents has been most used by the family in England.' Will 'W. H. W.' inform the Lees of Virginia which would be proper for *them?* Meanwhile, they await his decision with much anxiety.

If 'W. H. W.' will turn to the letter of William Lee, Esq., of Great Tower Hill, London (son of the celebrated President Thomas Lee, of Virginia), on page 51 of the 'Genealogical History of the Lee Family,' also his letter to Rev. Dr. Henry Lee, of Winchester College, England, of date 1771 (page 65), he will see that I have the authority of two of the most distinguished members of the family at that period, who state that the pioneer of the family to Virginia was of the house of 'Cotton,' or 'Coton,' in Shropshire. Also, on page 57, he will find from the inscription on the tomb of Richard Lee (the second), that he was a 'son of Richard Lee, gentleman, descended of an ancient family of Merton Regis, *Shropshire.*'

It is hardly to be supposed that the Lees of this generation will deny the authority of such eminent ancestry as William Lee, Dr. Arthur Lee, Richard Henry Lee, and Colonel Thomas Lee, and take up a new pedigree at this late day, brought forward by some Northern genealogist to flatter the pride of some distant cousin of the family. It is to be regretted that the old pedigree upon which the 'Genealogical History of the Lee Family' was based did not extend to a later period, and thereby settle this disputed question of the first Richard; but until there can be brought forward more

substantial evidence to the contrary, the family will continue to cling to their ancient crest of the squirrel, and motto '*Non incautus futuri*,' which they have borne for so many ages past.

Evidently 'W. H. W.' has found no 'scent' at all, and had better try again. With much respect, I am, sir, yours truly,

EDWARD C. MEAD.

KENWICK, ALBEMARLE CO., VIRGINIA, January 8, 1871.

THE THEORY OF FEDERAL APPOINTMENTS.

TO THE EDITOR OF THE NATION:

SIR: It is, as I suppose, an unwritten but recognized article of our national Constitution that unfitness is always to be regarded as among the chief qualifications for office under the United States Government. Thus, who ever heard of enquiring into the specific adaptation of a cabinet officer to the duties of his department? How many of the secretaries of the Treasury since the time of Hamilton have known anything about political economy? There is in some quarters a strong suspicion that we owe at least a third part of our national debt to the utter ignorance of the fundamental principles of finance which presided over the Treasury Department at the beginning of the war. As for the navy, since the days of the Crowinshields, that department has not, I believe, in a single instance been under the supervision of a secretary who even professed conversance with ships or maritime affairs. One of the secretaries—a man excellent and eminent in his way—said to a commanding officer at one of our naval stations, 'Commodore, there is in the accounts at my office one frequent item which I do not understand. What is *oakum?*' One of our Presidents sent to an eminent statesman, now in a service for which, strange to say, he is admirably fitted, a commission as Attorney-General. The recipient replied that he could not accept the office, inasmuch as he had not had a legal education. By return of mail he received a commission as Secretary of the Navy, which he accepted, though his anterior training had fitted him as little for the one office as the other.

The most luculent confession of the doctrine under discussion which it has been my fortune to read may be found in one of the daily papers of this city, in the editorial discussion of the claims of our recently appointed Minister to England. I quote from memory, for I have not the paper at hand, but I am sure that I do not misrepresent the article: 'General Schenck lacks the urbanity and the self-possession of Mr. Adams, the learning and the social qualities of Mr. Motley, the geniality of Reverdy Johnson. He has in no degree or measure the mind or temper of a diplomatist. He is nothing but a plain, blunt, honest, successful general. Therefore, in the present delicate and difficult state of our relations with Great Britain, he is the man of all others to bring the negotiations which transcended the skill and wisdom of his predecessors to a successful issue.' Is this idiocy, or is it an exposition of the present phase of Republican doctrine?

P.

BOSTON, January 7, 1871.

THE SCOTCH LANGUAGE.

TO THE EDITOR OF THE NATION:

SIR: In the December number of *Blackwood's Magazine* there is an article upon the humor of the Scottish language, some points in which deserve particular notice. The article is rather a misnomer, consisting mainly of a list of Scotch words, for the most part untranslatable into English, with explanations and examples of use. Many, indeed the majority, of these words have nothing humorous about them, unless to be un-English be humorous.

The only valuable thing in the whole article is a solitary piece of verbal criticism. Most people who know 'Auld Lang Syne' have probably been puzzled to understand the line:

'And we'll tak' a right gude willie-waught.'

I have heard many a Scotchman ask: 'What is a *willie-waught?*' and I have never heard any satisfactory explanation of it. Our author says that, instead of 'gude willie-waught,' we ought to read 'gude-willie waught,' which, I venture to say, will be perfectly intelligible to every Scotchman who knows the language of his country. Our author evidently has not a speaking acquaintance with Scotch, and so considers the line to mean 'we'll drink with a right good will a deep or hearty *waught* or draught.' This is not the meaning. 'Gude-willie' means simply 'generous,' as 'ill-willie' means 'ungenerous.' 'A gude-will' often means 'an alms,' or a 'gratuity.' 'Gude-willie' is not in my copy of Jamieson's Scottish Dictionary, but 'ill-willie' is, and is defined as, 1. Ill-natured, envious. 2. *Niggardly*. 3. Reluctant.

Our author's unacquaintance with Scotch as a spoken language is plainly shown by the number of words whose real signification he does not understand. The meanings he assigns will generally suit the context of his quotations, and yet they are often incorrect—a fact which ought to show us how careful we ought to be in setting aside traditional definitions of doubtful words occurring in dead languages, in favor of others seemingly better suited to the context. He seems to have been, in some cases, misled by Jamieson, whose dictionary—with all respect be it said—is sadly defective.

Carfuffle, we are told, means 'agitation of mind, perplexity.' It is true, the word does mean 'agitation of mind;' it never means 'perplexity.' The real meaning is 'confusion;' the verb 'to carfuffle' means 'to confuse,' 'to disarrange.' It corresponds exactly to the Low-German *verknutscheln*, and is usually applied to dress, books, or papers that have got soiled *and* crumpled.

Clarty does not mean 'dirty,' as our author and Jamieson assert. It means 'sticky,' or more exactly what the Germans express by *schmierig*.

Clour, Jamieson and our author notwithstanding, does not mean 'bump,' or 'lump on the flesh caused by a heavy blow.' The very passage quoted from *Noctes Ambrosianæ* proves this: 'That cane o' yours would gi'e a *clour* on a man's head eneuch to produce a phrenological faculty.' '*Clour*' here evidently means a 'blow;' we could not at any rate substitute 'lump' for it. Its usual signification is a 'blow causing a *dint*' or such a dint itself. It is most frequently applied to a dint made in vessels of tin or other metal.

Cog does not mean 'a bowl or cup, also a basin,' as our author might have seen from his quotation:

'I winna want my three-girred *cog*
For a' the wives in Bogie.'

'Three-girred' (correctly *three-gird*) means 'having three hoops,' and *cog* means a small wooden vessel, shaped nearly like a water-bucket, and made in the same way, with staves and hoops.

Crowdie never means 'a kind of oatmeal porridge or "parritch," sometimes prepared with water and sometimes with buttermilk.' Its proper meaning is 'a mixture of pressed curds and butter, seasoned with salt,' as in the passage quoted:

'My sister Kate came up the gate
Wi' *crowdie* unto me, man,
She swore she saw the rebels run
Frae Perth unto Dundee, man' (*sic*).

Crowds or *croods* is the Scotch for curds. *Crowdie* sometimes has the sense of 'brose,' which every Scot knows is something very different from porridge.

Gey does not mean 'very.' 'Gey an' fou' means not 'very drunk,' but 'pretty drunk.' 'Very' the Scotch express by 'verra' or 'unco.'

Gowpen does not signify 'handful.' This word, which is of Norse origin and still in use in Iceland, has no English equivalent. It means the *two hands* placed side by side, so as to form a cup, or the quantity that such a cup can hold. Jamieson defines this word correctly.

Hain means not 'to preserve,' but 'to save' or 'to hoard.' '*Weel-hained* gear,' does not, as our author states, mean 'well-preserved money,' but 'well-hoarded wealth.'

Hummel-doddie is a remarkable word. Our author makes it signify 'dowdy, ill-fitting, in bad taste.' In this he follows Jamieson, who says it is 'a ludicrous term applied to dress, especially to that of a woman's head, when it has a flat and mean appearance.' Both quote the same example of its use, which seems to have been the source of all their knowledge in regard to it. '*Hummel*' means 'without horns,' e.g. 'a *hummel* coo.' It is applied metaphorically to woollen gloves which cover the whole hand, but have no fingers. *Doddie* has, as nearly as possible, the same signification. Woollen gloves such as I have mentioned are called indiscriminately 'hummel-mittens,' 'doddie mittens,' or 'hummel-doddies.' 'Hummel-doddie' is applied to anything that has not the proper projections or protuberances. Any one who remembers the high-crowned mutches or caps worn by old Scotch ladies, or by Newhaven fishwives, will easily understand what is meant by a 'hummel-doddie mutch.' It is a cap without the high crown. There can be no doubt that 'doddie' and 'dowdy' are substantially the same word. 'Hummel' is still represented in the English word 'humble-bee,' which, with due deference to many great authorities to the contrary, be it said, means simply 'stingless bee,' and has no connection whatever with 'hum.'

Lunt does not signify 'the smoke of tobacco,' or 'to emit smoke.' It means a flame that bursts out suddenly accompanied with smoke, and continues but an instant or flickers violently. 'The luntin' pipe' is the

pipe that emits *flame and smoke* whenever the smoker ceases to inhale the smoke.

Orra never signifies 'all sorts of odds and ends.' It is never a substantive, but always an adjective, and has no English equivalent. Its meaning can be shown best by examples. 'Ha'e ye an *orra* pen?' means 'Have you a pen that you don't use?' 'An *orra* man' means a man about a farm who does all odds and ends of work—'orra wark.' Applied to character, it means 'disreputable.' 'An *orra* chiel' is a 'disreputable fellow.'

Rippet is far too mildly rendered by 'tiff.' It is exactly expressed by the slang word 'row.'

Splore, which our author also mistranslates, has nearly the same signification.

Taigle means not 'to tease, to perplex, to banter,' but 'to detain,' 'to loiter,' 'to tackle.' In the second sense, it is often pronounced 'dachle.' Our author was here misled by his quotation.

Wame, the Scotch form of 'womb,' means not 'stomach' but 'belly.' Here again our author was deceived by his quotations.

Whaup, he says, means a 'curlew.' This is true; but it oftener means the 'husk of any kind of pulse,' or 'a long lean fellow.'

Whommle does not signify 'to whelm, to turn over clumsily and suddenly, and with a loud noise.' There are in Scotch two *distinct* words which are written thus: the one—that which occurs in our author's first quotation—means 'to move with a wriggling motion,' used of eels, minnows, etc. (cf. 'Warlds whommulin' up an' doon, bleezin' wi' a flare,' in Ballantyne's 'Castles in the Air'); the second 'to place [a vessel] with its mouth downwards'—the meaning of the word in his second quotation. 'I wad *whomle* [sic] a toom bicker,' means 'I would turn over an empty goblet.' The first word should be written *wommel*, the second *whommel*.

These are all the cases of misapprehension in regard to meaning that I have yet observed in this article. I might point to several cases of gross misquotation; but as these are not likely to mislead any one, I shall refrain.

Now that all the dialects of so many European languages are being committed to writing and studied, why does not some competent person, on the basis of Jamieson, undertake an etymological dictionary of the Scottish language? Such a work would throw an immense amount of light upon the etymology and signification of many English words.

I am, sir, faithfully yours,

THOMAS DAVIDSON.

ST. LOUIS, Mo., Jan. 2, 1871.

Notes.

MESSRS. D. APPLETON & Co. publish this month Parts III. and IV. of Herbert Spencer's 'Principles of Psychology;' a 'Hand-Book of Law,' for the practical guidance of business men, by William Tracy, LL.D.; 'Life and Nature under the Tropics,' by H. M. and P. V. N. Myers, the region described being the Andes, the Orinoco, Rio Negro, and Amazon; a translation, by Dr. Charles E. Hackley, of Billroth's 'General Surgical Pathology and Therapeutics,' in fifty lectures. Also, the following reprints from English works: 'Westward by Rail,' by W. F. Rae, and 'The Recovery of Jerusalem,' by Capts. Wilson and Warren of the Palestine Exploration Fund.——Messrs. G. P. Putnam & Sons have in preparation 'A School History of England,' by Benson J. Lossing; 'The Pilgrim and the Shrine,' by the author of 'Higher Law;' 'Mental Philosophy,' by Prof. John Bascom; 'Leaves from the Book of Nature,' by Prof. Schele de Vere; 'The Humors of Law and Lawyers,' by Irving Browne, a member of the Troy bar; 'The Sisters of Orleans,' a tale relating to the present war in Europe; 'The Young Mechanic,' by the author of 'The Lathe and its Uses;' 'The Earth,' by Elisée Réclus; 'The Hidden Life of the Soul,' by the author of 'A Dominican Artist;' and a one-volume edition, uniform with that of Evelyn, of 'Pepys' Diary.'

—Among the peculiar and interesting practices of the profession to which we have the honor to belong, is the practice of 'extending journalistic courtesies' to other 'knights of the quill.' Thus, if we, for example, were to write a book on political economy, it would bear not the least resemblance to some works on that subject which have been written by Mr. Horace Greeley, or to a work that Colonel John W. Forney might write and publish in Pennsylvania. That, however, would not prevent our sending on a copy to the office of the *Press*, and another over to the *Tribune* office, each accompanied by a letter (bearing at the top of the sheet the stamp of our own office), in which we should say that we had at last gathered our politico-economical essays up into a book, of which already three copies had been sent to the office of the *Press* (or *Tribune*, as the case might be), and that we now sent a fourth copy, directed to the editor personally, and begged Colonel Forney, or Mr. Greeley, 'to extend to it journalistic courtesies.' Then each of these gentlemen would have to sit down and set about somehow turning out a genial notice of his editorial brother's book, at the same time taking care to run as little danger as possible of the loss of subscribers. Meaningless and florid compliments to our great abilities as a well-known 'member of the press' would be the line Mr. Greeley and Colonel Forney would probably take under the circumstances. But whatever they might do, something they would have to do; just as we, whatever may be our private opinion of it, shall have to praise Mr. Greeley's 'What I Know about Farming' when, by-and-by, he sends it over to us for review. That is journalistic courtesy; and nobody knows what would happen if its rules should fall into desuetude. It is in obedience to the letter and spirit of these rules that 'we here record our greeting to our esteemed contemporary the *Sunday Herald*, of Washington, which springs into the arena of journalism under the auspices of George Alfred Townsend and of Donn Piatt, the celebrated Washington correspondent of the Cincinnati *Commercial*, and formerly enrolled in the ranks of the profession as the editor of the Macacheek *Press*. May the *Herald*, under its new proprietors, renew its youth like the eagle. We bid it welcome.' And, in all seriousness, we give it a welcome, as hoping from it a good deal of the independence, sense, and courage of which both its new editors have, as Washington correspondents, given many proofs. From the necessities of their position, Washington correspondents are almost compelled to a time-serving dependence on senators, representatives, heads of departments and bureaus, and other officials of all sorts. Hired to purvey news; exposed to the keen competition of other purveyors of news; disgraced, if they are beaten, in the race for getting early intelligence; yet for getting any intelligence at all mainly dependent upon the good offices of this and that public man, who perfectly well knows the value of a correspondent's good word, and knows perfectly well, too, his own value to the correspondent—in view of these things, it is no wonder if Washington correspondents are, at their best, reticent to a degree that greatly impairs their usefulness to the public, and are, at their worst, unblushing and unscrupulous partisans of some patron whose favor they must purchase by various concealments and compliances. We do not stand surety for the *Sunday Herald* under its new ownership; we know too little of the editors. But both Mr. Piatt and Mr. Townsend are men of ability, and Mr. Piatt a man of large experience; both appear to have learned a secret that is still to many editors a secret unguessed—namely, that a truly able journal can generally afford to be a perfectly independent journal; both have dared to print a good deal of plain talk about men and things in Washington; Mr. Piatt we know less about, but Mr. Townsend clearly improves from year to year, as well in ability as in self-restraint and respect for his profession, being to-day a much better writer—and about much better things—than he was five years ago. He seems to put himself, with definite purpose, on the side of good causes, and to hate the right men; and to express his aversion with a good degree of effectiveness, whether or not as yet with much literary skilfulness. It would not be surprising if the *Sunday Herald* were made a journal sometimes impudent, often verging on the borders of scandalousness and libellousness, not to say scurrility, often and in many ways very vulgar; but generally fearless, intelligent, clever, and serviceable to readers who like to get reliable information of the way in which things are really brought to pass in Washington, and of the true character of the men and measures that the ordinary newspaper so often, and so often from interested motives, lifts into an atmosphere of utter unreality and delusiveness.

—As we have taken occasion to speak of the Washington correspondent, and as we have spoken of him in a rather disrespectful way—a way in which it would have been unfair to speak of him unless we had at the same time called attention to the very great difficulties of the position—we are glad of an opportunity to assert our conviction that Washington does not want for correspondents worthy of respect for fidelity, high spirit, and honesty, as well as for enterprise, acuteness, and industry. The opportunity in question is furnished by a paragraph now going the rounds of the papers, which is to the effect that Mr. Sidney Andrews, Washington correspondent of the Boston *Advertiser*, is now at last getting well of a sickness which at one time threatened his life, and which has for some months kept him idle. Like other Washington correspondents, Mr.

Andrews's work has to some extent felt the effects of the system which allows the reporter of facts to mix with his report of things that have occurred his own opinions as to their bearings, and as to the motives actuating the men who brought them about. But there is no other Washington correspondent, so far as we know, who more successfully than he has taken more pains than he to make his reports colorless—genuine transcripts of contemporary history, done with unfailing conscientiousness, and with a skilfulness sometimes greater and sometimes less, but always a long way above the average of such work. The Boston *Advertiser's* public is under great obligations to him, and so, too, is the general public, which has been benefited indirectly by the influence which his example has exerted over other journalists.

—The *Congregationalist*, the well-known religious weekly published in Boston, apropos of the recent discussion between 'Old' and 'Young Yale' which has taken place in our columns, refers to 'a manifestation both in the *Nation's* own editorials, and in the communications it receives and publishes from others, of an open and undisguised contempt for clergymen as a class.' We do not often notice misrepresentations, but misrepresentations by a religious paper we, for obvious reasons, do not let pass, when they fall under our eyes. We must, therefore, say of the above, that it is a very gross misrepresentation. There have been no manifestations of contempt for the clergy as a class in our editorials, and no manifestations of any such 'contempt' have appeared in the letters of our correspondents, except in the course of a discussion as to the fitness of clergymen for a certain office, and here the contempt can only be inferred from a denial to them of certain intellectual qualifications. For the opinions of correspondents not paid or employed by us we repudiate all responsibility whatever, but we should no more think of denying a competent writer the privilege of questioning a clergyman's fitness for the work of education than a lawyer's. 'Clergymen as a class,' just like lawyers as a class, have certain marked moral and mental peculiarities: if a sober and honest college graduate thinks that these operate as a disqualification for the conduct of college education, he has a perfect right to say so; and any clergyman who is afraid to have it said, and thinks the paper in which it is said must be a bad, designing paper, may rest assured that he is not well fitted either for college work or his own work. It is now our painful duty to call upon the *Congregationalist* to publish next week, or, at the furthest, the week after, one or two 'manifestations of contempt' for the clergy taken from the editorial articles of the *Nation*.

—In 'Brother Placidus, and why he became a Monk,' the new novel by Father Ignatius, a reader whose mind, to borrow a phrase from the work itself, has been 'rendered irrational by bigotry' is likely to find a good deal of amusement. This may happen in several ways, whether, for example, he regards the feebleness of the story as such, the bad style and worse grammar of it, or the author's hope that it will add to his following or advance his mediæval notions. As a religious novel it belongs in the same year and the same category with 'Lothair,' but its aim is quite the opposite. Its hero is converted from a hater of all things into a loving disciple of Father Ignatius, and finally a member of his monastery, the interior life of which is given with a frankness which, however creditable, is anything but astute. The foibles of the monks are revealed as if to set off the purity of the novice for whom the story is written, and their conversations are allowed to be almost profanely humorous. Two miracles are introduced, in strict conformity to the originals, which 'actually occurred in our monastery.' One is the bowing of the head of the image of the Christ-child at the ceremonies on Christmas-eve, and his returning the kiss of one of the monks; the other is the appearance of a circle of lambent flame about the head of Brother Placidus. Fortunately for the first, 'a beneficed clergyman of the English Church was witness of it,' and the second was distinctly seen by 'two persons, who would be prepared to affirm they saw it on oath.' Any doubts after this would be improper; and it only remains to hope that there may be a third miracle to record in the next edition—the conversion of a soul or two by the reading of this extraordinary fiction.

—To any one who wishes a history of the present war before it is ended, and from a German point of view, can safely be recommended the 'Illustrirte Kriegs-Chronik,' published by J. J. Weber, in Leipzig (New York: B. Westermann & Co.). This work is issued in parts of sixteen pages, of the size of Harper's 'History of the Rebellion,' and already six have appeared. It is copiously and, on the whole, judiciously illustrated, the usual concession being made to the popular taste for battle-scenes which never occurred, and even never could have occurred, to the displacement of so much text or more valuable representations. Some of these, however, seem to be a serious attempt to portray the topography of the more famous engagements. The portraits are unexceptionably good, and skilfully engraved, and consist of the eminent personages, civil and military, on both sides. The historian has not thought it necessary to go back to the Germany of Tacitus or of the Barbarossa to explain the causes of the war, but traces rapidly the chain of events from the famous interview at Biarritz down to the rebuff of Benedetti at Ems; and devoting his second chapter to the concerted preparations on both sides of the Main, and the third to the French movement towards the frontier, is able in the fourth to arrive at actual hostilities. Along with the history there goes in smaller type at the bottom of the page a *Bilder-Chronik*, or account of the engravings, in which a good deal of information is given that otherwise would have impeded the progress of the main narrative. Twenty parts, it is thought, will contain the whole war, though purchasers can judge of this for themselves. The completed work will include a colored map of the seat of war, a chronological table, and the bibliography of the war, besides an index. The title suggests the remark that two of the three words in it are derived from the French. Naturally the word for war (*Krieg*) is not one of these.

—A Paris correspondent of the *Athenæum* tells of the great activity of M. Jules Simon, undoubtedly the best Minister of Education France has ever had. He has ordered the reading-rooms of the public libraries to be kept open an hour longer than formerly; has reopened the library of the Louvre, and taken steps to furnish it with a reading-room; has addressed himself by circular to the heads of academies, impressing upon them the value of the higher education, and condemning the perversion of scholarships by which the late Government rewarded its favorites. No serious objection can be made to these measures, even as emanating from a member of the Government of National Defense. Though obviously of the kind which only in the long run produce significant changes, their immediate effects are wholly beneficial, and the official example of course counts for something. A feeling nevertheless arises that here, as in the renaming of boulevards, casting of new and shifting of old statues, and tearing down the Imperial insignia, there is a certain waste of energy in presence of the overshadowing, all-pervading necessities of the defence; and that posterity would have found it easier to forgive the present authorities for neglecting to contribute to the observation of the late eclipse, or to postpone the closing hour of reading-rooms from three to four P.M., than for the real omissions of duty to the besieged. The scientific societies have very properly turned their debates as far as possible upon subjects connected with the common weal, such as the forcing of vegetables, ballooning, preparation of condensed food, modes of military defence and offence, etc., etc. For one thing, however, the Government and the citizens both had ample leisure, and that was to provide adequate sanitary supplies and organizations, if any attempt was to be made to pierce the German lines. All reports agree, however, in stating that the French ambulance corps was, of the far too few which attended Ducrot's sortie, the least efficient; and that while the Italian and American, and perhaps one or two others, did excellent service, the French must be responsible for a vast amount of suffering unrelieved and lives lost, numbers of the wounded having been frozen to death in that bitter winter weather. The natural concern of the non-combatant portion of a population of two millions, and all the experience of Gen. Trochu and his associates, failed to anticipate the needs of a bloody contest under the very walls of Paris as completely as the self-conceit and incompetency of the military staff of the Empire to anticipate Weissenburg, and Gravelotte, and Sedan.

—A colored physician, Dr. Davis, a native of Barbadoes, has fallen a victim to his zeal in caring for the sufferers by the war in the neighborhood of Sedan. He was a graduate in medicine from Aberdeen, and continued his studies at St. Bartholomew's Hospital, London, where he was house-physician. In October he resigned this position in order to help in relieving the distress on the Continent, and to his skill and devoted attention many hundred wounded Bavarians at Sedan must be for ever grateful. He next impartially exerted himself for the needy peasantry round about, at Pont Mangy and Balan, establishing soup-kitchens, which he sustained by personal sacrifice and by such contributions as he could procure in England. His solicitations there, during a temporary visit for that purpose, were so incessant and fatiguing that he came back in a condition susceptible to contagion, and was carried off by smallpox contracted in the military hospital. He was only twenty-eight years of age at his death, and his funeral ceremonies, attended by the mayor of Sedan, the German subprefect, and a crowd of peasants, were touching in the extreme.

—Dying at Dieppe, on the 5th of December, after a considerable period of unconsciousness or semi-consciousness, Alexandre Dumas was spared the spectacle, as we venture to predict, of the last humiliation of his country. Less fortunate than the unfortunate Prévost-Paradol, he constitutes with Prosper Mérimée the third considerable loss to French letters since the commencement of the war. Viewed merely as a creative mind, his genius is not likely to be exaggerated, and the number of the volumes which bear his name surpasses even the fecundity of Voltaire. Compared with Dickens, as he naturally has been, it is evident that in point of originality and resources he was very much superior to his great contemporary. The morality of the two men differed as that of their respective countries differed, and that perhaps could not be more forcibly suggested than by attempting to suppose Dickens in the attitude with Miss Menken in which Dumas actually permitted himself to be publicly photographed. In this respect the latter was quite in harmony with the Second Empire, whether this is to be laid more to his French or to his negro blood; and it is not too much to say that he could well be spared in the midst of a revolution which seems destined to recall France to a nobler existence than any it has led since the reign which is celebrated in the 'Three Guardsmen.' Dumas was sixty-seven years of age, which must be accounted old as he lived. He is an instance of hereditary genius, his father having been a general of distinction under Bonaparte, and his son, as is well known, being a born novelist and playwright.

—In a recent German work, entitled "The History of German Women," the author, a Dr. Zapp, touches upon the woman question, and, in order to terrify those of his fellow-countrywomen who seem to him too zealous for reform, he draws a most fearful and disheartening picture of the demoralization of American society. For the benefit of those persons in this country who are not satisfied with the present condition of woman, and who claim for her fresh privileges, we make a few extracts from the Doctor's simple narrative, and the more readily because the horrors which he describes are not generally known. His authority for his statements appears to be a New York correspondent of the *Elberfelder Zeitung*. We go at once to the worst: 'There is in this city, in Twenty-third Street, a gambling-hell for ladies, which is regularly frequented by the New York wife and mother.' The *Zeitung's* correspondent visited it in the company of 'a prominent member of the New York press.' The house is a three-story brick house. Its blinds are always shut. One would naturally conclude that it was uninhabited. But not so. On the contrary, it is visited every evening by many of the women of New York, and every evening large sums are lost within its walls. The unadorned exterior corresponds to the splendor and elegance of the interior as little as the closed blinds, apparently indicating perfect calm within, betray the scenes of wild passion which take place there from nightfall to dawn. 'Let the reader follow us through this Twenty-third Street house,' says the correspondent, who, by the way, seems to have acquired a facility with his pen which would do credit to any citizen of his adopted home, and a knowledge of the horrors of the metropolis which must make him a most valuable city correspondent. He writes 'on a cold November evening.' 'The floors are covered with genuine Brussels carpets, which hush every step; the walls are adorned with magnificent frescoes.' Soon he reaches a smaller room than that into which he was first ushered, a room with still thicker carpets, and adorned with pictures still more precious and costly. The company is mixed; some are women of the sort whom one would naturally expect to see there, others evidently belong to good society and are 'of high standing.' 'The playing has already begun. On the faces of the players appear already those passions which,' etc., etc. The keeper of the bank is a young and beautiful woman of Juno-like shape; but she is cold, she is like a marble statue; she shows signs of life only when she has to draw in her winnings, which, we are told, 'are called in the expressive gambling slang of America "chips."' One of the players whom our German friend sees is the wife of one of the richest merchants of New York. Another is a young girl, not yet twenty, the daughter of one of the most esteemed judges of the city, who loses her last ten-dollar bill, and who 'must now once more rob her father's cash-box.' A third is the widow of a general who was killed in the war. She is a victim of the passion for play. This one loses all her money. She plucks with feverish haste a costly diamond ring from her finger—a present from her hero-husband—and gives that to the holder of the bank. It is valued by that cold statue at no more than one hundred and twenty dollars. Although the General's widow knows it to be worth five hundred, she eagerly seizes the small sum. She plays; she loses—but here the scene grows too fearful for description. Many a penniless victim of this unholy passion takes laudanum, usually in lemonade, before she can be stopped; but what then? Always the coroner's juries are bribed to say nothing more about it, 'and in the Twenty-third Street house the playing goes on as it did before!' After reading this, need one be surprised that foreigners misunderstand one another? Germans should know the United States better than almost any country; yet here we have an educated and intelligent gentleman, lecturing in the enlightened city of Berlin, who, in all honesty, proclaims these absurd fables. And what is worse, they will not want for believers.

—American women have lately been the theme of a lecture delivered in Milan by a lady with a German-seeming surname, Malvina Frank. In a course of four readings on woman, of which the last was on ignorance and materialism in matrimony, the third was devoted to the legal and social condition of our countrywomen. From a mere abstract of her remarks we infer that she was better informed than the learned Doctor we have just been quoting. She aimed principally to describe the educating mission of the women of the United States, and showed how they were prepared for it by their own education, 'based on the principle of full equality with man.' This is stating the fact too broadly, of course, though every year makes it truer; and the lecture was certainly speaking rather of the future than of the present, when she mentioned the 'civil offices to which women are readily admitted in the States, and which they fill with remarkable aptness, and generally in a satisfactory manner.' This is true only of postmistresses, who, for the rest, are very exceptional, though in Wyoming, we believe, women, besides the suffrage, have attained in some instances the dignity of justice of the peace. Madame Frank manifested good sense in reminding her hearers of the difference between a new society, like the American, and an old one, and that Italian women ought to avoid 'every exaggeration of principles and of aspirations,' trusting instead to the slow but sure operation of progressive civilization.

—United Italy gives daily example of the incompleteness which still characterizes its politics, and which, as we remarked the other day, removes the excuses of statesmen like Ricasoli, who retire because there is nothing else for them to do. The condition of Ravenna, for instance, is enough, or should be enough, to engage their best energies till it is permanently bettered; and this, they do not need to be told, is not the work of a day. Pavia is another fit subject for their attention. A short-lived paper, the *Costituzionale*, has just succumbed there, not because its funds gave out, or because its sympathizers were not in a numerical majority in the city, or because its conductors were intimidated by the violent menaces of the Ring which controls the municipal government. They were simply disheartened by the indifference or timidity of the friends of order and decent politics, and abandoned a struggle whose perils they would have endured if it had promised to end in the regeneration of the city. This lack of faith rather than of pluck will not be laid to the Italian character by any one who reflects how analogous it is to the state of things in New York. Disguise it as we may, there is here a real reign of terror, and our freedom of speech is at the pleasure of a Ring of which that at Pavia would have much to learn. In spite of occasional denunciations of Tweed and Sweeny, of this job and that, and exposure of frauds at the polls so reckless as not to be proportioned to the census, the city press has virtually abdicated like the *Costituzionale*, and exists only in virtue of its national importance, not of its metropolitan mission and influence. Here, too, as in Pavia, the apathy of the respectable classes is the cause of this surrender on the part of journals not wanting in good intentions or in courage.

THE ARMY OF AFRICA.*

DOUBTLESS that system, or rather want of system, which has obtained of late years in Algeria, is one of the many causes which have combined to destroy the regular armies of France. Previous to the present war, Generals von Moltke and Trochu had pointed out some of the evils and shortcomings of that 'training school' to which such undue importance has been attached, and whose graduates in the hour of trial have been found so sadly wanting. The army which was the most 'African' (McMahon's) was the first to fall, and, from its pell-mell flight after the battle of Wörth until the surrender at Sedan, offered an example of negligence and incompetency of the superior officers, and of unsteadiness and insubordination on the part of the soldiers, which prevented the strength of the German army from being tested, and which has rarely been equalled in military history. For nearly twenty years, service in Algeria has been almost

* Campagnes de l'Armée d'Afrique, 1833-1839. Par le Duc d'Orléans: publié par les fils. Michel Lévy frères. Paris: 1870.

a sinecure. Active operations have been confined to light cavalry and partisan troops, who have been exercised in reducing to subjection various bands of robbers; but unfortunately the spirit of this *guérilleria* has permeated the entire military system, and induced marshals of France to execute manœuvres against the King of Prussia which might more fittingly be used against a sheik of some tribe of Arabs. Moreover, it is unavoidable that an army of upwards of eighty thousand men, kept under quite loose discipline, in a hot climate, where the only civilized population consists of camp-followers, and those who have become reconciled to their position as a 'last resort,' should not become more or less demoralized. The stories told of the luxurious habits of the French officers—that all the officers who could afford it followed their men at their own convenience and in carriages, for instance—were doubtless greatly exaggerated; but still there is enough truth in them to be suggestive of some of the Orientalisms which have crept into the army. It is, however, impossible to read the Duc d'Orléans's animated and modest description of campaigns conducted on such principles as were those of the Tafna, Sickack, Boudouaou, and Constantine, without being convinced that at that time Algeria was a most excellent training school for every department of the army. Service in Africa then meant a series of toilsome marches, difficult retreats, and hard-won victories, which at once demanded the greatest ability on the part of the higher officers, and tested the qualities of soldiers to the last point. Such campaigns give evidence that, with judicious management, French troops are capable of adding to their other virtues that calmness and patient endurance which they lack so much at present.

The account of the Algerian campaigns, by the chivalrous young prince who took such a prominent part in them, besides being a welcome addition to French history, furnishes the connecting link between the military annals of the First and Second Empires; for the now fleeting generation of officers made their professional début in Africa, under the supervision of men who had studied the art of war, and held high command in the armies of the First Napoleon. 'L'Armée d'Afrique,' the Comte de Paris writes, 'is the title of a work in which the Duc d'Orléans proposed to give to France a record of the deeds and achievements of that army in whose ranks he had had the honor to serve. To the accomplishment of this work he devoted all the spare moments of a life so prematurely ended. . . . . It was not fated that the task should be finished; but among his papers this fragment was left, which still needed the author's final correction, and the publication of which his sons felt to be an homage due to the memory of their father, and the discharge of a legacy bequeathed by him to that army in which his pure patriotism beheld a faithful likeness of the French nation.' As the narrative of the Duc d'Orléans only relates to the five years preceding the peace of 1839, his younger son, the Duc de Chartres, has given a clear and spirited account of events which had previously taken place.

To Charles X. belongs the credit of having first gained a foothold for France in North Africa. In the latter part of his reign, urged by numerous insults to the French flag, but perhaps chiefly by the hope of being able to strengthen the tottering administration of Prince Polignac by means of military prestige, this sovereign determined to send an expedition against Algiers, 'not only to avenge the wrongs of France, but also to destroy for ever that nest of pirates.' In June, 1830, the Comte de Bourmont, after various mishaps, succeeded in landing with an army of thirty thousand men upon a peninsula near the city of Algiers. Five of the subordinate officers of this army were destined to become marshals of France—Baraguey d'Hilliers, Vaillant, Pélissier, MacMahon, and Magnan. After a severe campaign which lasted only twenty days, the city of Algiers, with its thousand cannon, splendid fleet, and fifty millions of treasure, fell into French hands. Strongholds in the interior were seized, and the standard of Henri Quatre now waved over a 'new France.' If at this time there had been men in the French Government who possessed half the talent and executive ability of the Outrams and Lawrences, it is possible that the successes of the Comte de Bourmont might have done for France what those of Lord Clive did for England. But soon news of the Revolution of July reached the army. Reports became current that the troops were to embark for France; the inland garrisons were withdrawn, and the Count was obliged to leave the country in an Austrian frigate. The natives quickly regained courage at what they believed to be a confession of fear on the part of their invaders.

At the critical moment the famous Abd-el-Kader, then in his twenty-fourth year, appeared upon the scene, and preached a 'holy war' against the Christians, who were forced to take refuge within the walls of Algiers. As soon as Louis Philippe became established on the throne, Marshal Clauzel was appointed the Comte de Bourmont's successor. This energetic officer was surrounded by so many difficulties that he could make but little headway against the enemy. Native troops were now for the first time made use of, and the Zouaves and Spahis first saw service in an expedition to Medéah, during which Lieutenant MacMahon, of the *Etat-major*, had the honor to be the first Frenchman to set foot on the summit of the mountain range of the country over which he was afterwards called to rule. Clauzel was succeeded in turn by Berthezène, the Duc de Rovigo (Savary), Voirol, and the Comte d'Erlon. During the administration of this latter officer, Abd-el-Kader gained a decisive victory at Marta over the army commanded by General Trézel, which disaster had the effect of replacing Marshal Clauzel. During an expedition to Mascara, Abd-el-Kader's capital, the Duc d'Orléans highly distinguished himself by driving the enemy from some woods, at the head of a detachment of the 17th *léger* and the *bataillon d'Afrique*. The innovations which Bugeaud introduced into African warfare, and success traceable to them, are described at some length by the prince, and may be read with profit by the military student. The account of the siege and capture of Constantine, where the Governor-General Damrémont, his chief-of staff, and six other officers, were killed outright at the side of the Duc de Nemours, is of absorbing interest.* The defence of this 'devil's city,' as it was called, was as obstinate as that of Saragossa, 'and like Saragossa, the defenders were more numerous than the assailants.' The unflagging resolution of the little army of besiegers, wasted by disease and decimated by incessant fighting with an army of trained soldiers, better provided with artillery than themselves; the perseverance and cool daring of the engineers, who were forced to 'execute in broad daylight those operations usually undertaken at night and under cover, and to commence siege-works without preliminary approaches, on bare rocks, and at distances at which they commonly terminate;' and, more than all, the noble-heartedness of the soldiers in the hour of final success, who, 'passing from the direst misery to the brilliant seductions of Oriental luxury, were seen to halt, and, at the call of honor and discipline, lend a helping hand to the vanquished, and adopt the children whom their bayonets had just made orphans,' are pictured to the reader in the most lifelike colors. The attack was fixed for Friday, the 13th of October; a 'few superstitious spirits' were startled at the ill-omen of Friday and the number of thirteen; 'so much the worse for the Mussulmans,' replied General Fleury. Lieutenant Colonel de Lamoricière and Commandant Vieux were the first to reach the slope; in an instant, the former was wounded and the latter killed.† A detachment of the 2d *léger* was buried under the falling walls, and its brave commander, slowly sinking in the masonry, 'still found words to encourage his men, until his crushed chest no longer gave forth any sound.' Altogether, the account of this successful assault, through a breech only ten metres wide, forms one of the most interesting stories of daring ever told. Such moving accidents by flood and field become under the prince's historical memoir as light in hand and entertaining as any novel. The concluding chapter gives an account of Marshal Valée's operations in 1838–9. The tenure of Constantine and Sétif was precarious so long as the enemy were in possession of the Portes de Fer—a perilous defile and natural fortress on the line of communications with Algiers; and the capture of this stronghold by the Division d'Orléans bears testimony to the Prince's military ability. The great prevalence of sickness in the army and the lack of proper medical attendance are described in this chapter, which also contains some reflections on sanitary reform which deserve especial attention. The narrative abruptly terminates with the return of the Division d'Orléans to Algiers.

The literary execution of the work is worthy of the historic name which the authors bear; and it is earnestly to be hoped that 'one of the "anciens Algériens," as the Duc d'Orléans used to call them, will finish a history so fitting to keep alive the traditions of those military virtues which are the honor and the essential characteristics of a truly national army.'

ERSKINE'S SPEECHES.‡

This is an American edition of Erskine's speeches which is in nearly every respect better than any English edition yet published—considerably better than the last or Reeves & Turner edition which appeared in London last year. Mr. High has judiciously made his explanatory notes

* This chapter appeared in the *Revue des Deux Mondes* of April, 1870.

† According to the Duc d'Orléans, Commandant Vieux, of the Engineers, was the man who forced open the gate of La Haie Salute during the battle of Waterloo.

‡ 'Speeches of Lord Erskine while at the Bar. Edited by James Lambert High, Counsellor at-law.' Two volumes. Chicago: Callaghan & Cockroft. 1870.

brief, presuming, doubtless, and with good reason, that few men take up Erskine's speeches who are not sufficiently familiar with the history of the times in which he lived to make much elucidation wearisome. The introductory memoir tells the leading facts of his career fairly enough, but in some places has an unpleasant 'reportorial' flavor. It is a little too bad to tell us of Erskine, of all men—'nor were the charms of an elegant physique and of an attractive personal appearance wanting [to him]. His form was peculiarly graceful, slender, and supple, yet when warmed with an address, quivering with the pent-up excitement of the occasion.' This sounds like a paragraph from 'Our Washington Correspondent's' account of his last hero's appearance on the floor of the House.

Erskine belonged to a class of men whom it is becoming more and more difficult to get the world to admire—so far away from us do the influences and abuses against which they contended seem. He made his appearance at the English bar at a period when the bar played a more important part in politics than it ever did before or is ever likely to do again. The reactionary oligarchy had firm possession of both Houses of Parliament, and, under the influence of the panic excited by the French Revolution, were bent on setting up a kind of government in England which would have been a closer approach to that of Venice than anything which existed then or has since existed. An energetic attempt was being made by the governing classes to repress the democratic spirit which had been growing steadily since the days of Wilkes, and above all 'to curb the license of the press,' which was the most prominent expression of this spirit; and the opposing forces met and fought their battle out in the courts. Erskine's accidental appearance in Captain Baillie's case brought him at once to the front, and he soon became the hero of the crisis; and in the course of the next twenty years he was instrumental in preventing some serious changes in the spirit of the constitution, and in putting the liberty of the press for the first time on a really secure footing, by handing it over to the protection of the jury. The scene in which he stood out against Judge Buller's ruling that to the court belonged the decision of the question of libel or no libel, to the jury simply the question of the fact of publication, is worthy, in any English historical gallery, of a place beside the signing of the Magna Charta, or the attempt to seize the Five Members, or the Trial of the Seven Bishops.

For this reason, Erskine is one of the few lawyers whose speeches are cherished and remembered outside the bar. He shares with Demosthenes and Cicero, and with them only, the honor of having made in courts of justice speeches which, as Horne Tooke said of that delivered in his own defence, 'will live for ever.' He owes his celebrity, too, it must be admitted, rather to his eloquence than his learning—because he was after all but little of a lawyer, and in quieter times would probably have made but little figure at the bar. He understood the principles of the English constitution thoroughly, and argued from them with matchless force and fire, but in legal lore he never attained a very high rank and made an indifferent chancellor, and such of his speeches as were delivered in the ordinary controversies of everyday practice strike one as labored and highflown. He had, indeed, in order to shine, to have great occasions to deal with. His temperament and his life in the army and navy, in both of which he served before going to the bar, gave him a fire which did him and his clients no small service, and indeed may be said to have made his fortune, by impelling him into that audacious reply to Lord Mansfield which was the glory of the Baillie case. Beginning to denounce severely Lord Sandwich, who was prosecuting Captain Baillie, Lord Mansfield reminded the young advocate that Lord Sandwich was not before the court. 'I know he is not before the court, and for that very reason I will bring him before the court,' Erskine thundered out. It was his first appearance, and the interruption would have disconcerted most men in a similar position; on him it only acted as a spur. The same quality made him, perhaps, not only one of the most successful but most ardent and courageous jury-lawyers ever seen. In some of his principal cases, he had to encounter not simply the hostility of the government but the frown of his own associates and of 'society,' then a comparatively small but very powerful body, whose smiles were dear to Erskine; but nothing ever made him swerve, and, indeed, the persistent and uncompromising *gallantry* of his performances in court savored more of the camp than of the bar. It was his splendid pluck as much as his eloquence which made the English press really free, and destroyed the odious doctrine of constructive treason.

The fidelity to their clients of which he and Brougham furnished the most conspicuous examples, and which, indeed, Brougham in his celebrated declaration about the duties of counsel reduced to an absurdity, was a great virtue in days when clients were poor men pursued by the crown. It has been used in later times to excuse or justify a fidelity to very different persons which springs from very different motives, and is attended with very different results. Erskine was pressed hard, by every influence to which he was most susceptible, not to undertake the defence of Tom Paine, when tried for a libel alleged to be committed in 'The Rights of Man.' Paine was an unsavory client, and Erskine defended him unwillingly and unsuccessfully; but his courage in resisting all temptations to refuse his retainer has had, perhaps, much to do with begetting and propagating theories of an advocate's duty to his client which are both immoral and dangerous. The ethics of the bar are full of perplexing problems of casuistry, not one of which can, of course, be solved satisfactorily without a careful consideration of the circumstances—which is nearly the same thing as saying that it is useless to try to set up a peculiar standard of morality for lawyers, and that right and wrong at the bar, as in many other places, are questions of degree. Erskine defended Paine for writing a book whose opinions he certainly abhorred, and defended him in spite of threats and obloquy; but if Paine had been acquitted through his exertions, and had then commenced a series of similar publications, and offered Erskine a general retainer for the purpose of having him held harmless in the prosecution of a business which Erskine would have considered nefarious, there can be little doubt what the lawyer's answer would have been. It may be proper to take a brief once from a man, from whom to take briefs twice, or continuously for a great number of times, would be wholly wrong. Erskine, five years after Paine's conviction, prosecuted, under instructions from a body called the 'Society for the Suppression of Vice and Immorality,' a poor bookseller, named Williams, for publishing the 'Age of Reason,' by the same author, and made his speech the vehicle of his own sentiments as to the character and value of the Christian religion, in which he was a devout believer, and declared that 'he would sooner have all his other speeches committed to oblivion than that a single page of it should be lost.' The doctrines laid down in the address in defence of the 'Rights of Man' will hardly bear reading side by side with the denunciation of the 'Age of Reason;' and it is curious to see how short a time ago very sensible men like Erskine were thoroughly satisfied Christianity could not hold its own without the aid of the police. Williams was convicted; but, before he was called up for judgment, Erskine was induced to visit him in a wretched garret, in which he and his wife were toiling painfully by the bedside of three children down with the small-pox, and was so moved by the spectacle of their penitence and misery that he advised the society not to press for sentence. On its refusing to comply, he withdrew from its service. His Christianity was too strong and too pure for this mode of defending it.

An Elementary Greek Grammar. By William W. Goodwin, Eliot Professor of Greek Literature in Harvard University. (Boston: Ginn Bros. & Co. 1870.)—Professor Goodwin has 'attempted to make a Greek grammar in which the facts and principles of the language shall be stated in as concise a form as is consistent with clearness and precision.' Brevity has certainly been attained. Etymology occupies a hundred and twelve of the duodecimo pages of the grammar; syntax a hundred; and metres and a catalogue of anomalous verbs make up the whole number—two hundred and twenty-eight. About one-third of this amount of matter—such as statements of dialectic forms, necessary for the pupil reading Homer; syntactical examples, illustrative of principles, but which it might be hardly desirable to commit to memory—is apparently not intended to be learned by heart. Thus it is seen that the whole voluminous grammar of the Greek language is brought within a most unusually reasonable compass. It might almost be asserted—if the nature of boys were not so well known—that six months of school-time of a clever boy would be enough to give him the whole. There being such compression, the question of course suggests itself whether the treatise has comp eteness. In this respect, too, the author seems to us to have been successful. We do not find that there is omission of anything that is necessary to any except professional students and those far advanced. The absence of troublesome technical terms is noticeable throughout the book, and there is no metaphysical discussion of cases or moods and tenses. The point of view which is taken is decidedly practical, the author seeming to wish that the pupil should learn the language first, and that philosophizing about it should come afterwards—an order of procedure which no doubt is much the best. Worthy of commendation as this grammar is in all its

parts, the treatment of the syntax of verbs is where the author is most original, and where perhaps is found most of the superiority of the book. The chapters on this subject are abridged from Mr. Goodwin's 'Greek Moods and Tenses,' and contain all the general principles of that work, now for the first time adapted for use in preparatory schools, and here treated of in a manner that must, we should think, clear up in the minds of all intelligent pupils and instructors the very hazy subject of Greek syntax. The distinction between general and particular suppositions which has given the clue to the devious ways of the protasis and apodosis in Greek—and Latin, too, for that matter—is set forth so plainly as to be understood with ease by anybody. This distinction, by the way, is a purely American discovery, and one in which we may properly take some pride. The Germans, even, have not yet attained to it, and the English would seem to be hopelessly astray.

The various constructions of relative sentences are also made very clear, and their analogy to conditional clauses is set forth fully and without undue metaphysical subtlety. Many persons will be pleased to notice that in the treatment of forms comparative grammar is recognized as the only true basis of a scientific knowledge of the subject. There are differences of opinion as to how far elementary books should deal with comparative grammar. Where, however, as in this book, the history of forms is merely suggested to account for apparent irregularities, without burdening the memory of the pupil, slight glimpses of comparative grammar can hardly fail to stimulate a wholesome curiosity. Of this kind are the notices of the lost σ in the oblique cases of $\gamma\acute{\epsilon}\nu o\varsigma$, the discussion of the feminine of the participles of the third declension, the note which gives the comparative inflection of the verb *εἰμί* in five cognate languages, and the suggestion in reference to the original eight cases of the Indo-European family.

The book well deserves to be recommended to teachers; and even those of us who learned our Greek under less favorable circumstances may read the syntax at least with pleasure and profit.

The Iliad of the East: A Selection of Legends drawn from Valmiki's Sanskrit poem, the Rāmāyana. By Frederika Richardson, author of 'Xavier and I.' (London and New York: Macmillan & Co. 1870. 12mo, pp. xix., 315.)—The authoress of this pretty volume serves up in English prose the main contents of the great Hindu poem. Her foundation is not the original, but the French version of M. Hippolyte Fauche. And this she has not merely condensed greatly; she has told over everything in a style of her own, with plentiful admixture of modern sentiment in Western coloring; so that her work represents the incidents but not at all the tone of the real Rāmāyana—for a faithful reflection of which we must go to Mr. Griffiths' versified selections or Mr. Wheeler's detailed abstract and part version. We cannot altogether approve this mode of treatment, which brings out a result that is neither one thing nor another, but many readers will perhaps be won by the Western garb to an interest in the Eastern subject, and so the book, besides furnishing an entertainment of a somewhat novel flavor, will help introduce to the public a literature which ought to be more widely known than it is now known.

Sam Shirk. A Tale of the Woods of Maine. By Geo. H. Devereux. (New York: Hurd & Houghton.)—It is clear that the author of 'Sam Shirk' will not find the solution of the problem which centres in the New England character. His story could hardly be less interesting or his characterization less individual. Sam Shirk, the hero, is a shiftless, pithless vagabond, who, by the gift of a farm, becomes suddenly endowed also with thrift and energy in a way which goes far to confirm the vote-yourself-a-farm party in their most extravagant pretensions. The author moralizes through nearly 400 pages, and only succeeds in awakening any interest in the reader by the resuscitation of Cooper's red-skin bugaboo and spectacular strategy, in which wampum makes the Indian and bad grammar the Yankee.

The moralizing and philosophy are hardly up to the standard of New England shrewdness, as this example may show:

> There is no more marked characteristic of this world than what our philosophers please to call its imperfection. In morals and in physics, the abstract principle is seldom found perfect or unalloyed. The concrete development and visible form combine, always, more or less exceptional matter. Everything works, at times, what seems mischief to our partial perceptions. From the golden circlet of the year, with all its beautiful and wonderful beneficence, dart forth, from point to point, casualties that sting like serpents hidden in a wreath of flowers. The glorious source of physical life and light pours down the *coup de soleil* upon the incautious head. The air that is the breath of our nostrils sweeps us away in the hurricane, withers and freezes us in the polar blast, and stifles us in the sirocco. The elements that are our ministers, and are assumed, by our complacent vanity, to have been created only for that purpose, must be watched continually, or they become our masters and destroyers. In the moral world, the noblest virtues trench narrowly upon the meanest vices; and the head must be clear indeed, and the resolve steady, that can maintain the exact line of right. Countless disturbing influences cause the sensitive and impulsive spirit to oscillate about the strait and narrow path. The magnet, though ever faithful to its mysterious polarity, is stationary and true only in a state of repose and isolation unknown to human hearts. Even under the most favorable conditions, our spirits waver over an endless cycle of aberration, returning to their precise meridian only to wander on the other side.
>
> . . . . . .
>
> What needs the mother care for the child, if it were born a 'hinfant phenomenon?' What needs the child revere or love its parent, if it lacked neither guidance nor support? What need of affection, tenderness, benevolence, if every human being stood upright in the rigidity of absolute exactitude?
>
> What need indeed! And what need of Sam Shirk? we might ask, if the need of anything were its only *raison d'etre*.
>
> What the author might evidently have told us, if he had been content with a severe simplicity, is something of the woods life, the actual struggle with nature and her forces; but even here there is too much exaggeration and piling up of sensation to leave an impression of trustworthiness. His accuracy of observation of the habits of animals is shown by his saying that 'the moose, like other deer, sheds his horns annually about the month of *November*.' There is small use of a man's recording 'the simple outgrowth of ten years of his own life' when he has not learned to record the most commonplace incidents about him correctly!

JUST PUBLISHED BY

PORTER & COATES,

822 Chestnut St., Philadelphia.

LONGFELLOW'S POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, by H. W. Longfellow, with the addition of 150 pages of entirely new matter never before published, making it one of the most elegant and complete works extant. With Introduction, Biographical Notices, and Translations, from the earliest period to the present time. By Prof. Henry Wadsworth Longfellow. Illustrated with engravings on steel and engraved title. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6; sheep, marble edges, library style, $7 50; half-calf, gilt, $9; Turkey morocco, $12.

'This valuable work contains selections from about four hundred authors, translated from ten languages. Mr. Longfellow himself gives us translations from all these languages but two.'—Allibone's Dict. of Authors.

'This edition has been revised and enlarged by the author, and contains his last touches and additions to his labors.'—The Age, Philadelphia, Nov. 3, 1870.

HEDGE'S PROSE WRITERS OF GERMANY.

A new and revised edition. With Introduction, Biographical Notices, and Translations. By Frederic H. Hedge, D.D. With Six Portraits on Steel and Engraved Title. Imperial 8vo, cloth extra gilt top, bevelled boards, $5; sheep, marbled edges, library style, $6; half-calf, gilt, $7 50; Turkey morocco, $10.

'There is no book accessible to the English or American reader which can furnish so comprehensive and symmetrical a view of German literature to the uninitiated; and those already conversant with some of the German classics will find here valuable and edifying extracts from works to which very few in this country can gain access.'—Prof. A. P. Peabody, in North American Review.

A New Globe Edition of

THE WAVERLEY NOVELS.

By Sir Walter Scott. In 16mo size, on toned paper, illustrated. The most attractive edition for a small amount of money published in the country. Complete in 23 vols. Green cloth extra, per vol., $1 25; per set, $28 75. Half-calf, gilt back, per vol. $3; per set, $69.

With additional descriptions of all the Species hitherto named, of many not before noticed, and other Original Matter, by Edward Griffith, Pidgeon, Gray, and others. 16 vols. Elegantly bound in extra fine, half calf, gilt, yellow edges. Contents, lettered, Lond., 1825. Each volume profusely illustrated with fine plates, engraved by eminent artists. Best edition, superb copy, $65.

*** A work no less distinguished for its scientific accuracy than for its interesting details of the habits of animals. It was published in the following divisions: Mammalia, 12 parts, in 5 vols., 7l. 4s. Aves, 9 parts, in 3 vols., 5l. 8s. Reptilia, 1 vol., 1l. 16s. Insecta 7 parts, in 2 vols., 4l. 4s. Annelida, Crustacea, and Arachnida, 1 vol., 1l. 16s. Mollusca and Radiata, 1 vol., 1l. 16s. Pisces, 1 vol., 1l. 16s. Supplement, Fossil Remains of the Animal Kingdom, 1 vol., 1l. 16s. Classified Index and Synopsis, 2l.—forming 26 vols.

COMTE'S BOOK OF BIRDS. Edited and arranged from the Text of Buffon, by M. Achille Comte. Translated from the original by B. Clarke. Imperial 8vo, fine half-crimson morocco gilt, gilt edges. London, 1841. Illustrated by 130 fine plates, colored after nature. Fine copy. $6 50.

DANIELL (WM. B.), RURAL SPORTS. 3 vols. London, 1812. Supplement to the Rural Sports, 1 vol. London, 1813. Together, 4 vols. thick royal 8vo. Elegantly bound in polished half-calf, extra, profuse illustrations, fine copy, $27.

*** This edition has considerable additions, which extended the work to four volumes. It likewise contains additional plates and proofs of all the larger subjects originally taken off for separate sale. The excellent engravings in this esteemed work are principally by Scott, the best of English engravers of animals.

NOW READY.

A SHORTER COURSE IN
ENGLISH GRAMMAR.
BY SIMON KERL.

Author of 'Common School Grammar,' 'Comprehensive Grammar,' 'Composition and Rhetoric,' etc.

1 vol., 240 pages, price 80 cents.

This work aims to be just such a manual as the great majority of schools and academies now require. The classification is exceedingly compact, and all that belongs to the same topic is carefully grouped together. It is specially adapted for use in schools where only one text-book in grammar is desired.

We shall be pleased to have the work extensively examined by teachers, and for this purpose we will send it, free of postage, on receipt of *half* the above price.

RECENTLY PUBLISHED.

ELEMENTS OF
Composition and Rhetoric.
BY SIMON KERL.

Author of 'First Lessons in English Grammar,' 'Common School Grammar,' and 'Comprehensive Grammar.'

1 vol. 12mo, 400 pages, price $1 25.

This is a simple, concise, progressive, thorough, and practical work on a new plan. It occupies an intermediate position between Common Grammar and Higher Rhetoric, and has been commended by many eminent scholars and critics as the best work of the kind now published.

We shall be pleased to furnish it, free of postage, for examination, with a view to introduction, at half retail price.

The Nation.

NEW YORK, THURSDAY, JANUARY 19, 1871.

The Week.

MANY ingenious statements are sent over the Cable purporting to be facts, but being in reality the opinions, more or less worthless, of the news-collector. The most ingenious, however, arrived on Friday, when it was announced gravely that 'thousands of Prussian balls had fallen during the night in Paris, killing women and children, and striking ambulances, churches, museums, schoolhouses, etc.' We suppose the 'etc.' must mean that the balls also fell on nurseries and hospitals and funerals and weddings, ripped up Bibles and prayer-books, smashed to pieces the monts-de-piété, and made a noise resembling profane swearing on striking the pavement. The bad boy who threw the Bible at his grandmother, and the mean white who stole the horse from the one-armed negro, were evidently nothing to the Prussian gunners.

The San Domingo resolution of enquiry having passed, the President appointed a commission, composed of President White of the Cornell University, Mr. Benjamin F. Wade, the late senator from Ohio, and Dr. S. G. Howe, of Boston; Mr. Allen S. Benton, of Kentucky, who is said to be a good Spanish scholar, going out as secretary. If Mr. Wade and Dr. Howe were younger, and were not both entirely wanting in the judicial faculty, there would be little fault to find with the arrangement. To send men, however high their character, to 'investigate,' who have all their lives cultivated the virtues of partisans—that is, the talent of seeing one side of a thing, and seeing that vividly and admiringly—can hardly be called judicious. But then appointments better calculated to remove all suspicion about the President in pushing the annexation scheme could hardly have been made. We may be sure that the report will be honest, and perhaps there is nothing more important than this as matters stand at present.

This disposition of the San Domingo affair will probably go far to disarm all hostility to the President, whatever may be the fate of the scheme itself. The men he has put on the Commission are incapable of conniving at any fraud or job, or of concealing any traces of it on which they may light, and even Mr. Sumner will probably be appeased by the appointment of Dr. Howe—though probably a large portion of the appearance of wrath in his late speech was due to his inability—which it is almost impossible to doubt—to measure the strength of his own language. He talks like a man who has passed his life among deaf people, and consequently is often amazed to find that he has given offence by shouting.

The judgment of the press on the Motley-Fish correspondence seems to be, as far as our observation has gone, that Mr. Fish erred in leaving Mr. Motley so long in ignorance of the real feeling of the Government about his performances; that common courtesy, to say nothing of sound policy, required that he should have been put on his guard at the very outset against whatever the Administration found fault with in his opinions; that Mr. Motley showed bad taste and bad judgment in ascribing his dismissal to Mr. Sumner's opposition to the San Domingo scheme, and, it might be added, that he showed in it also some want of self-respect, for there is more or less humiliation in confessing that one has been badly used in order to spite a patron who is too powerful to be got at. On the other hand, it appears to be generally thought that Mr. Fish erred still more grievously in his manner of repelling the imputation, than Mr. Motley in his manner of making it, and that if Mr. Motley did not show to much advantage in his performance of his diplomatic duties, Mr. Fish showed to as little in his manner of calling him to account. The *World* makes one point which is undoubtedly strong and probable, and that is, that the Administration appointed Mr. Motley against its better judgment, and for the purpose of obliging Mr. Sumner, and when an appointment is made in this way a disastrous issue may, of course, be fairly expected. A story has been long current, and is tolerably well authenticated, that antipathy to and distrust of Mr. Motley were first roused in the President's breast by seeing that he parted his hair in the middle, an arrangement to which, according to competent observers, the Western mind has an unconquerable repugnance, in spite of its adoption in the East and in Europe by many estimable and able men of all ages, married as well as single.

The civil service has come up during the week in a debate on Senator Trumbull's bill, making it a misdemeanor for members of Congress to solicit offices or give their opinion about candidates, unless asked for it. We wonder whether Mr. Trumbull really expects this bill to be enforced if passed, and whether he is not pushing it as simply a strong expression of opinion about the evils of the office-seeking nuisance. During the debate Senator Morton came out strongly against all change in the civil service, and pronounced the present system necessary to good democratic government, which is about the same thing as saying that lying, cheating, and stealing, and the deliberate discouragement of virtue and the deliberate promotion of vice, are necessary to good democratic government. The New York custom-house is at this moment undergoing a 'weeding-out' process at the hands of Mr. Murphy, under general instructions, we believe, from Washington, supplemented by his own sagacity. Now, when we say that this process is exactly the one which the devil would perform if he were appointed collector of this port, and that he would perform it on exactly the same principles, and with the same objects, and with the same results as Mr. Murphy performs it, we say what is strictly accurate, and we challenge any one who is familiar with the devil's character and habits and Mr. Murphy's late doings to deny it. The devil, for instance, on being sworn in, would seek out the clerks who gave their whole time to the duties of their office, and made them their first, great, and only consideration, and would incontinently dismiss them; while such clerks as made their duties a secondary consideration, and devoted most of their time to running about, making arrangements to keep him in power, he would retain and promote, and this is just what Mr. Murphy is doing. Highly competent clerks, long in the service, faithful, punctual, and exact, are now dismissed every week to make way for 'active politicians,' which, we need hardly say, is a synonym in this city for fussy, energetic rascals.

There was a debate on Monday in the Senate over Mr. Sherman's bill to cede to Ohio jurisdiction over its national asylum for disabled soldiers, which was valuable as showing that his Republican colleagues would not make a party issue of it, not a few of them endorsing the decision of the Supreme Court of Ohio, by which Mr. Schenck lost his election and got his English mission. On Friday, Admiral Porter was confirmed, very much against the grain, and apparently as the only escape from leaving him out of the service. Several Georgia representatives have been admitted in the House, which has been chiefly engaged on appropriation bills. A laudable effort was made to raise the salaries of the justices of the Supreme Court from $6,000 and $6,500 to $10,000 and $10,500. Down-East parsimony, we regret to say, diminished the proposed increase by one-half. Mr. Wood's bill to regulate telegraphic communication between the United States and foreign countries, and which imposes very just and necessary conditions upon the laying, control, and use of cables, was passed unanimously. On Friday, Mr. Buffinton, who represents the New Bedford district and whale-ship interest in Massachusetts, introduced a bill providing that the President shall appoint three commissioners to audit the claims for damages by the Anglo-rebel cruisers, and that bonds of the United States shall be issued in pay thereof. The early passage of this bill would put the Government none too soon on the right basis for settling the *Alabama* controversy.

The New York wing of the woman's suffrage movement, headed by Miss Victoria C. Woodhull, the Wall Street broker, have during the week made a determined assault on Congress, beginning with a series of addresses to the Judiciary Committee of the House, by Mrs. Hooker, Miss Anthony, and Miss Woodhull herself, who takes far higher ground than her colleagues, inasmuch as she declares that women are, under the Constitution, already entitled to the suffrage. Two converts were made among the members of the committee. Mr. B. F. Butler, we need hardly say, was one of them, and the other was Mr. Loughridge of Indiana. The majority of the committee were not convinced, and refused to take any notice of the ordeal to which they had been subjected, but the two neophytes are, it is said, going to bring in a minority report, and, at least, provoke a discussion in the House. The Senate Judiciary Committee refused to hear the delegates, the old dolts pretending they had no time to crack jokes with the humorous Anthony or listen to the ponderous wisdom of the learned and judicious Woodhull. Mr. Edmunds, of Vermont, presented a petition in the Senate, however, signed by one thousand ladies, including wives of divers high functionaries, begging that women may not get the suffrage, on the strange ground, amongst others, that the duties already devolving on women are as much, if not more, than they can manage. Considering the small strain on women's health and energy which is at present caused by housekeeping, cooking, child-bearing, dressmaking, educating, and visiting, the almost rude energy with which these duties are performed, and the amount of animal spirits and nervous power one finds running to waste among the sex after they are performed, such arguments as this ought to excite pity rather than indignation. The woman's suffrage party naturally laughed over the petition, and said that competency to judge that the suffrage would be bad for women argued competency to exercise it, so that the ladies who signed it had stultified themselves. Still, this way of looking at the matter has a painful resemblance to the argument that anybody who knows enough of the dangers and difficulties of navigation to fear them, and to beg that when he goes to sea he may be allowed to go as a cabin passenger, shows thereby that he is an able-bodied seaman, and ought to be sent before the mast or made first mate.

The appearance of Miss Woodhull in the front rank of the movement, with an offer of a $10,000 subscription, and with a weekly paper at her back, together with the adhesion of Mr. Butler and Mr. Loughridge, and the establishment of a committee in Washington to watch Congress and get a 'recognition' out of the President, proves the gradual entrance of the movement on the 'cute practical stage. In other words, it is working its way 'inside politics,' and attracting the attention of many truly patriotic politicians. We observe that Senator Wilson, who has been walking round it, poking it with a stick, and snuffing it for two or three years, has at last decided that it will suit him, and has stepped up on the platform.

Mr. Jenckes has brought in a modified bill for the reorganization of the Civil Service, providing simply that all officers of the Civil Service of the Government, except judges and clerks of United States courts, members of the Cabinet, and ministers to foreign courts, shall be selected by open and competitive examination; the examinations to be conducted, and all the rules and regulations relating to them to be framed by a commissioner and two assistant commissioners, appointed by the President, with the confirmation of the Senate. The rules and regulations are to be subject to the approval of the President, and every candidate is to pay five dollars before he can be examined, and ten if he obtains a certificate. All persons now in the Civil Service are to be examined as soon as the act passes, and dismissed if they do not come up to the required standard; and, in spite of the 'law of 1853,' and Mr. Boutwell's 'examination schedules,' we fear there would, if the bill should pass, be a terrible clearance. Provision is made for cases of eminent fitness for particular duties, in the absence of book-knowledge, by enabling the President to dispense with an examination whenever the head of a department advises him that it will be conducive to the public service to do so. This might be made the means of breaking down the whole system; but there can hardly be doubt that, if it were in operation even two or three years, no President or head of department would dare to break it down. No mention is made of the tenure, but 'half a loaf is better than no bread,' and we presume there are few friends of the reform who would not be only too glad to secure even the filling of all vacancies from persons holding the certificates of the commissioners. Good men would not be dismissed so often if it were known that their places would have to be taken by men of the same kind. But what would become of the young men whom Mr. Boutwell says he is training up for the professions in the Treasury, and whom he paternally turns out as soon as he thinks they are ready for the cold world?

Another Life Insurance Company has been indicted by the State Superintendent, and a receiver of its property appointed by the courts. The proceedings show not only the worst kind of reckless mismanagement, and extravagant expenditure of a doubtful character, but a systematic falsification of entries for the purpose of deceiving the public and deluding the State authorities. The State Superintendent, who is doing his duty courageously, and apparently with intelligence, has probably done all that can be reasonably expected of him by 'discovering, disclosing, and denouncing these vicious practices.' But if, as he states, these false and fictitious entries were made with intent to 'give a false result and impression,' it would seem that here was an opportunity for some of our other officials to display a similar efficiency. Now that the District Attorney is no longer occupied with 'usury' prosecutions, how would it do to look into some of Superintendent Miller's allegations concerning false entries made by insurance companies? The victims of the latter are much less able to protect themselves than were the victims of the wicked usurers who excited the spontaneous indignation of our ever-watchful guardians of the public virtue and the public purse.

The unsatisfactory condition of general business is well illustrated by the fact that almost every one of the leading city papers is discussing the 'true causes of the hard times.' Decline in prices, from whatever cause, invariably makes business dull and unprofitable. The decline in cotton and breadstuffs appears to be arrested mainly by liberal export orders; but meat of every description, both fresh and cured, has had another decided fall, and is selling lower than at any time since 1865. Coal has been forced up on pretence of the strike which has now become general, and drygoods have been firmer on a somewhat better trade than was anticipated, and on the stoppage of many New England mills owing to the drought. Otherwise trade remains unchanged. Collections are greatly complained of, and Chicago reports again numerous failures. The troubles in Boston and New York growing out of the Oakes Ames suspension appear to be in a fair way of temporary adjustment, although rumor continues busy with the names of other parties interested. Mr. Ames' creditors have given him a liberal extension of time, and the management of the Union Pacific Railroad is to be reorganized under the auspices of strong parties in New York, from whose skill and credit great results are expected. Money has again become easy; but the banks, though nominally stronger, are not in as good a position as might be desired. Stocks have been materially higher, but fluctuating, under the usual manipulations of cliques, and without any participation by the general public. Gold keeps remarkably steady, and lends plausibility to the discussion of a return to specie payments, now being revived with some earnestness.

The meeting in celebration of the union of Italy and the restoration of Rome to its proper owners, the Italian people, was a great success, one of the largest and most enthusiastic ever seen in this city—a result somewhat due, we think, to the announcements made about the timidity of the politicians. A few—about five, and all Republicans—ventured to write letters expressing sympathy with the meeting; the remainder of a large number invited either wriggled out of it or frankly acknowledged their fear. The committee ought, as we suggested last week, to make thorough exposure of them. It has, we believe, tried to put a good face on the matter, and to conceal the extent of the coward.

ice which it met with, through sheer shame and dislike to let the Papal party see of what stuff American politicians were made; but this, we cannot help feeling, is a mistake. The public is not afraid, and a good exposure of the politicians—who are perhaps the basest and meanest class modern society has produced—would do as much to keep ecclesiastical pretensions within bounds as anything that could be devised for the purpose.

The old year closed, in South Carolina, and the new year opened, with a series of disturbances in the 'up-country,' as the northwestern corner of the State is called, which quite rival the lawlessness in North Carolina, against which Governor Holden called out his militia. Sometimes the blacks began the taking of life, and sometimes the whites, but the latter figure oftenest in the familiar Ku-klux rôle of surrounding and murdering a man in his own house, or breaking open jails and carrying off the prisoners, to be shot in secret, with greater or less atrocity. Much of this is a sequel of the bitterness engendered by the late election, and to have been a Republican trial-justice, or a candidate for representative, has not been 'healthy' in Union, Newberry, Laurens, or Spartanburg. All parties admit the fact of these disorders, and the Governor has been urged to send his militia to the seat of them. The North Carolina example has, perhaps, saved him from doing that, though he is compelled to take some steps to investigate the matter. If specific remedies were of much use in such cases, we should count that a right step which a legislator has taken in moving to amend the unjust election law which raised suspicions of fraud, if it did not in all cases lead to the perpetration of it; and that is also a proper bill which makes the county liable for damages committed by any mob within its limits. But it is evident that the true friends of the State should pray and work as they are able for three things: the decline of the carpet-bag influence, the increase of population by immigration, and the establishment of an efficient school-system. The first reform must pretty much take care of itself. Ku-klux and other outrages are the great obstacles to the second, which is favored by a bill now before the Senate, giving aliens the right to hold property in the State on equal terms in all respects with native citizens. As for schools, the last report of the Commissioner of Education can number only 657, less than one-half of which are in what even a Carolinian would call 'good condition.' The State appropriates but $50,000 a year for a school population of 175,000. The teachers are generally very incapable and appointed without proper examination, and the people are apathetic about sending their children to get instruction. It chimes with what we said the other day to read that the Freedmen's Bureau Schools are decidedly the best in the State.

The army of General Chanzy, attempting to cover Le Mans, has fought a series of engagements on the banks of the Huisne, a northeastern affluent of the Sarthe, and suffered a crushing defeat. The reports, however, as far as received here, concerning the movements preceding, accompanying, and succeeding the decisive encounters, are uniformly imperfect, and, in part, quite incongruous. What we can best make out is the following: The first considerable engagements took place on Tuesday, the 10th, east of the Huisne, both main divisions of Frederic Charles's command pressing on the French, who were forced back toward Le Mans with a loss of several pieces of artillery and two thousand prisoners. The Prussian right wing, under the Grand-Duke of Mecklenburg, crossed the Huisne on that day, and, on the following, a great battle was fought between Montfort and Le Mans, the French army, posted on both banks of the river, being attacked all along the line. The fight was hotly contested, and seems to have been decided by the disastrous defeat of the French right. Chanzy fell back in a northwesterly direction, leaving ten thousand prisoners in the hands of the victors, and abandoning Le Mans, which Frederic Charles entered on Thursday, the 12th, capturing large quantities of supplies and war material. On the last-named day, however, Chanzy's left wing—then his rear—was still able to contest, though ineffectually, the advance of the Grand-Duke in a severe engagement, which cost the French another thousand prisoners, and after which it crossed the Sarthe, west of Savigné-l'Évêque, closely pursued by the enemy. The defeated army was again assailed on the 13th and 15th, losing considerably; and, on its double line of retreat, along the railroads to Laval and Alençon—that is, to Brest and Cherbourg—evacuated the vast fortified camp of Conlie and Beaumont-sur-Sarthe. Frederic Charles reports it to be 'broken up and disorganized,' after an aggregate loss of twenty thousand in captives alone.

In the East, where we at last distinctly see General Bourbaki in command of the French forces, the Germans have met with little success in their renewed offensive movements, and have fallen back on the defensive, while waiting for overwhelming reinforcements—the Second, Seventh, and Fourteenth Corps—under Gen. Manteuffel, who is to assume command in that department. After desultory fighting, with varying success, against some smaller French detachments, between Langres and Montbard, the Germans, under Von Werder, advanced against Bourbaki's main body, posted on the Oignon, on the confines of the Departments of Doubs and Haute-Saône, and attacked it on the 9th. Both commanders reported victory—Von Werder also the capture of eight hundred prisoners—and both announced the carrying of Villersexel by storm; but Bourbaki, who, on the evening of the battle, 'could not ascertain the full extent' of his success, subsequently reported his troops passing the whole of Tuesday night in driving the enemy from the houses of that town, which shows that neither party had been decisively victorious on Monday. Later, however, we hear of Bourbaki at Onans, beyond Villersexel, and carrying Arcey, on the road to Héricourt and Belfort; still later, through a despatch from the Swiss border, dated the 13th, of 'severe fighting all that day' west of Héricourt, 'which had not ceased at a late hour in the evening, the result unknown;' and, finally, of a Prussian victory on the 15th, 'south of Belfort.' On the final result of these operations depends the fate of that Alsatian fortress, the siege of which was vigorously pushed at last accounts. In the North, Peronne had capitulated with three thousand men, Longwy was invested, the citadel of Givet threatened for a short while, and Cambrai menaced by Von Goeben, who had replaced Manteuffel at the head of the forces operating against Faidherbe and Havre.

The Prussian fire against six or seven of the forts of Paris—on the south and east—connected with some shelling of the southwestern region of the city itself, has been kept up throughout the week. The besieging batteries having been advanced, according to a Versailles despatch, a thousand paces nearer Forts Issy and Vanves, the bombardment in that direction, which had slackened on Tuesday, the 10th, on account of a snow-storm, was resumed with vigor on the following day, and continued on the 12th. The barracks of Fort Issy were seen to be in ruins, and several fires to have broken out at different points within the French lines. The besieged had erected new batteries, and the besiegers, expecting a sortie against their lines in the south-west, were crowding in front of Clamart and Meudon. And according to communications from within the walls, the quarters of the city lying north of Forts Issy, Vanves, and Montrouge were all that time exposed to a rain of shells, which sometimes fell every two minutes, striking the Champ-de-Mars, the Hôtel des Invalides, the Luxembourg, the Sorbonne, the Church of St. Sulpice, the Val-de-Grace, and their surroundings, and doing havoc in streets, private buildings, and hospitals, and among collections of art. The simultaneous bombardment from the east, however, had little effect upon the city. On Friday, the 13th, the army of Paris made vigorous sorties in opposite directions, advancing at the same time against the Prussian Guards, near Le Bourget and Drancy, east of St. Denis, against the Prussian Eleventh Corps, near Meudon, and against the Second Bavarian, near Clamart. All these assaults, however, met with decided repulses after some spirited fighting. On the 14th, the bombardment was renewed, Forts Issy, Vanves, and Montrouge—as reported from Versailles—being silent. Some fresh batteries, unmasked by the French on the 16th, were also silenced.

WHAT GAMBETTA IS DOING FOR FRANCE.

We do not know where in modern history there is anything to be found so miserable as is the state of France at this moment. To men who know what war means, and what are the conditions of success in war, and what the strong and weak points of French armies are, there has not been a chance for France since the fall of Metz. It is not possible to improvise an army of Frenchmen—and improvise it without officers, too—which can stand in the open field against such a machine as the Prussian army, in itself an almost perfect instrument of destruction, and drawing, as no other army in the world does, its reinforcements from trained reserves, and, more than all, fighting under a strategist of whom it is no exaggeration to say that he has had only one equal since Julius Cæsar. The hosts which Gambetta has been drawing together in the provinces, and which Trochu has been trying to train in Paris, really do little more than madden the invader, make his exactions more remorseless, and his temper fiercer. They are picturesque, to be sure, and furnish exciting reading for the winter's fireside, the vain efforts of these crowds of peasants with their new Chassepots and their new uniforms to stem this dreadful tide, which is sweeping across their frozen fields, cruel and irresistible as fate itself. But their spasmodic valor only fills a few more German homes with mourning; it does not stay the conqueror's march or render the issue doubtful. We do not say that it is not better to have fought and lost than never to have fought at all. People owe something to their self-respect, even when they know that exertion is useless. There are times when men owe it to their own manhood to fight on, no matter how the fight is going to end; but Frenchmen have done all that either pride or patriotism calls for. There is nothing left in their struggle to call forth any fresh admiration. People who read of the havoc wrought by former wars can draw from it no conception of the havoc of this, because no war of ancient or modern times has been carried on on so great a scale and with so much destructiveness in the midst of a country so densely peopled and so highly cultivated as France is. The Prussian army is to-day working more misery than any army of its size has ever wrought. The houses it destroys can soon be rebuilt, the fields restored to cultivation, and the high roads and bridges to traffic; there are no scars left by war on the face of the earth which human industry cannot soon remove; but the shock of hostile armies in the midst of a society so populous, highly civilized, and so complicated in all its relations as French society is, means misery which no human power can wipe out—the disruption of family ties where ties were close, numerous, and of infinite value—the loss of the accumulations of years in a country where accumulation is slow—the destruction of homes where homes are hard to win and dearly loved. Neither labor, nor capital, nor domestic industry, nor foreign charity, nor peace, nor good government can give back to this generation of Frenchmen what the events of the last six months have taken from it. It will find peace in the grave, but nowhere this side of it. This seems a hard thing to say, but it is literally true. We must not judge of French capacity for recuperation by our experience of a country like ours, in which hope overflows, ties of all kinds sit lightly and are easily dissolved, enterprise vigorous, resources boundless, and change a habit.

For all these reasons, horrible a thing as it seems, we confess we cannot greatly regret anything which promises to hasten the conclusion of this mad struggle. If the bombardment of Paris will do it, better Paris should be bombarded than that this wild hoping against hope, and these frantic efforts to achieve the impossible and avoid the inevitable, should go on much longer. Nobody who thinks calmly about the future of France, can help wishing that the end be reached quickly through whatever brief increase of devastation. Whatever chance she had of an orderly constitutional government after the fall of the Empire, Gambetta and his coadjutors are deliberately destroying. Under the most favorable circumstances, with peace and plenty within her borders, to set up such a government, as everybody knows, were no easy matter. A thousand illusions, hates, hopes, and fears work against it, and work in a way for which the best Frenchmen have as yet been unable to find a remedy. The task of creating institutions that will give her peace and liberty and order is one from which her ablest men, even in the most tranquil times, shrink almost in despair. We believe we have read what nearly every one of them has had to say within the last five years about what is in store for her, and have as yet failed to light upon one confident or joyful anticipation. What will that task be after the Prussian troops are withdrawn, and the ruined towns and famished provinces are left face to face with their misery and humiliation, without an army, or a government, or anything in the shape of an institution for which they have a shred of gratitude or respect? M. Laveleye says there will then be a great reaction in favor of religion, and he is perhaps right; but even in this prospect there is little political comfort to be found, for he confesses, as all must confess who know what religious revivals in Catholic countries mean, that the first effect of this reaction will be the increase of the influence of the priesthood—in other words, a falling back towards the Middle Ages.

Considering that the efforts of the Imperialists have been steadily directed during the last eighteen years towards the destruction of even such rudiments of self-reliance and political sense as had sprung up under the Restoration and the Orleanists, the first duty of those who overthrew the Imperial régime, with its 'personal government,' was clearly to set up a representative assembly that would in some degree express the opinions and feelings of the country, and bring home to all voters a sense of their responsibility for their fate. A worse offence against France than the continued refusal to allow the country to take charge of its own affairs and decide on its own destinies, it would be hard to think of; and yet—so strange are the ways of French politicians—this the members of the Government of National Defence immediately set about committing. They set up another personal government instead of Louis Napoleon's. They entrusted the management of French affairs in peace and war to a couple of lawyers in black broadcloth, instead of an adventurer dressed up as a field-marshal—but, this done, everything went on as before. What Badinguet did, Gambetta does. He levies taxes, raises levies of men, carries on war, arrests, shoots, hangs, and transports—with better motives than Badinguet's and a better character than Badinguet's, we freely admit, but with, we sincerely believe, the same influence as regards politics on the French mind. The reasons which to an American or Englishman imperatively prescribed the calling together of a national assembly—that is, the danger of the country and its need of men and taxes and allies—he and Jules Favre unblushingly assigned as reasons why no assembly should be called, and why Gambetta should be allowed to do what was right in his own eyes. Fancy Lincoln's or Stanton's gravely informing us in 1861 that, the condition of public affairs being very critical, and one-half the country being occupied by hostile forces, they would govern as long as the war lasted as their own wills dictated, and without Congress; and yet Lincoln and Stanton were the products of a popular vote. Moreover, Gambetta has gone rather further than Louis Napoleon. *He* doctored and manipulated the elections so that the legislature should not be otherwise-minded than himself; but Gambetta, to avoid this very same result, gravely announces that he will not call the legislature together at all.

The consequence is that there is, in the midst of their great agony, absolutely no way in which the French people can express their wishes with regard to the prosecution of the war. The French press has never been of much value as an organ of public opinion; it is now of less value than ever. The principal newspapers appear inside the besieged capital; the others have little circulation and no influence whatever. At this moment, therefore, the young lawyer who is wielding the national resources has within his reach no means of consulting the people whose blood and money he is so lavishly spending, and, as is not unnatural, does not wish for any such means. It is said, we know, that the readiness with which he is obeyed proves that his acts are authorized by the nation; but this is, under the circumstances, an odd argument. He and his colleagues have so managed matters that the choice of Frenchmen lies between Gambetta's government and no government at all; between obedience to his orders and anarchy; between a profession of faith in his bombastic proclamations and an abject and unconditional surrender to the enemy. What can a Frenchman do or say before such an alternative? Was there ever such an alternative offered to a great nation, and was there ever such treason to the cause

of popular government as the pretence that it is all that Frenchmen ought to ask for or have any right to expect? The worst of Gambetta's rule is, however, that it still further familiarizes the French people with the processes of despotism; it confirms them in the deplorable habit of seeking relief in 'personal government' from the dangers and responsibilities and anxieties of self-government; it strengthens that contempt for parliamentary bodies, as mere assemblages of rhetoricians, which more or less pervades French society, and which has been the great support of the military régime, for so many generations the curse of the country. The more successful Gambetta is in carrying on the war, the more difficult does he render it to set up anything better than Gambetta in the shape of a government after the war is over. His failure, therefore, humiliating as it is for France, is not the worst thing that could happen her. If the misfortunes which have overtaken her under the knot of gentlemen who have charge of her destinies in this unhappy war should do anything to destroy all faith in 'saviours of society' and brilliant 'organizers,' and to attach the popular mind firmly to the slow and clumsy but sure and healthy methods of popular government, bitter as they are, and hard to bear, they will in the long run prove better than victories.

THE SCANDAL AMONG THE METHODISTS.

An investigation with open doors into the alleged frauds in the Methodist Book Concern has at last been commenced and is now pending. When it is remembered that the first public mention of these frauds was made in September, 1869, and that ever since that time not only the reputation of the Methodist body but of religion itself has been suffering seriously from the stories told about them, it must be admitted that the delay in examining them has been a most remarkable phenomenon. The main fact of the case is that Dr. Lanahan, the assistant agent or superintendent in charge of the Concern, declared, a year and a-half ago, that he had discovered serious waste and even dishonesty in its management. As soon as he made this charge, there ought to have been an immediate and thorough investigation, and the persons touched by it ought, as honorable men and good Christians, to have clamored for the investigation and refused all postponement. So far from this, however, nearly everybody connected with the Concern seems to have had his mind occupied not with the question whether there had really been fraud and mismanagement, but whether Dr. Lanahan could not be induced to stop the scandal caused by his mention of it and prevent the decline in the business of the Concern. On Dr. Lanahan's refusing to retract his charges, he was relegated to the character of a culprit, and, comically enough, it is he and not the persons whom he accused who is now on his trial. In fact, the 'credit' about which many of the brethren seem to have been most concerned all along is not the credit of the church as a spiritual institution, but the credit of the church as a moneyed corporation, with bills to meet, bonds to put on the market, and goods to sell.

We are not going to enter into a history of the affair or make more than a passing reference to the two or three sham or at least abortive investigations which have been attempted during the past year, and every one of which has resulted in confirming the impression that whether or not there had been fraud in the management of the Book Concern, there had been something wrong in it that called for examination, and that even if Dr. Lanahan were a libeller there was some foundation or color for his libels which needed clearing up. We shall express no opinion either as to the truth or falsehood of his statements. This is now at last under investigation, and, what is more important than all, public investigation; and though we hold the form of enquiry to be radically wrong and to reveal a most extraordinary misapprehension on the part of many leading men in the Methodist denomination as to the exact relations of the church to the community at large, it will, nevertheless, in all probability bring out the truth, which is the main point. When an officer of an institution managing what may fairly be called trust funds, brings a charge of malfeasance against any of his associates, the proceeding which usage and common sense prescribe is to put the person whom he accuses instantly on his defence, and to call on the accuser for his proofs. This is the course pursued in courts of law and in all enquiries of a judicial nature conducted by laymen. The charge of libel or of perjury against the prosecutor follows the trial of the accused but never precedes it. If a man, having had his watch stolen, goes to swear a complaint against somebody whom on good grounds he suspects of stealing it, the magistrate does not at once make the prosecutor give bail to appear and stand his trial on a charge of slander and defamation, and declare that the truth will come out in that way as well as in any other. If he did, there would be very few charges brought, and most thieves would escape. Or, to use a closer illustration—if the cashier of a bank was to inform the president that he had discovered that one of the tellers was a defaulter, the first act of the president would certainly be to secure the teller and investigate his accounts, and not to try the cashier for lying. If the president of a bank received charges of fraud against one of his officers as some members of the Methodist body have received the charges of fraud in the Book Concern, and enquired into their truth only indirectly, through a libel suit against the accuser, people would certainly be very shy of keeping deposits at his bank or owning stock in it. The time to try a false witness is after his accusations have been examined and have broken down. To treat him from the outset as a culprit is to favor crime by making the exposure of it troublesome and vexatious, if not dangerous. Slander and 'scandal' are bad things, but they are not so bad as theft or embezzlement, and it is recognized in all systems of jurisprudence with which we possess any acquaintance, that to make accusation *primâ facie* an offence would enable all other classes of offenders to thrive. If all this be true of the machinery for the protection of purely mundane interests, how much more true is it of machinery for the protection of interests that are eternal.

We doubt, indeed, if we have ever met with a more striking illustration of the dangers which the church runs whenever it becomes a great proprietor than is to be found in Judge Fancher's speech at the opening of Dr. Lanahan's trial. After mentioning the publication of Dr. Lanahan's charge in the newspapers in September, 1869, he proceeds to speak of their consequences. To anybody who duly considers what the Methodist denomination and all other denominations profess to be and undertake to do, the consequences of most gravity seem obvious enough; indeed, the gravest consequences are so grave that all others beside them seem utterly insignificant and trivial. Of course, in the case of an institution which has for its object the spread of moral and religious truth, and which is ostensibly managed for the glory of God and not for worldly profits, the most lamentable result, and indeed, it would seem, the only result worth mention, of a charge of pecuniary dishonesty againsts its conductors, is the shock to the religious convictions of that large body of persons in all churches and communities in whose eyes the claims of religion to confidence and respect are based on the character of its leading teachers and professors. That a youth who has been brought up on the mental and moral pabulum supplied by the Book Concern should be suddenly informed that the managers of the Concern, who get up and distribute all these improving publications, are a parcel of knaves who care more for their own pockets than for the salvation of souls, is certainly a serious matter, not so much because he will not buy or read the books of the Concern any more, as because it shakes his faith in everything he has held sacred—the greatest misfortune that can happen to a human being.

We were, therefore, a good deal surprised—we were going to say, entertained—at reading Judge Fancher's enumeration of the terrible things which happened after the publication of Dr. Lanahan's charges in the New York *Times*. As the first, and we suppose the worst, he sets down the heavy depreciation of certain bonds issued by the Book Concern to pay for the new building called the 'Publishing House.' Those persons who had bought some already declared they were swindled, and nobody else could be got to buy any at all. An effort, the judge says, was then made to do 'something to counteract the effect of that atrocious article'—that is, the effect not on faith and morals, but on the credit of the Concern in Wall Street. Dr. Lanahan refused, however, to sign a paper that was prepared for this purpose; so Judge Fancher declares with much solemnity, 'that the man who would

permit such an article to circulate without following it with an explanation was not fit to have charge of the vast interests of the Methodist Book Concern,' as if the first and great interest of the Book Concern and of all other 'Concerns' on the globe was not to be honestly managed. After the appearance of the article, says the judge, not a bond could be issued, though $80,000 worth had previously been 'taken quite freely.' In 1867, the profits of the Concern were $88,602; in 1868, they were $131,950; but when these changes were made, they fell in 1869 to $68,719, and properly fell, we think; but the judge thinks it was horrible, and of other loss and damage he makes no mention. We wish they had fallen to nothing, and remained at nothing, until the charges were investigated fully and openly; it is a disgrace to the Methodist Church that the profits did not disappear altogether—that anybody bought its books, while its leading men were trying to shirk enquiry as to whether a solemn trust had or had not been grossly abused. Dr. Lanahan, according to Judge Fancher, has written to bishops and others of the clergy such words as these: 'Fraud, fraud, fraud! Infamous and deep has been the history of this Concern for many years.' 'Is a man,' the judge enquires, 'that is capable of writing that sentence, capable to stand in the place of one of the principal agents of the Book Concern?' May it please the judge, if the frauds exist, the man who wrote that sentence is just the man to stand in that place. Moreover, there is no surer sign of rottenness in any sect, body, or organization than the appearance of greater horror over the making of an accusation than over the commission of the offence. As soon as we see 'scandal' become the greatest dread of a community, we may be sure that its morals are becoming muddied at their source. The elaborate arrangements made by Jesuit casuists for its prevention at any cost are among the disgraces of Catholic theology, and we should be sorry to see similar pains taken in any Protestant denomination for the polishing of the outside of the platter. 'Bonds' might rise, and 'profits' grow, and 'sales' swell, and yet every object for which the Christian church exists be neglected. There is a point at which a man may become too 'good a business man' for the successful promotion of the Christian religion, and every denomination which for any purpose takes to buying and selling has to see to it that the managers of its affairs do not reach it.

SLAVIC AGITATIONS IN AUSTRIA.

The threatening attitude so suddenly assumed by Russia towards her southwestern neighbors, while declaring her determination no longer to abide by all the stipulations of the Treaty of Paris, has caused quite a ferment among the Slavic populations of the Austro-Hungarian Empire, on both sides of the Leitha. And were all the Slavic elements of that polyglot monarchy not only united by a loose tie of race-relationship in various degrees, but animated by converging national tendencies and sympathies, that ferment, openly and secretly fomented by Russian agencies, might become not a little dangerous to the continuance of the Germano-Hungarian leadership at Vienna and Pesth, and even to the very existence of the Empire. Fortunately, however, for Germans and Magyars, Francis Joseph and Beust, the elements opposed to or not participating in that leadership, are still further removed from political harmony, even, than from a real unity of language, available as a basis for constructive national purposes. More than this, some of the Austrian Slavi are at this moment agitated by feelings among themselves which not only conflict, but almost neutralize each other.

The most outspoken in their sympathies for Russia and her Panslavic advances are the Serbs of Hungary—also known as Rascians—who occupy the fertile lands on and near the Danube border in the south of that country, opposite the semi-independent Principality of (Turkish) Serbia, and who in 1848-49 made themselves conspicuous by their deadly struggle with the Magyars. Their organ, the *Srbski Narod* ('Serb Nation') of Neusatz, on the Danube, gives quite unequivocal vent to their revolutionary sentiments, when it says:

'This attitude of Russia means the resurrection of the Slavic world; the Russian is the deliverer and avenger of the Slavi. . . . The Austro-Hungarian press preaches a crusade against the Russians. Is it stupidity or insolence which makes the Magyars see allies in the Slavi against Russia? They deceive themselves. The Slavi, of Austro-Hungary as well as of Turkey, have ceased to mind their Agas and Spahis. The hour of justice and freedom has come. The resurrection is nigh. The bridegroom is coming for his bride. We are ready to stand anything rather than, jointly with Tartars, lift up our hand against our Slavic brethren. Let the gentlemen at Vienna and Pesth know, then, that in our eyes a war against Russia means a struggle against the freedom of the East, a struggle of barbarians against civilization.'

And this mouthpiece of the Serb nation is the more inclined to see barbarians in Germans and Hungarians, and in the Russians defenders of civilization, as the latter are not only Slavi, but upholders of the Greek double cross, which the Serbs worship, against Protestants and Catholics.

The Poles of Galicia, on the other hand, who, though Slavi themselves, and not entirely devoid of general Slavic sympathies, see in the Russians only the bloody persecutors both of their country and church, and in a triumph of Russian Panslavism the final extinction of their nationality, naturally take the opposite view of the complication, hailing in it a chance of once more unfurling their banner—this time side by side with Magyars and Germans—*for* 'the freedom of the East,' against the Muscovite barbarians. And their impatience to fly to arms against these deadly foes is increased by the desire of indirectly aiding France—their ally of old, and so often their last, though deceptive, hope—in her desperate contest with Prussia, whose secret ally they see in the Czar. Unmindful of the perils to which the open northern and eastern frontiers of their province and the hostility of their Ruthenian fellow-citizens would, in case of an Austro-Russian conflict, surely expose that last asylum of Polish autonomy and nationality, they tremble at the idea of a diplomatic conference settling the 'Black Sea question' without the arbitrament of arms; and the Polish press of Galicia gives frequent utterance to their dissatisfaction with the slowness of the Hungarians to move in the affair, considering which, in all its aspects, there cannot be but perfect accord of interest and sentiment between the two warlike and friendly nations north and south of the Carpathians. But the Magyars, though hostile to Russia almost as intensely as the Poles, and, since the fall of the Empire, unanimous in their lively sympathy with France, are now, as usual, inclined to follow reason and wise statesmanship rather than sudden impulses; and, while waiting for England to give the signal for a general 'crusade against the Russians,' prudently abstain from rushing into war, with only Cis-Leithan Austria and Turkey for allies, which, as an avowed republican in the Pesth *Hon* ('Fatherland') expresses it, would be committing the useless crime of national suicide from love of France and the republic.

The Czechs of Bohemia and Moravia occupy a middle ground between their Rascian and Polish brethren, with an apparently decided leaning towards the former. And while the Poles, in spite of all the crimes Austria formerly committed against them, can now be counted upon by Count Beust as the most loyal to the sceptre of his master, and are ready to compromise their grievances with the Reichsrath through the President of the Cis-Leithan cabinet—Count Potocki, their countryman—the Czechs, formerly the pets of the monarchy, are the principal stumbling-block in the path of the Austrian statesmen of the present, and the deadweight on the machinery of the new constitution of the Empire. In vain has Potocki tried to conciliate them by moderate concessions. In vain have elections to the Reichsrath by districts been ordered to replace the representatives chosen by the Bohemian Diet, who, being all Czechs, refused to appear. The Czech opposition has spurned the conciliatory overtures, and, by voting for recusants in the district elections it declared to be illegal, frustrated their result; and thus the Czech nation is not only unrepresented in the Cis-Leithan parliament, but maddened by its own violent yet hitherto fruitless resistance, and almost ready to go to extremes. Revolt, however, being impossible under the actual circumstances, going to extremes means to threaten rebellion in furtherance of the Panslavic movements of Russia, should these lead to a collision between her and the Austro-Hungarian Empire; and this Dr. Rieger and a number of his fellow-agitators in Bohemia and Moravia, aided by a simultaneous agitation among Croats, Slovens, and other South-Austrian Slavi, [illegible] done, in a memorial presented to Count Beust, to be [illegible] by him

to the Emperor. The memorial solemnly declares that any attempt at coercing Russia to observe the treaty of 1856 would be an insult to the whole Slavic race; that the Czechs are firmly united by ties of race and tradition with all other Slavic nationalities, and therefore warn Austria of the peril in which an anti-Russian policy would place her very existence as an empire.

Unfortunately, however, for Czech political logic, the same memorial puts almost equal emphasis upon what it declares to be just, wise, and good Slavic policy in regard to the Franco-Prussian struggle—that is, a policy favoring the preservation of French integrity and the limitation of Prussian aggression. This, it is true, shows the consistency of the memorialists' Slavic sentiments, as uniformly directed against the Germans; but, when closely examined, places them in actual antagonism to themselves. For to demand an Austrian policy friendly both to Russia and France, at a moment when Austria is known to abstain from interfering in favor of the latter, and taking revenge for Sadowa, mainly from fear of the former, is to stultify one's self. And what makes the position assumed by the memorializers still more untenable is the circumstance that the French sympathies of the Czechs, who are chiefly Catholics, are known to be much more sincere and general than their enthusiasm for Russia, which is displayed mainly for political effect, and by no means shared by either the clergy or the aristocracy, both of whom would require but little persuasion to join in a 'crusade against the Russians.' All this has made it easy for Count Beust to treat the memorialists with decision and almost with contempt, telling them that if the Czech nation demands to be heard concerning the international policy of the Empire, it must appear in the representative assembly of the latter; that the channel of communication the signers of the memorial have chosen is altogether unconstitutional; and that their offensive utterances only stop short of high treason. And the Czech agitators have the mortification of seeing their action ridiculed and denounced not only by the German and Magyar press, but also by the Polish journals, of the Empire, while the only words of comfort they receive from beyond its boundaries are the encouraging greetings of their Slavic brethren of Moscow and St. Petersburg—whom they serve so well.

THE TWO 'MOVEMENTS' AMONG WOMEN.

THERE has been a horticultural school established near Boston for the education of women in the culture of flowers and their preparation for the market—an excellent occupation, and one for which women are apparently admirably fitted. They have a natural love of flowers; the colors and the perfume are both very grateful to them, far more so than to men, and they have a natural gift for making up bouquets. Nevertheless, the results accomplished by the school have not thus far been very satisfactory. To be sure, it has not nearly funds enough to carry on its operations as they ought to be carried on; but, then, the pressure of pupils on its resources has not been nearly as great as it was hoped it would be. It is too soon as yet to pronounce with any positiveness on the result of the experiment, but one is reasonably made anxious about it by the total failure of the various agricultural schools which have been established in various parts of the country to attract male pupils. We believe we are not guilty of much exaggeration when we say that these schools have no pupils. The young men who go to school and college are very largely influenced in doing so by a wish *not* to be farmers, while those who have to be farmers consider, and their fathers consider, that they can learn farming better on the farm than anywhere else. What farmers, young and old, want to know about the theory of farming, they get from the agricultural books and newspapers, and what they do not want to know they think is not worth knowing. In the East, the most intelligent and most enterprising of the farmers' sons either refuse to follow their fathers' calling altogether and go to the cities and become clerks or salesmen, or go out West and try farming by machinery on a grand scale, getting all they can out of the ground with the least possible trouble and outlay. In fact, in spite of prodigious exertions on the part of poets, orators, editors, and lecturers, rural life, especially if accompanied by the tillage of the soil, is not held in much esteem by the people who have had most experience of it. Their highest ambition, and the first use to which they put talents or good fortune, is to get out of it. They say it is laborious and lonesome, and, therefore, opposed to 'the spirit of the age;' and the women like it less than the men, and find its hardships and inconveniences more serious. Our city ladies, however late the hours they keep, or heavy and hot the suppers they eat, or however deeply they plunge into fashionable dissipation, are pictures of health compared to country girls. A vigorous New York belle, even after a winter's gaiety, would be stared at in any country district for her appearance of rude health. The 'milkmaid' whose 'roses' have stood so many poets in good stead, is now a cadaverous creature, with sunken eyes, and pallid cheeks, and flat arms, and weary limbs with no spring in them. She is, in fact, going out of poetry as fast as she can—the poets are hurrying her feeble steps.

It is, therefore, not unreasonable to fear that the horticultural experiment will not succeed unless women who have 'the elevation of woman' at heart will go into it, and show what may be done by it, and things like it, for female health and happiness. In so far as it has been tried, its effects on the health of the women, we believe, have been very remarkable; but we doubt if the proclamation of this fact will do as much for it as it ought, and for several reasons, which we shall state as moderately and inoffensively as we can.

There are two movements going on among women in our day—the first, among the farmers' daughters and working-girls generally, and which is by far the most widely spread and the strongest, has for its object what may be called a 'genteel,' or, in other words, an idle life, or a life of light, clean, indoor, and sedentary labor, which does not involve a total sacrifice of personal liberty—which, for instance, leaves the evenings free, and makes the work certain in kind and quantity, and brings with it more or less society and amusement. It is this movement which makes so many girls miserable in farm-houses, and fills the cities with sewing-girls and shop-girls, and it is all but overwhelming. It makes little or no noise, has no 'organs,' holds no meetings, and pays no lecturers; but it has an amount of pristine human nature at its back which gives it a literally appalling strength. It is curious to see, too, how widely different views of life its promoters take from those current among the woman's suffrage advocates. That 'independence' which the friends of 'the cause' are constantly clamoring for, the vast body of working women thoroughly detest and abhor. They take views of marriage, and of the ends of marriage, old-fashioned enough to satisfy Abraham himself; that is to say, they look on marriage as a profession, and a very delightful one, too, which every one of them wants to enter at the earliest possible moment. The inequality in the laws relating to the property of married women have no terrors for them; and so far from regarding man as a possible 'tyrant,' and treating with him, as the lawyers say, at arm's length, they are only too ready to surrender their liberty to him, merge their existence in his, and become his 'slave,' in return for a living and a home, and the chance of having one or two children. From these women, schemes for raising women above the necessity of marriage receive no sort of countenance. They are really independent or self-dependent, they say, and know what a miserable condition it is; while the ladies who paint its delights on the platform or in the columns of the 'organs' generally do *not* know what it is, and have not worked friendless for a living, and therefore do not know what they are talking about, and ought not to be listened to.

The second movement is designated in a rough way as the Woman's Rights movement. This has for its object, nominally, not only the admission of women to the electoral franchise, but their admission on equal terms with men to all employments and occupations. It so happens, however, that the women most prominently engaged in it make no secret of their contempt for all the harder and more obscure modes of earning a livelihood, and particularly for those which have hitherto been mainly or exclusively confined to women. They treat housekeeping, including cooking, dusting, sweeping, dressmaking, washing, and baby-tending with undisguised scorn, as unworthy the powers of the ideal woman whose cause they plead. Needlework, too, they hold in low repute. The callings which they exalt both by their teaching and example are those which are either carried on in public, and are attended with more or less excitement, or which offer the chance of earning money without much labor of the hands. They encourage women to be brokers, lawyers, ministers, lecturers, editors, doctors, and professors, as not only the best means of asserting their outward equality, but of demonstrating the great capacity of the female mind. The general result of the agitation has been, therefore, to strengthen and diffuse the repugnance to steady, and what some economists would call productive, industry which has been for some time gaining ground among the youth of both sexes. The young men from the country do not want to work on the farm, or enter a work-

shop and learn a trade, if they can possibly get a clerkship or engage in some kind of speculation. The young women do not want to wash, or cook, or milk, or make butter, or raise flowers, or fruit, or vegetables, or engage in any employment that hardens the hands and requires stooping, as long as there is a chance of sewing to do, or, better still, of lecturing, or writing for magazines, or marrying. Both sexes are laboring might and main, in short, to shift the rough, hard work of the world on some one else, and the attempt has, to a certain extent, succeeded in this country, owing to the constant supply of coarse labor from Europe ready to undertake it. But it is quite plain we are nearly reaching the limits of the possible in this direction.

'Third parties' are rarely successful, and yet, unless the signs of the times are very deceptive, there is room for one, and urgent need for one, in that thorny field of sociological speculation known as Woman's Condition. It is becoming plainer every day that it is an immense misfortune that it should have been taken hold of in this country by agitators out of work, and who have agitated so long, and love agitation so much, that agitation has come to seem in their eyes the principal business of life. Their influence on women, so far as it has gone, has been to make obscure toil—that is, the toil to which the great mass of mankind must always be condemned, and in which the bulk of our duties must always lie—more and more distasteful. So far from checking the tendency amongst the women who do not care anything about their suffrage doctrines to crowd into the towns in search of a shabby-genteel living, they have, so far as their influence has gone, fostered it. The model woman whom they hold up before the country-girl's eyes is the young girl who, feeling herself too good for handwork, takes to the stump for a living, and, by dint of burning eloquence, makes ten thousand dollars a year, and perorates in black velvet and a gold chain; or the other young woman, with ringlets and a sailor's hat, who, having deft fingers, learns to ply the reporter's pencil with faultless skill, and passes a distinguished and honored existence rushing about the country, taking down the speeches of female orators, and describing their dresses; or, better still, the woman's rights agitator herself, who attends four conventions a month, travels ten thousand miles, and 'corners' eight members of Congress, and reduces three twaddling ministers, and an old fogy of a judge, and a flippant male editor, to appalled silence during the winter campaign. There is no woman engaged in the achievement of these triumphs whose history contains anything which need make any American girl despair of imitating her. Some of the successful public women —if we may use the term—it is true, have had something like an education; but, then, others who earn as much money as any of them have had no education at all. Some have had a social training, but, then, others who have had none succeed just as well as any. Some have characters spotless as the driven snow, but others lost their characters long ago, and nevertheless figure as prominently and are as popular on the platform as the purest. In short, no girl, not absolutely deformed, who watches their performances and listens to their talk, no matter what her condition in life, need despair of imitating them, and as long as there is a possibility of imitating them the labor of the hands and of the back becomes daily harder to a girl of real ambition. Anybody who desires to win the hearts of the women of the country for productive industry will therefore find plenty to do, and will prove one of the greatest benefactors both sexes have ever had.

Correspondence.

THE LEE PEDIGREE AGAIN.

To the Editor of the Nation:

Sir: In your issue of January 12, Mr. E. C. Mead replies to certain criticisms on his published genealogy of the Lee family. Mr. Mead seems to misapprehend somewhat the functions of a critic in calling upon me to construct as well as tear down. He publishes a pedigree, with the presumed proofs, and when I allege that these are insufficient, he demands to be furnished with his right line of ancestry. However, if I can aid him I will waive the question of duty, and will try to do so.

Stripped of all unnecessary matters, it seems that Mr. Mead found among his family papers a pedigree copied in 1750 by the officials of Heralds' College. I presume it to be an extract from the Heralds' 'Visitation of London,' in 1664, as the different lines are brought down to 1663. There is no evidence that I can see connecting this document with any Virginian. It is an office copy, such as can be procured to-day by any one who pays the usual fee. Mr. Mead refers me, however, to page 51 of his book, where I read, as I had before, that William Lee of London, great-grandson of the emigrant, in 1771 wrote to Dr. Lee, of Winchester College, and claimed relationship. Mr. William Lee, indeed, says that his father had corresponded with Dr. Lee's father, and that they had agreed upon a common ancestry, being that of the Lees of Cotton.

This is all the evidence that I find of this affiliation, and I must repeat that, taken alone, it is insufficient. There is no proof that either of the gentlemen was versed in genealogy or competent to give an opinion entitled to weight. I would ask Mr. Mead if he imagines that any property or title could pass on such evidence? The tabular pedigree simply says that a Launcelot Lee of Cotton had six sons and four daughters; that the third son, Richard, was of the parish of St. Olave's, in the borough of Southwark, in 1663, and that he had a wife, Elizabeth, daughter of Walter Langdon. But, as Mr. Mead shows, in 1663 Richard Lee, the emigrant, made his will, mentioning his wife Anna and eight children. Every one of these items makes it the more difficult to believe that these two Richards were the same person. Mr. Mead, seeing the difficulty, imagines that the emigrant had two wives; but this is a gratuitous supposition.

Here, indeed, I might rest the case, on the ground that there was no evidence to prove the identity of Colonel Richard Lee of Virginia with Richard Lee of Southwark. The case is, however, much stronger. Colonel Richard Lee, in his will, calls himself 'of Virginia, and lately of Strafford-Langton, in the County of Essex.' Now, we should naturally ask, was there any family of the name at Stratford-Langton? The answer is in the affirmative. As I wrote in my last communication, Sir Robert Lee, father of the first Baronet of the Quarrendon Lees, was buried at Stratford-Langton in 1616. The emigrant named his plantation Stratford, and his son, Richard Lee, jr., called his plantation Ditchley. The latter name was that of the family seat of the baronets.

I have said that there is hardly a doubt that the emigrant was a younger brother of Sir Henry Lee of Quarrendon, Bart. I do not assume that he was, although the circumstantial evidence is so strong, because to prove the fact satisfactorily would require an examination of parish registers and wills in England. As, contrary to Mr. Mead's suggestion, I have not brought forward a new pedigree to 'flatter the pride of some distant cousin of the family,' and as I have not the honor to be connected with any branch of any family of Lee, I respectfully decline to bear the expense of such a search in England. I have no doubt, however, that such investigations would prove the affiliation I have suggested, and the reviewer in the *Herald and Genealogist* considers the point as settled. I will add, that if the connection be proved, Mr. Mead will find a good account of the main stem of the Lees of Quarrendon in the third volume of the *Herald and Genealogist* already cited.

One little point may be noted. The tombstone of Richard Lee, jr., says that he 'was descended from an ancient family of Merton Regis, Shropshire.' Now, the Lees of Quarrendon are an offshoot of the Lees of Lee Hall, Shropshire. As I cannot find Merton Regis in Clarke's large *British Gazetteer*, I see no reason to suppose that this evidence favors the Cotton ancestry rather than the Lee Hall origin.

I do not understand Mr. Mead's allusion to the fact that 'another Richard Lee, of the house of Litchfield,' came to Virginia in 1641. Surely the will printed in his book is that of the emigrant ancestor of the Virginian family. William Lee, of London, writes, in 1771 (see p. 66), that the first Richard Lee, his great-grandfather, went there 'one hundred and thirty years ago to this very day,' *i.e.*, 1641. Surely Mr. Mead does not mean to suggest that there were two emigrants of the name recorded in his book.

The dispute between Mr. Mead and myself seems to be narrowed to this point. I take the will of the emigrant, which says that he was from Stratford-Langton. I show that there was a family of the name there, including a Richard, contemporary with the emigrant, and that the names of the family seats were revived in Virginia. These facts seem to make a strong presumption that the emigrant belonged to the Lees of Quarrendon.

Mr. Mead finds that, in 1771, Mr. William Lee had an idea that he belonged to another family of Lees. He also finds that there was a Richard in that family, but the few facts recorded about him are directly at variance with any identification with the emigrant. The family may prefer the opinion of the 'eminent ancestry' quoted, but genealogists will prefer more tangible proofs.

I have already denied any responsibility on my part to reconstruct the Lee pedigree. Mr. Mead published a book to show that Richard Lee

was the son of Launcelot Lee. I submit that he has not given a scintilla of evidence of the fact, but I am not bound to furnish the aforesaid Richard with lawful progenitors. Still, regarding this pedigree as typical, I have done what I could to aid any of the family in tracing its origin.

W. H. W.

[We have made up our minds that the Virginia Lees are descendants of the Lees of Quarrendon, and we shall not permit this theory to be impugned in our columns any more by anybody, no matter what his ancestry may be.—Ed. Nation.]

GAMBETTA'S AUTOCRACY.

To the Editor of the Nation:

Sir: In your able article of the 12th of January, entitled 'The French Resistance,' it seems to me that through love of legal forms you miss the strong point of the French case. Gambetta's authority is no doubt, as M. Guizot says, technically illegal. Yet, after all, when we look for things rather than words, what better title could Gambetta have than the purely voluntary obedience paid him throughout so large a portion of France—everywhere, in fact, where Prussian troops are not present—while even from down-trodden Alsace and Lorraine every possible response is made to his call?

This matter is so ably treated in the London *Spectator* of the 24th of December (which you have no doubt seen) that I need not enlarge upon it. As an American, however, I cannot forbear urging that we warmly sympathized in the woes of Venice, and thought Italy fully justified in all her efforts to free Venice from the Austrian yoke. Is France less justifiable in struggling to prevent Alsace and Lorraine from being subjected to a similar tyranny? Does the fact that the French are fighting at great odds and under great disadvantages make their cause less noble?

Surely we have not already forgotten through how many defeats our own army of the Potomac fought its way to victory. To my thinking, the devotion and patriotism now displayed by the French are worthy of the highest praise—quite as high as we should merit were the United States, for example, with New England overrun, and New York besieged, and the Southern States again in rebellion, still grimly fighting on, rather than make a shameful peace by the cession of Maine. But my letter is already too long. I remain, sir, yours faithfully, Devon.

Burlington, Vermont, January 14, 1871.

[1. The obedience paid to Gambetta is not voluntary; he is obeyed because there is nobody else to obey, and somebody must be obeyed in all civilized countries. Appointment by a national parliament is a better title than Gambetta's, and the only good one we know of.

2. The London *Spectator* has been thrown off its balance, as it has often been before, by the picturesqueness of Gambetta's performances. It sometimes forgives everything to a man who gets up a good tableau, and Gambetta has got up an admirable one—young lawyer, black beard, dark eyes, high boots, fur coat, absolute power, tremendous will, generals tremble before him, armies rise at his stamp, Junkerdom appalled by terrible civilian, and so on. It is magnificent, but it is not government.

3. France did not go to war to save Alsace and Lorraine. She went to war to rob and devastate Germany, and has used Alsace and Lorraine for a century and a half as a rendezvous and refuge when setting out on similar expeditions. We are not in favor of the annexation of Alsace and Lorraine, but Frenchmen are estopped from crying out against it. There is no sort of resemblance between their case and that of the Italians. When men gamble, they must not wail because they lose the stakes.

4. The Army of the Potomac suffered no such defeats, or anything like such defeats, as the French army has suffered, and was opposed to no such enemy, and, in fact, to detect any resemblance between the condition of the North at any period of the late war and that of France now, requires an imagination which we confess ourselves incompetent to criticise.—Ed. Nation.]

Notes.

The first number of a new quarterly, the *Photographer's Friend*, is issued in Baltimore, and the publication seems calculated to be practically useful to the class named in its title. We do not know how much competition it has to meet in this country, but believe it is not the first of its kind. Like the foreign photographic journals, it gives a specimen of the art with each number—in this instance, a striking character-portrait, by Sarony, of Mrs. Scott Siddons, as Mary Queen of Scots. The literary execution of the *Photographer's Friend* is certainly not of the highest order. ——Messrs. Leypoldt & Holt, having disposed of four editions of Professor Pumpelly's 'Across America and Asia,' are about to publish a fifth and cheaper one, which, however, will be unabridged in every respect, including maps and illustrations. They have also nearly ready a cheaper edition of Taine's 'Italy,' making one volume out of two, but without abbreviation of the contents; and hope to publish before the summer the same author's 'English Literature.'——The American Tract Society of Boston has just completed an arrangement by which it transfers to Messrs. Hurd & Houghton the manufacture and sale of its large stock of publications, as well as the printing of its two newspapers. This we understand to be a purely economical proceeding, and not to indicate a winding-up of the Society either as regards its collections or fresh publications. In effect, the Society leases its plates, for a royalty, to Messrs. Hurd & Houghton, who will maintain a principal depository in Boston, keep also a stock at their bookstore in Astor Place, and supply the trade either from the Riverside Press at Cambridge or from this city.

—We were not a little surprised to meet with this sentence in the seventh article of a series of criticisms on Richard Grant White's 'Words and their Uses,' by a Yale professor, published in the *College Courant* (Jan. 7): '—— when, far worse than this, a paper of the character of the *Nation* can, on the authority of it [viz., 'Words and their Uses'], introduce into its columns such a formation as *presidental*, assuredly it is full time,' etc. But it happens that we were particularly offended by Mr. White's dictum in regard to the excellent word 'presidential,' and expressed ourselves quite plainly on page 351 of Vol. VII. (Oct. 29, 1868), as follows:

> We usually allow Mr. R. G. White to talk without interruption when he takes people to task for their errors of speech, and, perhaps, do not give him too much attention. The vulgarisms that cause him such grief we, we desire to thank heaven, are entirely free from. But as he was laying down the law the other day in the *Galaxy*, on 'Words and their Uses,' he seems to have hit out right and left in a way which has brought him into contact with ourselves among others. It is to be hoped, as we believe we have once before remarked, that Mr. White is well learned in philological knowledge, for he is abundantly peremptory in all that he says, although, to be sure, he escapes the pertness and laborious dulness and triviality of the Moons and the Goulds. But to the matter in hand. Mr. White wants people to say 'presidental' instead of 'presidential.' Now, as this is a word that we shall have to keep on using for more years than we can say, we should be obliged if Mr. White would inform us and the audience which he instructs what he does with 'tangential,' and what vestige of authority he has for what he says, and why he reasons from analogy as regards English orthography, and why he finds fault with so good a metaphor as calling a 'canvass' a 'campaign,' and what 'blatant Americanism' there is in a word so long known to English on both sides of the water as 'presidential?'

It only remains for us to beg the writer in the *Courant* to take an early opportunity of showing when the *Nation* has ever used (except to condemn it) the word 'presidental' and referred to Mr. White's book as its authority for so doing; and if he can point out an instance of the former, we shall be justified, we imagine, in the light of the above extract, in laying the occurrence of the odious form to a printer's error.

—The mention of Mr. Moon may properly be followed by a notice of the death of his antagonist, the Rev. Henry Alford, whose 'Queen's English' called out the 'Dean's English,' and a debate in which a considerable strain was put upon clerical urbanity, but without breaking it down. This verbal controversy, however, occupies a small place in the Dean's public career. His first ventures in literature were poetical, but he was still young when in 1841 he published the first volume of his critical Greek Testament, on which his fame and his usefulness as a theologian chiefly rest. This work was twenty years in passing through various editions under his hands, and in the meantime, in 1857, Palmerston had appointed him Dean of Canterbury. His latest service to letters was as editor of the *Contemporary Review*.

—The first annual report of the present national Commissioner of Education, General Eaton, consists of a general survey of the work of the Bureau during the past year, and of the topics treated of in the papers which accompany the report in the form of an appendix. These last are the work of many hands—on Kindergarten Culture, by Miss Peabody, on Hebrew Education, by J. J. Noah, on the Chinese Migration, by Prof. Day,

on Illiteracy in the United States, by Dr. Edwin Leigh, etc. The chief labor of the Bureau has been in making abstracts of the school reports of every State, and in preparing twenty tables of general school statistics of the United States; and this it seems to us to have accomplished with judgment, industry, and despatch. It gives us for the first time a comparative exhibit of all the educational institutions and machinery in the country, and leads the way to a uniformity of statistics for which hitherto, however desirable, there has been no motive on the part of the various school boards and superintendents. As this report is valuable chiefly to them, though not without interest to others, we shall expect to see them voluntarily combine upon a schedule which the Bureau lacks the authority to impose, and then take care that it be punctually and exactly filled and rendered to the Commissioner. For the rest, the report embraces many subjects comprehended under education in its broadest sense, such as institutions for the infirm, including inebriates, Young Men's Christian Associations, prison discipline, the relations of education to labor and to crime, and many similar. Mr. Leigh's 'Views' of illiteracy are perhaps as remarkable as any portion of the report, though they do not appear for the first time, and have been somewhat injured by disarrangement. They endeavor to express to the eye the total of illiteracy in the United States, as reported by the censuses of 1840, 1850, and 1860, and the relative proportions in each State. This is done by using black dots representing a thousand persons each, and ingeniously varied to show the foreign and the native quota of ignorance, the comparative ignorance of men and women, and other important data. The result is certainly startling, and we shall look with interest for the supplementary 'Views' prepared from the census of 1870.

—The Catholic Publication Society has lately paid a tribute to the 'child's paper' propagandism of the Protestant societies. It now publishes the *Young Catholic*, which is first intended, we presume, to hold the young to the true faith against the many influences which in this country make the third generation of Irish Catholics either Protestant or indifferent; and next to seduce whom it may from the youth of any sect. The Jews, apparently, feel a like need of self-defence. We have received the first number of a monthly magazine called *Young Israel*, whose being is accounted for in the prospectus by the fact that 'all the periodicals for the youth published in this country—and we know of no exception—betray a more or less telling Trinitarian savor, which is quite incompatible with the religious ideas imparted to the Hebrew offspring by their parents and teachers.' The English of this passage is, it will be noticed, not quite perfect, the editors being Germans; and the English of the articles which make up the body of the magazine likewise leave something to be desired. The contents, nevertheless, of this first number are well selected. 'My Raven' is a very humorous tale of a mischievous bird; there is a skilful translation of a poem by Rückert, considering that English is not the native idiom of the translator; a translation from the Florence *Opinione* of the history of the second and distressing Mortara case lately disclosed at Rome; an account (to be continued) of 'The First Jews on American Soil;' and a dialogue, 'Five Months' Absence from France,' in which the stupendous overthrow of that country is forcibly brought out as if communicated to a shipwrecked mariner on the coast of Normandy. We apprehend that the readers of *Young Israel* will get their full share of amusement, and more learned instruction than falls to subscribers to 'Trinitarian' magazines for boys and girls.

—The general reader of the European war bulletins no doubt considers each new name of city or town that calls for pronunciation and remembrance one of the burdens which all wars inflict upon neutrals. And it is even worse if the name is not new, though designating a new place; and one must keep in mind that *Bar*-sur-Seine is not identical with *Bar*-sur-Aube, and *La Ferté* sous-Jouarre different from *La Ferté* Gaucher or *La Ferté* St. Aubin, that there are two *Nogents* on different rivers within the radius of hostilities about Paris; and so on indefinitely. Geography acquired in this way certainly has its disadvantages, and it needs a mind of a peculiar quality to delight in all this nomenclature as furnishing a basis for philosophic induction. If such a mind exists, one might predict it would be German, and in fact there is a Dr. J. J. Egli for whom a Leipzig house (Friedrich Brandstetter) is publishing 'Nomina Geographica,' or 'An Attempt at a Universal Geographic Onomatology.' The author explains his purpose to be to establish the various points of view from which all peoples in all ages have proceeded in applying geographical names. Accordingly, he divides his work into two parts—a lexicon and a treatise. The first contains a full alphabetical list of names in all languages, etymologically treated in such a way as both to reveal their meaning and the motive, in each case, for bestowing them. The great majority of the upwards of 17,000 names thus discussed are referable to discoverers whose original works of travel offer authentic information concerning them. The treatise, using the foregoing material as a groundwork, arrives at such general conclusions as seem justifiable, one being that the geographical nomenclature of every people has a close causal relation to the degree as well as to the direction of its civilization.

—How Dr. Egli deals with the wonderful list of names in our post-office directory, we are not able to state, though it might easily afford him one of his most entertaining and instructive chapters. An American would shrink from the task, which indeed should be properly performed by many hands, the Indian nomenclature being of itself sufficient to engage several. Then, too, we are but just beginning to have printed records of the naming of the country west of the Alleghanies, while the East still offers problems that cannot be solved by books. We believe it is nowhere told in print how the little suburb of Northampton, Mass., which gives its name to the sewing-machine manufactured there, came to be called Florence, after having for ten years or more been one of the innumerable *villes* in honor of a leading citizen. One of the other industries of the place, to which a tributary of the Connecticut furnishes a copious water-power, is the conversion of raw into sewing-silk, and though the article is good, perhaps as good as the foreign-made, it used to encounter a prejudice in favor of the latter. Protection in some shape was evidently needed to promote its sale, and the means adopted in many trades, such as the cigar-maker's and the hatter's, of imitating the foreign label, was here resorted to. This done, the New England conscience perhaps came in; at all events, to make the Italian profession on the label nominally in accord with the fact, the village was rechristened Florence, and is so known to this day. We offer this example—unique, so far as we know—to Dr. Egli, leaving him to determine its psychological value.

BRET HARTE'S POEMS.*

In this volume Mr. Harte has collected not all but most of his pieces in verse, and all we think that have any claim to remembrance. Not that all of the poems that are in this volume have any good claim to remembrance, and would not have been better omitted. Almost all of the serious poems are of a kind not materially different from the pieces which appear in such numbers in the magazines. Sometimes, for instance, they are imitative to a degree which, to say nothing of its often lowering the reader's estimate of the author, is apt to interfere with the reader's pleasure. Why this latter should be an effect of imitativeness, it might not be easy to say. Why, for example, should it displease us that Mr. Harte writes a very pretty little poem, 'The Angelus,' in very successful imitation of Mr. Longfellow—an imitation which is not mere surface imitation, but as if Mr. Harte had, for the moment, been Mr. Longfellow himself, and Mr. Longfellow by no means at his worst? We should have been glad to have had it from Mr. Longfellow; no doubt we should have enjoyed it thoroughly had it come upon us anonymously, and been taken by us for Mr. Longfellow's work. Yet, as Mr. Harte's, it displeases. Perhaps it is because we resent it that a man has discovered how we are to be moved, and deliberately sets about showing that he knows the trick, and proceeds to give an example of how, by way of amusing himself, and without giving himself the trouble of being himself at his best, he can exercise this power over us. Whatever the reason, imitative poetry, when it is very good, has this effect of offending; and always when it is not good, and often when it is good, it tends to lower the author in the reader's estimation. The cause of this latter effect it is easy to perceive—the man is weak who allows another to dominate him. Besides this fault, some of the serious poems would seem to show the author somewhat of a sentimentalist, and the very name of the magazine poet is sentimentalist. Thus, in 'San Francisco from the Sea,' we have a little of that common complaining of the minor poet as to the asphyxiating effect upon the poetic lungs of the materialistic and vulgar surroundings amid which fate has compelled his susceptible nature to get its development. Of course Mr. Harte is too clever a man to be fatally given over to the Laura-Matilda view of the poet's needs; but he is—or, rather, let us say that he was, and that he no longer is—a little inclined towards it.

Good, among the serious pieces, and above any but the highest magazine level, is 'The Reveille.' And good, in a somewhat too pretty way, perhaps, is 'Relieving Guard;' though this is hurt by the memory which it recalls of an exquisitely pretty passage in Longfellow's 'Hyperion,' where

* 'Poems, by Bret Harte.' Boston: Fields, Osgood & Co. 1871.

when 'sweet Emma of Ilmenau' begins her misfortunes, a star falls out of the evening heaven. As being, on the whole, a fair specimen of Mr. Harte's abilities as a serious poet working after the usual methods, we quote this 'Relieving Guard.' It is prefaced by these initials and words: 'S. T. K. Obiit March 4, 1864.'

'Came the Relief. "What, Sentry, ho!
How passed the night through thy long waking?"
"Cold, cheerless, dark—as may befit
The hour before the dawn is breaking."

'"No sight? no sound?" "No; nothing save
The plover from the marshes calling,
And in yon Western sky, about
An hour ago, a Star was falling."

'"A star? There's nothing strange in that."
"No, nothing; but, above the thicket,
Somehow it seemed to me that God
Somewhere had just relieved a picket."'

Of the jocose poems, too, there are a number that one would have thought their author would leave out of this volume—the second, we believe, in which they have appeared. What, for example, is there worthy of preservation in this very cheap fare? A 'Geological Madrigal' is the title of it:

'You wished—I remember it well,
And I loved you the more for that wish—
For a perfect cystedian shell
And a *whole* holocephalic fish.
And O, if Earth's strata contains,
In its lowest Silurian drift,
Or Palæozoic remains
The same,—'tis your lover's free gift.'

Both the wit and the grammar might well have been dispensed with, as fitter for once appearing in a newspaper than for any other publishing. And pretty much the same thing, barring the remark about the grammar, might be said of the 'Tale of a Pony,' and which is in J. G. Saxe's worst style, being farcical in wit and vulgar in two senses of that word; of 'The Ballad of the Emeu,' and of all the parodies. 'Twenty Years;' 'The Return of Belisarius'—after Praed; 'Her Letter'—a pleasant mixture of Praed and the mining dialect of Poverty Flat; and 'Grizzly,' may, we suppose, well be kept; though it is in 'Her Letter' alone that we get away from other poets and get a glimpse of that field which Mr. Harte has made his own, and in which he has displayed true and original strength. 'What the Engines Said,' also, is Mr. Harte's own, and, if not very good, it is at least the best of all the oceans of writing that the Pacific Railroad has called into being—this triumph of the age, like another triumph of the age, the Suez Canal, and still another, the Atlantic telegraph, and, in fact, like all great triumphs of the age, having not been productive of much good writing in verse; and, indeed, one might lay it down as generally true, even of the moral triumphs of the various ages, that they are not celebrated in very worthy song at any time very near their achievement.

This by the way, however. Where our author really deserves hearty praise is in his 'Poems in Dialect.' They are less often poems, strictly so-called, than humorous character-pieces illustrative of the wild life and the strange personages of the early Californian days. In some of these pieces —as in that which treats of the 'heathen Chinee;' and of the sudden revulsion of feeling in the breast of Mr. Nye when he finds that the Chinee who was to be cheated is not altogether guileless, but can himself violate the moral law with a skill, effect, and sinfulness sickening to Mr. Nye's Caucasian moral sense; and of the instant discovery and assertion by Mr. Nye of the politico-economical truth that 'we are ruined by Chinee cheap labor;' and of the promptness and thoroughness with which he vindicates the moral and the economical law—in this and some of the other pieces, Mr. Harte not only jumps luckily with the popular thought and feeling of the moment, but proves himself a satirist with a keen eye, and a humorist with a light and sure hand, and a fine power of expression. Perhaps it is in this piece that he gives most unequivocal evidence of an ability to accomplish more than he has yet accomplished. The skilful presentation of personages with dialectic oddities—with what ought to be called dialectic oddities of thought, manner, and experience, as well as of phraseology—is a good thing to do, and one not too easy to do, but still is a thing so often done well, and so often done well by writers who cannot think, and who have only a species of mimetic skill, that it can hardly be taken as giving promise that a writer has more than a capacity for giving momentary pleasure. To be sure, Mr. Harte has the advantage over most of these character-painters in that he gives us his material not in an amorphous mass of prose, but crystallized into short pieces of verse, from which everything is excluded except the personage whom he wishes us to see; and he has the further advantage of dealing with personages who are now very fresh and interesting.

Again, it is usual to find that the mimetic skill of which we speak is united with a considerable degree of power of touching the common sentiments, and united, too, with a fondness for moving them and a habit of doing so which seem to argue sentimentalism in the writer, and make one dubious as to his or her future. Excellent, then, as they are, very touching as some of them are, one is inclined to say of the 'Heathen Chinee' that it gives more certain promise of better things, has more thought, and is on a higher plane of literature, than the extremely skilful, objective, unsentimental 'Chiquita,' or the pieces like 'Cicely,' 'Jim,' and 'In the Tunnel,' where we have an objective handling of the subjects, and of subjects which are pathetic.

We have said so much as to the reasons why, as it seems to us, Mr. Harte's most finished work is not the work of his which is of most promise for his future, that we fear we may have seemed to make scanty acknowledgment of the pleasure they are capable of giving. They legitimately give great pleasure. They show us the Californian of twenty years ago in all his roughness—or, perhaps, not in all his roughness and wildness, but much of it—and in perhaps rather more than all his greatheartedness, and simplicity, and queerness of opinion and feeling and manners; they are skilful in construction, and not in construction alone, but in the conception of the whole and the subordination of the parts, and thus they give a refined pleasure to the purely literary sense, or, perhaps, we should say, to the literary and to the artistic sense, if the two are separable; they are humorous—sometimes, as in 'The Society upon the Stanislaus,' with the extravagance of what is known as 'American humor,' sometimes with rather farcical and cheap humor, as in the latter parts of this same 'Society upon the Stanislaus,' sometimes with the humor which is not American more than it is Hindoo or Spanish, but is of all countries and all ages, and is as far from farce as pathos is, or the voyage of Milton's Satan; they are often touchingly pathetic, as in 'Cicely;' they are often full of good-fellowship, as in 'Jim;' and if this is sometimes overdone, and a little sickly, as in the piece called 'In a Tunnel,' why, the bearing on too hard is of a kind which it is not very difficult to pardon, even while desiring for the author more of self-restraint. In short, we profess ourselves judicious admirers of Mr. Harte—which is to say, in other words, that we admire him a good deal, and are so much believers in him, as his works gradually and progressively reveal him, that we think the extravagant praises of him now current will not prevent his doing better things in the future than any he has yet done.

We might be willing to go as far in expostulation with him as to repeat to him a remark made by a facetious friend of ours on reading 'Jim Bludso,' by 'J. H.,' that if he and his imitators keep on, it will soon be necessary for the reputable members of society to hire somebody to write poetry in their behalf, so that we need not give all our admiration to gamblers, prostitutes, profane swearers, drunkards, murderers, and suicides. Mr. Lowell, in speaking of Hamlet somewhere, says that he was one of those persons who habitually allow the grain of doubt which their supersubtle eyes perceive to outweigh the immensely preponderating weight of affirmative proof. We quote, and quote badly, from memory. Something like this is done when a writer calls on us to give our admiring recognition, and, when we give it, to the grains of goodness in the composition of the scoundrel and evil-liver. It may be doubted if the gain on the side of charity, when we are compelled to applaud the gambler and murderer who commits suicide, that thus there may be one mouth the less in the snow-bound camp, and that he may not assist in the consumption of the food which his starving companions need—it may be doubted if the gain on the side of the charitable judgment of our fellow-men, when we are constrained by the literary skill to admire such an act of such a man, compensates for the loss in other ways. There is little danger, probably, that we shall be too charitable in our judgments of others; but there is always danger of our being too charitable in our judgments of ourselves, and this is a danger which it is the tendency of some of Mr. Harte's writings to increase, and which it would be well for him and many others of our story-tellers to consider.

Finding fault with an author who has given one real pleasure is usually a thankless task, and makes one feel as if ungrateful—or rather makes one fear that one seems ungrateful. But most authors, really good, know that often they have in their fault-finding critics their sincerest admirers, and that, after all, the main business of true criticism is to insist upon perfection—perfection as the critic understands it, of course. He generally understands it ill, most authors would say; but then he is always available as an object of pity and contempt.

HOWELLS'S SUBURBAN SKETCHES.*

EXCEPT the little sketch with the somewhat singular title of 'Scene,' all the essays in 'Suburban Sketches' have appeared in recent numbers of the *Atlantic*, of which magazine Mr. Howells is the working editor. The people are the fewer, then, among such as our words can reach, to whom we should be bringing anything like news if we were to say that in the author of 'My Doorstep Acquaintance,' and 'Mrs. Johnson,' and 'By Horse-Car to Boston,' we possess a humorist who, in virtue of the genuineness of his gift, would be admitted by their own suffrages to a secure place among the best humorists who have at any time written in our tongue. The verdict of the contemporary and general public might be different—humorists, like other people, being, as a rule, esteemed by the mass of their contemporaries not for that in them which is essential, but for various incidental things. Fielding, for example, or Cervantes, his own generation would best know as a story-teller; and it would be as a story-teller, or as a finished writer, or as a satirist, that his own generation would best like him. The characteristic and distinctive strength of the humorist is in his disposition, his way of looking at things; and the general public can perceive and understand the things which he says far better than it can understand and appreciate his mode of saying them. For his real public he commonly has to wait until his books, as books merely, have declined from their first importance. Mr. Howells's humorous publications have not been numerous enough nor alloyed enough to attract widespread attention; but, nevertheless, of their remarkable fineness of quality there can be no intelligent doubt. He is, in fact, all but unique in unadulterated fineness of quality.

Coleridge, who did so many things so well, did hardly anything better of its kind than the little which he did in lexicography—his discriminative definitions of various terms expressive of distinctions which the literary critic must bear in mind being almost always perspicacious and exceedingly helpful. Thus, for instance, it is recorded in his 'Table Talk' that, speaking of one of the many poems which he had projected—or, rather, one of the many poems which so often while he was talking used to flash suddenly across his vision as possibilities of poems—he made this remark, serviceable to our present purpose: 'My devil was to be, like Goethe's, the universal humorist, who should make all things vain and nothing worth by a perpetual collation of the great with the little in the presence of the infinite.' With this as a key one might, by the way, come to a comprehension of that saying of Mephistopheles—that of all lost spirits the Almighty likes best the spirit who scoffs—as being eternally in full consciousness of the infinite, and of the finiteness of his own scoffing.

For the unalloyed pureness of this essentially humoristic disposition—the disposition which plays with the world; which finds as much of travel in a horse-car ride through Cambridgeport as in the voyage to Venice and the gondolas; which looks on somewhat quizzically while all kinds of good people get very much in earnest about all sorts of 'causes' and 'movements;' which chronicles with amused gravity the rascality or simplicity, or self-importance, or stupidity, or impudence of the Irish housemaid, or the negro cook, or the begging impostor; which is as much amused and as censorious over its own faults, and shortcomings, and weaknesses as over those of Patrick, or Dinah, or Napoleon III., or the Gratz Brown party in Missouri, and no more so; which, in short, good-humoredly collates 'great things with small,' and has for a background against which to show its work the infinite of the unintelligibility of the universe, and the probable infinite tolerance towards man of the intelligence behind this inscrutable frame of things—for the unalloyed pureness of this humoristic spirit, it would be hard to find anywhere in the annals of our literature a humorist, however great, who would not, we should say, give Mr. Howells most cordial welcome to his company, and who would not admit him to be of the true strain.

The humoristic spirit is not everything in the literary production of humorists; indeed, a man may have it in, we suppose, the very highest degree—he may certainly have it in a very high degree—and never put pen to paper or utter a phrase that goes into print. It is, as we have said, not so much a thing to be seen as a certain way of looking at things; the attitude of the man towards the world which surrounds him. It is rare that the literary humorist is not about as well to be first described by some other name; and it is not often that the second name is not almost as truly descriptive as the first. Thackeray, to cull a name or two, is novelist and satirist almost as much as he is humorist; Rabelais begins with rollicking humor, but he ends with blunt, bitter satire; Swift is as much fighting man as humorist; Addison moralizes; Lamb turns critic; Dickens, humanitarian—of most of them the world with which they were to play somehow or other gets the better, and they serve this or that of its uses instead of keeping it subservient to them.

We have by this time probably persuaded some of our readers that this delightful ease which distinguishes Mr. Howells's pages he obtains at the cost of sacrificing every quality that ennobles and adorns the human mind and heart. Perhaps we have dwelt too long on the fact that he is primarily a humorist, and have left too much out of view the subject-matter with which he occupies himself. This cannot be said to have great intrinsic interest, and much, if not most, of the reader's pleasure comes not from the acquaintance which he makes with Mrs. Johnson, the negro cook, and the Delaware veteran, and the Italian estrays, and the streets and byways of Charlesbridge, and the musical carpenter who advocates woman suffrage, but from the subtlety of perception and delicacy of sentiment which are brought to the humorous treatment of these things and persons. Yet there is hardly any of the subject-matter which would not seem to have been chosen because of its capacity for being so treated as to call out only kind and generous feelings. At all events, it is so treated of, except in one or two places where there is excited a kind of dim, remote righteous indignation—a tribute exacted of writer and reader by the moral laws; but much like the 'heat lightning' of summer evenings so far as regards accompanying noise and blasting effects.

* 'Suburban Sketches. By W. D. Howells.' New York: Hurd & Houghton. 1871.

HEINE'S LAST WRITINGS.*

THIS volume, prepared, although the title-page does not say so, by Adolf Strodtmann, will be cordially welcomed by the many readers of Heine in this country. About one-half of it consists of poems written at different times in the poet's life, and which, although never printed in the works he had prepared for publication, yet escaped destruction when, shortly before his death, he re-examined his manuscript writings, condemned all which he was unwilling to own, and spared those which he was not unwilling should appear in a volume of his posthumous works. Some, like 'Die ungetreue Luise' and 'Kitty,' are of the same pathetic kind that we know so well in his already published poems; others, again, are even more cynical and bitter than almost any of those which he himself published. The saddest of all are the latest, 'Zum Lazarus,' as they are called. The first of these is particularly impressive. The following prose translation but feebly represents the simplicity and pathos of the original:

'There is whirling through my brain a flood of forests, mountains, and meadows. Out of the mad medley finally arises a picture with distinct outlines. The town, I think, is Godesberg. There am I, sitting again under the linden, before the inn. My throat is dry, as if I had swallowed the setting sun. "Here, landlord, a bottle of your best wine!" The delicious grape-juice flows into my soul, and extinguishes the blazing sun in my throat. "Another bottle, landlord. I drank the first in disgraceful absence of mind, without due reverence. My noble wine, I crave your pardon." I was looking up to the Drachenfels, which, romantically lit up by the evening red, is reflected with its castle-ruins in the Rhine. I was listening to the distant song of the grape-gatherer and the pert chirping of the finches. I drank carelessly, and thought not of my wine while drinking. But now I, for the first time, hold the glass to my nose, and first look at the wine. Often, too, I swallow it without looking. But, strange! as I swallow it, it seems to me as if I were doubled—another poor drinker is here, close beside me. Ah! so sick and wretched he looks—so pale and wan. He turns his eyes upon me contemptuously, at which I am annoyed. The fellow says that he is myself—that I am he; we two, he says, are only one; that we are one poor creature racked with fever; that we are not in the tavern at Godesberg, but in a sick-room, in far-off Paris. "You lie, you pallid wretch, you lie! I am red and vigorous as a blooming rose. I am strong, too; take care that I don't get angry!" He shrugs his shoulders, and sighs, "O fool!" That rouses my wrath, and I at last get to beating this damned second self of mine. But, strange! every blow I deal him, villain, I feel on my own body, and I give myself many a bruise. With all this fighting my mouth is dry again, and I try to cry out to the landlord for more wine, but the words stick in my throat. My senses reel, and dreamily I hear some one talking of cataplasms and of the mixture—a table-spoonful and twelve drops each hour.'

'Die Menge thut es' is an excellent example of Heine's satire. 'Bimini' reminds of many of the Romancers. It describes Don Juan Ponce de Leon's search for the fountain of youth, and has all the wit and descriptive power which give these semi-lyrical, semi-dramatic poems of Heine's such power and charm. We are sorry, however glad he might be, that it is too long for us to attempt a translation.

The second half of the volume contains 'Thoughts,' arranged by the compiler under various heads, as 'Personal,' 'Religion,' 'Philosophy,' and

* 'Letzte Gedichte und Gedanken von Heinrich Heine.' ('Last Poems and Thoughts of Heinrich Heine.') Hamburg: 1870.

so forth. Then follow later additions to writings published long ago—additions which we hope to see incorporated into the next editions; and, finally, we have his correspondence with his wife during two visits to Germany, in the years 1843 and 1844. The 'Thoughts' are, as was to have been expected, very often both witty and acute. One of the first is this:

'I have a most amiable disposition. My wishes are as follows: A modest cot, with a thatched roof, but with a good bed, good food, the milk and butter both very fresh, flowers before my windows, and a few handsome trees before the door. And if Providence wishes to make me perfectly happy, it will allow me to experience the pleasure of having some six or seven of my enemies hung on these same handsome trees. With a heart moved to deep emotion, I shall pardon them before their death all the wrong they have done me in their lives. Yes, one should forgive his enemies—but not before they are hanged.'

'I am not vindictive,' he says in another place. 'I would gladly love my enemies, but I cannot love them before I have avenged myself upon them. It is not until then that one's heart opens towards them. So long as one has not thoroughly avenged one's self, there is a certain touch of bitterness in the heart.'

A third is this: 'The earth is the great rock on which man, the real Prometheus, is chained, and where he is torn by the vulture of doubt. He has stolen light, and for that he now suffers martyrdom.'

And here is something kind about M. Villemain: 'Buffon says, "the style is the man." Villemain is a living contradiction of this axiom. His style is elegant, graceful, and neat.' Heine's admiration of Napoleon shows itself in this jeer at the crowned heads, at whom he was never tired of jeering: 'No one seems to know the reason why our princes live to be so old. They are afraid to die; they are afraid they are going to meet Napoleon in the other world.'

This is an ingenious insult: 'I read in the stupid book; fell asleep over it; dreamt that I went on reading it—and awoke from fatigue. This I did three times.' There are other things, as brief phrases, which bear the unmistakable mark of Heine's mint. 'Er sprudelte von Dummheit'—'he sparkled with dulness'—which reminds one of Sidney Smith's remark about Macaulay's 'brilliant flashes of silence.'

The letters to his wife are interesting, but are hardly pleasant reading. They show, on his part, a morbid jealousy and uneasiness which are almost painful to think of, and, on hers, a dulness far beyond simplicity. He appears to be tormented always by fears of her misconduct during his absence, and his continual appeals to her are really piteous to read. The visits to Germany, during which these letters were written to her in Paris, were, for this cause, productive of little enjoyment to Heine. It was not long after his return that he was seized by the illness which carried him off, but carried him off only after eight years of suffering in what he calls his 'mattress-grave.' During these years, his wife—he had previously made her his mistress—was, at least, whatever her faults, his faithful nurse in a long sickness, perhaps hardly less trying to her than to him.

Historical Selections. A series of readings from the best authorities on English and European history. Selected and arranged by E. M. Sewell and C. M. Yonge. (New York: Macmillan & Co. 1868.) *European History*, narrated in a series of historical selections from the best authorities. Edited and arranged by E. M. Sewell and C. M. Yonge. II. 1088–1228. (New York: Macmillan & Co. 1870.)—These two volumes, the discrepancies of the title-pages notwithstanding, are intended to form a connected work, or rather parts of a larger collection, the dimensions of which will be determined by the more or less favorable reception accorded its successive issues. The object of the compilers was to enlarge the sphere of historical knowledge, as presented to the young in outlines and abridgments, 'by continuous and chronological selections, taken, as much as was practicable, from the larger works, which it is next to impossible for young people to read at school, and which many may never have the time and opportunity to read in after-life.' And in making the selections they were guided by the idea of imprinting upon the memory and imagination of their readers 'certain definite events and distinct biographies . . . as landmarks, round which other less important incidents may be grouped,' as well as by the desire of presenting specimens of good and attractive English composition. As regards the latter object, the compilation can be said to be very well executed. The selections—from Freeman's 'Norman Conquest,' Roscoe's 'Kings of England,' Lingard's 'England,' Pearson's 'England during the Early and Middle Ages,' Hook's 'Archbishops of Canterbury,' Palgrave's 'History of Normandy,' Knight's 'Normans in Sicily,' Stephen's 'Essays on Ecclesiastical Biography,' Milman's 'Latin Christianity,' James's 'Richard Cœur de Lion,' Humes's 'England,' T. C. Robertson's 'Becket,' Morrison's 'Saint Bernard,' Lord Campbell's 'Lives of the Chancellors,' Gibbon's 'Roman Empire,' Creasy's 'English Constitution,' and a few other books—are not only historically instructive but, almost all, pleasant and attractive reading—made the pleasanter by the omission of cumbersome details and passages, and more intelligible by a number of introductory sketches, destined to fill up gaps or to serve as connecting links. On the other hand, the mere titles of the books from which the extracts are taken are sufficient to show how limited the range of this so-called 'European History' is; that, in fact—which a closer examination fully proves—it is almost restricted to the history of England—chiefly in the 11th and 12th centuries—of the Crusades, and of the Papacy, in its struggles with monarchs and heretics. The introductory sketches and the indexes are tolerably well done, but not free from mistakes, especially chronological. Thus we find—and this false date is four times given—that Frederic Barbarossa was drowned in '1189' (instead of in 1190); and we find it in the same paragraph in which we are informed that 'he set out for the Holy Land in the spring of the year 1189,' traversed with his army, Hungary, Bulgaria, Thrace, and landed on the coast of Asia, 'on the Wednesday in Easter week.' '1094,' instead of 1095, is given as the date of the Council of Clermont; and we read in the 'Chronological Index,' '1145—St. Bernard preaches the Second Crusade at Vézelai,' while the corresponding 'Introductory Sketch' speaks, in every way more correctly, of his 'preaching of a new crusade at Vézelay (A.D. 1146).' Errors of this kind, however, are not so numerous as greatly to impair the value of this useful compilation.

Ancient Classics for English Readers: Herodotus. By George C. Swayne, M.A. (Philadelphia: J. B. Lippincott & Co.)—While modern historians have largely occupied themselves in reconstructing events and characters upon a view altogether different from that hitherto received—as in the works of Grote, Niebuhr, Mommsen, Carlyle, and Froude—the 'father of history,' whose name had come to be almost a synonym for the 'father of lies,' has steadily grown in respect for his veracity and accuracy; and the genuine historical spirit that pervades his work has been redeemed from the atmosphere of fable that had surrounded it. This is not owing to any critical defense of Herodotus, but to the general advance in historical criticism and in archæology which has brought unexpected confirmation to some of his more doubtful statements. Egypt especially has attested the truth of his story, and Mr. Swayne is quite correct in saying that the veracity of Herodotus 'is of the kind that wears well.' We go to Herodotus now not from mere curiosity, nor to be entertained with a traveller's stories, but for information and instruction, as to a good authority upon the matters of which he speaks—observant, honest, impartial, and, if more credulous than critical, yet so transparent in his credulousness that he cannot mislead, and never attempts to deceive. Mr. Rawlinson's translation of Herodotus, with its copious notes from Egyptian and Assyrian archæology, was a service rendered to the historian himself, as well as to the world of letters; for it set the history in all its proper surroundings of antiquity, while bringing it before the English reader in a becoming modern dress. Mr. Swayne has performed the more difficult task of giving an analysis of the great work of Herodotus in the form of a consecutive narrative, with illustrations from other sources, and copious extracts in the historian's own words. This twofold task of condensation and explanation is so cleverly done that the reader who knows nothing of Greek, and who has not the time or the patience for the study of Rawlinson, can possess himself of the substance of Herodotus, and of much of the spirit of the author, by means of this charming manual of 180 pages. Though popular in its aim, the work is prepared with the thoroughness of the scholar, and may therefore be referred to with as much confidence as the original. The series of which it is a part, and which already embraces 'Cæsar,' by Anthony Trollope; 'Virgil,' by Rev. W. Lucas Collins; 'Horace,' by Theodore Martin, etc., etc., will prove as taking as it is novel.

Shiloh; or, Without and Within. By W. M. L. Jay. (New York: E. P. Dutton & Co. 1870.)—The plan of Shiloh is like this: Miss Winnie Frost, the heroine and autobiographer of the tale, having encountered difficulties in the course of her true love which she imagines to be fatal ones, decides to spend her summer vacation, not in Saratoga or any other fashionable resort, in the company of her worldly aunt and cousin, but to retire to some quiet country place where she can rest. Shiloh appears to offer great inducements for this purpose, and she repairs thither in com-

pany with her inseparable companions, 'Bona' and 'Mala'—in other words her good and her evil dispositions. With these two counsellors her 'will' keeps up a perpetual fight throughout a novel of nearly five hundred pages, and, as a matter of course, 'Bona' always gets the best of it in the long run. On the first night of her arrival at Shiloh, after a tough struggle between her cynical selfishness and her Christian charity, Miss Winnie decides to don a gorgeous wrapper, and go at nine o'clock in the evening, unattended but by a Newfoundland dog, to sit up with a dying girl whom she never heard of before. The sick girl's father proves to be an infidel of a singularly bellicose type—a hunchback, whose personal deformities joined with a diligent study of Tom Paine have made him, morally speaking, a very unpleasant object for Christian contemplation. Beside the deathbed lie is anxious for 'an argument on the divinity of Christ,' which Miss Winnie promises him at some more convenient season. This person, we are sorry to say, does not finally give up his objectionable views, but is nevertheless reduced to silence by finding that his opponent knows more, even on his own side, than he does. Miss Winnie, in fact, bears a striking likeness to some other heroines whom we have met in the course of a long career of novel reading, in the matter of having been the only child of a man of wonderful attainments, who, in his despair at having no son, brings up his daughter in the same manner as if she had been a boy. Her mind has been trained to a masculine precision by the study of Greek and Latin and the science of music, and she has been early shown the fallacies, not alone of Tom Paine, but of Spinoza and Voltaire, of Hume and of Strauss. She has, too, an incisive, not to say a sharp, way of bringing out her arguments which silences even when it does not convince her antagonist.

To convert infidels and to smooth deathbeds is, however, but a small part of Miss Winnie's summer work. She regenerates the whole village, instructs the young and sets a good example to the old; is active in getting a new melodeon and a new rector for the disused church, and, when the latter arrives, modestly foregoes the immense advantage she has over him in point of learning and practical skill, and works under his direction with the most exemplary meekness. So we learn, at least, in one of the concluding chapters, where another hand than the heroine's takes up the tale. From Miss Winnie's own account we confess to having gained the impression that she abounded in every Christian virtue except humility, and had in our own mind accused her of nullifying her good deeds and her amiable intentions by her singular arrogance. The doubt occurred to us, however, whether modesty were a virtue strictly compatible with the work of setting in the best light not only one's actual good deeds, but the mental struggles which preceded one and all of them. Miss Winnie, at all events, though we admit her cleverness and her good intentions, by no means pleases us as well as she says she did her friends in Shiloh. From the lofty and serene heights of her learning and her better self and her inexorable 'will,' she patronizes everybody, even her reader, and even gives the impression that she is not certain that it is not rather a praiseworthy thing in her to adore her Maker. The book, however, is cleverly written and not uninteresting.

Estelle Russell. By the author of the 'Private Life of Galileo.' (New York: Harper & Brothers. 1870.)—An unusually readable, and in some ways a rather remarkable novel is this. The scene of the story is chiefly laid in France, although a majority of the characters are English people. The plot is simple and well managed; the dialogue is lively, and the very sparing amount of moralizing and philosophizing in which the author indulges, and which, with great wisdom, she generally puts into the mouths of her characters instead of enunciating it in her own person, has a curious air of profundity which is quite imposing. The book contains, too, a great deal of what looks at first sight like very clever study of character, and which, in cases like that of Estelle, or Mrs. Russell, or Julia Maurice, where her personages are not meant to do double duty, and to be types as well as individuals, very often really is so. There is none of them who will not be found interesting in one way or another, nor any portion of the book which can be called anything but agreeable reading. Despite, however, of its real cleverness as a story of social life, we have found it more interesting as suggestion than as performance. It belongs to that class of imperfect art products which inevitably bring their author so prominently before the mind that he partially eclipses his own work. The book shows close observation within a limited range, and, if we may say so, a good deal of insight into the outside of a great many things. Estelle Russell, the heroine, is a Protestant girl of some nondescript shade of orthoxody, who is married for love by a free-thinker, and by him brought to live in the household of his parents, Catholics of what the author considers the most extreme type. Naturally enough, although the book is in no sense a religious novel, the antagonism of the two religions comes into great prominence. The peculiarity of the author's way of handling her theme is that, being herself imbued with a generally liberal spirit, she wishes both to satirize the foibles and to insist upon the good points of all her religiously inclined personages. To a certain degree, too, she succeeds very well—her weakness being that she does not really understand the state of mind of any person who holds any positive belief whatever, and, being no genius, has to let her reading and her observation supply as best they can, her want of sympathetic appreciation. To George Eliot, a satisfactory portrait of so genuinely religious a character as Dinah Evans seems to have been not difficult of delineation, but the Abbé D'Eyrieu, who seems to indicate the high-water mark of our author's abilities in this direction, is only a pleasant failure. One of her critics, we see, professes to be in doubt as to what particular shade of religious belief the writer of this novel inclines to—whether the Protestantism of the French pastor Cazères, or the Wesleyanism of Mrs. Vivian, the Rationalism of Raymond, or the Catholicism of D'Eyrieu, is really most to her taste. To our thinking, she might hold to either opinion *as she has depicted it*, and yet be disowned alike by Catholic, Protestant, and free-thinker. Her book is one to which novel readers may very properly be glad to have their attention called.

From Thistles—Grapes? By Mrs. Eiloart, author of 'The Curate's Discipline,' 'Meg,' 'St. Bede's,' etc. (New York: Harper & Brothers. 1871.)—Mrs. Eiloart's novel gives evidence of having been very carefully thought out and planned, and shows, too, that sense of responsibility which appears so plainly in much of our modern fiction—more often, we think, in that produced by women and by men who are, on the whole, second-rate, at least in pure literature, than by those whose work is really artistic, and, for that reason, has a permanent value. The story and the delineation of character seem, to writers of this class, to be rightfully subordinate to certain views they entertain and wish to enforce—some theory in politics, or some side in religion. Their way of writing does not, perhaps, render their books less interesting—not, at all events, in the first reading, which is all that most of them ever get, and in which the finding out what a new author's mind is like—supposing that he has one worth considering—is, to many readers, as agreeable a task as contemplating the fortunes of his fictitious creations. Generally, however, there is an appearance of hard work about them which detracts from the reader's pleasure. Mrs. Eiloart has political and social theories to ventilate. Like Victor Hugo, she would like to shift upon society most of the responsibility of crime—a plan which, as it undoubtedly has its advantages for the criminal and does not materially injure society, is naturally capable of having many ingenious things said in its favor. She has contrived a story in which a brutal, debased, and utterly ignorant man is finally pursued to the gallows for a crime which he did not really commit, but for which the circumstantial evidence went strongly against him, by his own father, a highly respectable clergyman and master of a noted grammar-school. Of course, neither Dr. Langton nor his son is aware of the relationship between them, although the reader is allowed to conjecture it from the outset; but his desertion of the boy's mother, and the resulting life of ignorance and indigence in which the child is reared, make him the responsible author of all that afterwards happens.

There is also another criminal introduced—one of the most injured and saintly of men, who, in his youth, had committed a forgery out of purely philanthropic motives and in a moment of unguarded weakness, and whose whole after-life is one long remorse, which, nevertheless, does not clear him in the purblind eyes of justice. Evidently there is something wrong in such a state of things. Mrs. Eiloart is also more than inclined to extreme liberalism in religion, and has a great admiration for Garibaldi and his re. doubtable red-shirts. As a delineator of character, she gives the impression of making her personages serve rather as means to her ends than of considering them in and for themselves. As we said before, she writes well and carefully; and if she leaves, on the whole, not quite a pleasant impression, it is, perhaps, as much because of her want of spontaneity as for any more serious defect.

Village Sketches, descriptive of Club and School Festivals and other Village Gatherings and Institutions. By T. C. Whitehead, M.A., Head Master of Christ's College, Finchley, late Incumbent of Gawcott, Bucks. Third edition. To which is added a new series. (New York: George Routledge

& Sons. 1870.)—This little volume contains, in a very unpretending form, a good deal of instructive and interesting reading. It recounts the various attempts of the author, while incumbent of Gawcott, to set on foot a number of self-supporting associations, penny banks, sewing societies, clubs for mutual instruction and entertainment, and the like, by means of which his poorer parishioners might learn how to manage their own affairs, and to improve their condition by their own efforts. His idea was to accustom them to self reliance, and to get them to understand the value of united action and of joint deliberation. Most of his hints are such as would be found valuable by all persons who have the ability and the will to do what they can for the benefit of their poor and ignorant neighbors—the gist of them all being that it is best to rely very little on authority and very much on training into working order the common instinct of self-help. Mr. Whitehead seems, however, to have been unusually well able, both by nature and by the accidental circumstances of his position, to put his plans into effect. His benevolence appears at once genuine and intelligent, and he shows a hearty sympathy with the dispositions of his people as well as a nice appreciation of their needs. He seems, moreover, and we suspect this had no slight influence on the complete success of his schemes, to have had everything his own way—neither a dissenting chapel nor a resident landlord was near to help or to hinder. Under a different order of things we can imagine that his machinery might very easily have got out of running order, and that his 'Free and Easy Night Club,' for instance, the account of which is such pleasant reading, might very speedily have come to grief. To adopt his special plans, therefore, although in themselves they look simple and feasible enough, would very likely be difficult except under circumstances equally favorable; but the general principle which underlies them all being a true one, might readily be carried out in other ways. The book is worth reading, if only for the impression one gets from it of the thorough manliness and amiability of the author, who, notwithstanding, keeps himself, with the most unaffected modesty, entirely in the background.

A Treatise on the Preparation and Delivery of Sermons. By John Broadus, D.D., LL.D., Professor in the Southern Baptist Theological Seminary. (Philadelphia: Smith, English & Co.)—Though every genuine preacher will be a law to himself, and the very art of sermonizing must change with the changes of the times, there will never come a time when the study of homiletics can be dispensed with in favor of nature, or genius, or individuality. How to present truth so as to secure the best ends of truth, how to lead devotion so as best to answer the ends of worship, is an art—a science, we might almost say—that no preacher can afford to neglect through confidence in his own spontaneity or originality. Dr. Broadus has prepared a manual which, though neither profound nor original, has these two merits: a tacit recognition of the changes that modern society demands in the methods and manners of the pulpit, and good common sense in its suggestions for securing to preaching its legitimate influence. The chapters on argument, illustration, and extemporaneous preaching will be particularly useful. The author has used freely the materials of other writers in the department of rhetoric, and in the main with discrimination. Any theologue might gather some timely hints from his pages.

Fine Arts.

THE NATIONAL ACADEMY OF DESIGN.

FOURTH WINTER EXHIBITION.

I.

THE National Academy of Design continues in the winter season what might be called a permanent exhibition, remodelled at different times. The collection of foreign pictures, whose ownership is represented by Mr. H. W. Derby, is the principal new feature, and gives to the North and East rooms of the Academy building an unusual look of gaiety. So easily does the eye become accustomed to any key of color in pictures, so well do we bear with the dull brown and dirty yellow of American landscape, as interpreted by too many of our painters, that the coloring of a batch of work, far from first-rate, by contemporary Europeans, affords a comparative relief and makes a manner of festivity. The Derby collection, unfortunately, is no exception to the usual run of our importations of pictures, which are prudently kept within the limits of general demand. So even in character has been this popular liking, that under strong provocation only has it happened that a very few first-rate foreign pictures are at last owned by some wealthy collectors of foreign art.

It is not at all surprising, therefore, that the mass of the present collection, numbering some four hundred pictures, should represent little more than an average choice. Around two rooms runs a long line of little pictures, of what is called high-finish, or painted according to methods in fashion, but out of all these not a couple call for exceptional notice. Among the larger paintings, among the usual Bouguereaus, and Verboeckhovens, and Merles, some three or four would be noticeable and praiseworthy in any modern collection. First in importance is a picture by Alfred Stevens, in which carefully finished work, and a rapid and almost sketchy execution, unite to make what may be fairly called a masterpiece. The painting has little subject in the usual sense; it is a portrait-study of a lady, seated on a mahogany arm-chair. A harp and music-stand with music are near her, and her hands are folded over some printed sheets of music in her lap. The decorative effect of a blue carpet and amber-colored hangings, a green silk dress, and dark fur and velvet, make up in great part the interest of the picture; but everything in it, figure and accessories, is subdued into perfect accordance with the tone—color and quantity—of the light in the place represented, with a consequent look of peace and repose. Though the work is labelled 'Meditation,' the expressiveness of the figure seems to be independent of any intention of the painter. It is probably nothing but a studio study, but the artist's direct interest in the mere facts before him has given it an intimate life not enjoyed by that other careful picture of his now in Knoedler's gallery, and mentioned here some few weeks back. A few little faults in the figure are interesting—a certain indecision of the drawing of the wrist, and a monotony of folds in the dress, which suggests the lay-figure.

Another more important work is Jules Breton's 'Potato Harvest,' which recalls in a degree the austere sentiment of the peasant-painter, François Millet. Mr. Breton's ideal is more complex, or, rather, less decided; he often hesitates in his choice between the more vulgar and outward appearances of rustic life and some more elegant and idyllic intention. His great rival has sought typical action and character, and, more successfully than any other artist, has rendered under all external accidents the gravity and dignity of labor. Here, the movement of the two figures filling the greater part of the canvas has a solemn look in harmony with the delicate evening sky against which they are relieved in a faint and clear sunset light. This weakened contrast of light and shadow gives unfortunate prominence to some shocking defects of drawing, limited, however, to the modelling and painting of the arms of the figures, which, besides being incorrectly foreshortened, have too much of the appearance of leather sheaths; a distressing piece of carelessness, and difficult to account for in such careful work.

The graceful style, accurate observation, and critical restraint which have marked Mr. Fromentin's literary studies mark also his modest landscape in this collection. It represents a view on a water-course near Cairo, a canal running between earth banks, and disappearing in a hazy white distance, out of which rise the pyramids in a vaporous white sky. On the edge of the bank are camels and camel-drivers, and across the water come swimming Arabs from the other side. The sober correctness of the work differs from the accuracy of the Stevens opposite, in that it seems not so much the result of a trained instinct's pleased recognition of

facts as the expression of a refined intellect which has chosen a subject for deliberate observation and enjoyment. The peace and quiet of the picture are well worth waiting for, even if they take at first the appearance of dulness. Mr. Fromentin seems here to have carried out with too much faith his own little aphorism—'that those painters who have sought for sunlight have played with fire and burnt their fingers'—for a short pause is needed to see that sunlight and not gray dawn is represented in the picture. Perhaps one ought to rejoice in that undulating diversity of the human mind which can bring back from the East such varying impressions as this cool, clear light and the hazy, Indian-summer atmosphere of our own Mr. Gifford's painting.

The gray mode appears more probable in the large French landscape by Mr. Daubigny, important by its size and its masculine execution, but with a heavy look, certainly increased by its being very badly hung in the Academy room. A similar blackness afflicts the interesting but not more representative landscape by Rousseau. Mr. Desgoffes' patient and certain art has here an average specimen, wherein one notices the absurd limitations apparently imposed upon him by so brilliant a method of painting. While the deceptive imitation of certain hard surfaces could go no further, and the accuracy of touch which gives them is wonderful, the poor tender flowers which Mr. Desgoffes insists upon painting in positions of honor are made to take the form and texture of sheet-iron, glass, and enamel.

A scene of Alsatian life is conscientiously treated by Brion; and Billet, a well-known follower of Mr. Breton, has a very real and very realistic study of rural French characters entitled 'The Card-Players.' There are some sheep by Mr. Chaigneau, who seems too much afraid of falling into the hardened manner of the school of Rosa Bonheur; Mr. Jacque has no such wholesome fear about his sheep, and has an enormous picture called 'Spring,' which is much better in his little etching on zinc of the same subject. There is a little landscape by Lambinet, pretty but not characteristic, and a nice little picture by X. De Cock, full of the green light that filters through leaves, and probably somewhat despised by the public. Then there are two Düsseldorfers of unequal fame, who manage to combine some of the merits and many of the defects of French and German paintings. Mr. Oswald Achenbach's picture is not exceptional, and Mr. Hoff's is ingenious and gay-colored but rather too large for its not enormous merit.

Among the smaller pictures, which are numerous, there is a pretty little Ziem, a picture by Fortin, and some studies by Edouard Frère, whose merits seem to belong to the past. A recent celebrity is Mr. Worms, who here manages to give so much of nature in his scene, of the date of the first French Empire, that the exquisite archæology of his picture is pardonable. There are also in the collection a number of pictures by well-known names, whose appearance is doubtful or contradictory, and in some way uncertain. The most remarkable is that of Baron Leys, entitled 'The Message,' not evidently by the Leys we all know and admire but painted by the same artist at some intermediate stage. With the same bad mark there are: a picture by Gallait, with some intention, however conventional, but incredibly weak in the drawing and modelling of its figures; two specimens of the decrepitude of Diaz; a Troyon upon whose authenticity it is not pleasant to rest; two more Ziems, almost impossible; and a Chaplin, which, however authentic, represents its painter's usual gray tones by an abnormal bricky color.

The transition to the works of Verboeckhoven, Bouguereau, and Merle, or to those of their imitators—Lecomte-Vernet, and Cot—would here be natural and in connection, but want of space forbids. Something, however, might be said in extenuation of the blame with which they might be visited. Artists and critics forget the very evident and ordinary uses which works of art subserve. Certainly, no better adornment to a certain style of wealthy interiors could be found than paintings by Bouguereau or by Merle, which combine with many of the merits and the look of pictures the look also of furniture, and suggest by their polished surface the presence and care of many attendants. The faces in the pictures are also very pretty, and if the eye catches them in a parlor, they do not seem out of place. Of this quality of parlor-pictures there are several in this collection by Mr. Bouguereau, and one by Mr. Merle, who has more judiciously worked for our market.

JUST PUBLISHED BY

PORTER & COATES,

822 Chestnut St., Philadelphia.

LONGFELLOW'S POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, by H. W. Longfellow, with the addition of 150 pages of entirely new matter never before published, making it one of the most elegant and complete works extant. With Introduction, Biographical Notices, and Translations, from the earliest period to the present time. By Prof. Henry Wadsworth Longfellow. Illustrated with engravings on steel and engraved title. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6; sheep, marble edges, library style, $7 50; half-calf, gilt, $9; Turkey morocco, $12.

'This valuable work contains selections from about four hundred authors, translated from ten languages. Mr. Longfellow himself gives us translations from all these languages but two.'—Allibone's Dict. of Authors.

'This edition has been revised and enlarged by the author, and contains his last touches and additions to his labors.'—The Age, Philadelphia, Nov. 3, 1870.

HEDGE'S PROSE WRITERS OF GERMANY.

A new and revised edition. With Introduction, Biographical Notices, and Translations. By Frederic H. Hedge, D.D. With Six Portraits on Steel and Engraved Title. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5; sheep, marbled edges, library style, $6; half-calf, gilt, $7 50; Turkey morocco, $10.

'There is no book accessible to the English or American reader which can furnish so comprehensive and symmetrical a view of German literature to the uninitiated; and those already conversant with some of the German classics will find here valuable and edifying extracts from works to which very few in this country can gain access.'—Prof. A. P. Peabody, in North American Review.

A New Globe Edition of

THE WAVERLEY NOVELS.

By Sir Walter Scott. In 16mo size, on toned paper, illustrated. The most attractive edition for a small amount of money published in the country. Complete in 23 vols. Green cloth extra, per vol., $1 25; per set, $28 75. Half-calf, gilt back, per vol. $3; per set, $69.

LITTELL'S LIVING AGE.

Among the contents of *Littell's Living Age* for the weeks ending respectively January 7, 14, and 21, are: Castle St. Angelo, by W. W. Story, *Blackwood's Magazine;* The Personal History of Imperialism in 1870, *Fraser's Magazine;* The Science of Nonsense, *Spectator;* The Future of France, *Fortnightly Review;* Browning's Poems, *Saint Paul's;* Louis XIV. as a Matchmaker, *Saint Paul's;* The Arts of Destruction, *Pall Mall Gazette;* American Literature, *Westminster Review;* Wesley and Arnold on War, *Macmillan's Magazine;* Some Recollections of a Reader, *Cornhill Magazine;* Life of Madam Beauharnais de Miramion, *Spectator;* From an Englishman in Spain, *Pall Mall Gazette;* The New Constitution of Germany, *Spectator;* the continuation in weekly instalments of the new attraction, "Seed-Time and Harvest, or During My Apprenticeship," translated specially for the pages of this magazine from the *Platt-Deutsch* of the favorite German author, Fritz Reuter; the conclusion of Earl's Dene, etc., besides shorter articles and poetry.

The Living Age is also publishing a story by George Macdonald, and promises to new subscribers for 1871 the last two numbers of 1870, containing the beginning of the story, *gratis.* A good time to subscribe.

The subscription price of this 64 page weekly magazine is $8 a year, or for $10 any one of the American $4 magazines is sent with *The Living Age* for a year.

LITTELL & GAY, Boston,

PUBLISHERS.

George Macdonald's Story, in *Scribner's Monthly,* bids fair to be the best story of him who is the best of living story-writers. Let us put it a little differently, and say that he will be among novelists what Wordsworth is among poets. But he is more poet than novelist. The present installment of 'Wilfrid Cumbermede' is extremely fascinating; but it is the fascination of poetry rather than of story. It may be enjoyed almost in perfection by one who has not read the beginning, and who will never read the sequel; and it will remain in the memory like a beautiful song.—*New York Independent.*

The Nation.

NEW YORK, THURSDAY, JANUARY 26, 1871.

The Week.

THE Massachusetts "Labor Reform League" held its third annual convention last week, and passed a series of resolutions that certainly went to the bottom of things. One of them laid it down that any one who took interest for money, or rent for land, or dividends on stocks, or profits on capital, or sold anything for more than it cost him, "was a thief, whom law should bestir itself to lock up and bring to justice." Another affirmed that no man has any more right to own land than to hold slaves, and that all sales of the Government domain are "void." Still another settled the "average cost of money" at one per cent., and declared that all rates of interest above this are a "fraud," and that, in conniving at it, Boutwell, Colfax, and Greeley are worse than Pierce, Taney, and Buchanan. This is unfair to Mr. Greeley. He only differs with the Reformers on the question of degree. They say anybody who takes more than one per cent. is a villain; he says that any one who takes more than seven per cent. is a villain; but he gets his rule out of his own breast and the Labor Rerformers get theirs out of their breasts—so that it would be ridiculous for them to quarrel over a paltry six per cent. Boutwell and Colfax we do not defend. We are glad to see that the convention not only "aims at establishing justice between man and man," but between "man and woman." This being the case, it is wicked only to sit for a day or two once a year.

A convention has been sitting, during the week, in Philadelphia, attended by two hundred learned and respectable delegates, whose proceedings it is somewhat difficult to criticise. The object is "to secure a religious amendment to the Constitution" which will "indicate that this is a Christian nation, and place all Christian laws, institutions, and usages in our government on an undeniable legal basis in the fundamental laws of the nation, especially those which protect society against blasphemy, Sabbath-breaking, and polygamy." Speeches were made in support of this scheme. We have not had in our time a more curious display of that feature of Sentimentalism which consists in utter disregard of facts, and which is, therefore, a form of falsehood. The Constitution could not truthfully "indicate" that the nation was more Christian than it really is. Everybody who lives in it knows it is not Christian or anything like Christian, and that it contains hundreds of thousands of Jews and infidels and deists, and millions of Christians in name only. It can hardly be supposed, therefore, that the convention hoped to "indicate" to their countrymen that it is now a Christian nation; so we are driven to the painful conclusion either that they thought they could make it so by constitutional amendment, or impose on the Almighty as to its real character, and secure his favor by a false statement of facts. A "proper oath" must, according to the convention, of course be a Christian oath, which no Jew could take, or, if he did take, could not believe binding. So that we should, if the convention had its way, either have to exclude his testimony or force him to perjure himself in order to present it. In the one case, we should violate the fundamental principle of the Christian religion by a denial of justice, and in the other we should promote and encourage the swearing of the most *im*proper of all oaths, and that is, false oaths. Last of all, there are no "laws which protect society against blasphemy, Sabbath-breaking, and polygamy." All these offences are committed every day on which it is possible to commit them by the great majority of the American people. Denouncing them in the Constitution would not lessen their number. Laws, let us remind the convention, do something—but only a little—towards "protecting" society against anything. You make men better mainly by what you put in their hearts and heads, and not by what you put in the statute-book. Some of the speakers drew attention to France as an awful example of the consequences of wickedness. Let us remark that France furnishes also an example of the consequences of the kind of purblind belief in the power of phrases with which the convention seems to be afflicted.

The Methodists seem at last to have become sensible of the error of their way in trying Dr. Lanahan for saying there were frauds in the management of the Book Concern. The rest of the world seemed so strongly of opinion that the proper order of proceeding was to enqnire into the existence of the frauds first, and try the Doctor afterwards, that his arraignment for falsehood, slander, and general cantankerousness became, every day it lasted, more ridiculous; and the brethren finally decided to give it up. Some of them, however, do not see the point to this hour, and have protested against the discontinuance. The whole matter has now been handed over to a sub-committee, which is to report to the General Committee, next year. Some say that this is simply a contrivance for consigning it to oblivion, but if any such scheme is seriously entertained, we trust the press will frustrate it, and that the religious and moral public—for it really seems sometimes as if there was a difference as well as a distinction between them—will keep the scandal in mind by cutting down those dearly-loved "profits" of which Judge Fancher spoke so pathetically. May the profits be small, and the bonds "flat," and the sales "slow," till the mystery is cleared up.

The week in Congress has been rather one of words than of doings. On Thursday, the 19th, to be sure, the President's Missouri appointments were confirmed by the Senate in Executive session, though not without a debate in which their merits, as a political measure, were freely canvassed. On the same day, Mr. Morton succeeded in getting his committee appointed to investigate the lawlessness prevailing at the South, with the usual power to travel about and take testimony, and call for persons and papers. Mr. Wilson introduced a Civil Service bill, whose provisions are very simple and well-considered, and which, besides providing for the examination, by a board, of applicants for offices worth more than $1,200, and fixing their tenure of office and conditions of removal, forbids their being assessed for any purpose, or serving as delegates to any political convention or members of any political committee, etc., on pain of dismissal. The Senate, also on Thursday, listened to a communication from the Chief of Ordnance to the Secretary of War, to the effect that Congress had been so lavish in giving away condemned ordnance for monuments that he doubted being able to satisfy appropriations already made. For the present, therefore, we hope to hear no more of Mr. Clark Mills's monstrous Lincoln monument. Mr. Trumbull's "Importunity Bill," as it is now called for short, came up on Monday, and its author was more than a match for Mr. Morton, who had procured statements from the heads of departments that their clerical force was too small rather than too large. Mr. Trumbull pointed out that this was precisely the effect of incapable appointments, and then brought testimony to prove the amount of idleness in many of the bureaus. The House has been busy with railroad grants and steamship subsidies, and with a bill to establish a Territorial Government in the District of Columbia—one of the votes on the latter involving the yeas and nays on woman suffrage: 55 in favor, and 117 opposed. On Monday, a bill, whose justice in principle we have frequently maintained, was introduced, to assimilate the rank of the staff of the Navy to that of the line.

Mr. Wilson's Civil Service Reform Bill is a great step in advance, and proves, if it does nothing else, the rapid progress the idea is making even among the older politicians, who might naturally be expected to treat it as a fancy scheme, unworthy of serious attention. In the Senate, the only strong opponents of the reform now are, as might have been expected, Messrs. Cameron and Morton. Of Mr. Cameron we have not much hope, but since Mr. Morton came out, in 1867, in favor of paying the debt in greenbacks, and then, in 1869, said it would be an outrageous fraud to do so, we feel satisfied that no good cause need despair of securing his support eventually. We know we shall see him jump round and share our dislike of the present mode of filling the Government service. He is not like that old bigot of whom it is told that he used to say "he thanked God he was not open to conviction." Mr. Wilson's plan has one excellent feature—the clause which forbids

clerks to meddle in politics on pain of dismissal. But it has one almost fatal defect—in that it does not propose to award the appointments on competitive examination. Any other kind of examination is sure to become a farce, and for the sound and well-tested reason, that there is little or no use in imposing a duty of this kind on a public officer unless you arm some one else with the means of asserting the corresponding right. You will say in vain to the head of a department that he must fill his vacancies with the best-qualified men unless you bestow on the best-qualified men the power of insisting on his doing it.

We commented, in August, 1869, on the case of Cheney ag. Chase' in which the Superior Court in Chicago granted an Episcopal clergyman an injunction restraining the ecclesiastical court of his own church from pronouncing on him a sentence of disqualification for unsoundness of doctrine on the question of baptismal regeneration. The injunction was granted on the ground that the profession of a minister was "property," and that any judgment or decree which drove him from it might, therefore, properly be examined, and, if found irregular or unsupported by evidence, overruled by the secular courts. We pointed out at the time that this decision, if sustained, would create a connection between church and state of the most mischievous kind, and would place the discipline and doctrine of every denomination in the country at the mercy of the judges, and it might be of judges like Barnard and Cardozo; and that it was utterly opposed to the spirit of the Constitution and to the manners and usages of American society. We are, therefore, very glad to say it has been unanimously overruled on appeal by the Supreme Court of Illinois. The judgment acknowledges that the profession of a clergyman is property, but it is property created by the rules and regulations of the religious body to which he belongs, and held and enjoyed on condition of obedience to them. On the question —and it is an important one—whether the ruling of an ecclesiastical court is conclusive as to its own jurisdiction, the Supreme Court was divided—a minority holding the negative.

The "Irish exiles," or, in vulgar language, the Fenian prisoners lately liberated by the British Government, arrived on Friday morning by the *Cuba*, and met with a very diverting reception. Two different set of politicians made arrangements to "capture" them as they came up the Bay, and went down in tugs for the purpose—one, the Tammany organization; and the other, a composite body made up of the "Fenian Brotherhood," "The Irish Revolutionary Brotherhood," and the malcontent Democrats, with a Republican reinforcement, the whole headed by our worthy Collector, Mr. Thomas Murphy, who went into the fight in a Government cutter. Although he boarded the *Cuba* in what appeared ample time, he found he had been outmanœuvred by Tammany, as the Health Officer, who is a Tammany nominee, had thrown a powerful force of Tammany marines on board the ship as she passed Quarantine, and the representative of the United States found the *Cuba* full of them. The feelings of the warring factions when they met on board may be more readily imagined than described. They freely denounced each other, and a stand-up fight over the bodies of the "exiles" at one time seemed not impossible. Several addresses were presented; and General Millen, of the Collector's party, bade them welcome "onbehalf of the United States;" but, on being asked tauntingly "if he was the United States," was forced to confess that this was simply a form of speech resorted to to "prevent the men being made the tools of Tammany tricksters." The exiles, seeing how the land lay, politely but firmly declined to accept the invitation of either party, and, after a brief but vigorous effort on both sides to get them to come off in the rival tugs, they were left alone long after midnight. We should like to know what the President thinks of Collector Murphy's part in this performance. It is very curious to read the biographies of the exiles in the Fenian papers, and see how from martyrs they are growing into war-worn veterans. Several have borne, we are told, a distinguished part in "battles" in Ireland the names of which are judiciously withheld. One played a prominent part in a spirited attack on a "British garrison," but we are enabled to fix the scene of his exploits by the fact that the only "British garrison" attacked during the war was that of a police station, and consisted of six constables all told, who capitulated on condition that they were not murdered. The new arrivals, however, seem to appreciate the situation, and understand that they are surrounded by an atmosphere of humbug, which in a Fenian is a sign of extraordinary perspicacity.

The legitimate merchandise trade of the country, which supplies the daily wants of the community, continues to show a moderate degree of activity; the export trade is lively on very heavy cotton receipts and shipments, and an improving demand for our produce from abroad; the grocery trade, partially interrupted during the last weeks of the year owing to the new tariff, is large; and in the lines of manufacturing industry, interrupted by the great drouth throughout New England, there is some speculative movement based upon fears of an insufficient supply of goods in the spring. But all other branches of business are dull and stagnant. The coal strike as yet continues. The iron manufacturers complain of dearth of orders and accumulation of stock. Railroad enterprises, even of the most promising description, find it impossible to raise funds. House-builders say that the prospect of the building trade was never so poor, and real estate in the city, in spite of a large and very successful sale of choice improved property during the week, does not materially revive, while from all other parts of the country real estate is quoted almost unsalable. The rumors concerning a reorganization of the Union Pacific Railroad Company, which has now grown to be a question of the greatest national importance, have taken a new direction, and it is now reported that a controlling interest has been purchased by the Pennsylvania Central Railroad Company, which would tend to make the present great railroad problem even a trifle more complicated. Another fire insurance company, this time in Massachusetts, has made a disgraceful failure, and the question is being asked, Who will insure the insurance companies? Money, in spite of artificial manœuvres of stock cliques, has been easy, and stocks strong. Gold and Government bonds steady, but without activity.

The anticipations which we have all along ventured to express about the course of events in France have been only too fully justified by the news of the last week. The new armies which Gambetta raised with so much vigor have been crushed in detail by a series of defeats, which confirm the testimony which the correspondents have been bearing ever since D'Aurelles de Paladines' defeat at Orléans—that there is no fight left in the French levies. Masses of them may continue to be gathered together, but only to be slaughtered and dispersed. Gambetta, meanwhile, according to the last reports, continues as jaunty and hopeful as ever, and makes it his special business not to despair of the Republic. The state of things, however, grows more terrible as the crisis approaches—and for two reasons. One is, that there is no likelihood that either Gambetta, Favre, or Trochu will have the moral courage to affix his name to a humiliating peace, and any peace that is concluded now must be humiliating. Indeed, it is doubtful whether any one or any two men of any country would, under similar circumstances, have been willing to assume any such odium or responsibility. These three will, therefore, probably shirk it, and disappear from the scene in the whirlwind of a new revolution, leaving the country absolutely without a government, and dependent upon the Prussians for protection against total anarchy. The mere mention of this contingency must be sufficient to convince any thinking man of the guilt of refusing to convene a national assembly. Nothing but a representative body can face such a crisis as is now impending over France.

The second reason is, that there is good ground for fearing that the memory of the misfortunes which occurred under the Empire, and which were only brought home to a small proportion of the population, will have been lost sight of by the time the collapse comes, under the pressure of the greater and more widespread misfortunes of the sham Republic, and that there will be a strong reaction in favor of the Bonapartes throughout the country. Dictator for dictator, the people will say, we like Napoleon better than Gambetta. Napoleon's hold on the peasantry, all competent observers testify, has not been seriously

shaken, and nothing is better calculated to revive it than six months' experience of a defeated, bankrupt, anarchical republic, personated by a rhetorical lawyer. The republicans of the cities, too, have shown themselves arrant impostors. The "Reds" of both Paris and Lyons have proved simply impudent braggarts. Even Rochefort has been disgusted with them, and Flourens, who has led them in Paris, has proved —what we always felt sure he was—a half-crazy agitator. The famous Belleville battalion, which was supposed to be panting for feudal blood, has had to be dissolved as mutinous and cowardly humbugs, who ran away and deserted in the face of the enemy, and fought each other in the trenches. In fact, the Prussians have effectually disposed of the theory that the "Reds" were terrible as fighting men. Trochu plainly declared in his book that their claim to have shared largely in repulsing the foreigner in 1792 had no foundation in fact; and, indeed, the only occasion on which they have supported their pretensions to courage was in June, 1849, in their rising against the Republic or rather against property. The ideas which give them all their fire are essentially anarchical, and make discipline among them impossible.

General Chanzy's disastrous defeat has been followed by the discomfiture of Bourbaki's operations in the East, and the total rout of Faidherbe's army in the North. Bourbaki, undismayed by the reports of approaching heavy reinforcements for the Germans, had continued his advance for the relief of Belfort, amid much skirmishing and some severe fighting, as far as Montbéliard and Héricourt; but in the vicinity of the latter place, near the banks of the Lizaine, the Germans, under Von Werder, occupied a strong defensive position, barring the entrance into Alsace, and the decisive battle was still to be fought. He attacked them on Sunday, the 15th; the combat was obstinate, lasting until dark, and ended with the repulse of the French along the whole line. He renewed the attack on the following day, and was again repulsed with heavy loss. A third and last assault, on the 17th, met with equal failure. Bourbaki now entered upon a full and speedy retreat, which was probably hastened by the apprehension of German movements on his flank; and Von Werder as speedily began the pursuit. This new advance of the Germans must have been very vigorous, as we have the report of their having occupied Dôle, after a bombardment. Dijon, too, has again been attacked, but unsuccessfully, by a Prussian force, the French troops commanded by Menotti and Ricciotti Garibaldi being in the action, and "behaving splendidly," according to a Bordeaux despatch. That Prussian force, however, may not be of Von Werder's army, but a division of the Prussian Second Corps, whose arrival from the vicinity of Troyes has been looked for by the Germans in the East. Bourbaki's main line of retreat is not distinctly indicated in the despatches here received—a portion of his troops, however, seem to be retiring east of the Doubs.

General Faidherbe, having been reinforced by a large number of mobilized national guards, resumed the offensive about the middle of the month, slowly advancing from his positions between Arras and Cambrai towards the Somme. His right wing, possibly with the intention of deceiving the enemy in regard to his objective, moved in the direction of Amiens, occupying Albert, and pushing forward as far as Corbie; his centre, however, marched on St. Quentin, which fell into his hands with some military stores, and subsequently occupied positions in front of it. Here he was attacked, on Thursday, the 19th, by General Von Goeben, Manteuffel's successor in command of the Prussian forces in the North. After a severe fight, the French were driven from all their positions, and into St. Quentin, with a loss of four thousand prisoners; the national guards, panic stricken, flying in the utmost disorder. Von Goeben lost no time in pursuing the disorganized army, and, on the 20th, took St. Quentin, making still larger captures. The total loss of the French—on both days, as we presume—is stated, in the Versailles telegram "to the Empress Augusta," to have been fifteen thousand. That telegram adds: "The enemy has withdrawn to Valenciennes and Douai; we have again occupied Cambrai." The latter statement, however, refers to the open portions of the town. The wildest consternation prevailed in Lille and its vicinity, but Faidherbe and Gambetta, who met in that city after the defeat—the latter coming from Cherbourg—tried their best to rouse the spirits of the people, by "enthusiastic" harangues and "hopeful" orders of the day, to continue the struggle "to the bitter end." "France," Gambetta declared, "prefers an eternal war to the surrender of any portion of her territory." And the patriotic audience cheered the declaration—fragments of Faidherbe's army all the while arriving "in a pitiable state."

The bombardment of Forts Issy, Vanves, and Montrouge, and, as it seems, of the adjoining parts of Paris, has been continued throughout the week with some intermissions, but it would be hard to state with what effect. Versailles despatches have it that the Prussians are steadily advancing their batteries nearer to the city, but, according to reports received from the besieged, their fire is far from being in a high degree destructive. The statements concerning the stock of provisions still left to the Parisians are equally contradictory. The people, however, are evidently becoming more and more impatient of the siege, and of the resultlessness of Trochu's attempts to raise it. The last sortie was made on the 19th, from the side of Mont Valérien, under cover of a heavy fire, and in great force. The French succeeded in surprising the Prussians, and carrying their position on the heights of Montretout. The besiegers, however, soon rallied, and, concentrating a considerable force of infantry and artillery, retook the position, after a sanguinary conflict, and repulsed the enemy with great loss. The French remained outside of Paris, massed at the foot of Mont Valérien, and threatening a fresh attack on the 20th, which, however, they failed to execute, withdrawing into the city at a late hour of that day. This new failure gave rise in the besieged capital to fresh and loud popular denunciations of Trochu's military leadership, which was decried as feeble and temporizing. This dissatisfaction seems to be shared by a portion of the Parisian Council of Defence, at the last meeting of which—shortly before or after the sortie—Trochu, importuned by demands for grander efforts, is reported to have offered his resignation, which came near being accepted in favor of a military triumvirate. The news of Chanzy's defeat, we hear, had been received "stoically" by the people of Paris. In pursuit of that general, the troops of the Grand-Duke of Mecklenburg had advanced beyond Alençon, and those of Frederic Charles beyond Vaiges, on the road to Laval. Cheered by favorable reports from every quarter, William of Prussia, on the 18th, formally proclaimed himself at Versailles Emperor of Germany—an empire which now embraces also Bavaria, the Federal treaties with this kingdom having finally been ratified by both houses of its legislature.

In no point is the superiority of the Germans more striking than it is in their finances. While the French are unable to raise any more money, and talk of returning to assignats, the recent North German loan, in spite of much grumbling at the method of its introduction, maintains itself at a premium, and money at Frankfort is reported "a drug," and the bank rate has been reduced to three per cent. There is, however, according to late Cable advices, an unexplained drain of specie from England to Germany, which may indicate preparations for peace, or may be the first indication of financial depression. The total debt of the North German Confederation amounts to less than $150-000,000 in coin, while that of Prussia proper, including all the states annexed in 1866, amounts to about $300,000,000, one-half representing the cost of railways built by the state, which, unlike some of our state roads, are worth their cost, and are even paying off the principal of the debt at the rate of two and one-half per cent. per annum. While on the subject of foreign finance, we may mention that the kingdom of Spain, over which the young Italian now reigns, has a floating deficit, totally unprovided for, of nearly $70,000,000, in addition to its funded debt, and enters on the new year with a further deficit in prospect of about $20,000,000, and without the cash to pay nine or ten millions of interest just maturing. It is, after all, no wonder that, with all our mismanagement, American securities continue to advance abroad.

THE MORALITY OF ARMS-DEALING.

The fact that although the French have drawn supplies of arms and ammunition nearly if not quite as large from this country as from England, and that Prussia, though inveighing bitterly against the toleration of the traffic by the English Government, has taken no notice of its activity in the United States, has perhaps done more than anything else to cause uneasiness in England touching Prussian intentions with regard to her, and has given fresh vigor and point to the demands for active and immediate interference on the French side which a portion of the English press has been recently putting forth—a portion, too, which has no sympathy with the Positivist notion that France is the Holy Land and Paris the New Jerusalem. The discrimination between England and America, made not only by the Prussian Government, but by the public and the army, there is no denying it, looks more like an indication of a desire to pick a quarrel, or get materials ready for a quarrel with the former, than of a desire to patch up the rules of international law. The doctrine of "benevolent neutrality," too, produced so solemnly by Count Bernstoff, being clearly not a joke, has been taken, and not unnaturally, in spite of the pacific sound of the term, as a sign of growing ferocity of temper, and of a desire on the part of Prussia to thrash some neutral or other. The British public has, consequently, been for the last two or three months in the same uncertain frame of mind about its relations with the Prussian Government as we may suppose the Jew to have been who was severely cudgelled with the royal hand in the streets of Berlin, for running up a side street when he saw Frederick William I. approaching. His subjects, his Majesty said, ought to love and not to fear him, and he enforced the rule by inflicting a sound thrashing then and there on the first person taken *flagrante delicto*.

If the Prussians had from the beginning assailed the United States as well as England—that is, made the obligation of "benevolent neutrality" general and not particular, they would doubtless have received hearty support from that large body of persons in this country who hold the sale of arms to belligerents to be immoral, and its prohibition by municipal law a duty resting on higher grounds than international usage. The illustrations they have adduced in support of their theory, and especially that pet one of the two men fighting in the street, one of whom a neighbor supplies with a knife or pistol, shows, however, that they have contented themselves with a very limited survey of the field. What makes the fight of the two men useless for their purpose is, that the manufacture and sale of arms, which go on on a great scale in the United States, England, and Belgium at all times, employ an enormous amount of capital and thousands of operatives. The export of rifles and revolvers for military purposes is a very important branch of the national trade in all these countries. It is viewed with no disfavor or reprobation. A manufacturer of arms, or the inventor of a new cartridge or breech-loader, not only finds that his achievements do not injure him in the estimation of his neighbors, but that, if he is successful, they are actually titles to honor and distinction. Colonel Colt, or Remington, or Sharpe, or Sir William Armstrong, or Krupp, has certainly never found that his calling brought any stigma on him, or that it barred his entrance into any Christian church, or charity, or mission-board, or made his subscription to any benevolent or religious enterprise unwelcome. On the contrary, the fact is—and in view of what we sometimes listen to on the subject of "the horrors of war," we think we may call it an amusing fact—these forgers of weapons are held in high honor and repute as great industrial chiefs. Their factories are pointed to with pride; their contracts with foreign governments are chuckled over for their glorious effects on "the balance of trade." All this is, of course, comprehensible and defensible on various grounds. We know several good reasons why the business of a manufacturer or dealer in arms should be treated as perfectly legitimate; we should be sorry to see him brought before a court of philanthropists as "a bad man," and condemned on the ground that certain ladies and gentlemen were of opinion that there should be no more war.

But here comes in the absurdity of this outcry about the immorality of selling arms to belligerents. Turkey has been arming for the last three years vigorously with Remington breech-loaders, all imported from this country. It is well known that they are to be used in killing Russians, but no word of protest has ever been heard against the transaction, or will be heard as long as the killing has not actually begun. France, between 1866 and 1870, procured about 500,000 Chassepots, some at home but many abroad, without any whisper of objection also, though it was well known that they were intended to be used in killing Germans. Let Turkey, however, begin to defend herself this summer against an attack by Russia, and we shall be gravely told that to sell any more Remingtons to her to take the place of those lost in active service, or to arm fresh troops, is a crime against humanity. So, likewise, it would, in June, 1870, have been a perfectly proper thing to have delivered 100,000 rifles in Paris, to arm the troops getting ready to invade Germany; but to deliver them at Bordeaux, in December of the same year, when, according to these same moralists, France is defending the cause of human freedom, besides fighting for her own life, is blood-guiltiness.

We have only, indeed, to state the case to show the absurdity of the distinction which the Prussians have been trying, and not unnaturally, to set up for their benefit, and to which they have managed to get the adhesion of some people here and elsewhere who ought to know better. There is not a shred of authority in international law for the doctrine that any neutral government ought to interfere with the trade of any dealer in arms who chooses to run the risk of capture by belligerent cruisers. There is not the shadow of excuse in morals for applauding the sale of arms for warlike purposes up to the moment the war breaks out, and then reprobating it as unchristian. War, and the preparation for war—as we endeavored to show some weeks ago when discussing the peace agitation—are parts of one great transaction, which must, in the forum of morals, stand or fall as a whole. If you give your neighbor lessons in shooting and fencing, and sell him powder and ball, and pistols and cudgels, and in all your conversations with him impress on him the beauty and glory and justifiability of thrashing somebody, you cannot save your Christian character and build up a reputation as a peacemaker by shutting your doors and refusing to let him have any more cartridges or knuckledusters as soon as you see him actually engaged in a fray in the street; and if you take to preaching the duty of forgiveness of injuries to him out of a window, you cannot wonder if he recognizes and denounces you as a Pharisee and a cheat.

The Prussian complaint, we are glad to see, is likely to have its absurdity made still more patent by the action of some of the Germans in this country. Meetings have recently been held in the West, at which the partiality of the Government at Berlin was rectified by denunciations of the Administration at Washington for permitting the export of arms to France, and resolutions have been passed refusing it confidence and support till it changes its policy. When we see German-American citizens voting against the Republican party because it refuses to violate a well-known rule of international law, and to saddle itself with new and difficult duties, to the great loss and detriment of American citizens, in order to compensate Germany for the want of a navy in a war with France, the doctrine of "benevolent neutrality" will have been relegated to its proper place among the odd fancies, born of excitement and embarrassment, to which all belligerents are liable.

AMNESTY MEASURES.

The various bills now, or lately, before Congress providing for a removal of disabilities in particular cases, or for a complete amnesty to all persons engaged in the rebellion, or to certain classes thereof, make it proper to examine the exact legal status or condition of the rebels towards the United States Government in relation to the personal penalties, civil and political, incurred by them on account of their acts and defaults. Under laws long in existence, it is certain that all those who "levied war" against the United States were traitors, and liable to the punishment prescribed for the crime of treason. We assume the same to be true of those who adhered to the rebels, and gave them aid and comfort; although there is some doubt upon this particular point growing out of old dicta in the English books, which confine the operation of this clause in the statute of treasons to those who give aid and comfort to foreign enemies, and deny its application to any rebel-

lion or insurrection. Under the broader assumption, however, the number of persons who became liable to the penalties of treason was small compared with the entire population of the Southern States, because the "aid and comfort" of the law mean material aid, which, if not exclusively of a military nature, must be such as will directly sustain and promote the armed resistance to the authority of the United States which the same law calls "levying war." Sympathies, friendly acts to persons, words, and opinions are not embraced within the phrase. But the rebellion assumed such proportions that the contest was conducted with all the forms of public war. This brought it under the domain of international law, and within the rules applicable to hostilities between independent sovereignties. The Supreme Court has repeatedly decided that, as a consequence, all the inhabitants of the insurgent States, without regard to their private opinions, were enemies, and that their property was liable to seizure and confiscation. Congress, however, did not exercise this power to its full extent, but provided for the forfeiture of property belonging to the disloyal. It also contrived the well-known system of test-oaths. Such were the personal liabilities imposed upon residents within the revolted States, viz., the punishments inflicted for treason and sedition, confiscation of enemy's property, and the scrutiny of the test-oath.

It is not denied that all these penalties, unless they had already been fully executed, would be uplifted and removed from any particular offender by a pardon. Proceeding upon the notion, which was undoubtedly a mistaken one, that such an act was necessary, Congress, on the 17th of July, 1862, passed a statute authorizing the President, at his discretion but under some limitations, to grant a general pardon or amnesty. President Lincoln, on the 8th of December, 1863, issued a proclamation announcing to all persons who had been engaged in the rebellion, and who should take a prescribed oath of future allegiance, and keep the same, that a free pardon was thereby granted to them, with restoration of all rights of property except as to slaves. President Johnson, as is well known, granted a large number of specific pardons. On the 7th of January, 1867, Congress repealed the statutory provision of 1862 above-mentioned. Notwithstanding this repeal, and claiming to possess the constitutional authority independent of Congress, President Johnson, on the 4th of July, 1868, issued a proclamation by which he conferred full pardon and amnesty, with restoration to all rights of property except as to slaves, and except, also, any property of which any person might have been legally divested under the laws of the United States, upon all persons except those under indictment for treason or other felony. Finally, on the 25th of December, 1868, he granted in the same manner full pardon and amnesty to all persons, without exception, with restoration of all rights, privileges, and immunities.

The Supreme Court of the United States has recently had occasion in several instances to pronounce upon the effects of a pardon, and has uniformly sustained the settled doctrine of the English law, that it relieves the offender from all penalties and forfeitures to the government which have not already been completely executed. In the case of Padelford *vs.* The United States (9 Wallace, 531), Mr. Padelford claimed the proceeds of his cotton which had been seized and sold when Savannah was occupied by the national forces. The statute provided that the owners of cotton so taken should be entitled to the proceeds thereof if they established their loyalty to the Government. Before the seizure, Mr. Padelford had taken, and subsequently kept, the oath prescribed in President Lincoln's proclamation of 1863. The Court held that his loyalty at the time of the seizure was thus established, although previous to taking the oath he had done acts which were decided to be disloyal. Mr. Chief-Justice Chase remarked that "after the pardon no offence connected with the rebellion could be imputed to him." Immediately upon the announcement of this decision, Congress passed a statute to the effect that in other similar cases a pardon should not be sufficient to establish the claimant's loyalty. The validity of this last enactment may well be doubted, for it seems to infringe upon the pardoning power which belongs exclusively to the President. The case of Armstrong's Foundry (6 Wallace, 766) was a proceeding to confiscate a rebel owner's property. He had received a special pardon, and this, it was held, relieved him from liability of forfeiture to the United States. In the celebrated case, *ex parte* Garland (4 Wallace, 333), the Court decided that a pardon granted to Mr. Garland enabled him to practise law without taking the test-oath required by Congress, its effect being to uplift and remove that penalty. The prevailing opinion said of him that "he is as innocent as if he had never committed the offence." It should be observed that there was no dissent in this case as to the powers of the President, nor as to the general effects of his pardon; the minority simply denied that the test-oath was a penalty to which the act of grace could apply, and insisted that it was merely a qualification to the exercise of an attorney's office. No decisions have yet been made directly based upon President Johnson's two sweeping amnesty proclamations issued after the repeal of the statute of 1862. There can hardly be a doubt as to their validity. The principle of constitutional law, that the President is clothed with all the prerogatives of mercy which belong to the British Crown, and that the word "pardons" used in the Constitution includes all the species known to English jurisprudence, was settled long before the rebellion; and the Court, in Garland's case, said the power of the President is unlimited, and is not subject to legislative control. The result is, that all civil penalties which hung over the Southern people, all forfeitures not fully executed, all liabilities to punishment, are wiped out and utterly destroyed.

The same would probably be true of any political disabilities imposed by Congress. It is unnecessary, however, to discuss this abstract question, for the XIVth Amendment has established a class of such disabilities which, being created by the organic law itself, are beyond the reach of the pardoning power. It has often been said that the third section of this amendment disfranchises the persons embraced within its prohibitions. As the word "disfranchise" is commonly used, this statement is untrue. The right to vote is not interfered with; only the capacity to hold office is taken away. Persons who have been members of Congress or of a State legislature, or officers of the United States, or executive or judicial officers of a State, and who, as such, have taken an oath to support the Constitution, and have engaged in the rebellion, or given aid and comfort to the enemies of the United States, are debarred from all official positions, civil or military, under the national Government or under a State. This prohibition is sweeping and inclusive; for the term "judicial officers" embraces justices of the peace as well as judges of the highest courts, and sheriffs and constables are executive officers as well as governors.

Congress has already passed several statutes removing these disabilities from designated individuals. This method of procedure is plainly liable to great abuse. It can be made, and h s been made, a means of accomplishing mere partisan ends, and of gratifying partisan dislikes. Persons who have undergone a political conversion which brings them into harmony with the majority are easily set free from the restraints of the amendment, no matter how deeply they may have been implicated in the rebellion; while political opponents are subjected to a severer scrutiny and escape with difficulty. We are glad, therefore, to learn that Senator Trumbull will hereafter resist all such special bills until the Senate shall have considered and passed upon some general measure. The conviction, long felt by the more thoughtful members of the Republican party, that a scheme of substantial relief would not only be just but politic, is beginning to impress itself upon the professional politicians. There exists, however, a great difference of opinion upon matters of detail which it will be difficult to harmonize. In December last, Mr. Butler introduced a bill which has been termed an amnesty, but is so only in name. It entirely ignores the general pardons issued by President Johnson, and professes to remove all civil penalties and forfeitures as well as the disabilities created by the Fourteenth Amendment. It excepts from its own operations, however, the following large classes of persons who have engaged in rebellion or given aid and comfort to the enemies of the United States, viz., those educated at the military or naval schools; members of Congress and of the Confederate Congress; heads of departments, foreign ministers, judges of the United States courts, and the like officers under the Confederate Government; members of conventions voting for or signing ordinances of secession; governors of seceded States; persons in the Confederate service who treated pris-

oners with cruelty; persons having charge of public moneys who have not accounted for the same; deserters and bounty-jumpers. It also excepts from its restoration of property-rights all forfeitures already executed, and the national cemeteries. Finally, it declares invalid all rights of action and liabilities arising on any ordinance, law, or contract in aid of the rebellion. It will be observed that Mr. Butler recognizes the existence and provides for the continuance of penalties far greater in number and more stringent in effect than those embraced within the prohibitions of the XIVth Amendment. His bill, instead of being an amnesty, is, in fact, a stringent measure of repression and punishment, and would, if possible, reverse the decision of the Supreme Court and annul the pardons of the President. Mr. Beck proposed to except only persons educated at the military or naval schools, members of Congress, heads of departments, foreign ministers, and judges of the national courts. Mr. Farnsworth offered a substitute, short but comprehensive, that all political disabilities imposed by the third section of the XIVth Amendment be removed. The discussion which followed showed that Mr. Butler's bill cannot pass, and the whole matter seems to have been left in a lethargic state, only to arise, we hope, with renewed energy and vigor.

We should be glad to see the simple measure of relief offered by Mr. Farnsworth adopted, with an amendment excepting from its operations a very few individuals, who should be designated by name—the first of whom should be Jefferson Davis. The objections to the third section of the XIVth Amendment, which exist in the nature of things and can never be obviated, are the reasons why Congress should at once use its power and abolish the system of disabilities. These objections and reasons are summed up in the single fact that the amendment is an *ex post-facto* law, and one, moreover, of the very worst character. When the Constitution was adopted, *ex-post-facto* laws were well known as the ready and efficient instruments of a tyrannical parliamentary majority. All history, and emphatically all English history, had taught their danger. Their very essence is injustice. Both Congress and the State legislatures were therefore forbidden to pass such enactments. It is a scandal that side by side with this prohibition there now stands in the very Constitution itself a provision which embodies all the features which make *ex-post facto* laws odious—a provision which is especially opposed to the primary conceptions of a republican government, because it works a deprivation of political privileges. It is doubly a scandal that this was the work of men who claim to be the champions of the rights of man. As these prohibitions are essentially unjust, and as they are peculiarly irritating, it is not strange that they have promoted discontent and disorder.

THE CONDITION OF LIFE INSURANCE AMONG US.

The recent disastrous failure of two life insurance companies in this city has directed public attention anew to a subject the magnitude of which is scarcely realized even by those directly interested. The discussion which has arisen is rendered confusing by the failure to discriminate between the different parts of the subject to be discussed. The question of the morality and public policy of the system, which has been revived by recent events, however important in itself, has really nothing to do with the questions now before the country. Practically, these latter relate solely to the general possibility of making life insurance safe, to the soundness of our present system, and to the methods now in use for putting that system into practice.

The theory of life insurance is based upon two essential assumptions—the rapid accumulation of money invested at compound interest, and the average duration of human lives, or, in other words, the average number of annual deaths out of a given number of individuals of the same age. The latter is derived from a mass of statistics which, by competent authority, are asserted to be amply sufficient to warrant the conclusions drawn from them; although it should be borne in mind that since the origin of life insurance the civilized world has been visited by no general pestilence, which it is by no means certain may not again recur, in spite of our great progress in modern times in medical and sanitary science. The danger from pestilence is, however, undoubtedly remote; and although we, in the United States, are trying the system under novel conditions, owing to the most extraordinary migration of peoples that the world has seen since the Middle Ages, which have already somewhat modified the conclusions of European experience, we may yet safely adopt the dictum of scientific enquirers that the calculations of our life insurance companies, as far as the element of mortality is concerned, are sound and satisfactory, and that life insurance itself is sound in this respect if the rules established by science are rigidly adhered to. If the companies exercise ordinary prudence in the selection of their risks—in other words, if they only assure the lives of persons of good habits and in good health, or receive a corresponding increase of premium for the insurance of those whose health and habits are less perfect—they will be safe in this particular.

Unfortunately, the system of inducing people to insure their lives adopted with us tends directly to destroy prudence in this regard. The system of employing agents to solicit insurance, especially in cities and towns at a distance from the chief office of the companies—the agents receiving a commission on the amount of premium paid by the insured—is utterly subversive of all sound business principles. The principle that the agent's earnings depend upon the number of persons whom he can induce to insure their lives—however apparently sound in ordinary business—is utterly unsound here, because it puts the agent's interest in direct conflict with the interests of his employer, the company. It is the agent's interest to procure the acceptance of every life that he presents for insurance, and, instead of making it his duty to aid his employer in discovering every cause of rejection, it virtually pays him a premium to aid in concealing it. It is utterly useless to urge in extenuation of this fact that the application must be accompanied by statements from the insured, any falsehood in which would vitiate his insurance; that he must present certificates from the family physician, or other reputable medical adviser, or from friends; that each policy is submitted to the medical counsel of the company; and that, finally, the company itself reserves the right to reject any policy accepted by its agents. No man or woman of the world need be told how weak are these supposed safeguards, especially when both the physician and the agent are virtually "retained," to use a legal phrase, on the side of the insured against the company.

The case is somewhat different where the insured resides in the same place as the chief officers or one of the competent branches of the company, and where the medical adviser of the company is engaged, at a salary, to serve the exclusive interests of his client. But even here an element of demoralization enters that saps the whole system. Every employee of the company is *ex officio* an agent for the company to solicit insurance. With a view to increase the interest of the employees in the success of the company, they receive, the same as any other agent, commissions on the premiums which they procure for the company; but, by a process of the most extraordinary sophistry, they are supposed to be securing the *success* of the company while they are merely increasing its *business*, and while their own interest in the matter is directly opposed to that of the company. It is true that the medical advisers of the company reserve the final decision as to the acceptance or rejection of the risk; but, when president, vice-president, secretary, cashier, and every subordinate clerk is in the receipt of annual commissions on policies procured for his corporation, varying from five hundred dollars to twenty-five thousand, and, if common rumor is to be believed, to even more; when even directors—directly or indirectly—become solicitors for the companies, and receive commissions; when men are openly spoken of as having made fifty or a hundred or two hundred thousand dollars "by life insurance," where, in this age of moral obtuseness, is the value of the approval by a salaried medical man of any risk submitted to his decision by the very men who hold his appointment—frequently his sole means of support—completely at their mercy? It is idle to say that there *are* men who can remain honest under such temptations. No doubt there are. But it is positively wicked to expose the purest man to such influences; and, unfortunately, the pure and strong are few and far between.

So long as agents for life insurance companies are paid by commissions, and thereby virtually rendered the enemies of their employers; so long as officers of companies are allowed to receive commissions on the premiums that they procure, just so long will there be an element

of weakness and corruption within the organization itself, which no amount of honesty and business shrewdness in its managers can permanently counteract. When the public begins to understand and appreciate this circumstance, it is to be hoped that some of the older and well-established companies, whose reputation insures them a certain amount of business independent of agencies and employees, will make or enforce the experiment of abolishing this system, and either secure its prohibition by law, or else by the force of public sentiment compel the younger or weaker companies to follow their example. The injurious results of the commission system, arising from the enormous expenses thereby incurred, are insignificant compared to the injury arising from the corruption which it almost inevitably engenders. The magnitude of the temptation offered by it is seen when we remember that the annual premiums received by insurance companies doing business in this State exceed fifty millions of dollars, on which some companies are reported to pay as high as forty per cent. commission, while probably the average does not fall much below twenty per cent., making a fund of something like ten millions of dollars to be earned by a system which is in itself a temptation to dishonesty.

It is scarcely too much to say that this commission system is one of the main incentives to the establishment of new companies by reckless or overambitious persons. When companies with a capital of one hundred thousand dollars can obtain an annual income of one million, a very small portion of which only can be called for in the earliest years of its existence, it will be readily seen how easy it must be to obtain the loan of that capital, by the processes known to incorporators, until it can be repaid, in some form or other, out of the receipts of the corporation; and where shrewd, active, and unscrupulous managers thus have the opportunity to earn for themselves annual commissions amounting to more than their capital, the temptation is irresistible. The process is generally as follows: The parties who desire to get up a new company, themselves make liberal subscriptions to the capital stock. The lawyer who is to be retained by the company at an annual salary is expected to take at least an amount of stock equal to his salary; the medical adviser, the same; the stationer, whose bills form a very large and important part of the annual expenses, does the same. The advertising agent, the president, and other officers of the company, and, finally, the persons who expect to become the company's principal agents, follow suit; and then, of course, as many outsiders as possible are induced to join. Most of these persons have to borrow the money to pay for their stock; but it is generally easy to borrow money for a short time on such stock, because it is known that with ordinarily decent management and activity it is next to impossible for a life insurance company to fail in the first years of its existence, and because it is known that the gains of the parties in interest are likely to be large enough to enable them very speedily to repay the lender. With a company thus organized, even if started with the most honorable intentions, and with the temptation of large commissions constantly dangling before the eyes of every one concerned, it is evident that the supposed safeguard of medical inspection and control becomes a mere delusion—a farce. Premiums and commissions *must* be earned, and the safeguard of medical control is swept to the winds. It must be remembered that we are speaking of companies intended to be managed honestly, and are speaking only of the evils resulting from one bad principle incorporated into the system—the principle of paying commissions on premiums procured by agents and officers of the company. This principle, we maintain, is subversive of all safety in the business of life insurance, because it upsets all calculations based upon the "average duration of healthy lives," which forms one of the two fundamental facts on which the whole system of life insurance rests.

The second of these two facts is the rapid accumulation of money at compound interest. It is evident that this fact depends entirely for its value upon the safety of the manner in which the money is invested. Now, it has generally been believed that no investment could well be much safer than that of bonds and mortgages on real estate, and, indeed, we find that the life insurance companies doing business in this State hold bonds and mortgages exceeding sixty millions of dollars. They have in fact become during the last few years the principal lenders of money on real estate, and have done more to create and perpetuate the present real estate speculation than almost all other influences combined. From fifteen millions in 1865, the amount thus invested has risen to over sixty millions in 1869—a capital of forty-five millions of dollars added to the real estate speculation in four years, surely sufficient to account for a very large advance in the value of property over a very wide area. It is only a few weeks since a piece of property was offered for sale at the Real Estate Exchange of this city, and reached a certain price beyond which no bids were to be obtained, when the agent of an insurance company or savings-bank announced that the corporation he represented would advance a certain amount on the mortgage of the property; bidding was immediately resumed, and the property finally sold for ten per cent. more than what was bid for it previous to the announcement. Such is the influence which the enormous amounts offered on bond and mortgage by the life insurance companies have had and have on the prices of real estate in this city and elsewhere. The latter have advanced in many instances four and five-fold since 1864, and prudent men are seriously asking themselves whether they can be maintained. It is argued that the great rapidity with which the population and wealth of the country are increasing, and are likely to continue to increase, prohibit the thought that real estate can decline. But those who argue thus forget that it took thirty years from the collapse of the great real estate speculation, in 1836 and 1837, to bring prices back to the level of those years, and that in some instances property on this island is to-day selling for less than its supposed value prior to the crash in 1837. We do not intend to argue that, with the liberal margins usually required by life insurance companies, there is any momentary danger of loss from any supposable decline in real estate. It is merely intended to point out the enormous power which these companies possess to affect the value of property, and the great temptation which there always will be to use that power for corrupt purposes. Nearly two-thirds of the available assets of the life insurance companies doing business in this State are thus invested in a security subject to more violent though less frequent fluctuations than fancy stocks in Wall Street—in a security the prices of which are most seriously influenced by the investments of the companies themselves, and which hence offers unusual temptations for illegitimate transactions.

It would seem that in a business so hazardous as life insurance would appear to be under a system of commissions to agents and investments in real estate, the community would require that the company should possess large means of its own to give some guarantee to insurers, both as a financial security and as a means of insuring the interest and watchfulness of the stockholders or their representatives, the board of directors. But the very reverse is the case. The total capital of all the insurance companies doing business in this State, with an annual income of over $60,000,000, annual expenditures of nearly $40,000,000, with total assets not far from $200,000,000, and with risks exceeding $1,600,000,000—the total capital of all these companies doing this enormous business is about $10,000,000, or one-fourth of their annual expenditures, one-sixth of their annual income, one-twentieth of their total assets, and one one-hundred-and-sixtieth of their total risks. Of all the companies doing business in the State only two have capitals of $1,000,000 (one of them doing only nominally an insurance business, the other quite recently started), one of $500,000, two of $300,000, and the rest almost exclusively of $100,000 only, including the two largest companies, which together do nearly one-half of the entire business. The disproportion between the capital of these companies and the enormous magnitude of their business is less important with regard to their financial safety than it is with regard to their management and their responsibility towards the public. In all other financial institutions, the large pecuniary interests of the stockholders and directors are looked upon by the public as a guarantee of honest management. But in life insurance the pecuniary interest of the stockholders and directors is ridiculously insignificant. In the case of one of the largest companies, the total capital was less than one per cent. of the annual income, and less than one and one-half per cent. of the annual expenditure, while the annual fees to medical examiners nearly equalled the capital, and the commission paid to one single agent exceeded the entire capital of the company seven-fold. It is evi-

dent at a glance that men do not undertake the management of and the responsibility of being directors in such enormous concerns for any possible benefit to accrue to their diminutive capital invested in them. There are undoubtedly men who do devote their time to the management of corporations from mere love of the thing. But, as a general rule, directors in such corporations understand that their services as such are to entitle them to a preference, under equal conditions, in the legitimate and proper, but nevertheless very advantageous and very desirable, use of the funds of the company. Nor would there be anything essentially wrong in this if the "equal conditions" could be preserved. But that is notoriously impossible.

FORENSIC ETHICS.

THE history of the Erie Railroad during the last two or three years has brought into considerable prominence, besides many other questions of law and morals, the question of the proper limits of an advocate's duty to his client, and it has derived additional interest from the fact that it has been raised by criticisms on the professional conduct of a leading member not of the New York bar only, but of the bar of the United States, who has achieved a world-wide reputation as a legal reformer. We believe there has never been any general agreement either amongst lawyers or among moralists on this subject. Many distinguished moralists have always held that the lawyer's trade was essentially dishonest, and that it was not possible to pursue it successfully without more or less moral deterioration; that even the most careful and restrained presentation of a case involved concealments, evasions, and attempts to make the worse appear the better reason—or, in other words, to deceive—which could not be allowed a place in the art of legitimate persuasion, and which, hardly pardonable to a man in the excitement of pleading his own cause, were wholly unpardonable in a hired advocate.

On the other hand, lawyers, while acknowledging their general subjection to the ethical canons which govern men in the ordinary dealings of life, have always claimed, on purely utilitarian grounds, the benefit of certain exemptions, which they maintain to be absolutely necessary to the proper conduct of judicial enquiry, as long as that enquiry takes the form of attack and defence. Out of these exemptions they may be said to have framed a code of their own, which, even if it will not bear the application either of Christian or Stoical tests, they say serves a great public need, without detriment to the character of those who practise it. As pure and upright men as ever lived do practise it, we all know. These exemptions have, doubtless, been pushed in some cases to an intolerable extreme. The liberty claimed by Brougham for an advocate—that of treating his client's safety as the very highest interest, and seeking it at any cost, *per fas aut nefas*, is simply detestable. The laity has never acknowledged it to be anything but detestable, and any bar which acted on his doctrine would become a public nuisance; but no bar, we believe, has ever done so.

The main cause of the difference of opinion which exists, and has always existed, between laymen and lawyers as to the modes in which it is permissible to advocate a client's cause, and as to the rightfulness of pleading causes known by the lawyer to be bad, or of defending men known by the lawyer to be rascals, we take to be forgetfulness, on the part of both lawyers and laymen, of the fact that the advocate, under our system of jurisprudence, and, indeed, we may say under every system in which the courts administer laws and are bound by rules of procedure, has a twofold character. He is not simply the counsel of one of the parties; he is an officer charged by the government with the task of assisting in the administration of justice. When he appears in court, it is not simply as the representative of one of the litigants, but as the guardian of the general interests of the community. It is not simply his business to get the prisoner off, but to see that his trial is properly conducted; not simply to enforce or resist a claim, but to see that the procedure provided by the legislature for testing the validity of claims is not evaded or twisted or ignored. In doing all this, he acts not simply for the parties to the cause, but for everybody who may ever become a party to a cause; not simply for the person whose life or liberty or property is jeopardied by the pending case, but for everybody whose life or liberty or property may be brought into jeopardy in any case. When A is sued on a fraudulent demand, or tried on a false accusation, he unquestionably is indebted in a considerable degree for his chances of escape to the labors of lawyers who push such accusations or such claims, inasmuch as in those cases, as well as in others, they help to keep the machinery of justice in working order, and help to keep alive that sense of the importance and even sanctity of forms which is, after all, our principal defence against oppression or spoliation.

This part of a lawyer's duty laymen almost invariably overlook. They see in him only the hired pleader, determined to win, no matter what the moral complexion of his case may be, and they are never thoroughly satisfied that an attorney who appears for a man whom he knows to be guilty and dishonest, does not thereby become *particeps criminis*. It has, however, been often pointed out, and is familiar enough to those who have given any attention to this class of questions, that the thing of most importance to a civilized community with regard to crime, for instance, is not so much that criminals should be brought to justice as that they should be brought to justice in the prescribed way. In this all innocent men are interested; if it were of no consequence, martial law and lynch-law would serve our purpose as well as any other. It follows from this that all judicial enquiries are enquiries not into a man's moral but into his legal guilt. Juries are told this by the judge at every trial. The court sits and lawyers argue in order to find out, not whether a man committed a murder, but whether the proofs, without which the law says no man shall be hanged for murder, are forthcoming in his case. It makes no practical difference, therefore, whether an advocate is satisfied that his client really did commit the murder or the robbery, or not. He has really, *quâ* advocate, nothing to do with that question. His duty is to see that the evidence is sufficient and the procedure regular; and, to make sure of this, he is bound to give both the severest possible handling, and direct the attention of the court to every point and stage of them, and, in doing all this, he acts, as we have said already, not simply for the prisoner at the bar, but for every other person in the land. How confused the popular notions are on this subject, and how little consideration the Sentimentalists have ever given it, was well illustrated by the outcry against Mr. Evarts for undertaking the defence of Andrew Johnson, as if he did not at the impeachment trial appear for Grant and all future presidents, as well as for his actual client—for those whom "the party" might some day factiously and viciously seek to overthrow, as well as for him whom it was then righteously seeking to bring to justice.

As we have said, however, lawyers do often forget their character of officers of justice, and do act as mere advocates whose sole business is to get their client out of his scrape, and make money by it. It is the natural tendency of human nature, of course, in this profession as in all others, to look rather to the effect of a course of conduct on a man's personal fortunes than on the general welfare, and a lawyer's temptations to do this are so numerous, and the injury wrought by his doing it is so great, that in every country in which a bar exists, while he is allowed some special exemptions from ordinary moral responsibility, he is also saddled by law or usage with certain special restrictions. His dishonesty or ignorance works mischief not to his clients only, but to the community at large, by diminishing the power of the only criticism which the judges seriously regard—that of the bar. An upright and learned bench is not possible in conjunction with a knavish or unlearned bar, because nobody but lawyers can tell whether judges have either knowledge or principle. Moreover, as there is no relation between man and man in which one party has to place himself so helplessly in the hands of another as the relation of advocate and client, so there is no class whose want of personal integrity so seriously shakes mutual confidence and the general sense of security as the lawyer class. Indeed, honesty among a nation's lawyers may be said to be nearly as essential to its healthy existence as chastity among its women. They are expected, more than any other class, not simply to be just in the transaction of their professional business, but to promote justice by their influence and example.

It must be remembered, however, that the theory of the duty of the bar with regard to all classes of cases and of clients, rests altogether on the assumption that the courts are pure, and that when an advocate asks a thing of a judge the judge will only give it him if the law allows it. The bar is, in short, supposed to get the law, and nothing but the law, from the bench. If a state of things arises in which the bench is in a league with the dishonest, then we say, unhesitatingly, any lawyer who carries a dishonest man's case before the bench does *ipso facto* connive at the fraud; and it is the fact that that state of things has arisen in this State which has given the discussion about the Erie road and its lawyers so much of its acridity. There are two judges at least on the New York bench who are believed, on evidence which can hardly be gainsayed, to be corrupt, and to be in a corrupt league with the persons who have secured possession of the Erie Railroad. About the character of these persons there is, unhappily, no sort of doubt, and yet they have a perfect

right to have the claims made against them passed on by the courts, and to have competent legal assistance in doing so. Their character, be it never so bad, is, it must be admitted, according to the well-established usage of the bar, no obstacle to this. But the questions which now agitate the public mind are, whether, their power having become so great as to raise them to all intents and purposes above the courts and the legislature, their claims to legal assistance ought not, in the eyes of a right-minded lawyer, to be modified by the higher claims of public decency and morality; whether it is permissible to take any of their cases before a judge with whom they are known, or believed on good grounds, to have corrupt relations; whether any order, granted by such a judge for their benefit, can be considered in any proper sense a judicial finding, or anything better than an instrument of spoliation; and whether every lawyer is not bound to abstain from procuring, or using, or conniving at the procuring or using of such orders. The public is, in the matter of judicial corruption, very much at the mercy of the bar. The bar only knows whether judges are corrupt, for corruption is hardly ever patent or discoverable by the non-professional eye; and a lawyer is bound as a lawyer not only not to profit by such corruption, or allow his clients to do so, but to watch for and expose it. To use it for professional purposes is one of the gravest offences a member of the bar can commit against the community, and he is not only bound not to seek a corrupt judge, but to avoid using him. Nay, more, if there is no other judge to be had, we hold he is bound not to apply to him in a case in which he is likely to be dishonest, for what takes place before him is not, and cannot be a judicial proceeding. A corrupt judge is no judge at all; he is a robber. To refuse to appear before him no doubt may involve the loss of practice, but so might a refusal to bribe him.

Now, whether any member of the bar has in any way connived at or profited by the corruption which we know to exist on the bench of this city, is a grave question, but it is one which no layman is competent to answer. All charges of this kind must rest on facts. Names, dates, and circumstances are needed to give them substance, and these are not within the reach of the general public. There is probably no subject on which general report or gossip is of less value. Moreover, after the facts are secured, they need to be professionally interpreted. A layman may know that a lawyer did a certain thing on a certain day, but to decide whether he did wrong in doing it he needs the aid of professional opinion. He cannot condemn a lawyer, for instance, for appearing before a corrupt judge, without knowing whether he was brought there by the other side or went there voluntarily, or whether he could have possibly avoided it. There ought to be some tribunal before which such a charge as this, the bench being unreliable, could be investigated. In this State there is no such tribunal. The bar has no control over the conduct of its members; but there is an association in this city known as the Bar Association, which, if it cannot expel an unworthy lawyer from the profession, can at least let the public know what to think of him, and, if it refuses to perform this duty even toward its own members, it can hardly claim any higher character than that of a not very select social club. We submit that, if grave charges are current against one of its members, affecting his professional reputation—if these charges are generally believed by the public, and find frequent expression in periodicals of good standing on both sides of the Atlantic, and are of such a nature as to shake confidence all over the world in the security of property in this State, and to bring odium on the very name of a New York lawyer—the Bar Association should either enquire into their truth, and, if found to be false, publicly vindicate their member's character; or, if found to be true, make such proclamation of the fact as would put the community on their guard against him, and relieve the bar from the odium which, in the absence of any protest or reprobation on its part, his connection with it is calculated to bring upon it. If it refuses to do either of these things, both the accused person and the public will have abundant reason to complain, and the Association may fairly feel some doubts as to the reason of its existence. Our firm belief is that all that can be done for reform by private conversation in offices and over dinner-tables, and by general homilies on corruption, has been done. We have reached a point at which, unless persons of influence and character can be found ready to assume open responsibility for their opinions, we may as well surrender at discretion. There is no use in making a breach in the walls unless volunteers can be found for the forlorn hope.

ENGLAND.

LONDON, January 6, 1870.

POOR Mr. Gladstone is unlucky in his constituencies. Everybody admits that he is one of our greatest orators and ablest ministers; yet it seems as though nobody cared to be represented by him for any great length of time. When he lost his seat at Oxford, he found a refuge in South Lancashire; driven from South Lancashire, he received the honor of an election without canvass from the borough of Greenwich; and now it seems that some of the good people of Greenwich are repenting of the honor which they conferred, and would like to give Mr. Gladstone notice to quit. I am not acquainted with the details of Greenwich politics; but I imagine the cause of this discontent to be easily guessed. The reductions made by the present admiralty in the neighboring dockyards of Woolwich have caused a certain amount of distress and a good deal of irritation. The Tory party have, I presume, taken advantage of this circumstance to open fire, so to speak, upon Mr. Gladstone's rear, and have endeavored to give the complaint a character of general rather than of local dissatisfaction. Of course, the matter has been taken up more or less in the newspapers, and has led to some discussion of the errors committed by Mr. Gladstone's administration, and the defence set up for them. That there is a good deal of dissatisfaction in different quarters appears to be tolerably clear. The complaints are twofold. In the first place, the radicals have not forgotten or forgiven the concessions made to the church party by the education bill. They say that that measure was carried by the help of the opposition in spite of the efforts of the most genuine liberals; and they are suspicious of similar measures in future, especially in regard to the Irish educational system. From the other side, the conservatives declare, and a good many liberals sympathize to some extent with them, that Mr. Gladstone has pursued a very false policy in regard to military and naval reforms. He reduced our forces, they urge, till we found ourselves scandalously ill provided with men and materials in the midst of the most terrible of modern wars, and we are now endeavoring to make up for lost ground in urgent haste, and therefore at an extravagant rate. We discharged 20,000 useful soldiers, and are trying to entice them back again; we allowed our supplies of powder to fall to a ridiculously low ebb, and have now to buy from private manufacturers at an advance of 40 per cent. above the average price. I have no means of distinguishing the truth which may be contained in these assertions from the errors by which it is doubtless accompanied, but they presage a stormy session, and will no doubt lead to some very uncomfortable debates.

I see a letter in the *Daily News* of to-day which gives utterance to some of these feelings. The writer professes to be a radical, and says that his party looks forward with great anxiety to the fate of three leading measures. These concern the ballot, the licensing system, and army reform. The programme is, to my mind, very feeble; and I do not believe that many rational human beings care much for the ballot at the bottom of their hearts, or believe that we are going to make a serious legislative assault upon drunkenness. The third question, however, is more likely to lead to political complications. Though I have already touched upon the subject on one or two previous occasions, I will venture to call your attention to some of the difficulties involved. The gentleman who has been most active in the endeavor to get up an agitation on the subject is Mr. George Trevelyan, who has been publishing pamphlets, making speeches, getting into newspaper controversies, and generally seeking to gain a hearing for his views. Mr. Trevelyan is a very able as well as a very zealous and honest politician, yet he has scarcely met with the success he deserves; partly, I think, because he has fallen into some statistical inaccuracies, and has so given the enemy occasion to triumph over him. He tells us, and the statement is near enough to the truth to be unpleasant, that we spend near $30,000,000 annually upon our army, and that for that sum we can only place in line, after making the necessary deductions for garrison duty, something like 35,000 men. In other words, we could produce one strong Prussian corps at twice the cost of the entire Prussian army. There are certain deductions to be made from this statement with which I need not trouble you. It is, however, remarkable that such statements can be made, and made with at least a plausible approximation to accuracy, and excite so little sensation as they do.

One main cause of this comparative quiescence is that the country is by no means prepared, in spite of all that can be said, to adopt anything like the Prussian system. Advocates of army reform have expressed a wish to see every man in the country drilled; and we are by no means so frightened or so ambitious of military glory as to be ready for so sweeping an innovation. Lord Derby expressed the general sense of the country when he said that it would be a retrograde measure to turn the nation into an armed camp. The suspicion, in fact, that a disposition to sacrifice everything to military efficiency underlies the eagerness of most military reformers, goes far to neutralize their efforts. The argument, indeed, remains that, as we choose to spend

so much, we ought to get more for our money. It seems, however, that the British public aquiesce pretty comfortably in an old-established abuse, and do not work themselves up to the pitch of demanding reform till some serious catastrophe has made its necessity obvious to the meanest capacity. What has been done even by the terrible spectacle now before our eyes is not to produce any vehement popular outcry, but to make it necessary for the ministry to introduce some measure of reform in the ensuing session. To that, in one way or other, they seem to be pretty well pledged; they have the advantage that a moderate scheme will content the general public; but, on the other hand, in the absence of any strong pressure, they will have a difficulty in encountering the opposition of many men, and bodies of men, whose interests must be materially affected by any decided measure.

What is the nature of these interests may be briefly indicated by the resolutions of which Mr. Trevelyan has given notice. He intends to move, in the first place, that the purchase system should be extinguished. That system is so utterly monstrous in theory that it is difficult to understand how any reasoning being should get up and defend it. Yet, as every abuse which has lasted for generations must be convenient to a large class of men, and as most people hold that what is convenient to them must be good for the nation, it does not want eager defenders. Their great practical stronghold is that the first expense of extinguishing it would be enormously costly; yet it is impossible to move a step towards army reform without finding this preposterous arrangement in the way. A bit of evidence from an able general will be enough to point out its most palpably mischievous effect. "If a man knows," said Sir J. Franks, "that, with very little attention, and a smattering of knowledge, and lots of money, he is certain to get on, he is not likely to pay proper attention to his duties. I conceive that, as long as men think that money and interest will forward them in the service, they will not devote themselves to their profession." The consequence is, in fact, that English officers are essentially amateurs. They enter the army, as the Duke of Cambridge admitted, for three or four years "to see how they like it." It is not true to say that the army is aristocratic in any strict sense of the word; but it is certainly plutocratic, or, as Mr. Trevelyan puts it, a "plutocracy tempered by social interest." Of the various indirect modes in which the vested interest of officers in their commissions stops every attempt at improved organization, I have no room to speak; but they can be easily imagined. Mr. Trevelyan's next resolution points to bringing the Horse Guards under the complete control of the Secretary of War. The existing system of double administration is one of those things which nobody can understand who has not been initiated into its secrets by practical experience. It is enough to say that at present the Duke of Cambridge, as commander-in chief, has a kind of independent and indefinite authority; but, as he is a member of the royal family, ministers are generally too delicate to interfere with him; that Mr. Trevelyan's assault upon him has been considered as something between treason and sacrilege; and that the Duke, though a well-meaning man enough, is a thorough obstructive, and an obstinate defender of all the worst points of our system. Then Mr. Trevelyan proposes that the militia and the line should be united in one common organization, and that various reforms, into which I need not enter, should be carried into effect, having for their main object the introduction of a short term of service, after which the soldier should pass for a time into some efficient body of reserves. As matters stand, we have a small regular army; a half-drilled and badly-officered militia, which has no particular relation to the army; and a large mass of volunteers who, at the best, are mere raw materials out of which an army could be gradually formed. To make a coherent and well-organized whole from these chaotic materials is a task so difficult that one rather hopes than expects that the ministry will propose some satisfactory scheme for the purpose.

Reformers have thus to contend against a number of discouraging circumstances. The intricacy of the system, which serves to condemn it in the eyes of intelligent observers, makes it almost impossible to explain its evils to the outside world. The assailant is easily enticed into such a labyrinth of complicated detail, where he makes statistical blunders and finds all kinds of unexpected arguments spring upon him at every turn, but ordinary readers grow bewildered, and give up the question in despair. Then there is all the enormous weight of social interests, beginning from that of the royal family down to the tradesman who gets some advantage from his connection with the local corps of volunteers; there are the whole body of officers who have invested large sums in their commissions, and regard any tampering with them as picking their pockets; there is the very large military element in both Houses of Parliament which despises outside reformers, and is ready to swear that the British army is the envy and admiration of the universe; and, finally, there is the dislike of the radical himself to anything which savors of military extension. He is apt to regard the services as an abuse, which ought to be abated by a simple process of cutting down instead of improving their organization. It is still popular to condemn standing armies altogether, and to propose to rely upon our admirable band of patriotic volunteers. The ministry may well dread doing either too much or too little in so ticklish a business; and, though something must be done, I would rather not make any guess as to what that something will be.

As the piece of news which I am about to announce has already got into the newspapers, I have no hesitation in revealing it. Miss Garrett, the ablest of our lady doctors and advocates of women's rights, is about to be married. It is stated—though I cannot understand on what ground—that she thus forfeits her position in the school-board; but she is certainly not prevented from continuing her professional practice, and I am informed that she intends to do so.

CHRISTMAS IN WAR TIME.

CASSEL, December 26, 1870.

LAST night a train carrying 800 sick and wounded French prisoners arrived here, and halted for a few hours that the men might have an opportunity to recover in some measure from the effects of the cold and hunger and thirst with which they were all suffering, have their wounds dressed, and be supplied with any medicines of which they stood in need. They were on their way to Berlin, whence they were to be sent still further north, and everything was done for them which could possibly help them to endure the hardships still in store for them, as their journey must continue through the night and be prosecuted in miserable freight-cars, neither lighted nor warmed, and supplied only with a scanty allowance of straw. To say merely that they had been suffering from the cold is to put it too mildly by several degrees. The fact is that, while numbers of them had frost-bitten hands, feet, and faces, four poor fellows were found actually frozen to death. The train had left Nancy two days before, when the weather, though raw, was not severe in temperature; but during the first night the cold became intense, reaching 14° to 16° Réaumur. The prisoners were transported in open platform cars, with no shelter, except such as their clothing afforded, and that, in many cases, was little indeed. The train did not stop for the weather, but continued its route with true military observance of orders and disregard of consequences. The prisoners were, many of them, weak, sick, and exhausted, and the effect of forty-eight hours of uninterrupted suffering from cold upon such men will not be exaggerated by the liveliest imagination. Many of the men were in such a state that it would have been murder outright to send them further; their lives would have come to an end long before their journey did, and the destination for which some of them were already plainly bound was not Berlin but the grave. Hence a considerable number were detained here, and divided among the military hospitals of the city.

Sixteen were assigned to the hospital where I am engaged, and, as I was "officer of the day" at the time of their arrival, I had the duty of examining them. They required to be looked after with special reference to small-pox, as that disease had seized some of their comrades on their way hither from France. They did not present any symptoms of that fatal complaint; but nearly all of them were afflicted in various degrees with one or another of the pests which prey upon the soldier in war-time in winter. In the first place, their forty-eight hours' chill was showing its disastrous effects in various ways. Here the dusky countenance and partial asphyxia of a commencing severe pneumonia, there the swollen joints and intense agony of rheumatic fever, presented themselves. Poor exhausted victims of dysentery and typhoid fever, with chattering teeth, were vainly trying to get warm in bed. Some had frozen feet, many less extensive frost-bites. Their bodies were emaciated in nearly every case and covered with eruptions of various sorts, and they were infested with vermin in a truly appalling degree. It was on this latter account that they were all forced into a warm bath and given fresh clothing before they were allowed to take their beds. The bath was a necessary but cruel precautionary measure. It increased their discomfort to the last degree, chilling them still more by the rapid evaporation which it caused; and they must have felt their first reception in the land to whose tender mercies they had unwittingly committed themselves a coldly inhospitable one.

The men were all from the Loire army, and had been made prisoners in or about Orléans. Four of them were "Turcos," stupid but apparently good-natured fellows, certainly not the savage and blood-thirsty animals

they are usually represented to be. Four wore the picturesque Zouave uniform. The rest were from infantry regiments, several from the 16th infantry. There was one fair-skinned, flaxen-haired, blue-eyed Alsatian, or "Elsasser," as the Prussians called him, who spoke German with entire fluency, and whose Teutonic traits offered a marked contrast to the Latin proclivities of his comrades. He had received a severe gunshot wound through the shoulder at Moulin d'Anvilliers, before Orléans, on the 3d of December, where the French made such obstinate resistance, but were finally overpowered by the Holsteiners. He seemed to win the hearts of the German attendants by his manly behavior under his severe sufferings, his forlorn looks, and still more, perhaps, by his temperament and appearance, which allied him so closely to them, and every possible attention was paid to his comfort. He acted as interpreter to his comrades, and, indeed, spoke better German than French. He was complimented on his German looks and language, and assured that he could now forget French entirely, and make German his mother-tongue. He made no reply to this jest, but his countenance fell, and it needed no penetration to see that he had not yet learned to reconcile himself to the idea of transferring his allegiance from the defenders to the conquerors of his country.

A soldier's funeral cortége is no uncommon sight in these times. Almost every day two or three of them pass in the street before my window; but this afternoon I have seen two whose unusual nature will perhaps merit a few words. In every particular save one they were exactly like the procession which ordinarily escorts the Prussian soldier to his grave: a squad of perhaps 50 men marching in rear and van divisions, between which are borne upon the shoulders of six comrades the soldier's mortal remains. The coffin is enfolded in a black pall, upon which rest the sabre and helmet of the deceased, encircled with garlands of flowers. The one particular in which these two processions differed from the ordinary ones was that, instead of the burnished helmet encircled with its wreath of immortelles, there rested upon one coffin the elaborately braided red cap of a French soldier of the line, and upon the other the tasselled headpiece of an Algerian Zouave. The bright red of these head-coverings formed a striking contrast to the solemn black pall, and told its sad story in an instant to the glance of every passer-by. These were two of the poor fellows who made so disastrous a journey hither yesterday from France; and it cannot be long before they are followed by still others of their unlucky comrades, many of whom are in a low condition which forbids the hope of their recovery.

It will, perhaps, seem like cruelty or criminal neglect on the part of the Government that men should be frozen to death during transportation through the country, but the circumstance was one which could not have been foreseen, and, if it had been foreseen, would have been difficult to prevent. The soldiers of the Prussian army are transported in precisely the same manner, and ordinarily ride safely if not comfortably. The cold came on suddenly, other cars were not to be had, military orders are necessarily peremptory, and the fate which overtook these poor men was only one of the inevitable consequences of disastrous war. This is the manner in which I heard the thing settled in a solemn conclave of warriors and burghers at the "Spotted Buck," a quiet old inn near the hospital, which I visited last night. One veteran of 77 years, who had been at Leipsic, as he handed his snuff-box round the table, recounted the horrors which stared every sick or wounded soldier in the face in "*anno* '13," and by contrast of those times with these the loss of half-a-dozen men by freezing to death seemed indeed only a trifle. Altogether, these Hessians and Prussians do not find it difficult to console themselves for the misfortunes of France. The manner in which Napoleon I. made these provinces his hunting-ground is not forgotten here, neither are the designs which his nephew entertained.

Besides the survivor of Leipsic, there was an old comrade present who had been at Waterloo. The two old companions in arms meet at the "Spotted Buck" regularly on Wednesday evening of each week. They are both men of character, wealth, and influence, and the tendency and effect of their conversation may be imagined. Northern Hesse, Prussian only since '66, might be restless under the Prussian military system in other circumstances, but she has shown no reluctance to send men against France, and, indeed, has done valiant service on more than one occasion. The young men who are now being called into service for the first time, under the new regulations, as a rule respond with alacrity to the summons. At the very worst, indeed, the severe but impartial and enlightened policy of the Prussian Government could not but be preferable to the petty tyranny which the former Kurfürst exercised.

Whenever an American finds himself in Prussian company nowadays, he is sure to encounter, in one form or another, the question of American sympathy with the French Republic. The veteran of Leipsic aforementioned, in speaking on this question of the relations of the United States with the "so-called" Republic of France, permitted himself to describe that republic by the untranslatable term "schweinerei," and expressed it as his firm conviction that the Americans were reasonable beings, and, whatever Mr. Washburne might do, would understand the difference between a "schweinerei" and a genuine republic. R. S. D.

DRESDEN, December 30, 1870.

IN these war-times, when we read, day after day, of marchings and countermarchings, of ruined homes, and all the misery and desolation which war brings both to the conquered and the conquerors, it may interest your readers to turn to a short account of two among the many celebrations characteristic of this strange, sad Christmas of 1870, which sees the German Fatherland reunited after so many years, but its peaceful home circles broken up, and almost every family dwindled by distance and danger, if not by death.

The following is a literal translation from yesterday's *Dresdener Nachrichten*:

"Certainly never has Christmas festival been solemnized with a more fitting or more deeply impressive consecration than that which the German and French soldiers held together in the hospital here. In the small room of the pious sisters, the soldiers stood around the flaming Christmas-tree, which, indeed, has its special significance only for the Germans. The latter sang with much feeling their beautiful old Christmas songs, 'O du selige, o du fröhliche gnadenbringende Weihnachtszeit,' 'Stille Nacht, heilige Nacht,' etc., concluding late with Fatherland songs. As the French, of course, could not follow the words of these, they were encouraged to sing some of their own songs. Although they had observed that the Germans sang their 'Prussian Marseillaise,' they did not respond to this, but began 'Le Montagnard,' whose sad, touching melody every German clothed almost involuntarily with the words 'By the rivers of Babylon, there we sat down and wept; we hung our harps upon the willows,' etc. Many of the German soldiers wept, till at length a one-year volunteer proposed a song in common, 'O sanctissima, O purissima,' which holy hymn was known to many, both Germans and French. At the conclusion of this, the one-year volunteer set his French vocables in order of battle, and addressed the following speech to the French:

"'Mes chers camarades français! je demande pour un moment votre attention. C'est aujourd'hui la fête de Jésus-Christ, qui a été premier apôtre de l'amour pour le monde entier, qui n'a pas voulu la guerre, et qui a commandé aux hommes d'aimer les uns les autres. Eh bien! Espérons que le jour arrivera bientôt, où il n'y a plus de guerre, où tous les peuples aiment les uns les autres comme des frères, et où, sur le drapeau de l'humanité, seront écrits les mots: Fraternité! Liberté! Égalité! C'est pourquoi je vous demande d'écrier avec moi devant cet astre brûlant: Vive la Fraternité, la Liberté, l'Égalité!'

"Free from national passion, the French joined with enthusiasm in the concluding words."

The other occasion was a "Christbescherung" (Christmas present-giving), at which we were present last night, and which interested me from its thoroughly German character. A week or more ago an advertisement appeared, stating that the Dresden "Liedertafel" (glee club) would give a "patriotic evening" on the 29th, for the benefit of children of men who had fallen in the war, or whose prolonged absence left their families without adequate support. Tickets were to be had for ten neugroschen (25 cents), or in exchange for useful and appropriate presents, and the notice ended with an earnest appeal to the rich and happy children of the city in behalf of those less fortunate. The hall in which the concert was given is the largest in Dresden, and was very prettily decorated for the occasion. A tall fir-tree, covered with candles, surmounted by a Christ-child, and embraced by a woe-begone waxen St. Nicholas seated at its foot, occupied the centre of the room. Eight long tables, covered with ticketed presents, radiated out from this, each terminating at its outer end in a smaller tree, connected by long, hanging streamers with the central one. Smaller tables were scattered through the hall, round which the audience were seated in family and friendly groups, prepared to absorb music and beer at the same time in true German fashion. Soon the singers formed on the stage, under the flag of United Germany, and the performance began with Körner's "Prayer before Battle," music by Weber, most beautifully given by one of those rich, soft, perfectly trained choruses which only a musical nation like the Germans can produce. Then came a new song, "On September 3d, 1870," marked by the earnest, religious feeling, the absolute outspoken

conviction that "God, even their own God," is fighting with and for them, which makes them in their own eyes a chosen people, almost like the Jews of old. I suppose every nation, especially in its time of trial, has something of this feeling, but, since the days of the English Puritans, no people have taken it so solemnly and seriously to heart as the Germans. The thought is summed up in one line of the song to which I refer:

"Nun bebt vor Gottes und Deutschlands Schwert"
("Now tremble before the sword of God and Germany"),

and with the deepest sympathy for this great people in this time of national exaltation, and a real respect for the simple earnestness which makes such expressions natural to them, one cannot but smile at the literalness of the statement. A Christmas hymn followed; then a poem spoken by the author, and describing, as far as I could follow it, the camp Christmas before Paris, the coming in of the field-post with news from home, the hope that the day might pass without bloodshed, etc.

Meantime, the candles on the smaller trees were lighted, and after a few moments the door was thrown open, and with a burst of martial music the children's procession entered. It was headed by a brass band, a "Musik-Chor" of small boys, playing the "Wacht am Rhein" with a will, and in excellent time and tune: then came a figure with long gray beard, hooded cloak spotted with snow-flakes at alarmingly regular intervals, a bundle over his shoulder, a toy in one hand, and a bunch of rods in the other, known to readers of German story-books by the name of Pumpernickel. The strains of the music passed in through the great hall, and a long line of children followed with their mothers, the young faces of the women and the little children, many of whom were in their mothers' arms, making one think sadly of the young fathers who had marched away to the sound of that same melody, many of them never to see their German homes again. There was a weary sad look in the women's faces, some full of feeling, others with something practical, almost hard in them, as of people on whom the daily cares of life weighed too heavily to leave much room for sentiment, but all with that steadfast, patient endurance so characteristic of the Germans, especially of the women. The children gazed solemnly at the lighted trees, little ones on the floor struggling vainly to get a glimpse of the wonders around through the mass of grown people in which they found themselves embedded. Without being especially pretty, not nearly as pretty as the English charity children, for instance, there is something particularly taking and childish in the ways of the German children, and these looked well fed and were comfortably clothed —a bright hood or new coat here and there giving token of some previous festivity. The presents were numerous and handsome, comfortable winter garments and other useful things, and really nice toys, mostly contributed from the toy-shops, I believe. It was good to see the little faces light up, and the mothers smiling and enjoying their children's pleasure with a ready demonstrative gratitude which one will hardly see on such an occasion with us. There was none of the stiffness which is so apt to mar our public benevolences, but a cordial, homelike cosiness pervaded the whole affair. Every face was bright when they passed us again on the way out; the children's arms filled, the mothers' quite loaded down, each woman carrying a large "Stollen," the German Christmas-cake, on top of her basket or bundle. Some of the children stopped to shake hands and show us their presents. As they went out, the boys began to play again, and it was striking to see how many, even of the smallest children, kept time to the music, little ones in arms beating time with their hands, and others falling unconsciously into a marching step. When the poor children were gone, and the boys' music over, fresh supplies of beer and sandwiches were brought in, pipes and cigars made their appearance, more songs followed from the "Liedertafel," and in a thick cloud of tobacco smoke the performance came to an end; the "Wacht am Rhein," which, though not in the programme, was called for by acclamation, forming an appropriate finale to this "patriotic evening."

H.

[*Extracts from the private letters of an American lady.*]

VERSAILLES, Dec. 26, 1870.

On Saturday we went to a Christmas-eve party, and helped to dress the trees beforehand. Never was a sight more "sad and strange." We were in the central hall of the château, lighted by regal chandeliers of rock-crystal. Just remember, for a moment, what were the last fêtes seen in the palace. "Le repas des gardes du corps" was the fatal banquet which precipitated the Revolution. After a long interval, Louis Napoleon received at Versailles the Queen of England, ready then to call him "cousin." The next time the candles are lighted, it is for the German wounded, of whom more than twenty-five witnessed the festivity from their beds, and as many more came in, limping and bandaged, helped along by their nurses or trying their crutches for the first time. Besides these, the company consisted of six ladies, English and American and German, who visit the hospital every day, ten or twelve *sœurs de charité*, some of them surprisingly lovely. The medical staff, headed by the chief-surgeon, superbly dressed, an aide-de-camp of the Prince Royal, and the Commandant Voights-Rhetz, in full dress with decorations. A clergyman made a prayer and read the old familiar story of the Nativity. A military band in the vestibule played Christmas hyms. It was wonderful to see them there, grouped between rows of high pedestals, with gilt branches for candles alternating with tall shrubs in ornamental pots. Louis XIV. died in the chamber above the spot where the Germans were blowing their cruel trumpets and stirring the frosty air with their Protestant hymns on Christmas eve 1870. Those who are familiar with the château will recognize the Salle Louis XIII. as the place where this lugubrious fête took place.

"What, shall our feast be kept with slaughtered men?
Shall braying trumpets and loud churlish drums—
Clamors of hell—be measures to our pomp?"

After service, we helped to distribute the gifts: a flannel shirt, pair of stockings, apples and nuts, for 200. Three ladies gave 600 apples. There were also 200 large cakes with plums, according to a German custom. We had great fun, on that day and the next, giving our particular gifts—hair-brushes, boxes of matches, cigars, knives. —— gave two new ribbons to a most beautiful wounded officer who had worn his medals since 1866. Words cannot describe his beauty. This is the man to whom —— gave a pretty little box, in which to keep his bones, extracted from his foot! There were eight Christmas-trees, all arranged on long tables in the Salle Louis XIII. They were very pretty, and I learned a number of German fancies while helping Herr Barons and others to dress them. It was a very touching scene, and even painful to those not familiar with its elements; but I know of far more heart-rending exhibitions in some far-away halls of the great palace. I had made my visit in the morning to the *condemned*. You would not like to know about them, dying of hospital fever, and actually pained by this advent of Christmas. One officer, who has been in a dying state for days together, delirious sometimes, asked to have a Christmas-tree. They say he tried to sing a hymn when it was brought to him. We make a point of going to him, for he mistakes us for his family and friends, and astonished my brother by saying he used to see him in Berlin with Mr. Hildebrand. However, I have no intention of dilating to you on these things. It would not be right to force on you our experiences in hospital, which are made tolerable by excitement and action. . . . . This morning I went to skate on the Grand Canal, where an old woman with hot coffee and a pot of charcoal represented the luxury of the ex-Empire. No hussars skated *in spurs* to-day, but a Polonaise in costume, also an English lady with three little children, all on skates, and prattling and laughing, in pleasant contrast with old Gen. Von Moltke, quite alone, seeking sylvan solitude, while far-away guns were audible; stern-faced, without insignia of rank, and enveloped in an overcoat, through the arms of which he doesn't put his own. He thus looks like a man in a tragedy about to do a foul deed. They who know say it is impossible to read his countenance, which is the same on the eve of a great battle, in victory, and in defeat. I once saw the funeral of a poor private cross his path, and watched him narrowly. But, as usual, not a muscle of his face stirred. He merely stopped to let it by, gave the salute to the dead body, and went on, apparently unconcerned. An anxious Versailles woman asked a friendly Prussian soldier, quartered in her house, whether the French could send shells as far as she was. "*Die Français nix boum-boum Versailles.*" *Nix* is the one word now known by all French, and *nix pain, nix beurre* tells soldiers they are out of bread and butter.

Notes.

MESSRS. D. APPLETON & Co. have in press several scientific works, of which that by Mr. Darwin is first in point of interest if not in importance also: "Descent of Man, and Selection in Relation to Sex." "Electricity and Light," by Prof. Tyndall, and "The Beginnings of Life," by Prof. H. C. Bastian, with whom Prof. Tyndall has lately been having some sharp words in regard to spontaneous generation, are two other works announced by the same house.——Messrs. Leypoldt & Holt have admitted to partnership Mr. R. O. Williams, a gentleman connected with the house for some

years, and whose name will appear in the firm style of Leypoldt, Holt & Williams. Following the line so well begun by Prof. Pumpelly's popular book of travel, they will soon issue "Travels in Central America: including accounts of some regions unexplored since the Conquest," by the Chevalier Arthur Morelet. The translation is by Mrs. M. F. Squier, and Mr. E. George Squier furnishes an introduction and notes. The operations now in progress to connect by rail and by canal the Pacific and the Atlantic must inevitably attract attention to the history and archæology of the remarkable country which this book treats of, doubtless without revealing more than a small part of its mysteries.——Messrs. Hurd & Houghton's announcements for February are: "A Hand-book of Legendary and Mythological Art," by Clara Erskine Clement, which will be "fully illustrated;" two more of the Hans Christian Andersen series—"Stories and Tales," and "The Story of My Life;" "From Fourteen to Fourscore," a novel by Mrs. S. W. Jewett; the second volume of the "Life of Nathanael Greene," by Prof. George W. Greene; and Volume V. of Albert G. Browne, jr.'s "Reports of Cases Argued and Determined in the Supreme Judicial Court of Massachusetts."——The author of several juvenile works has produced, and Messrs. Dodd & Mead will publish, "Max Kromer: A Story of the Siege of Strasbourg in 1870." The same house announces, with considerable reduction in price, new editions of "Cruden's Concordance, unabridged" and "The Quarto Gospel Treasury."——Messrs. Harper & Bros., besides several novels, have in press "The War Correspondence of the Daily News;" "Strange Dwellings," by the Rev. J. G. Wood; Yonge's "Musings on the Christian Year;" Holland's "Sinai and Jerusalem;" Tristram's "Scenes in the East;" Cunningham's "Ancient Geography of India;" and Jesse's "London."——"Nebraska Legends and Poems" is the title of a work by Rev. O. C. Dake, which will shortly be published by Messrs. Pott & Amery. The mention of this firm reminds us that they are the agents in this country of the Arundel Society of London, whose objects and productions are doubtless known to many of our readers. To others we may say that it was founded in 1848 to promote the knowledge of art by copying and publishing important works of ancient masters, and that it has been instrumental in reproducing many perishable and actually perishing paintings, as well as in making more widely known the works of various schools and masters, an acquaintance with which must be supposed improving to the taste as well as gratifying to the curiosity. For particulars of membership we must refer to Messrs. Pott & Amery, at the Cooper Union. The Society's publications consist of a spring and an autumn issue, and those for 1870 are as follows: (1) Three chromo-lithographs, on one mount, from the panels forming the upper centre picture of the altar-piece, by the Brothers Van Eyck, in the Cathedral of St. Bavon at Ghent, and representing the Triune God, the Virgin Mary, and St. John the Baptist; and two chromos after frescoes by Fra Angelico and Fra Bartolommeo, in the Convent of St. Mark at Florence, viz., Christ and Mary Magdalen in the Garden, and Jesus and His Two Disciples at Emmaus; (2) A chromo after a fresco by Fra Angelico in the same convent, representing the Transfiguration; and two chromos from pictures by Albert Dürer in the gallery of Munich, which represent the apostles John and Peter, and Mark and Paul, respectively.——Mr. Sibley's "Harvard Biographies" is now in the printer's hands, although the requisite number of subscribers has not been obtained—requisite, that is, to pay for the actual outlay, since the author's time and labor he consents to count as nothing. We trust that his faith will be justified, and have little doubt that it will. The work has grown on his hands, and will be larger than he expected at the time of issuing his prospectus, and will be printed on better paper.

—No one yet knows the loss to the literary, scientific, and artistic worlds, and to the world of affairs, wrought during the year just gone in the war waged upon each other by the two nations which are at the head of civilization. The gain to mankind which is to be brought about by the appalling sacrifice of German and French lives had needs be great to compensate the world for the extinguishing of so many fine and great intellects as the last six months have seen snuffed out. But apart from the killed in battle, the necrological history of 1870 is mournfully rich in eminent names; and America furnishes more than her share of names that everywhere are justly celebrated. Thomas, Farragut, Lee, and Dahlgren—two great generals whose names are to be familiar to many generations; a great admiral; and a scientific sailor, eminent in his profession, and secure of long remembrance as an inventor—are counted among our American dead of the last twelve months. From among our authors we have lost none of great distinction, but several who were of merit and are well known, as Gulian Verplanck; Kennedy; Anna Cora Mowatt Ritchie; William Gilmore Simms; Albert Barnes, the widely known commentator on the Scriptures, whose works have been scattered abroad by hundreds of thousands, and deserved their popularity; George Prentice, an editor of very great influence; and Nathaniel Willis, the father of the poet, and the Nestor of American journalism. In politics and law, the deaths are recorded of Robert Grier, a justice of the United States Supreme Court; David Burnett, once famous in Texas politics; Anson Burlingame; Pierre Soulé, of better fame in law than in politics, and of abilities much greater than his reputation; and George Ashmun, lawyer and politician, and the chairman of the convention which first nominated Lincoln for the presidency. Prince Salm-Salm, too, we might mention among the American dead of the year, one of the more striking passages of his adventurous life having been four years of service in our war of the rebellion, and a year of service on the staff of Maximilian. He was killed at Gravelotte, fighting a French marshal whom his Mexican experiences had given him small reason to love.

—The English, as well as the French, suffered by the loss of their greatest story-teller, Dickens having died in the summer, at the comparatively early age of fifty-eight. Lord Clarendon, Sir James Clark, Captain Cowper Coles, the inventor of the shields for armored ships; Mark Lemon, one of the founders of *Punch;* Sir George De Lacy Evans, who fought with distinction in Spain, in India, in the Crimea, and against us, and died at the age of eighty-three; Canon Dale, Maclise, the artist, and Balfe, the musical composer, are others of the best known of the Englishmen who have died within the year. In Spain, in the very last days of the year, on the 28th of December, Don Juan Prim, one of the most striking of the historical figures of this age, so rich in striking historical figures; leader of the revolution which dethroned the last Bourbon, Isabella II., whose love he had refused, and who had twice exiled him; life-long intriguer and conspirator, for the last two years the ruler of Spain and the soul of Spanish politics; the man by whose act the present eventful war between France and Germany was precipitated, ended his strange career by death at the hands of an assassin, perhaps by the manner of his death doing as much to establish firmly the monarchy of his choice as his labors in life had done to make its first establishment possible. He was but fifty-six years old at the time of his murder.

—Paris as a city of the first magnitude, eating its omnibus horses and gradually reducing itself to immobility, is not so astonishing a spectacle as the same capital besieged into silence, with its periodicals suspended and its great book-houses devoid of business, and the press itself contracted and powerless. The unloosing of tongues will follow soon enough the taking of Paris, and for a time, at least, there is reason to expect—if only topics are considered—an unprecedented literary activity. One class of works, whose popularity has already been enormous, though the sale was restricted in every way under the Empire, is likely to be sought after with increased avidity, and this time let us trust that their lessons will, after the late bitter experience of the horrors of war and "glory," be taken more deeply to heart than they have ever been. We refer to the remarkable fictions of Messrs. Erckmann-Chatrian. A correspondent of the London *Times* lately had an interview with the former of the two partners at Pfalzburg—a place of which the siege in 1814–1815 has been commemorated by them in "Le Blocus." Erckmann announced his intention of narrating also the recent siege, which, he said, "has features differing greatly from the last blockade. Then we lay under a military despotism; now it is France and her people who are fighting for their hearths. There is a human interest which was wanting before." The correspondent was cruel enough to compare mentally the promised picture of the present crisis with that which Victor Hugo may be expected to give us. Erckmann seemed to desire the neutralization of Alsace, believing it could be maintained as Belgium's had been. As for France, he chiefly expressed anxiety on account of the gulf which, he had begun to fear, was widening between the two great races, of which the Gascon and the Breton are the types. "The world is not cognizant of this," he added, "but I have watched it with foreboding." What has heretofore attached Alsace to France was not, "as is so often said, simply the wars of the Empire. It was the Revolution, against whose excesses and terrorism it so stoutly struggled. It was the abolition of the vexatious seigniorial oppression, the destruction of feudalism, the establishment of equality." These gains, we must admit, may suffer somewhat at first from annexation to Germany; but as they did not preserve Alsace from subjection to the second Napoleonic despotism, it is clear that the value of them has been overestimated. To exchange equality of the French sort for German feudalism plus the university and a popular army may, considering the tendencies of the

age, be accounted a good bargain; while by helping to remove the remnant of feudalism in Germany, Alsace may worthily repay its debt to France.

—The editor of the Boston *Congregationalist* promptly disavows the paragraph on which we commented a fortnight ago, and which charged the *Nation* with "a manifestation both in its own editorials, and in the communications which it receives from others, of an open and undisguised contempt for clergymen as a class." He states that it was published by mistake, after explicit directions to the contrary, and to his sincere regret; and that "it certainly would not have appeared without substantial modifications," he being of opinion that the charge, if it had any force, related to the communications to this paper, and could not justly be brought against its editorials.

NORTH AMERICAN REVIEW FOR JANUARY.

THE number before us is, we should say, an average number, though, perhaps, rather below than above the average. It opens somewhat unfortunately with a paper entitled "The Aborigines of Nova Scotia." A good solid piece of out-of-the-way philology, unreadable by most of mankind, is, we take it, what the editor owes us who proffers us an article concerning the aborigines of Nova Scotia. Or else an article, readable by everybody, containing something like a good account of the curious ways of a singular people, three-quarters pagan and not half-civilized, who live undisturbed their peculiar lives amid a race which is of one blood with ours—ours which murders the Indian, and which our Indian constantly does his endeavor to massacre. The same sort of strange torpidity which in its own home characterizes that vigorous and energetic offshoot of the English race which inhabits the Dominion would seem to have affected the savage Algonquin also, and in the solitude of the Canadian pines and junipers he has vegetated into a hulking, lazy, healthy rascal, who has forgotten scalping and the chase, and is content with petty larceny and going a-fishing and setting traps and selling baskets. Mr. William Elder, our author, has made neither an article that would please Mr. J. H. Trumbull and Professor William D. Whitney and the Abbé Brasseur de Bourbourg, nor one that the unphilological reader might enjoy for the freshness of its description of an unknown tribe of neighboring men. He has merely strung together a few Indian legends, not unamusing in the perusal, but so plainly alloyed with what the Micmacs have picked up from the French, the English, and perhaps also from the Provincial negroes, with whom they have for some generations been in contact, as to be very unsatisfactory when considered in any light but that of merely entertaining reading with which to while away an idle half-hour. It is a good subject very inadequately handled. It will, however, in all probability remain good for a long time, as there is sufficient reason for believing that the Micmacs maintain their numbers, and that they, like their brethren in other parts of the British possessions in America, are as numerous as they ever were. Apparently the secret is, not that the Yankee is crueller and less regardful of human life than the other members of the English-speaking family, but that in the vast spaces of the northern half of the continent there is plenty of game and fish for all, an inhospitable climate, as unfavorable for warfare as for horticulture, and that there is no possibility of the occupation of any considerable part of the whole immense region. It has been but little worth the Indian's while to kill the white man instead of partaking of his rum and tobacco, and catching him his fish and deer; and it has been as little worth the white man's while to give his attention to killing the Indian instead of buying his peltries and bear's meat. On this side of the line the two races have always crowded each other, and, seemingly, they always will—a short always, the Indian historian may most likely think it.

The closing article of the number is one entitled "Pope," by Mr. Lowell, who accords the great Anne-Augustan wit more praise than it might by many have been expected that he would give, and more, no doubt, than will to many seem just. Indeed, there will be some who will be little less than astounded on reading that, "where Pope found a subject exactly level with his genius, he was able to make what, taken for all in all, is the most perfect poem in the language"—"The Rape of the Lock," namely. If it were only a poem at all, one says to one's self. But it is true that Mr. Lowell, when so speaking, has in his mind a remark of Lessing's which he has just quoted, and in which it is said that "Pope's great, I will not say greatest, merits lay in what we may call the mechanics of poetry." Moreover, although Mr. Lowell is not at pains to point out and insist upon the heaven-wide difference between poetry and the verse which is the rhythmical utterance of the experiences of conventional life, nevertheless he gives us to understand plainly enough that his praises of Pope are of Pope as the poet who gives metrical expression to the highly sophisticate London life of his very periwigged day. And here, to our mind, he appears to concede too much. He even says: "The question properly stated is, How much was it possible to make of the material supplied by the age in which he lived, and how much did he make of it?" And to this question Mr. Lowell would answer—seemingly he would answer—that Pope made of it a vast deal, and that he merits great praise among poets. A truer answer, one would think, would be that there was so little to be made out of it that contemporary poets like Thomson and Collins and Akenside and Dyer—whom Mr. Lowell does not forget to mention—would none of it, but left the material furnished by the age to the age's born prose-writers, of whom, by the way, the best, Addison, is the age's typical and representative man. And as for the question itself as above given, one would think that "the question properly stated" would be not that at all. That his age has its unescapable influence on the poet, however great he may be, is past doubt; that he need make it the subject of his work, and let it saturate all he does—this is not an altogether indubitable proposition. We confess unwillingness to speak without more consideration; yet, recognizing our obligation to speak after having expressed dissent from the conclusions of an authority not to be lightly questioned, we shall say that Pope seems to us not "to stand for exactness of intellectual expression, for perfect propriety of phrase" (when taken at his best), but that he has, as in the imitation of the "Pollio," a sounding rhetorical eloquence; as in the "Abelard and Eloise," something of the passion of a sickly man, who knew little of affection because he was of a heart neither large nor tender, and that while he had no imagination, and was by this deficiency and by the others mentioned made incapable of poetry, he was, nevertheless, fitted for the place he attained, and which he holds without a rival, because he had an unequalled faculty of tipping with wit the products of the common sense and quick and keen perceptions of a mind neither very high, very broad, nor very deep, and the emotions—to call them so—of a spirit perfectly subdued by the spirit of the vulgar time in which he lived.

As sometimes happens in Mr. Lowell's writings, there are in this essay incidental things that are even better than the main thing. Some of the remarks about other poets than Pope are extremely good and valuable. It may be proper, too, to call the attention of admirers of Mr. Lowell's wit to the fact that the brilliancy is never at the expense of soundness. Where else to look for so much truth of criticism, lit up by more brilliancy, and brilliancy less delusive, we do not know.

We have left ourselves little space to speak of the other articles in this number of the review. One, and the one which has attracted most attention and called forth most comment, is by ex-Secretary Cox, who treats of the prospective reform in our civil service. There is, perhaps, in what he says, not much that has not been in print before, and that has not been as forcibly and effectively said as he says it. But literary considerations are here of least importance; the essay is the well-considered work of a man who has had the best opportunities for knowing his subject most thoroughly; who brought to the learning of it a mind as able and a temper as philosophic as is often seen in Washington; and whose words will sooner or later, if not just now, have great influence, Mr. Cox having to an enviable extent the good opinion of almost every man in the country outside the ranks of the politicians, and having the politicians' hearty contempt.

"Mining Schools in the United States" is by Mr. John A. Church, a mining engineer recently returned from Germany, who undertakes to give some brief account of existing schools of mines in this country, and similar schools in Germany, Austria, and Russia, and also to indicate the proper course to be pursued in the establishment and management of such mining schools as may in the future be set on foot in the various rich mineral regions of the United States. Mr. Church's paper, whether or not all its conclusions are correct and all its statements are accurate, seems very intelligent, and is a very fair example of such treatment of a subject intrinsically possessed of only technical interest as may make it interesting to the general reader who has some curiosity.

"Modern Architecture" is by Mr. Russell Sturgis, Jr. It is difficult for the profane to say anything about these sacred subjects without feeling uneasy as to how blasphemous and heretical he has been; and as to whether he has exposed himself as preyed on by only a pitiable or by a thoroughly execrable degree of ignorance. This article, we make bold to say, has for at least one merit that it condemns that imitation of the admired architecture of other ages which has now for so long a time been

the habit of modern architects. Doubtless, coming from so practised an architect as Mr. Sturgis, and one of such wide reading and study, there is very much in it that will be of interest and advantage to the professional reader. Other readers will not find it so instructive; if we judge by our experience, they will understand just enough of it, and so well like what they do understand as to wish that the writer had made himself more comprehensible to the multitude.

"Prussia and Germany" is a survey of recent Prussian history by Mr. H. W. Hemans, who is firmly pro-German. In "The Government and the Railroad Corporations," Mr. C. F. Adams, jr., makes another attack on his old enemies, the railroad directors, and of course has the least difficulty in the world in making the case look very bad for them. But, then, they carry us about, and they carry our goods about; and if they do buy up our legislatures and do steal our public lands, why, we have so much public land that we do not know how much we have, and we voters can afford to be cheated, though you stockholders may think that you cannot, and as for the corruption of legislatures, that is bad; but it happens at a long distance from our farms and shops. Moreover, Mr. Adams confesses that the remedy for this monstrous rascality and great danger which he attacks is still to seek; and the one he hints at is not so promising of unmixed good that people will not put up for a good while longer with the ills they have rather than fly, as they fear, to others, of which also they have had unpleasing experience. The case is a bad one; and it seems as if something must speedily be done; nevertheless, it will be a number of years before people will believe that our State governments have got so good that the railroad corporations had not better be left to their cheating than that railroads should be brought into State politics; and shortly thereafter into national politics—a natural and, indeed, all but inevitable sequence. The history of the relations of the railroad directions of foreign countries with the state seems little likely to be of much use to us here, at least in the discussion of our main problem. But Mr. Adams's suggestion of the establishment of a tribunal which should interpret and enforce general legislation in reference to railroads, all special legislation being absolutely forbidden, may have in it the germ of much good, and appears to be worth pondering.

The literary reviews are not many—only half-a-dozen; a number that is seen to be very small indeed when we think of the *Review* as a literary journal, which comes out but once in three months, and which should by rights deal with all important and some unimportant publications in American literature, and with a good part of what is published in Germany, France, and England. But, though few, the critical notices are all good, the best being an admirable article—doubtless Mr. Whitney's—on Cox's "Aryan Mythology." Mr. Cox is one of the classical and philological scholars who were completely taken off their feet when Mr. Max Müller introduced "The Solar Myth" to their attention. Mr. Whitney's notice, which is a model of condensation, and apparently of learning unostentatiously employed, contains besides its learning some subdued fun making which everybody, including Mr. Cox, will enjoy.

JUST PUBLISHED BY

PORTER & COATES,

822 Chestnut St., Philadelphia.

LONGFELLOW'S POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, by H. W. Longfellow, with the addition of 150 pages of entirely new matter never before published, making it one of the most elegant and complete works extant. With Introduction, Biographical Notices, and Translations, from the earliest period to the present time. By Prof. Henry Wadsworth Longfellow. Illustrated with engravings on steel and engraved title. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6; sheep, marble edges, library style, $7 50; half-calf, gilt, $9; Turkey morocco, $12.

'This valuable work contains selections from about four hundred authors, translated from ten languages. Mr. Longfellow himself gives us translations from all these languages but two.'—Allibone's Dict. of Authors.

'This edition has been revised and enlarged by the author, and contains his last touches and additions to his labors.'—The Age, Philadelphia, Nov. 3, 1870.

HEDGE'S PROSE WRITERS OF GERMANY.

A new and revised edition. With Introduction, Biographical Notices, and Translations. By Frederic H. Hedge, D.D. With Six Portraits on Steel and Engraved Title. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5; sheep, marbled edges, library style, $6; half-calf, gilt, $7 50; Turkey morocco, $10.

'There is no book accessible to the English or American reader which can furnish so comprehensive and symmetrical a view of German literature to the uninitiated; and those already conversant with some of the German classics will find here valuable and edifying extracts from works to which very few in this country can gain access.'—Prof. A. P. Peabody, in North American Review.

A New Globe Edition of

THE WAVERLEY NOVELS.

By Sir Walter Scott. In 16mo size, on toned paper, illustrated. The most attractive edition for a small amount of money published in the country. Complete in 23 vols. Green cloth extra, per vol., $1 25; per set, $28 75. Half-calf, gilt back, per vol. $3; per set, $69.

GET THE BEST.

Webster's Unabridged Dictionary.

10,000 Words and Meanings not in other Dictionaries.

3,000 Engravings. 1,840 Pages Quarto. Price $12.

Glad to add my testimony in its favor. [President Walker of Harvard.]

Every scholar knows its value. [W. H. Prescott, the Historian.]

The most complete Dictionary of the language. [Dr. Dick, of Scotland.]

The best guide of students of our language. [John G. Whittier.]

He will transmit his name to latest posterity. [Chancellor Kent.]

Etymological parts surpasses anything by earlier laborers. [George Bancroft.]

Bearing relation to Language Principia does to Philosophy. [Elihu Burritt.]

Excels all others in defining scientific terms. [President Hitchcock.]

So far as I know, best defining Dictionary. [Horace Mann.]

Take it altogether, the surpassing work. [Smart, the English Orthoepist.]

A necessity for every intelligent family, student, teacher, and professional man. What library is complete without the best English Dictionary?

The Week.

THE New Idea which Miss Victoria C. Woodhull brought to the aid of the Woman's Suffrage movement, by petitioning Congress to pass a declaratory act affirming the right of women to vote everywhere under the Fourteenth Amendment, has been crushed by a majority report from the Judiciary Committee of the House, presented and, we presume, drawn by the heartless Bingham, of Ohio. The report says that the privileges and immunities of citizens referred to in the amendment are the privileges and immunities embraced in the original text of the Constitution, Article 4, Section 2, and that the franchise is not among the number—the giving or withholding of this resting still, as it has always rested, with the individual States. According to this cold view, therefore, women must look for the suffrage to the action of the people of each State. The question will probably now suggest itself to many, how long are our constitutions and laws to be interpreted by man-made, cast-iron rules of construction, in which no play whatever is allowed to the warm impulses, the passionate longings, the delicate fancies, the flashing intuitions, which the Feminine Half of Humanity alone can supply? Has it not occurred to Mr. Bingham, we wonder, that the well-known rule—"They builded better than they knew"—applies to Article 4, Section 2? The Cause has, however, made solid gains at Washington by having got a debate and an adverse vote on the proposal to establish female suffrage in the District, and by getting this adverse report from the Judiciary Committee. What the friends of the movement desire above all things is noise, whether the result be victory or defeat—feeling very much like the Irishman who, when his lawyer returned him the fee, telling him he had no chance, and that there was no use in his appearing, cried: "Keep it, anyhow, an' make the coort ring!"

There has been during the last ten days, in New York, a theatrical sensation of the first order, and, owing to the close relations which exist between the actors and the New York correspondents of the country newspapers, it has been tolerably well spread over the whole country. Mr. George Holland, a well-known actor of excellent character, died at an advanced age. His friends applied to Mr. Sabine, a young Episcopal minister of the Evangelical school, whose church Mr. Holland attended, to perform the funeral services *in the church*. The application caught Mr. Sabine shortly after he had been denouncing the theatre from the pulpit, and he declined to officiate except at Mr. Holland's house, and sent the family to Dr. Houghton, another Episcopal minister in the neighborhood, who cheerfully complied, not feeling himself authorized to make any difference in his treatment of the remains of an honest actor and those of a knavish lawyer or broker. Mr. Sabine's performance was simply weak and uncharitable, and has no warrant in Scripture, rubric, canons, or articles, and was, therefore, in no way indicative of anything but the confusion of Mr. Sabine's mind. Nevertheless, there arose a prodigious storm in the theatrical world. Mr. Sabine rose, with the help of the newspapers, in the course of a very few days, into a well-developed monster of fanaticism and intolerance, while Dr. Houghton, who is a very modest and unassuming man, and hates notoriety, found himself dragged before the curtain as the champion of actors' rights and free funerals. The reporters interviewed Sabine so as to get from the wretch's own lips the confession of his cruelty and baseness; they also interviewed Houghton so as to get his own account of the workings of his truly Christian and catholic spirit; and swarms of "friends of the theatre" called to thank him. The excitement, however, also took a useful turn, for all the actors got up a grand Holland testimonial, which has realized $6,000 for Mr. Holland's family; but some of the country papers, hearing so much of Dr. Houghton, gave out that the money went to endow his church, and some of the actors proposed to build him a fancy gate to the churchyard, or, if he liked it better, an ornamental porch to the church. It would be hard to say whether he or Mr. Sabine has suffered more from the whole affair, but we suspect the former. The dastardly attempt of the theologians to deprive actors of Christian burial has, however, been met and defeated. Sabine—the bigoted and desperate inquisitor—has been crushed, and the claims of the theatre to a prominent place among the means of moral culture fully vindicated. We wish, however, that side by side with the discussion of Sabine's base conduct, the papers had not contained a correspondence between Mr. George Vandenhoff, a well-known actor, and a person claiming to be his illegitimate son, in which Mr. Vandenhoff repudiates the paternity on the ground of the exceeding badness of the mother's character. The foes of the stage are apt to receive very powerful aid sometimes from behind the scenes.

The "Established Church" in this State, to whose pretensions, as we have more than once said, there is absolutely no limit, has had a bill introduced into the Legislature intended to cripple the operations of the Children's Aid Society, and similar organizations, in a very ingenious way. The Children's Aid Society, besides providing schools and lodging-houses in the city for orphans, deserted children, and children earning their living in the streets, sends every year a large number of those who are willing to go, to the West, where they find homes with the farmers, and where the great majority subsequently enter on a useful and prosperous career. It may be said, indeed, to be the only charity we have which goes to the roots of our city vice and crime; for it is from the ranks of these neglected street children that nearly all the criminals come. The bill now before the Legislature is the second of the kind which has been introduced, a similar one having passed last winter, but failed to receive the Governor's signature, and it binds the societies to keep a register containing, among other particulars, "the religious belief" of each child picked up, and forbids interference with such religious belief—which, if it could be shown that the parents belonged to the Catholic Church, would, of course, put an end to *all* religious teaching—and provides that no child shall be sent beyond the State without the consent of the parents, guardians, or nearest male relatives, and that the persons receiving them shall give bonds not to "interfere with their religious belief," etc. The opponents of the bill are denouncing it as an attempt to "make religion hereditary," which does not seem to us a very strong point to make against it, as religion really is hereditary in youth with nearly everybody. The main objection to it is that it puts it in the power of priests and politicians in this city so to impede the operations of our most useful charities as to render them practically useless. Its success, too, would strengthen the confidence of the church in its own strength, and prepare the way for fresh exactions. We should not be at all surprised to see a large grant of State money made to the Catholic clergy before long to enable them to take charge of all juvenile vagrants, and orphans, and deserted children, on the presumption that they belonged to the Catholic Church as the church of the majority.

The Senate spent considerable time during the week in repealing the income tax by a vote of 26 to 25, and was immediately informed by the House that it had exceeded its prerogative in originating a revenue bill. Senators Fenton and Conkling had some preliminary sparring over the New York Custom-house, but the grand encounter is yet to come off. The House passed on Friday the Indian Appropriation Bill, having tediously discussed the old question, whether Indian treaties approved by the Senate bind the House to make the appropriations called for by them. If they do not, one might ask what the Senate's approval is worth; and the question arises in the case of foreign treaties as well. General Butler leading off, the House on Friday, by a very large majority, extended a welcome to the Fenian exiles just landed, and directed the President to transmit the resolution to them. He will find Collector Murphy a willing medium, though not to be compared for enterprise with Tammany.

The question of abolishing the income tax is in a curious position. General Pleasanton, the Revenue Commissioner, says the tax will not yield more than seven million dollars, and that it will cost that to collect it. Mr. Boutwell says, on the other hand, that it will yield fourteen millions, and will cost far less than General Pleasanton says to collect it. So Mr. Boutwell advises that it be kept up, and General Pleasanton that it be abolished. A difference of opinion of this amount between two such officials, on such a point, suggests some curious reflections as to the management of our finances. It is not wonderful that under the presence of these distracting counsels only a majority of one could be secured for the abolition in the Senate, in spite of the vigorous bombardment of the press. When the bill reached the House, it was thrown out on the singular ground that the Senate could not originate a revenue bill; and the Committee of the House is now going to bring in one of its own of a similar purport. What will be the end of the matter it is as yet difficult to foresee. Some people are flattering themselves that they have at last got a tax which pinches only a few, and these few belonging to the wealthier class, so they hate to give it up; and Mr. Boutwell is absorbed in the work of paying off the debt, and thinks all reduction of taxation injudicious. Mr. Evarts and Judge Miller, of Philadelphia, have given an opinion against the constitutionality of the tax.

Some of the recent accessions to the United States Senate have not been of a sort to be very welcome to the better portion of that body. The character of the Senate cannot be said, indeed, to be as venerable as it was before the carpet-bag invasion, and the presence of General Frank P. Blair does not, therefore, present so striking a contrast as it might have done in other days. Except for appearances, the country can as well afford to have him there as at large in Missouri, but happily it is not bound to accept Governor Gratz Brown's "distinguished testimony that for perfect purity of character he has not an equal in the United States." If this were anything else but after-dinner and after-election buncombe, Republicanism might safely be pronounced a failure. General Logan, who is also (but more immediately) promoted from the other House, is perhaps not of the ideal senatorial stamp either, but is certainly far superior in every way to the author of the Broadhead letter. His last utterances on the civil service reform leave us a little doubtful whether he will reinforce Mr. Morton or will withhold his opposition to that "aristocratic" measure. The original Senator Saulsbury, of Delaware, is to be succeeded by an older brother, whose views on the subject of temperance, it is to be hoped, will not be inherited with the place, as might be feared. The new Senator, we believe, is considered by his constituents well out of the way; and Dr. Gove Saulsbury, the third brother and present Governor, if he could feel the popular pulse, would probably find that the approaching end of his second and (under the Constitution) last term of office, with no vacant place to fall into, is cause of sincere rejoicing to his fellow-citizens. Most conspicuous of all in the Senate, precisely because he has failed to get there, is Mr. Sidney Clarke, of Kansas, whose services being also dispensed with in the House, we are now at liberty to congratulate the country on his retirement from Congressional life, and to say for him that he has, as Chairman of the Committee on Indian Affairs, done at least as much as any other man to persecute the Indians and oppose the most enlightened efforts to preserve peace and promote civilization along the border.

The working-men of this State have sent delegates to a "Workingmen's Assembly" which has been sitting in Albany during the past week for the purpose of taking some action against the contract system of prison labor. They, however, instead of demanding the immediate abolition of the system, agreed to support the recommendation of the commission appointed by the Governor last year to enquire into the condition of the prisons, that an amendment to the constitution, taking the management of the prisons "out of politics," be submitted to the people. The amendment failed to pass the Assembly last year, and we greatly fear "the men inside politics" will see that it does not pass this year either; but to have a working-men's convention take up a reform so practical, and so urgently needed, is certainly a good sign of the times. The condition of the prisons is bad, and grows worse, and all owing to "rotation in office."

The situation of the *Alabama* question has again become less hopeful, owing to increasing doubts whether the Senate will confirm any treaty Mr. Schenck will be able to negotiate. Some members of the Senate Committee on Foreign Affairs, and more of the Senate itself, are opposed to any settlement which does not include either a cession of Canada, or at least the formal withdrawal of England from this continent, and the chances of either of these, as a penalty for bad behavior, are at least small. Should these views prevail, it would, of course, involve another indefinite postponement of the whole matter. But it is to be sincerely hoped, and is, we think, to be believed also, that Mr. Schenck is not going abroad to reopen negotiations without having found out very clearly what kind of treaty the Senate *will* approve. It would be far better that the *Alabama* claims should be unsettled than that the Executive should for the third time in three years be placed before the world in the ridiculous and contemptible position of making bargains which it cannot carry out. Another failure of the Senate to approve of the deliberately made agreements of the President would certainly go far to shake the confidence of all foreign nations in the *bona fides* of any negotiations with the United States.

The second batch of Fenians has arrived, and all have now been "received" by the Common Council, and have been presented with $15,000 of city money "on account," showing that more is still coming. At the reception, they intimated several times that their appearance was not to be taken as a sign of countenance for any political party, a warning which the worthy aldermen declared gave them "the greatest satisfaction." Our esteemed Collector has, we fear, been beaten out of the field. He has not a single "exile" to show for all his trouble, and treads the custom-house halls "remote, unfriended, and solitary," though, of course, not "slow." In Congress, Mr. B. F. Butler has got ahead of everybody, and particularly of the Democrats, with a resolution giving the Fenians a "cordial welcome to the capital and also to the country." It passed, of course, only twenty-one members daring to vote against it. The commission employed by the English Government to enquire into the charges of cruel treatment in prison made by the Fenian prisoners, have reported them well founded in several cases, that of O'Donovan Rossa in particular, who was kept with his hands tied for thirty-five days, for having saluted the jailer, on entering his cell one morning, with the contents of the slop-bucket. The whole party were, doubtless, reckless and impulsive men—the kind of enterprise in which they embarked showed it—and were highly exasperated by its termination, but if met by kindness would have behaved well. Treating them, as they were treated most inexcusably, as common convicts, of course made matters worse, and reduced the prison authorities to measures which have certainly not injured the Fenians and undoubtedly have injured the English Government. But the question remains whether, considering what the training, prejudices, antecedents, and temperament of Irish patriots is, Providence could well have reserved for them a worse fate than to deliver them into the hands of American politicians. There is hardly a weakness or delusion from which the poor devils suffer, which the wretched schemers and blatherskites with whom they have to do in Washington and New York do not help to aggravate or deepen.

We did the Germans of the West injustice last week in our article on the morality of arms-dealing, by ascribing to them a desire to force the Administration into preventing the export of arms to France, when the fact appears to be that they only protested—and, we admit, rightfully—against the Government selling arms from its own arsenals to French agents for export to France. We were misled by the telegraphic reports of some of the meetings; but we have since seen the full report of the meeting in Cincinnati, at which Mr. Stallo spoke, and the international law propounded in the proceedings was certainly unexceptionable. A distinguished German writes to us accusing us of "dexterously evading the real and only point of the German objection." We suppose we must confess we did hope to palm off a falsehood

about the Germans on this one occasion, but, having been so promptly found out, we certainly shall not try it again.

Famine, the ravages of disease—whose victims in the week ending January 20 were about four thousand five hundred—the increasing fire of the besiegers, the bloody repulse of Trochu's sortie of the 19th, the total rout of Faidherbe's army on the same day in the battle of St. Quentin, the disastrous retreat of Bourbaki from the vicinity of Belfort, and "Red" riots, which assumed a serious character on the 22d—all these may be equally reckoned among the reasons which finally decided the military and civil rulers of Paris to open negotiations for its surrender. These began with an interview between M. Régnier and Count Bismarck, which was followed by Jules Favre's arrival at Versailles on the evening of the 23d. On the following day, a council of war was held by the German Emperor, at which the Crown Prince, Bismarck, and Generals Moltke, Roon, and Boyen were present. The German Chancellor communicated its results to Jules Favre, who returned to Paris, but soon after resumed negotiations at Versailles, aided by Picard and Dorian, his colleagues in the Government of National Defence. Various propositions were made by both parties and alternately rejected, until an agreement on the basis of a military surrender and armistice was reached on the 27th, and signed on the evening of Saturday, the 28th. On the following day, the surrender of the forts to the German troops took place, accompanied by no particular incident.

The full and exact tenor of the articles of the capitulation and armistice can as yet not be stated on the authority of the despatches forwarded us by the Cable, which are both defective and somewhat discordant. The main points, however, are contained in King William's telegram to the Empress Augusta: "An armistice for three weeks has been signed. The Regulars and Mobiles are to be *interned* in Paris as prisoners of war. The National Guard will undertake the maintenance of order. We occupy all the forts. Paris remains invested, but will be allowed to revictual as soon as arms are surrendered. The National Assembly is to be summoned to meet at Bordeaux in a fortnight. All the armies in the field will retain their respective positions, the ground between opposing lines to be neutral." Some additional light is obtained from General Walker's telegram to the British Foreign Office, which says: "The military forces . . . are all to deliver up their arms, except the National Guard and one division of the regular army;" and from Mr. Moran's to Secretary Fish, which, officially, in the name of Count Bernstorff, communicates the fact "that the armistice extends over the sea." Jules Favre's despatch to Bordeaux states the armistice to be for "twenty-one days, the National Assembly to be convened at Bordeaux on the 15th of February, the elections taking place on the 8th." There are widely conflicting unofficial statements concerning the war contribution to be paid by the city of Paris, and a statement—which lacks confirmation, although the last military reports from the Franco-Swiss border give it a coloring of truth—that Bourbaki's army and the fortress of Belfort are not included in the armistice. This certainly conflicts with the words of the Emperor William, as telegraphed, which speak of "all the armies in the field."

That this armistice will more or less speedily be followed by a treaty of peace dictated by the conquerors, will be doubted by few who consider the prostrate condition of France, which, within the latter half of January, lost—by defeat or capitulation in the North, in the East, and on the Seine—about 400,000 combatants, and, in fact, retains only scanty remnants of the forces created by the Republic, and those hard-pressed and mostly doomed to surrender should hostilities be resumed. What conditions of peace will be dictated by the Chancellor of the German Empire, what the character and color of the National Assembly convoked for the settlement of the chaotic affairs of France, who will sign the treaty surrendering a portion of French territory, and perhaps also a portion of the French fleet, and who will, after the peace, assume the reins of government over the bleeding, enraged, and divided nation—all these are points of the highest interest, but they can be answered only by guesses. Rumor speaks of Count Bismarck's demanding Alsace and Eastern Lorraine, a guaranteed indemnity for the war expenses of Germany, a portion of the French fleet, and one of the French colonies; of his intriguing, and also of his repudiating all intrigues, with the Napoleon family; of strong influences at work favoring a regency composed—oddly enough—"of the Empress, Trochu, and Favre;" of Eugénie's patriotic "spurning" of all overtures looking toward a dismemberment of France; of Gambetta's attempting suicide on hearing the news of the surrender—but all this is more or less idle talk; and the last piece of it is an exploded story—the latest report being: "Gambetta ratifies the capitulation, and will not resign."

Bourbaki, on the other hand—by the by, a Greek by descent—seems actually to have attempted his life, in order not to survive the disasters which virtually destroyed his army. These disasters were the natural consequence of an adventurous march from the Loire to the Vosges, aiming at the rescue of Belfort and the "cutting of the German communications generally," and resembling in aim, character, and issue the march—in our civil war—of General Hood from the Chattahoochee to Nashville. The dearly purchased successes around Villersexel seem to have been to Bourbaki's forces, exhausted by long winter marches, what the victory of Franklin was to Hood's army. Von Werder retreated before Bourbaki, as Schofield did from Franklin, and the three days' fighting south of Belfort resulted in no less decisive a defeat to Bourbaki than was Hood's in the two days' battle before Nashville. Hood's army was broken up, Bourbaki's was caught—its retreat being cut off by the forces of General Manteuffel, which surrounded Dijon, captured Dôle, crossed the Doubs, cut the railroads leading to Lyons at Bians, and occupied Quingey, Sombacourt, and Chaffois, near the southern border of the Department of Doubs, before the French, closely pursued by Von Werder, and pressed towards the Swiss frontier, could reach the border. In fact, Bourbaki's entire force may be considered as lost, while Garibaldi's at Dijon has but a poor chance of escape. What the remnants of the French First Army, left behind by Bourbaki in the valley of the Cher, may amount to, we do not know. Chanzy is pressed by the Grand-Duke, and by troops belonging to Von Goeben's army, from the north-east, and by Frederic Charles from the south-east. The remnants of Faidherbe's army have sought shelter in the fortresses of the North. Longwy has surrendered. The sieges of Cambrai, Maubeuge, and Landrecies—a fortress which our Saturday evening papers and our great dailies of Sunday and Monday called by the fine name of Laumricrech—will hardly be resumed.

The siege closes, leaving 800,000 unwounded French prisoners in the German hands, including the Emperor and the Marshals of France, about 6,000 cannon, 112 eagles, not to speak of less illustrious spoils in the shape of rifles, munitions, and stores of all kinds. And the campaign in which this has been done has only lasted just six months. There has been nothing like it, or in any way approaching to it, in history. Compared to Moltke, Napoleon I. was a bungler and a slow-coach. How the French will ever get over it, or the Germans either, it is hard to see; but we are afraid the prospect that the French will do so is not so good as that the Germans will. The sobriety of the latter has, however, lasted very well—the failure to subject Paris to the humiliation of actual occupation shows it; but it must be admitted the character of the troops, as regards kindliness and honesty, was breaking down under the prolongation, the hardships, and the triumphs of the campaign. Professor Von Sybel has discussed the German future in an interesting article in the *Fortnightly Review*, which, however, high as its author's intellectual standing is, bears traces of that peculiar muddle, which it is easier to mention than describe, which is so apt to seize the brains of belligerent writers, and so often makes them see double or crooked. He predicts for Germany peace, liberty, and industrial growth, but not parliamentary government in Prussia, as the English understand it. The Prussian Government will, he says, rather resemble that of England in the days of the Tudors, or of the United States to-day, if the Presidents were permanent; that is, the Executive will enjoy an amount of independence unknown in parliamentary government proper, and ministers will not resign under an adverse vote.

WHAT WILL THE SAN DOMINGO COMMISSION DO?

A FOREIGNER who knew nothing of the San Domingo affair but the appointment and departure of the Commission of Enquiry, would naturally suppose that the people of the United States had just heard of a newly-discovered island some thousands of miles off, and that in order to gratify their curiosity they had thought fit to send out a scientific exploring expedition. Perhaps he would begin to deplore the profound ignorance of our people, unless indeed some one better versed in our way of managing political schemes were to ease his mind by telling him that we knew all about San Domingo; that Colton's descriptive atlas was found in almost every log-cabin; that we had had commercial agents and consuls for years past in both parts of the island (Hayti and San Domingo proper); that our diplomatic and consular correspondence had given us full tables of its commerce, exports, imports, and of the products of the field and the mines; that in every elementary school history was to be found an account of the population being nine-tenths colored, not to say downright black, and one-tenth Spanish and French Creoles; that their struggles were internal and eternal; that we knew all about the climate, its insalubrity being well attested by the fact that France lost in the time of the first republic about 60,000, and Spain, only a few years ago, some 15,000, men by the yellow fever. Even as to the frequency of "certain meteorological phenomena," to adopt the phrase in the resolution, and which is simply fustian for *earthquakes*, and which the commission is also charged to investigate, there is no lack of knowledge. Earthquakes occur once or twice every five years, and serious ones, destroying whole cities and towns, once in about twenty.

But, then, the ignorant foreigner would say, perhaps you want to know whether the people there wish to be annexed. Not at all, would be the reply. There is not the least doubt about that desire; they annexed themselves in 1861 *unanimously* to Spain, and almost unanimously to the United States in 1870. The last vote would have been quite unanimous too, for all the opponents of the measure happened to be in prison for some cause or another just when the vote was taken, or had been sent out of the country. At the last moment, however, it was suggested to President Baez by some shrewd Yankee friend that an entire unanimity might be rather looked upon as too suspicious, and so Baez, on the election day, got some men to cast their votes against annexation.

Indeed, it is hard to treat this commission business seriously, and yet it may have very serious consequences. Some people, not the people of the United States, want to annex all of the West India Islands, and San Domingo offers the best opening for that policy. Ever since the eastern part—in territory the largest, in population (135,000) the smallest—severed its connection, under the name of Santo Domingo, in 1844, with the western part, Hayti, containing about 1,000,000 of people, it has preserved only the semblance of an independent existence. Internal conflicts and wars with Hayti have kept it poor, disordered, and disorganized. Its presidents, one and all, Santana, De Regla, Cabral, Baez, were and are needy adventurers, astute and most unscrupulous men; and, despairing of sustaining themselves in power for any length of time, or aware of the unfitness of the people to govern themselves or to be governed, have all tried at some time or another to sell their country to any power which would pay them best. Mr. Fish is slightly mistaken in his late explanatory letter when he speaks of the late Spanish invasion. It was Baez who, as president, in 1860, first proposed annexation to Spain. But Santana, who desired to make the bargain himself, ousted Baez, and proclaimed annexation (March 18, 1861), sustained, as he asserted, by petitions to that effect signed by the voters unanimously. Baez then played the indignant patriot, and denounced the annexation as treason, but as there happened to be a few Spanish frigates on the coast his opposition became unavailing. That Baez was wholly insincere, and that his true intentions were well known to the Spanish Government, was made apparent by the fact that soon after annexation Baez went to Spain, was well received at Madrid, was made a general of division, and was decorated with some order.

The annexation itself was by no means popular in Spain, and even the Queen's Government hesitated long before it acceded to it. Indeed, it was charged that it was originally an intrigue commenced by Baez, carried out by Santana and General Serrano, then Captain-General of Cuba, and that it was a surprise upon the home cabinet. But as Serrano was the special favorite of the Queen, it did not dare to oppose it. Indeed, the Queen's speech from the throne (Nov. 8, 1861), in which she announced to the Spanish people the reannexation, shows, in spite of her assertion to the contrary, evident marks of doubt and hesitation, perhaps somewhat increased by the formal protest against this annexation which our Government had placed on record in Madrid in the spring of 1861. She said in that speech:

"The island of Hispaniola, the first discovery by which Columbus immortalized his name, has again become a part of the monarchy. The Dominican people, threatened by external enemies, exhausted by intestine disorders, in the midst of its conflict invoked the august name of the nation to which it owed civilization and existence. To look upon its misfortunes unmoved, to turn a deaf ear to its wishes, inspired by lofty recollections and by a never-extinguished love for Spain, would have been unworthy of our noble nature. Convinced that they were *unanimous*, and acting on their free will, I have not hesitated to receive them, regarding the honor still more than the advantage of my people."

But a little more than a year after those words had been spoken, San Domingo was in open revolt, assisted, as it always will be, by an abundance of men and money from Hayti, whose doom is sealed when San Domingo passes into the hands of a foreign power. The best Spanish authorities state that, even before the insurrection, the acquisition proved a financial failure; that to subdue a revolt of the people was impossible, on account of the deadly climate of the interior; that, owing to several parallel ranges of mountains, some of them rising to the height of 7,000 feet, forming valleys full of marshes and swamps, exhaling a pestilential air, no troops could penetrate into it, or could be supported for any length of time. The best troops of Spain, their rifle battalions, counted amongst the very best light infantry in Europe, it is well known were uselessly sacrificed, although most of them had previously stood the climate of Cuba. After an effort of about three years, costing many lives and about $40,000,000, Spain gave up her ungrateful child in despair.

As regards the Commission, its report, nine chances to one, will be favorable to the views of the annexationists. Baez, who has the reputation of being a most wily politician; the titular General Cazeneau, whose talents for intrigue are also well known; our new consul, undoubtedly selected with a foreknowledge of his views, and who has replaced that explosive young man, R. S. Perry, who has turned a sort of State evidence against annexation, will take good care that the Commission will not fall into improper company. Besides, there is really no doubt but that Baez, and also his adversary, Cabral, are both in favor of annexation, provided they can make it pay. It is almost certain that a majority of the people whom the commissioners will see—the inhabitants of the coast districts—are supporters of annexation. There is no doubt, also, that it would be an excellent thing for the interest of the whole people of San Domingo, and that the natural riches of the country would be greatly developed under our auspices.

But, really, that is not the question. It is, Is annexation for the benefit of the United States? The cession of the Bay of Samana might be well enough for a coaling station. The manifest-destiny policy of President Pierce was directed to its acquisition. In fact, our Government had negotiated a treaty with San Domingo (October 2, 1854), called a treaty of amity, commerce, and navigation, containing a *secret* article for the Bay of Samana; but it failed to receive the sanction of the Dominican Congress, owing to the threats of England and France, who had obtained information in some way of this arrangement. Annexation of the whole Republic of San Domingo, however, inevitably to be followed by that of Hayti, will involve us in something like a chronic Indian war, will be a heavy drain on our treasury, will prove a graveyard to our troops, will be a point of weakness instead of strength in case the country should be involved in a foreign war.

The late speech of Senator Schurz is, however, so exhaustive as to the impolicy of annexation that but little could be added. The object of these remarks is solely to show the uselessness of the appointment of this commission, if anything else is intended than manufac-

turing public opinion in favor of the scheme, to which, up to this day, the people have shown decidedly the cold shoulder. No censure of the commissioners is implied. They are honorable men; but they are on a most singular errand, and may find out too late that much against their will they have been used as instruments to accomplish a very bad end. Two of them, as we pointed out some weeks ago, Dr. Howe and Mr. Wade, are men of singularly unsuspecting and unjudicial turn of mind; and whether Mr. White, young, shrewd, and versed in affairs as he is, will be able, single-handed, to escape the snares which will be assuredly laid for the whole party, is something which, much confidence as we may have in his ability, it is permissible to doubt.

THE SURRENDER.

The increasing extravagance and inconsequence of Frenchmen and French sympathizers have for some time past made many people regard the speedy fall of Paris and the conclusion of peace as almost as important for the credit of the human mind as for the welfare of France. It was not unnatural that the friends of progress should have seen in the first French Revolution the rising of "the day-star of liberty," but there is something painful in the eagerness with which some of their grandsons have, with the last sixty years of French history open before them, hailed the *coup d'état* of September 4 as the establishment of "a republic." The conversion, too, before our eyes within the last six months of so many sober and able Frenchmen, whom we had all been accustomed to listen to with respect and confidence, into raving fanatics and zealots, at a moment in their country's history when cool heads and clear eyes were above all things necessary, has been a sad and disheartening spectacle. That the Imperialists should have proved incompetent, cowardly, and shiftless was what it was natural to expect; and that Rochefort and Flourens and the Reds should, when the time came for real work, and for the display of *human* qualities of knowledge, courage, and self-restraint, turn out worthless blatherskites, was also quite natural. But when a man like Mazade rants like a club orator; and Jules Favre takes up a senseless quarrel begun by the Empire and tries to make a holy war of it; and Thiers, after preaching for forty years that the ruthless conquests of Napoleon were among the greatest of French glories, and that the welfare of France required and prescribed the systematic division and degradation of the neighboring nations, and particularly of Germany and Italy, goes forth to seek allies to save France from the consequences of trying to carry out his policy; and when even Laboulaye declares, as he recently did in a letter to a friend in this city, that "the triumph of Prussia will be the triumph of despotism, and will condemn Europe to servitude or a new Thirty Years' War;" that the 300,000 honest German workmen who did so much to enrich France and to secure the predominance of certain branches of French industry, had *all* been made "spies of by Bismarck to guide the armies to the homes of their former employers to plunder them more easily;" and denounces the Prussians as "barbarians" for firing on balloons which kept up the communication between two great French armies and two branches of the French Government—one feels that for the credit of the French intellect no less than for that of French arms, it is time that peace was made. Enough, we all say, not of slaughter only but of fustian, of bombast, of equivocation, of perversion, and of self-deception: the disease from which France is suffering evidently lies far deeper than the form of government.

The effects of the war in some other countries were also rapidly becoming very injurious. In the United States, the delusion that France was a "republic" did not, except with very few people, survive the determination of Messrs. Favre and Gambetta not to call a National Assembly; but many excellent people were rapidly working themselves into the belief that Germany, in exacting the very kind of satisfaction from France for having attacked her which conquerors have always exacted after victory (and none more remorselessly than France herself), and in refusing to make a display of magnanimity and self-restraint which no other nation has ever made, was giving reason to fear that the new Empire would prove the scourge of humanity. In England, we have been witnessing for some months the gradual growth of the same order of craze, and its expression in very much the same language as that which had such a disastrous effect on her relations with the United States during the rebellion. We read the same ferocious denunciations of the Germans for exercising the ordinary rights of war which were hurled against the Northern armies; the same extravagant vituperation of King William and Bismarck which used to be heaped on Lincoln and Stanton; and are entertained with the same lofty views with regard to the immorality of war, and the same dismal anticipations with regard to the bloodthirsty ambition which the Germans may be expected to indulge after their triumph, as were so freely uttered with regard to the North. It is just as sure that the Confederation will seek to reduce Europe to vassalage as it was that the North would find employment for its vast armies in the invasion of Canada. Even our excellent contemporary, the *Spectator*, which kept its head so clear during the American war, seems to have lost the thread in this one. It has for some time past been "sympathizing with the weaker side" in a manner worthy of Mr. Roebuck or Mr. Beresford Hope; and not only this, but worked itself into the belief, in defiance of all experience, that Chanzy's raw levies were going to smash Prince Frederic Charles, and that Trochu and his motley host were going to break through the veteran hosts of the Crown Prince. When so careful and intelligent an observer as it is gravely declares, as it did recently (Jan. 7), "that there was nothing at that moment to prevent General Chanzy from raising the siege of Paris except the inability of his soldiers to do their work;" that they were afflicted with some "unaccountable moral paralysis" which, if it lasted, "would render the cause of France, which was then that of human freedom, hopeless"—peace is clearly to be desired in the interest of other people than Frenchmen.

The National Assembly is now going at last to meet, and for the first time since the fall of the Empire the French people are going to be allowed to express their opinions on the gravest national questions. They are at last to have an opportunity of deciding whether they will retain at any cost a nominal hold on Alsace and Lorraine or will cede them formally to Germany, or whether they will have a republic, an empire, or a constitutional monarchy. We presume no believer in the principle of popular government will deny their right to have whichever they please. The success of monarchy in a country in which monarchical traditions have no root in the soil it is, of course, permissible to doubt. Judging from the past, the future of monarchy in France cannot be considered very hopeful; but it must be admitted that experience compels us to be even less sanguine about a republic than about monarchy, for its history in France is far more lugubrious than that of monarchy, and the conditions required for its success are far more difficult. For want of these conditions, the two French republics have speedily ended in the coarsest form of despotism. Foremost amongst these conditions are the habit of self-government and a high state of popular education. Both are almost essential, but, in the absence of either, trusted, influential, and wise leaders might make success with the other possible. The French have no political habits; the idea of law as something higher than the emperor or the prefect or the *maire*, and to which an appeal against him may be made, is something of which few Frenchmen know anything. Whatever reaches them in the shape of an edict or order from Paris through the regular functionaries, they obey blindly, and their notion of a "revolution" hitherto has been, not a change in the system, but the setting up at Paris of a new source of authority. Between 1851 and 1870 the orders emanated from Louis Napoleon, who had his own views of what France required, and they were blindly obeyed. He has now been kicked out, and his place during the last six months has been occupied by Gambetta, who left Paris simply because it was surrounded by the enemy. Now, Gambetta has *his* views of what France requires, just as Louis Napoleon had, and he has set to work to use the machinery of state for the purpose of carrying them into execution, and for the purpose of preventing any opposition to them, just as Louis Napoleon did He decided out of his own head, and at most with the advice of one other man, that a dictatorship was better for France at present than a representative government. Accordingly, he at once went to work, just as Louis Napoleon did, to stifle all expression of a contrary opinion. In order that there might be no organized bodies left in France capa-

ble of opposing his will, one of his first acts was to suppress the councils-general of the departments, the most respectable of all the institutions of the Empire, and furnishing the nearest approach to local self-government France has ever had. The next thing was to gag those who said the councils ought not to have been suppressed, and that a National Assembly should have been convened, and this has accordingly been done. His prefects have suspended, we are told, the *Gazette du Midi*, the *Défenseur*, the *Union de l'Ouest*, and the *Ami du Peuple*, and other provincial papers, and have actually sent out circulars forbidding people to subscribe to the *Journal de l'Indre-et-Loire*, and the *maires* have all been forbidden to receive papers which call for departmental councils.

This done, M. Gambetta decided that he ought to fight on to the "bitter end," and fight he did as long as his armies held together. His reign is probably now at an end, but it will be observed that from first to last he has used his power to prevent the formation of habits or modes of thought favorable to popular government, to keep out of sight the idea of law as something higher than mere power, to bring odium on the notion that the people is at all times the proper judge of its own needs and the proper arbiter of its own destinies, to keep alive the belief in "saviours" and "deliverers" which has hitherto been the curse of France, and hold up representative bodies as a kind of debating clubs, all very well in quiet times, but dangerous in days of peril. In fact—and it is a painful fact—the French "Republicans," when in power, have thus far shown as great hostility to republican institutions as the Imperialists.

Turning to the condition of popular education, we cannot be said to find much encouragement there. It is universally admitted that in any attempt to found a government on universal suffrage, the peasantry and the bourgeoisie hold the decision in their hands; the artisans of the cities, who have hitherto made the revolutions, count for nothing, or very little. Now the peasantry vote pretty blindly under the dictation of the local functionaries, and if M. Gambetta had his machine in good working order, and had plenty of time, and had a few victories at his back, he would probably roll up a majority for his republic as readily as Louis Napoleon rolled up one for his empire. But he comes before the country as a beaten man, and an exposed braggart, and has only three weeks to canvass in. The peasantry, moreover, have, thanks to him, learnt to associate the republic with the continuance of the war and the presence of the enemy and the ascendency of socialism, and the priests, who, next to the functionaries, influence them most powerfully, associate it with the downfall of the temporal power at Rome, and the separation of church and state in France, and—partly owing to the employment of Garibaldi—with infidelity generally. Of the feelings of the bourgeoisie, we need not speak; they are well known. There is little doubt that a National Assembly convened under these auspices, even if it adopts a republican form of government for the moment, as a necessity and the readiest thing, will do so in a secret determination either to get rid of it at the earliest possible moment or, as in 1848, to make it as little republican as possible. Gambetta and Jules Favre will probably be pushed out of sight very soon, and with just as little compunction or respect as the men who did the perorating in February, 1848. What will happen afterward nobody knows. The one thing certain is, that nothing durable need be looked for till the government is decentralized and the peasantry taught. At present, according to M. De Lasteyrie—an excellent authority—"not one in fifty" of them knew three words of the constitution which they "approved" so many times under the Empire. They will know just as little of the constitution which will now be offered them. Had Jules Favre and Gambetta, after Sedan, accepted any terms they could get from Prussia, and calmly gone to work to set up the machinery of local self government in the departments, to create a good system of popular education, and to abolish the standing army, they might not perhaps have saved Alsace and Lorraine, but they would have made a France which would have been a worse thorn in the side of Prussia than a military France can ever prove, and would have dealt a deadlier blow at Junkerdom than the French army can ever inflict. It was for them, and not for King William, to set the world a splendid example of confidence in "modern ideas," of devotion to peace and industry and liberty, which they have been denouncing Prussia for not displaying. Instead of this, they took up the fight with feudal war-cries, fought it out under the influence of feudal ideas, and have lost it, to the great glory and strengthening of the Prussian system, the great discredit of republicanism, and to the deep and, we fear, lasting detriment and humiliation of their own unhappy country.

MORE ABOUT LEGAL MORALITY.

An angry correspondence between Mr. D. D. Field and his son, Mr. Dudley Field, on the one side, and Mr. Samuel Bowles, of the Springfield *Republican*, on the other, has been published during the week, arising out of some very unwarrantable gossip about Mr. Field, written from New York by a correspondent of the *Republican*, and of a kind in which its correspondents are apt to indulge, followed by some sharp editorial comments on Mr. D. D. Field's professional connection with the Erie Railroad managers. The letters are numerous—eighteen in all—and are long, and full of recrimination and personalities. We shall not, therefore, attempt to give a complete analysis of them. The public is not much interested in the question which of the disputants had the best of the argument, but it is interested in learning what new light, if any, the correspondence has thrown on the general subject of the rights and duties of counsel, and, in particular, on the nature of Mr. Field's relations with Fisk and Gould. We shall confine ourselves, therefore, to picking out whatever bears on these points. Mr. Bowles's charge is that Mr. Field's clients are offenders against the peace and integrity of business.

"They have achieved," he says, "and hold possession of a railroad by means little short of robbery itself. They have sought, for mere purposes of personal aggrandizement, to corrupt the very head of the nation. And they have, with like purposes in view, brought temporary disorder into the financial condition of the country, and spread ruin, with a wanton hand, among its people. It is in assisting or defending these men in such plans and in such operations; in borrowing the forms and technicalities of law to sustain them in their positions, or to screen them from justice: it is in lending your great ability and your legal knowledge, either to the concoction or the defense of gross schemes of stock speculation or railroad and business aggrandizement at the expense of innocent parties and the public; it is in interposing yourself and your professional services between men whom the nation supposes, rightly or wrongly, aye *believes*, with a faith that cannot be readily shaken, are men of public corruption and men of business dishonor—between such men and their dispossession of their ill-gotten gains and power, and the relief of the business of the country from their paralyzing control and corrupting example—it is for acts and influences like these that you have been arraigned before the public, and that not only professional but popular opinion sits in judgment upon you."

To this Mr. Field's reply, either from himself or through his son, is that he is necessarily at a disadvantage in defending himself, as he is bound by his confidential relations with his clients to suppress many facts that might put him in a favorable light, but he alleges—

1. That he fully concedes his responsibility for the proper and honorable conduct of his cases in court, and that he holds himself bound to defend his clients *per fas* and not *per nefas*, and that he has never conducted any Erie case otherwise than properly and honorably, that he has not in "giving advice perverted or misunderstood the law, or in arguing a cause suppressed evidence or misled the court." He holds, too, "that a lawyer being entrusted by the Government with the exclusive function of representing litigants before the courts, is bound to represent any person who has any rights to be asserted or defended."

2. That he has never been consulted beforehand "about the management of the Erie Railway, or the issue of any of its stock or bonds, or the payment of any dividend to any stockholder or class of stockholders, or about what is known as the Erie Classification Bill, or about the gold transactions of 1869," or about any transactions, public or private, of Messrs. Fisk and Gould to which exception has been taken.

3. To the charge, which readily suggests itself, and which Mr. Bowles makes, that, even supposing it to be technically proper for him to accept Fisk's and Gould's retainers, the badness of their characters, and the injury inflicted by them on the community, ought, on the general ground of duty to the public, to have prevented him from accepting them, he replies that, in accepting them, he has only done what Messrs. Evarts, Stoughton, J. T. Brady, S. J. Tilden, A. J. Vanderpoel, Dorman B. Eaton, William Fullerton, E. Burrill, J. K. Porter, H. W. Robinson, J. S. Bosworth, F. J. Fithian, and C. A. Seward have done—why, then, should he only be singled out for reprobation?—and that in every litigation in which he has

been concerned for the Erie managers, "he has been associated with most reputable and eminent counsel."

This is all the correspondence contains that is worth notice with regard to Mr. Field's professional conduct. A collateral issue was raised in the course of the debate, however, touching the rights and duties of editors, in which Mr. Field took the ground that editors have no right to indulge in their papers in criticisms on a man's professional conduct in which they would not venture before his face in a drawing-room, which is what we may call a military view of the duties of the press, but which Mr. Bowles disposes of very effectually.

It will thus be seen that Mr. Field meets the charge of aiding the Erie conspirators by his advice with a flat denial; challenges exception to his conduct of cases; and meets the charge of defending rascals by pointing to various leading lawyers who have done the same thing. Mr. Bowles does not touch on what is one of the current charges against Mr. Field here, that he has carried cases before Barnard and Cardozo; knowing or having reason to believe that their relations with his clients were corrupt. The correspondence does not, therefore, address itself to this point, but we have ourselves taken the trouble to make some enquiry about it, and are assured that Mr. Field has had only one argument in the Erie cases before Judge Cardozo, and in that the decision went against him. Before Barnard he has had three motions and three trials. Of the motions, two were made by the other side, and the third was a motion to punish Ramsey for a contempt in violating one of Barnard's injunctions. Of the three trials, one was in the suit against Vanderbilt to recover the celebrated $1,000,000, paid in a settlement made without Mr. Field's knowledge or consent. In the second, Mr. Field appeared against Ramsey and Eaton, and got judgment against Ramsey, but was beaten as against Eaton. In the third, judgment was taken by default. This does not include, of course, arguments before the General Term.

The discussion with Mr. Bowles is deprived of some of its value, indeed we may say of most of its value, for the public, by the intensely bitter and personal character which such a discussion inevitably assumes, and by the fact that Mr. Bowles, being a layman, and not conversant with the facts, is forced to fire at long range, or, in other words, deal largely in generalities, and fall back on common reports as his authority. If Mr. Field's defence be not complete and sufficient, all we can say is that the bar of this city are greatly to blame for keeping silent.

We have refrained thus far from expressing any opinion on the various points in the controversy ourselves, and we shall quit the subject for the present, without touching on more than one—but on this one we have neither doubt nor hesitation—and that is Mr. Field's proposition, that "a lawyer, being entrusted by Government with the exclusive function of representing litigants before the courts, is bound to represent any person who has any rights to be asserted or defended." Now, the state does not say a lawyer *must* represent everybody before the courts who has any rights to defend; it says he *may*. He is, therefore, not in theory bound to represent any litigant who asks him; it is his *privilege* to do so if he pleases. Moreover, in practice, no lawyer acts on Mr. Field's rule, or has ever done so. Mr. Field does not do so himself. Every lawyer selects his cases, no matter what the rights of the parties may be. He selects them either with reference to the nature of the proceeding, as criminal or civil; or with reference to their pecuniary result to himself, as great or small, in the inferior or superior courts; or with reference to his personal tastes or capacity, as conveyancing, or office business, or pleading in court. Law and usage allow every lawyer, in fact, the largest liberty in the choice of his business. Out of this liberty, and out of this only, arises a lawyer's moral and social responsibility for the character of his clients. If he had no such liberty, the bar would be the most degraded and degrading of all callings. Therefore, the answer which it is always open to the moralist to make to the lawyer's plea—that he is bound to do the best he can for a knavish client—is, that he need not have had him for his client. Out of this liberty, too, arises whatever distinction there is at the bar, even where there is no suspicion of professional misconduct properly so called, between upright and high-minded practitioners and base and "sharp" ones; and that such a distinction exists, and has always and everywhere existed, is notorious. When the public finds, therefore, a lawyer engaged in the service of unscrupulous and dishonest men, it has a perfect right to arraign him for it, and to treat his plea, that whatever he does for them he does with due regard to professional propriety and the rules of procedure, as an insufficient plea, and to enforce against him a higher code than that of forensic ethics.

Correspondence.

THE SENATE AND THE CIVIL SERVICE.

WASHINGTON, Jan. 28, 1871.

TO THE EDITOR OF THE NATION:

SIR: If you had been present at the recent debate on the Civil Service Bill, I fear you would have been less hopeful as to any very early practical result of the movement. The determined hostility of most of the senators was too marked to be misunderstood. The great difficulty is that it is quite possible to show the greatest apparent enthusiasm for civil service reform and yet to find fault with each particular measure. Mr. Trumbull's bill has a fundamental defect, which was the common object of attack on all hands. As long as frequent changes in offices are made, the members of the two Houses are the natural channel through which information and recommendations must come. As Mr. Morton justly remarked, the direct method would merely give place to the corrupt and indirect. It is like the ocean and Mrs. Partington's broom. Any real reform must begin with the pressure for office-seeking from below. Mr. Wilson admitted the annoyance and evils of office-seeking, and said he should vote for Mr. Trumbull's bill (I hope it was not only because he was sure it would not pass), and then proceeded to deliver a labored argument *against* civil service reform in all particulars which would be really effective. Mr. Howard, of Michigan, spoke feelingly of the annoyances to which senators are exposed, admitted that a great evil exists, and asked how it can be remedied; and then proceeded to denounce the proposed legislation (not merely Mr. Trumbull's, but Mr. Schurz's and Mr. Jenckes's) as the dreams of enthusiasts, as anti-republican, and opposed to the rights of the sovereign people to office. He went so far as to ask Mr. Schurz whether he really proposed to exclude from nomination to office all who were outside of the "charmed circle" of examinations—a question which it required some time for Mr. Schurz to understand as propounded in earnest. In short, the Senate seems to be something in the condition of a drunkard, who is feelingly alive to the evils of *delirium tremens*, but declines to see the remedy in abstinence from drink. If this is the state of things in the Senate, what must it be in the House? No matter how high the popular feeling may run, it will be perfectly easy to stave off action by introducing half-a-dozen different bills, and then pretending to divide on their respective merits. But even if a civil service bill were passed providing for competitive examinations, tenure during good behavior, etc., it is almost certain that if the Democratic party were to come into power, after ten years' exclusion from the spoils, which have grown so rich in the interval, it would make short work of the barrier which stood before it.

Seen through this perspective, the prospect is not flattering. I can see but one avenue of escape, however dimly it may open. It is that of introducing into Congress a power which rests upon the whole people, as opposed to local constituencies, which shall be able to call a national sentiment to its support—a power which could introduce a civil service bill which should be *the* bill, to oppose which would bring any member directly under the censure of its constituents. Such a position could be held only by the heads of the executive departments. However it may suit members of Congress to deny the fact, I believe that there is no particular as to which the public sentiment is more strongly aroused than this of the civil service. And I believe that there is no way in which President Grant's administration could be more certain of a second term than by taking a stand firmly *in* Congress upon this ground. And the greatest security against tampering with the reform afterward by a subsequent administration would be to have its cabinet officers standing upon an open battle-ground, where they would be subject to the free attacks of the opposition.

There is another obstacle to the success of civil service reform in this, that the present system, bad as it is, presents almost the only method of combining votes sufficiently to secure election; in other words, it forms the only basis for nominating caucuses. The true basis for nomination should be in the character and services of the representative; but neither in the State Legislatures nor in Congress is there any field for the exhibition of these. The bulk of important business is done in secret; the rest in so loose and purposeless a manner that there is no opportunity for the display of ability. The opposition is merely of interest against interest, and not of one principle against another. It should be the part of the executive, aiming at success with the whole people, to propose general in place of special legislation, and the attack and support of the former would bring out the qualities of the legislators.

Finally, the old party cry was "principles and not men." However

sound this may be in substance, yet in form we need the exact reverse of this. With such vast constituencies, the best part of which is actively engaged in minding its own business, it is impossible that they should come to any sound and general conclusions upon the complicated subjects of legislation. All that they can do is to judge of the bearing, integrity, and capacity of their public men. To this end, it is indispensable that these men should be so placed as to expose all their conduct and legislative action to the public eye, so that the prizes in the gift of the whole people may be the direct result of the public judgment. It is some such basis for nominations which will obviate the necessity of combinations based upon office, and smooth the way to a purification of the civil service. G. B.

[We cherish no illusions as to the state of Congressional feeling about the civil service. Ever since Mr. Cox's retirement from the Cabinet, the nature of the "little game" by which "the practical men" had determined to prevent any change has been perfectly apparent. After a few rounds of hearty abuse of Cox, they all went to work professing an ardent desire to have the civil service reformed. It was only the clumsy old fellows like Colonel Forney who came out and denounced the whole idea as a humbug and delusion. The others all said the present state of things was bad and ought to be changed; the only doubt in their minds was "whether this particular measure" (any bill that was brought in to effect a change) was what was wanted or could be made to work. In fact, it soon appeared that no bill that the wit of man could devise would meet with general acceptance. So the great cry now is that reform is sorely needed but cannot be effected, owing to the extraordinary badness and defectiveness of every "particular measure." Another mode of staving off legislation is to pretend that the existing law provides all the machinery that is needed for reform, and to get up sham examinations, conducted privately, at the same time maintaining stoutly that no examination can truly ascertain a candidate's fitness for office; that it is only the keen and scrutinizing eye of the head of the department, aided by the perspicacious and high-minded Congressman of the district from which he comes, that can tell whether a blatherskite stump-orator or broken-down adventurer does not hide under his unpromising exterior the materials of a first-class public servant. Mr. Boutwell, being rather duller in his perceptions than the rest of the brethren with whom he acts, went so far as to say that "no system of examination could exclude all those who are dishonest, or who under pressing necessity or the offer of sudden wealth might yield to temptation." In sheer fatuity the controversy has produced nothing like this. We should be sorry to class Mr. Dawes, of Massachusetts, with the ordinary politicians who oppose civil service reform, and yet a striking and almost painful illustration of the obstructive state of mind into which long dwelling in the political atmosphere brings even such men as he, is to be found in an article contributed by him to the last *Congregationalist*, showing that Mr. Jenckes's bill would not "work."

We now warn our readers that they may expect for some time to come to find general approval of the idea of civil service reform in all party platforms and in the letters and speeches of politicians, together with careful avoidance of any attempt at specifying how the reform is to be effected, and at the same time to hear that "this particular measure" is invariably an absurd failure, and the work of a visionary. They may also look for the introduction of occasional bills which will probably be called "really practical measures," whose main feature will be the embodiment in formal legislation of some of the objectionable customs now prevailing, and which at all events will depart from them only on some slight and non-essential circumstance, carefully preserving the patronage for "the party." The President, too, will probably continue to recommend civil service reform, as General Grant did in his last message, while keeping up in the New York custom-house, as he does, a state of things which it is no exaggeration to call a disgrace to a Christian people. All this, however disheartening as it may seem, is a step in advance. The popular feeling on the subject grows every day, and we believe the time is not far distant when men who believe there ought to be some connection between their morals and their politics will no more think of voting for a party which keeps up such an institution as the New York custom-house, than of subscribing to the support of a brothel or gambling-house. This is strong language, but the facts justify it. No man who managed his own affairs as the affairs of the custom-house are managed would be received into decent society; happily no man could so manage them without having his cruelty and knavery, and his encouragement of and connivance at knavery, punished by ruin. The nation saves its rascally agents from the natural reward of their iniquity by every year paying their defalcations in taxation.

The way in which the present system of appointments to office has grown up and the arguments by which it is now defended, are interesting to the student as presenting a tolerably exact picture of the way in which the great historic abuses of the Old World—such as the sale of judicial offices and of commissions in the army, the seigneurial rights, even slavery, and many similar things—grew up and held their ground: First, a small knot of persons began an objectionable practice without attracting attention; then a large number acquired a pecuniary or social interest in it, and it became an object of attack; then a moral and political theory was got up for its protection, such as the sanctity of usage or its necessity to the safety of something else of undeniable value; then it was said to be good on its own account and to produce admirable results; then, as the clamor against it increased, it was said that it worked as well as anything that could be substituted for it; and, last of all, that it was not practicable to abolish it, and that it must be endured, be it evil or good; and, finally, it wore people's patience out, and they swept it away after argument had been exhausted. Judging by experience in other cases—having reached the objection, You cannot do away with it if you try never so hard; and there is nothing to take its place—we are not very far from the end of the civil service difficulty. —Ed. Nation.]

LIQUIDATING THE ALABAMA DAMAGES.

To the Editor of the Nation:

Sir: It is suggested by the President that our Government shall audit and pay the "Alabama Claims," and this course finds advocates both in and out of Congress. I wish to point out what appears to me an obvious objection to it, though one that I have not heard urged.

On general principles of law, such an ascertainment of the damages would not be at all conclusive upon England, even if her general liability to pay these claims be admitted. It would be entirely *ex parte* as to her, and I think it certain that she would insist upon having the proofs taken again, and being represented in the proceeding for that purpose, before paying the first dollar. For the purpose of framing our claim with definiteness, it may be very well, though I should think it unnecessary. But as a means of "liquidating damages," any steps taken by our Government to which England is in no way a party must, in my opinion, be nugatory, and a waste of time and money.—Yours respectfully, H.

New York, Jan. 27, 1871.

THE SCOTCH LANGUAGE.

To the Editor of the Nation:

Sir: I differ from the opinion expressed by your correspondent, Mr. Thomas Davidson, in the *Nation* of January 12, regarding the signification of the Scotch words "*clarty*" and "*crowdie*." Indeed, I question if the former can be strictly classified as Scotch. I have heard it used by Englishmen, natives of Lincolnshire, to whom it was as much a part of their mother tongue as "*eldin*"—the so-called "Scotch" phrase for fuel. Whatever its proper nationality, however, if the ideas conveyed in its daily use among the common people are any index to its real meaning, then "clarty" (or, as pronounced in my native Perthshire, "clorty"), *does* mean "dirty," notwithstanding Mr. Davidson's dogmatic assertion to the contrary. As some dirty things are "sticky," no doubt "stickiness" is one of the ideas so conveyed, but only one, and that not very prominent. Miry roads are "clorty;" the annual purgation of the chimney and the pigsty are alike "clorty jobs;" a person of uncleanly habits is "a clorty broot," or, if one of the softer sex, "a clorty jaud," or (filth incarnated!) "a clorty tawpie." In all these examples the idea of dirt pure and simple, is prevalent; and if "clorty" has the same root as "glaur" (mud), the writer in *Blackwood* has an additional argument in favor of the sense he attaches to it. The bespattered hero who

> "took his bonnet frae his heid
> An' daddit aff the glaur,"

had undoubtedly very decided opinions as to the composition of a Scotch mud-puddle. May not the French "crotté" throw some light on the origin of the word under discussion? Certainly it is no more strained than the etymology which derives "glaur" from the French "glaire," the white of an egg.

As to the word "crowdie," Mr. Davidson is rather hypercritical when he affirms so strongly that it never means "parritch," but sometimes means "brose." The difference between these two delectable results of the Caledonian cuisine is only slightly greater than that between 2×2 and 1×4. In other words, "parritch" is oatmeal stirred into boiling water, while "brose" is boiling water stirred into oatmeal. I dare say any Scotch boy who is a bird-fancier and accustomed to make "crowdie" every morning for his pets, would stare incredulously were he to be told that the correct formula was "a mixture of pressed curds and butter seasoned with salt!" Burns evidently supposed that the "crowdie" with which "my sister Kate cam up the gate" was akin to the "cogs o' brose" in the context, but perhaps Mr. Davidson knows better. I think, however, that he has confounded "cruddy" with "crowdie," two entirely different words, the one being related to "curds," the other to "groats," *i.e.*, oats coarsely ground.

Apropos of curds: An English lady happened, in her travels through Scotland, to spend a day at Blairgowrie, some twenty years ago, and ordered, as an accompaniment to dinner, that favorite Scotch dish, with the English drawl on the word cu—urds. A substantial meal was served, including a liberal supply of boiled carrots, but none of the special preparation of milk and rennet ordered. Supposing it had been forgotten, and not wishing to bring the servant into trouble, she made no remark in his absence, but contented herself with repeating the order for tea. The waiter looked surprised and amused, but withdrew, and in due time crowned the teatable with another enormous dish of boiled carrots. "But where are the cu—urds?" "Here, ma'am" (removing the cover). "Why! I ordered cu—urds, cu—urds and cream." "Oo—oo!" (a Scotchman will understand the length and strength of the interjection) "ye wantit CRUDS an' cream!"

ANGUS COUPAR.

CHICAGO, January 14, 1870.

[We know too much of the tenacity of the Scotch character to let two Scots carry a discussion of this kind any further in our columns. —ED. NATION.]

SENTIMENTALIST "JUSTICE."

TO THE EDITOR OF THE NATION:

SIR: The duty of the philanthropist and reformer is, not seldom, very painful. At times the professional Samaritan of society—the general binder-up of wounds—finds himself called upon to sit as a Rhadamanthus. I have often been deeply impressed with the stern energy with which the great type of all this class in our day represses on such painful occasions the weak tendencies of his noble nature. Never, however, have I felt my admiration of the sense of duty which is at the bottom of every utterance of Wendell Phillips more excited than by the following recent allusion of his:

"Indeed, the puerile, crude, wordy, vulgar despatch of Secretary Fish (recalling Mr. Motley) would disgrace a sophomore at college—and almost makes one regret the removal of Seward. We know this is a very hard thing to say of the act of any loyal man. But the occasion more than justifies it. Rather than have the Department contemptible, we would almost welcome back the able but tricky vagabond from Japan."

Who can say that this is not very refreshing! "Reformers" do indeed "have terrible memories," as Mr. Phillips has recently well said. *Fiat justitia, ruat cælum*—it is pleasant to see a fearless judgment rendered. For some time now Mr. Seward has rendered himself and his country ridiculous by dragging round his paralytic old carcass, made absolutely ridiculous by the scars of Payne's knife, and no one before has noticed him as he deserved. All good and earnest reformers and philanthropists, disciples of Wendell Phillips and his friend Gen. Butler, cannot but rejoice to see the graven old "vagabond," who alone kept us from giving England a thrashing at the time of the *Trent* affair, referred to at last in meet language. Why, however, must such a painful but necessary public duty always devolve on one man? Why is it that it has been left to Phillips's brave, manly, and gentle voice to denounce, in the days of their success, Lincoln as "a slave-hound," Grant "as a drunkard in the streets of Washington," and, more recently, the Governor of Massachusetts as "a murderer?" Is there no courage left among us but in the breast of one man? Let me then, sir, in my place, at least honor that one. Here is Wendell Phillips—the philanthropist, our leader—God bless him! who fearlessly wanders from platform to platform, all over the broad land, and, by exactly the right word, stigmatizes this wretched, paralytic old "vagabond;" and as our great apostle enlightens audience after audience, the peripatetic of this later day, he sets an example full of promise to the American youth both of what a reformer should do, and how a philanthropist should talk. In him we see, as in a model, how love for the race may exist in vast profusion, and yet stern justice be meted out to individuals. That weakness which induces many to speak gently of the dead does not warp the judgment of our leader. He is above such mawkish sensibility. If justice call, he will even strike at the living through the dead. So here, in the case of Seward, the spectacle of a premature old age brought on through wear and tear of public service might excite a foolish and almost wicked good-nature or even sympathy in breasts compounded of a meaner clay; but—bah, sir!—while such considerations might influence the common ruck of male voters, or those who have struck with armed hands—mere brutes!—yet exponents of "female suffrage" and "prohibitory liquor-law" candidates, and friends of "labor reform" and professional philanthropists in general, need be made of sterner stuff. We cannot yield to such peurile sentimentalities. In fact, our cry is for justice; and a long experience has convinced us that justice is wholly inconsistent with any, the remotest, concessions of mercy.

A SENTIMENTALIST.

BOSTON, January 27, 1871.

[We print the above with loathing. Have these men no hearts? We wonder whether this particular Sentimentalist has a mother, or sister, or a wife?—ED. NATION.]

Notes.

IN addition to the announcements of new books made last week by Messrs. Harper & Bros., the following are now made: Lady Belcher's "Mutineers of the Bounty;" the Marquis de Beauvoir's agreeable and modest narrative of a "Voyage Round the World;" "Recollections of Society in France and England;" "Turkish Harems and Circassian Homes;" "The Revolt of the Cevennes;" Dyer's "History of Modern Europe;" "The Autobiography of Lord Brougham;" Hare's "Walks in Rome;" Greg's "Scenes from the Life of Jesus;" and numerous novels. ——Messrs. Appleton have in press: "Science Lectures for the People," five in number, by Professors Huxley, Roscoe, etc.; "The Works of Sir J. Y. Simpson, Bart.," in three octavo volumes; "The Sun," by Richard A. Proctor; and "Musings over the Christian Year," by Charlotte M. Yonge.——"A Concordance to the Poems and Sonnets of Shakespeare," compiled by Mrs. Horace Howard Furness, will be published by Messrs. J. B. Lippincott & Co.——Messrs. Roberts Bros. have in press two novels: "My Discontented Cousin;" and "The Forest House," by Erckmann-Chatrian.——The Hon. Charles Francis Adams's admirable address before the New York Historical Society, on "The Struggle for Neutrality in America," has just been handsomely printed in pamphlet form by Messrs. Charles Scribner & Co., and will doubtless be in request both by those who did and those who did not hear it delivered.——Messrs. Macmillan & Co. will shortly issue "A Greek Primer," by Bishop Wordsworth (being in great part a translation into English of his "Rudimenta;" and "A Parallel History of England and France," by Miss C. M. Yonge, whose title explains its purpose. It consists of two columns of contemporaneous dates and events in the two countries mentioned, and a middle column of remarks on the affairs of Europe. The period covered is from the Roman conquest of Britain to the fall of the French Second Empire last year. The manual if well executed, can hardly fail to be useful.

—By the death of Mr. George Ticknor, which occurred last week, at Boston, the ranks of American men of letters have sustained the loss of a veteran who now for some years has been past service, but whose services in the time of his activity were honorable and great. Mr. Ticknor lived to be almost eighty years old, having been born in August, 1791. He was of a respectable, though not especially prominent, Boston family; and after having been carefully instructed with a view to his engaging in professional life, he was sent to college. He was matriculated at Dartmouth, and it is said that he entered at the unprecedentedly early age of ten years and a-half. His name appears, however, in the list of the class of 1807, at

which time he was in his sixteenth year, and it would seem that he must have done twice over the work of one at least of the years of the college course, which then as now extended over four years. However this may be, his age at the time of graduation, while it gives evidence of the comparatively low condition of the American colleges in his day, gives evidence also of his precocious ability. In 1813, when he was twenty-two years old, he had not only—with the assistance of private teachers—pursued classical studies for three years, but had read enough of law to secure his admission to the bar. The law, however, was not to his taste, and in 1815 he went abroad. Apparently he had now formed a clear intention of devoting himself to literature, and had determined to fit himself for his future labors by giving his abilities the best culture that the age anywhere afforded. Moreover, it seems that he had already decided upon the particular field in which he would work, and a certain part of his time of European residence was spent in Madrid, where he prosecuted the researches on which is based his most important work. A part of his time, while he was abroad, he spent in Spain; but more of it was passed in Germany, Italy, England, and Scotland. Among his acquaintances and friends he counted many of the distinguished men of all the countries which he visited; he was known and respected by Scott, Rogers, Jeffrey, Macaulay, Byron, Goethe, Madame de Staël, Roscoe, Mackintosh, Southey, Wordsworth, Lord Holland, and many more. His correspondence, one would say, must be of great interest, as certainly his conversation was. Coming home in 1820, he accepted a professorship in Harvard College, his chair being that of the French and Spanish languages and literatures—the chair which since his time has been filled by Longfellow and Lowell. After 1835—in which year he resigned his professorship, to the performance of whose duties he brought great ardor and diligence, and in which his success was marked—Mr. Ticknor had every temptation to lead what is called a life of elegant leisure. A life of elegant labor, severe, though delightful to him, and at the same time profitable to others, was more consonant with his disposition, his temperament being that of an active and energetic man, who might have succeeded as well in the administration of affairs as in the prosecution of literary pursuits. In 1835, he went abroad for the second time, and, after three years, mainly devoted to further examination of the materials for his "History of Spanish Literature," he returned to Boston, and spent ten years in the composition of the work by which his name will be carried down to posterity. This appeared in 1849; and few American books, whether of earlier or of later date, have been more creditable to American literature. Doubtless, there will be among lovers of the Spanish poetry, of which Mr. Ticknor so largely treats, a good deal of question as to the justice or as to the value of some of his judgments. He was so far from being a man to whose judgments of poets one would feel it necessary to pay entire deference, that one might even feel no fear in declining to give them very anxious attention. But there is agreement among students of the literature of Spain that his book is of exceedingly great help to them—is, indeed, without equal in ours or any other tongue; and there is nowhere any question that its author brought to its preparation a degree of laboriousness, knowledge, intelligence, and faithfulness which is rare everywhere, and is here so rare as to entitle Mr. Ticknor to a most honorable place among American writers. Mr. Ticknor's death will be felt as a great loss not only by the literary community in this country, but by the best social circles in his native city. To these, by reason of his attainments, reputation, and character, he did much to give a dignity not inherently theirs. He was one of those "prominent citizens of Boston" who make the city prominent, and not one of those who owe to the city and their place in it more than the city ever owed them or their families. It is, perhaps, not worth while to say that in politics Mr. Ticknor was a Conservative of a very pronounced type. Those of us who think the Radical the highest style of man may please ourselves by recalling the fact that the man whom we feel bound to condemn as a Conservative was a chief promoter of that instrument for making the best style of Radical—the Boston Public Library.

—The Philadelphia Social Science Association recently held a meeting on the subject of compulsory education, and the paper read there is now printed separately, although the report of the discussion was left to the newspapers. It was thoughtful, serious, and earnest, and showed a real comprehension of the importance of the question. In curious contrast, however, to the statement then made of the fact that there were nearly twenty thousand children who ought to be provided for, is the recent issue of a paper on the same subject by the London "Society of Arts," in which it is shown that almost exactly the same number is unprovided for in Bethnal Green, a district of London containing about one hundred and thirty thousand inhabitants. This as against the population of Philadelphia, say five times as great, shows that questions which we consider urgent and ripe for legislative reform are easily met and solved as compared with similar ones in England. The necessity is none the less pressing on us to improve the greater facilities within our reach, in order to make head against the growing mischief of insufficient education, both in quantity and quality. Unfortunately for school reform in this country, neither in legislatures nor in school boards is pedagogy fairly and fully represented as it is, for instance, in Germany.

—The literature of the year 1870 will not cause it to be specially remembered, and, happily (as we choose to say, rather than unhappily), it does not need the distinction which books might have given it. It ought also to be borne in mind that the years spent in producing a work pass unnoticed, while that in which it appears and is catalogued has but an accidental claim to share in its renown. The London *Publishers' Circular* for December 31, 1870, sums up 5,251 books, whose titles it has recorded during the past year. Of these, 426 were importations from America, leaving to the credit of Great Britain 4,656, divided as follows: new books, 3,377; new editions of books originally published prior to 1870, 1,279. The *Circular* tabulates these publications with great care, and shows an average of nearly 300 new books a month, 100 new editions, and 40 American works imported. For the first named, February and March, and the last quarter of the year, are most prolific—exceeding the average; while August and September fall to considerably less than 200 each. Theology obtained the largest number of new editions (208 out of 811); but Fiction had the largest proportion (162 out of 381). This country furnished 55 volumes in Theology—presumably of a fair quality, and as many in History and Biography, which (55 out of 290 new works) make a very respectable ratio. Among 93 new works on Political and Social Economy, and Trade and Commerce, the American contribution is 16, of a quality to us unknown. We furnish about the same proportion to Travel and Geographical Research, viz., 41 out of 286 volumes, and a larger (58 in 263) to Arts, Science, and Fine Art Works. Law and Jurisprudence have derived from this side of the water 20 of the 84 new books catalogued in the *Circular*, which of course has embraced but a small portion of our publications in this as in the other departments mentioned.

—Among the latest publications of the past year in England were "The Duke of Edinburgh in Ceylon: a Book of Elephant and Elk Sport," by John Capper; "All Round the World: Adventures in Europe, Asia, Africa, and America," by Parker Gillmore; Volume I. of the "Ancient Geography of India," embracing the Buddhist period, together with the campaigns of Alexander and the travels of Hwen-Thsang, illustrated with thirteen maps, by Alexander Cumming; "The Capital of the Ancient Kingdom of East Anglia: a History of Thetford," by A. Leigh Hunt; "Clement Marot, and Other Studies," by Henry Morley, in two volumes; "Natural History of the Azores," by F. Du Cane Godman; Mr. John Cordy Jeaffreson's interesting "Annals of Oxford;" and "Siege Life in Paris, by One of the Besieged," Mr. E. B. Mitchell, who got out too soon by half, he must now be convinced. Tennyson's songs of "The Window," for music, which are singularly flat, and Mr. Buchanan's "Napoleon Fallen," another decrescendo on the part of the author, are, with the exception of Mr. Morris's "Earthly Paradise," now concluded in a fourth part, all the poetry worth noticing. Two illustrated works may be named: "Chronicles of the Castle of Amelroy or Ammerzode," by John Box, with photographs; and the "Rembrandt Gallery," containing thirty copies of this artist's most important etchings. A correspondent of the *Athenæum* calls attention to the delay in publishing "the large and well-executed catalogue of the works of Raphael, which has been prepared, and exists in the form of uncorrected proofs. This work was executed by desire of the Prince Consort, and embraces all the collection of works of the master which the Prince had caused to be formed; . . . the whole is the most perfect catalogue of the artist's productions which has been compiled."

—Among the distinguished French dead of 1870 none except the renowned Dumas was better known to the world of literature than Prosper Mérimée. He was one of the last of the brilliant company of French writers who threw such glory upon the first half of the present century. Born in Paris in 1803 (according to some in 1800, to others in 1804), he was a contemporary of Cousin, Guizot, Villemain, Sainte-Beuve, and Ampère, and their fellow-worker. He certainly belonged to the romantic school; but he brought to its subjects the severe taste and elegant style of the classicists. His earliest works were mystifications, the first being a pretended translation of some Spanish plays. These appeared in 1825. In 1827 they were followed by a pretended alleged translation, in prose,

of some Illyrian ballads. In a charming preface, written in 1840, he explains to us that he had formed the plan of visiting Illyria, but that, in lack of money, he determined to write the songs of the people first, and then with the profits to travel thither and ascertain the accuracy of his work. For preparation, he read a book of travels in Dalmatia, studied some statistics, and learned a few words of the language. Goethe was the first to detect the wonderfully ingenious forgery. No one who reads the ballads can wonder that they were successful, and that even Slavic scholars were deceived. Mérimée tells us of a certain German who translated them from the French into his own language and into verse, boasting that he was able to detect beneath Mérimée's prose the proper measure. But, indeed, Mérimée's prose has the simplicity, clearness, dignity, and suggestive rhythm which distinguish French prose translations of foreign poetry from the artificial French verse; so the poor German's mistake is less absurd than might appear. In 1829, Mérimée published his "Chronique du règne de Charles IX.," a most fascinating historical romance. His shorter tales are masterpieces in their way, and may well serve as models of artistic skill. In conception, in construction, and in style they all deserve the praise of being careful, graceful, and polished—and never polished to the point of weakness. "La double Méprise" is perhaps the best. "Tamango," "Les Ames du purgatoire"—but whoever reads one will read all, and can decide for himself about their relative merit, if he thinks it necessary. "Colomba" is somewhat longer, but to our mind as good as any. Some are stories of modern society, and upon the ordinary themes of "French novels;" but the author handles his subject with the purity of an artist; his legitimate right, as artist, to treat of all human passions he never exercises with the offensive delight of those to whom such subjects are most attractive on account of their dirtiness, baseness, and wickedness. The scene of others of his stories is laid in the Middle Ages or in foreign countries; but in all he delights the reader by his ingenious inventions and by his exquisite style. In 1845, Mérimée was elected a member of the French Academy. He was not only a graceful writer of fiction, he was also a scholar. He translated from the Russian a play of Gogol, and some of the novels of Tourguèneff, and, unlike most of his countrymen, was familiar with most of the languages and literatures of Europe. He wrote, too, some historical works—an account of Catiline's conspiracy, the history of the false Demetrius, etc.—but it will be as a writer of fiction that he will live. In 1853, he was made a senator, but he will never be counted as one of the now vanished—and let us trust for ever vanished—Imperial school. He had more than their talent, and was free from their vices and faults. For one thing, his fortunate objectivity of mind was strong enough to save him from the weakness and wickedness of the introspective, self-examining authors who finger and handle their hearts until, for that reason, if there were no other, they become corrupt.

—To those desirous of a complete and intimate knowledge of Mérimée, we would say that during the last twenty years the *Revue des Deux Mondes* has contained a great deal of his work, both original and translated. Among other noted French personages, besides Mérimée and the great Dumas, who have died within the twelvemonth, one is the notorious Madame Ratazzi, née Buonaparte Wyse, grand-daughter of Lucien Buonaparte, a woman of the usual reputation of the Buonaparte women, and of the not unusual doubtful legitimacy of the Buonapartes, who, in 1863, married the Italian premier, Ratazzi, and has since, as before, been distinguished for witty libels upon such men and women as she disliked. Prévost-Paradol's name also comes up for remembrance; and those of the Duc de Broglie, who has a place in history as one of the ministers of Charles X. of France; General Flahault; and, greater than any of these last, Charles Forbes de Tyron, Comte de Montalembert, the historian, publicist, politician, and representative Gallican Romanist. To these is to be added the name of the Duchesse de Berri, who was the mother of the Comte de Chambord, the legitimist claimant of the crown of the French kingdom, and who died in April, before she had seen the downfall of the parvenu Empire; and, too, before she had experienced again the disappointment of seeing France once more convulsed from top to bottom with no ensuing advantage to her family.

—Number 12 of the "Papers and Correspondence of the Imperial Family," which the present occupants of the Tuileries have been publishing from time to time, contains some twenty reports of the Commission of dramatic censorship. But one of these rejects a play on the ground of its immorality, and that turns out to be the immorality of the higher classes of French society assailed by the author. Political objections are found against all the rest, often of the most petty nature. Sometimes a piece would be altered essentially in spite of the protestations of the writer, and the Commission tell how in one instance they insisted that the play should end prior to the Revolution, or else glorify the First Emperor. M. Paul Meurice, accordingly, whose *Paris* was the play under censure, had to resign himself to "a final tableau representing Napoleon I. distributing eagles on the Champ de Mars." The seventeenth number of the "Papers and Correspondence" commences Volume II., and produces some highly interesting notes concerning the Prefects of the Republic, made from July to October, 1852. There is also a letter from a Crimean veteran, Capt. de Boüyn, of the gendarmerie, addressed directly to the Emperor in 1857, and complaining that "he had been ordered to ascertain, and to cause the chiefs of brigade to ascertain, the number of Legitimists, Orleanists, Republicans, Socialists, etc., to watch their movements, comings and goings, their relations, acts, and words," and to mention them in his report constantly. This worthy officer, to whom such service was repugnant, sought relief in an appeal to a decree of March 1, 1854, which says that the gendarmerie shall in no case be employed in secret (*occultes*) duties. The Emperor replies that "the first law of the military hierarchy is to obey without commentary," and that to apply the epithet "occultes" to the orders he had received was to cast unmerited odium upon them, and the Captain was finally dismissed from the gendarmerie.

—We have before us three new and beautiful maps, by Kiepert, of Alsace and Lorraine, and adjoining countries, executed on the same scale (1 : 666,666); one ethnological, one political, and one historical (Berlin: Reimer; New York: L. W. Schmidt.) The first, entitled "Specialkarte der deutsch-französischen Grenzländer, mit Angabe der Sprachgrenze," is chiefly designed to show the linguistic areas (Sprachgebiete) of the French border-lands presented by it, distinguishing them, by colors, as French, chiefly French or mixed, and German, respectively. Almost the whole of Alsace is given as German. The exceptions are: a French strip of land on the southwest border, including Belfort and Giromagny, and extending north to the foot of the Ballon d'Alsace; a mixed area, nearly of the same extent, and including Delle and Fontaine, to the east of the preceding; and some small territories, French or mixed, in the Vosges, west of Colmar, Schlettstadt, and Barr. The dividing line between the German and the other areas in Lorraine runs in a northwest direction throughout—from a point on the Alsatian frontier, opposite Barr; across the Vosges; along the Sarre Blanche; to and along the German Nied; from the juncture of this river with the French Nied to the juncture of the Orne with the Moselle, between Metz and Thionville; and thence to the Luxembourg frontier, near Esch. This line is skirted all along on the west, by more or less narrow mixed territories, separating it from the French area. The German area in Lorraine thus embraces more than half of the Department of Moselle, and about a fourth of Meurthe.

—The second map—"Specialkarte von Elsass und Lothringen, nach ihrer gegenwärtigen Eintheilung seit der deutschen Besitzergreifung"—exhibits the divisions established by the Prussian conquest of last year. The main division, under the provisional Prussian organization, is into the two governments of Alsace and Lorraine, the former of which, however, probably representing what at the time of the new organization the conquerors meant to keep—possibly less than they now mean to keep—embraces, besides the whole of Alsace proper, as it was under the French, about four-fifths of the Department of Moselle, and about half of Meurthe, formerly divisions of Lorraine. This Government contains not only all the German and, with very slight exceptions, all the mixed area of the two provinces, but also some portions of the French, including Metz and Château-Salins, and their surroundings. Its Lotharingian subdivisions are the districts of Thionville, Metz, Saargemünd, Château-Salins, and Saarburg. The third map—"Historische Karte von Elsass und Lothringen," etc.—in elaborating which Richard Boeckh co-operated with Kiepert, contains a maze of territorial divisions and *enclaves*, as they existed in the seventeenth and eighteenth centuries, and exhibits the successive annexations by France of German territory between the Meuse and the Rhine. The chronological dates of the annexations are given in notes.

—The *Methodist Quarterly Review* for January, 1871, contains a dissertation on "The Slavic Races," contributed by Dr. A. S. Long, of Constantinople, in which that subject gets rather more elaborately treated than is usual in this country; and as it appears at a time when Slavic affairs are rapidly growing in prominence and importance, it deserves the attention of a wider circle of readers than the regular circulation of that periodical will probably secure for it. It contains much that is interesting or learned—though little that is certain—concerning the origin of the Slavi, and

their early spread over the vast countries now occupied by them; speculations regarding their common name as a race, and their specific territorial or national appellations; remarks on their general character, as it appeared to the Byzantine writers of the earlier part of the Middle Ages; something on the old Slavic language and literature, and the Cyrilitic and Glagolitic alphabets; and more ample information on the origin and ancient history of the Bulgarians, a nation on whose present state the author promises a more exhaustive contribution. The critical views expressed in the article evince both soundness of judgment and familiarity with ancient as well as recent authorities. Like the best of the latter, Dr. Long rejects the derivation of the name Slav (in its various forms, Slovak, Sloven, etc.) from either the Slavic *slava*, glory, or the Teutonic *slave*, deriving it from the Slavic *slovo*, word, speech, and explaining it by "endowed with speech, knowing how to talk," in contradiction to *Nyemetz*, dumb—with whom one cannot converse—which was applied by the Slavi, and after them by Magyars, Turks, Arabs, and Persians, to the Teutonic race. Against some of the better authorities, he considers the Bulgarians of Turkey not as a gradually Slavicized, but as an originally Slavic people, though he admits that they may have derived their name from a conquering Turanian tribe, which imposed upon them its sway, and organized the country, but subsequently—like the Scandinavian Varangians, the first organizers of the Russian Empire—were lost in the mass of the original population.

PARKER'S HISTORIC AMERICANS.*

It is a thousand pities that Theodore Parker could not have lived ten years longer. He died at the very threshold of the time the fittest for the development of his immense energies and the exercise of his prodigious activity. He was meant by nature for an active rather than a studious life. The exuberant energy of his mind sought its outlet in the only direction which was open to it; and he certainly stirred up to their depths the rather stagnating waters of the religious opinions of thirty years ago. Whether it were an angel that had descended to trouble the pool, or otherwise, there was undoubtedly a diversity of opinion among men, but that he troubled it was plain for all to see. Yet, after all we have gone through of conflict and suffering within the last ten years, it is almost as hard to understand the violence of that ebullition, or the interest it created, as to comprehend the zeal with which our fathers and grandfathers watched the theological combats of fifty years ago between the excellent Doctors Woods and Ware. Mr. Parker was not a man of genius, nor yet of an original mind. The doctrines with which he connected his name were not of his devising. They had come down from former generations of free-thinkers. It was the freshness of illustration and the zeal and energy which he brought to their enforcement, together with the strong personal influence that went out from him—what we call in this country "magnetism"—that accounts for the stir he made among the dry bones, and the hold he had and still retains upon living souls.

It is well known that Mr. Parker was what is called "a self-made man," and his making was not free from some of the defects incident to that particular manufacture. It were an insult to his memory and an outrage to common sense to class him with those so-called "self-made men" in public life whose sciolism and conceit would only make them ridiculous did they not also make them mischievous. He was an omnivorous reader rather than a great scholar. A *helluo librorum*—a glutton of books—he did not always well digest and assimilate his intellectual food. The rudimental niceties and exactnesses of scholarship which form an admirable discipline for the child, are hardly ever mastered by one who begins his education in manhood. If Mr. Parker had read half as much he would have been a more learned man. In his extemporized speeches he was not unfrequently betrayed into inaccurate statements and mistaken literary allusions because of the very multitude of crude recollections that crowded into his mind. We well remember one of his sermons at his country meeting-house, at West Roxbury, before he went to Boston, in which, having occasion to illustrate the way in which men are "cursed with their prayers," he told the story of Semele, who was consumed by the thunderous glories of Jove, whom she had prayed to visit her as he was wont to approach Juno—only he made the victim of this mythological edition of the "Impertinent Curiosity" a *man!* This mistake could hardly have been made by one who in his boyhood had been introduced into the paradise of the dainty delights of learning through the gate, instead of climbing in over the wall after he was grown up.

The work which is the occasion of these observations we regard as a sufficient evidence of their truth. These lectures are marked by the well-known methods of thought and style of their author. He pronounces judgment upon his illustrious subjects with unhesitating decision, and sustains it by what he considers sufficient reasons. There is nothing especially new in his opinions as to their course or character, though he lays them down with an air of authority, as if he regarded them as final and unanswerable. We do not think, however, that his estimate of them, especially of Franklin and Jefferson, will be accepted as the ultimate settlement of the conflicting views concerning those great men; but we have no space to enter upon that question, were we disposed to do so. It is interesting, however, to read what such a mind as Mr. Parker's thought of these celebrated countrymen of his, and his opinion is as good as another man's on points which will probably never be quite settled. But the narrative portions of the lectures, by which Mr. Parker supports his conclusions, are full of errors, and errors so obvious that it is singular that they should have escaped the notice of the intelligent hearers of them. The Rev. O. B. Frothingham, who furnishes the preface to this book, says in it of Mr. Parker: "In all biographical studies his conscientiousness was a wonder. He laid on himself prodigious labor to satisfy it." This statement of Mr. Frothingham as to the usual accuracy of his friend we are not disposed to impugn; but his preparation for these lectures must have been an exception to the general rule of his literary habits. We cannot doubt that Mr. Parker had read the original authorities relating to his subjects; but he could not have consulted them as he wrote, or he would have been saved from the blunders—some trivial, but others most material—which deform this work, all of which might have been avoided by a proper verifying of his facts. We will quote some of them.

In the Lecture on Franklin (p. 17), speaking of his children, Mr. Parker says: "He left an illegitimate son, William Temple Franklin, who afterwards became Governor of New Jersey." William Temple Franklin was neither his son nor Governor of New Jersey. He was the grandson of Franklin, and the son of William Franklin, who did hold that office. Describing Wedderburn's famous diatribe against Franklin before the Privy Council, Mr. Parker says (pp. 29, 30): "Before this audience did Franklin stand for *ten hours* and listen to this purchased sycophant." Franklin himself says in a letter to Thomas Cushing ("Life and Works," viii. 111), that he "stood there, the butt of his ribaldry, *for near an hour!*" Mr. Parker calls Dr. Price a "*Scotch* dissenter." He was a *Welsh* one. He says that "slavery in 1758 was a very different thing from what it is in 1859. It was by no means the cruel and malignant thing it is now." In Pennsylvania and Massachusetts, then, undoubtedly, as compared with South Carolina in 1859. But Mr. Parker should have known that the slavery of the slave States proper was never so malignant and cruel as in the middle of the last century. The slavery of our time was mild and patriarchal compared with that of a hundred years ago. In his desire to magnify his subject, whose greatness needed no exaggeration, Mr. Parker says that "at forty, Franklin was master of English, Latin, French, Italian, and German." As a student of languages he must have known what an enormous claim this was to make. We have been able to find no evidence of its truth. Of French, though he had lived for years in France, Franklin certainly was not master. Writing to the Abbé Morellet, after his return home, 1787, he speaks of his delight in being surrounded by persons who speak and understand the same language with himself, adding, "You know that if a man desires to be useful by the exercise of his mental faculties, he loses half their force when in a foreign country, where he can only express himself *in a language with which he is not well acquainted*" ("Life and Works," x. 301). And we have been assured that in the two or three short French letters of Franklin, preserved as autographs in what was the *Bibliothèque Impériale*, at Paris, there are half as many grammatical and orthographic errors as there are lines. That he had a passable reading knowledge of these languages (excepting German, as to which we powerfully doubt) is very possible; but every scholar knows what a vast distance there is between this and a mastery of them. At the time of Franklin's death, in 1790, Mr. Parker says, enumerating the great men then in public life, "Jay was at the Court of England." Jay was then Chief-Justice, and did not go to England till 1794. So much for the Lecture on Franklin for the present.

These errors are of no material consequence, but should have been avoided as imperfections in a literary work the merit of which mainly consists in accuracy of details. The next error of which we shall speak it is not too severe to call a highly culpable one. In the Lecture on Washington (p. 98), speaking of his taking command of the army at Cambridge, in July, 1775, Mr. Parker says: "The officers were ignorant of their duty.

* "Historic Americans. By Theodore Parker." Boston: Horace B. Fuller. 1870.

General Ward, the previous commander-in-chief, *was old, and almost imbecile!*" This "old and almost imbecile officer" was at that time *forty-seven years old*—four years older than Washington. He could not have been one of the "officers ignorant of their duty," for he had served with credit in the Old French War, as a field-officer under Abercrombie, to which circumstance, undoubtedly, he owed his commission. His imbecility could not have been noticeably great, since he was the year before elected Captain-General of Massachusetts Bay, and when the army was first organized he was commissioned by the Provincial Congress as Major-General and Commander-in-chief. When Washington was appointed Commander-in-chief by the Continental Congress, General Ward was commissioned as senior Major-General, and commanded the right wing of the army during the siege. After the evacuation, he was left by Washington in command of a force to guard against the return of the British. In the course of 1776 he resigned his commission, from ill-health, but was in the public service in civil capacities for nearly twenty-five years longer, till his death in 1800. He was a delegate to the Continental Congress, and a member of the Second and Third Congresses—1791–95—of the United States. He was also a Judge of the Common Pleas at the time of Shays's insurrection. This story is told of him. The object of the insurrection was mainly to prevent the holding of the courts and the collection of debts. Judge Ward, on going to Worcester to hold his court, found the town in possession of the insurgents. A sentinel on the court-house steps presented his musket and told the judge to advance at his peril. The judge recognized the man as one of his old soldiers, and looking him in the eye gave the word of command, "*Recover arms!*" The old instinct of discipline returned, and the sentinel recovered his piece, and the judge went up the steps, whence he addressed the insurgents in a speech of two hours to convince them of their guilt and folly—but to no purpose. We are sure no man would have regretted more deeply than Mr. Parker, had he lived, the reprehensible inadvertence which betrayed him into this injustice to a gallant soldier and eminent public man, whose honorable record and fair fame are a part of the inheritance not only of his descendants but of us all.

One other error, occurring in the Lecture on Washington, is an odd one to be made by a man who was supposed to have made Revolutionary history a special study. He says (p. 144): "In 1779–80, General Arnold, the traitor, with less than two thousand men, ravaged the *whole State* of Virginia for *two years!*" Arnold was in Virginia precisely *five months*, from January to June, 1780, and his ravages were limited to the River James, from Norfolk to Richmond. But we must hurry on. In the Lecture on John Adams, Mr. Parker says (p. 151): one of his tutors was "Mr. Cleverly, the *Congregational minister* of the town." Mr. Adams says of him ("Life and Works," x. 254), he was "a bigoted *Episcopalian* of the school of Bishop Saunders and Dr. Hicks." Speaking of the argument before the Governor and Council, December 20, 1765, on the closing of the courts, by the appointment of the Town of Boston, Mr. Parker says (p. 164), "It was a great honor for the young men, Otis and Adams, to be employed in such a cause." For Adams, possibly; certainly not for Otis, who was then in his forty-first year, who stood in the front rank of the profession, if not at its head, and who had made the great argument against the Writs of Assistance nearly five years before, February, 1761—the most illustrious law-case ever argued in America, from which the Revolution may be said to date. And he was old enough, and eminent enough, near nine years before to be appointed by Governor Pownall Advocate of the Admiralty. In relating the part Mr. Adams took in the trial of the soldiers indicted for the Boston Massacre, Mr. Parker says (p. 166), "They applied to Mr. Adams to defend them. He induced Mr. Josiah Quincy, jr., to aid in the defence." The fact was exactly the opposite of this statement—Mr. Adams being the witness. Mr. Quincy was first retained, and it was at his suggestion and through his urgency that Mr. Adams was afterwards employed. (Adams's "Life and Works," ii. 230.) The mention of Mr. *Pickering* as one of the Commissioners to France in 1797 we are willing to suppose a misprint for *Pinckney*. In the Lecture on Jefferson, Mr. Parker says (p. 25), that in 1784 "Congress then passed the famous Ordinance of the Northwest Territory. Jefferson drafted the bill." That Ordinance was not passed till 1787, and Nathan Dane drafted the bill. The bill offered by Jefferson in 1784 included much more than Dane's of 1787, to wit, the entire Western region from the 31st degree of north latitude, but it was *not* passed. It contained an anti-slavery clause, as well as the Ordinance of 1787; but it was prospective only and not immediate. Mr. Parker goes on to say, "A motion was made on the 19th of April to strike out this clause. The New England members gave a unanimous vote to strike it out." They gave a unanimous vote to *retain* it. (Hildreth, 1st Series, iii. 449, 450.) We must say it seems to us, if Mr. Parker did "lay on himself prodigious labor to satisfy his conscientiousness in his biographical studies," as his editor says of him, that, as far as concerned the preparation of these lectures, he labored in vain, and spent his strength for naught.

There is one other matter of which Mr. Parker speaks which we think we ought not to pass by in silence, though we had much rather do so. Mr. Parker was not a man to call a spade anything but a spade. He is perfectly plain-spoken as to the immoralities of all his famous subjects in regard to women, with the honorable exception of John Adams. He is the first writer that we remember to have seen who has put in print the suggestion that "Washington himself" was not impeccable in this particular (p. 211)—a suggestion which he had better have spared if he had no better authority for it than the gossiping traditions which have come down to us, and were not ready to produce it. Franklin's own narrative certainly absolves all commentators from any squeamishness as to him. The colors in which he draws himself are dark enough, but Mr. Parker gives the picture a yet blacker hue. The figure which Franklin cuts in his own account of his breaking off his engagement with Miss Godfrey because her father could not give her enough money to pay off his debt to the printing-house, is mean and paltry enough (Sparks's "Franklin," i. 94), but far from being so ineffably base as Mr. Parker represents it. He says, after relating the above facts, "the bargain was broken off, though the woman in question soon became the mother of his only son." If Mr. Parker were alive and could prove this assertion, he would solve the one mystery about Franklin's life, to wit: who was the mother of William Franklin? It has baffled the curiosity of all other enquirers. Mr. Sparks assured us that he had looked it up in vain. The late eminent and lamented Alexander Dallas Bache, Franklin's great-grandson, also told us that he had failed to ascertain this fact, and considered it as past finding out at this day. A venerable lady, who died not much more than twenty years ago, who was married and living in Philadelphia when Franklin returned thither in 1785, who knew him well, and was a part of the society in which he lived, and who naturally heard all the gossip of that society about him (and there was plenty of it), assured us that she had never heard who the woman in question was, and did not believe that anybody knew it. It was probably one of the "low women" with whom he tells us that he intrigued in those days, and who died in obscurity and was forgotten before anybody took any interest in the question. We cannot believe, if there had been any foundation for Mr. Parker's statement, that it could have escaped the research of Mr. Sparks and Mr. Bache and fifty other enquirers, and are obliged to conclude that he had no sufficient authority for loading the memory of Franklin with this enormous aggravation of his despicable conduct, and still less for blackening the good name of poor Miss Godfrey after she had been for a century in her grave.

It is not a pleasant task to speak thus plainly of a work of so famous a man as Mr. Parker, whose memory is still warmly cherished by multitudes who regard him with mingled admiration and affection. When we opened the book we expected to have nothing but praise to bestow. Justice to ourselves as critics, and to the reading public, obliged us to show how very far its performance falls short of the expectations excited by the preface. We think that Mr. Parker's reputation as a man of accurate knowledge and original opinions will not be increased by the publication of this book, and that its editor would have consulted the fame of his friend better by putting the manuscript into the fire rather than by giving it to the press.

PLUTARCH'S MORALS.*

One of the most natural branches of the movement in ethical speculation set on foot by Buckle and Mill (in his essay on Liberty) has been a more careful examination of non-Christian morality, whether before or after the Christian era. Its relations to Christian morality (of which it appears to have been completely independent, and this is not the least of the puzzles in which the subject is involved) embrace many interesting and curious questions. It is a very prevalent opinion among Christian moralists that one of the great benefits of the Christian revelation was its conferring a divine sanction upon certain great elementary moral principles which had until then been but partially acknowledged, the wise and good men who held them having no *universal* authority or jurisdic-

* "Plutarch's Morals. Translated from the Greek by several hands. Corrected and revised by William W. Goodwin, Ph.D., Professor of Greek Literature in Harvard University. With an Introduction by Ralph Waldo Emerson." Boston: Little, Brown & Co. 1870.

tion. One of the latest and neatest statements of this position may be found in "Ecce Homo." How far it can be reconciled, or if it can be reconciled at all, with the utilitarian theory of the origin of morals, is a nice point. Could we accept Mill as a typical specimen of the utilitarian, the question would seem to be pretty conclusively answered in the negative; but, as Professor John Grote has shown *passim* in his valuable and, alas! posthumous work, "On the Utilitarian Philosophy," Mill must be considered a very much modified utilitarian.

But, it may be asked, did Christianity introduce *no* moral novelty? And the reply that it *did* originate something in ethics, although apparently a contradiction to the position briefly noticed in our last paragraph, would not really be such. Christianity *might*, while confirming old moral precepts, introduce some new ones. The general opinion, however, at the present day is that it did not make any additions to the moral code. Even those who are most ready to admit emotional or metaphysical originalities of Christianity, who will allow, for instance, that it invented or discovered religious faith, usually deny that it evolved any new principle of morals. Nevertheless, we think that a plausible case might be made out in favor of the proposition that chastity, as a male virtue, and distinct from asceticism (with which it is often confounded), was, and is, a special product of Christianity.

But neither of these propositions, nor yet a combination of the two, would justify the notion once very popular, and not yet altogether exploded among divines and theologians, that heathen morality may be entirely disregarded and ignored by the ethical student on account of its vast inferiority to Christian morality. There are three *à priori* objections, independent of internal evidence, against such a conclusion. First, it is more in accordance with our conceptions of the Supreme Being that he should have vouchsafed some spiritual light to the world than that he should have left it so long in utter darkness. Secondly, it seems hardly credible that a totally immoral world should not have functioned even worse than the heathen world did. Thirdly, a denunciation so sweeping is likely to provoke reaction, if internal evidence should be found to contradict it in even a few particulars; and this is probably the reason, or one reason, why not only avowed sceptics, but persons who profess and call themselves orthodox Christians, have expressed qualified preferences for heathen morality.

We are, therefore, never sorry to see a translation or popularization of an ancient moralist; but, in the present case, our satisfaction is not unmitigated. In spite of his popularity as a biographer, Plutarch has not the very best name among scholars and critics. His style is often inelegant, his treatment of subjects is apt to be gossipy and diffuse. Though acute as a verbal critic (witness his explanation of the secondary meaning of Ἀρετή *), his filthy perversion of one of the sweetest passages in Theocritus, and his utter misappreciation of Aristophanes, demolish his pretensions as a literary critic; and his attack on Herodotus, like Croker's on Macaulay, may be called "an attempt at murder resulting in suicide." Plato, Xenophon, and Plutarch all wrote Symposia. Every scholar has read Plato's "Banquet" in the original. Every man like Keats, Greek-minded, but not Greek-learned, has read Xenophon's "Banquet" at second-hand. But who, scholar or dilettante, reads Plutarch's "Feast of the Seven Wise Men," unless, as now, it is thrust into his face? And what is the natural reflection after reading all these? That Plato's guests are demigods, Xenophon's jolly good fellows, and Plutarch's very positive prigs, properly decorous, and, in many respects, deserving their epithet of wise, but in no respect exhilarating.

It is only proper to say this much, because the general reader might easily be misled by Emerson's glowing panegyric—a very gem of composition in the author's best manner—and when Emerson is at his best, what living writer of English prose can do better? The beauty of the edition may also well create a favorable prestige. Yet even here there is a certain sense of disappointment when we find that the "several hands" thus honored did their work as long ago as the end of the seventeenth and beginning of the eighteenth centuries. From a merely literary point of view, indeed, this is hardly a disadvantage, much of the work being written in that quaint, nervous, fruity, Baconian English which makes us feel how little, after all, our language has gained in passing first through the Johnsonian and then through what we may call the newspaper stage. But many of the versions are only loose paraphrases, some are full of glaring errors, and the best contain many archaisms which tend to confuse their meaning. The mistakes, of course, can be, and have been, corrected; the modernizing of the archaisms is a delicate matter, in which Professor Goodwin has hardly been able to satisfy himself, judging from his preface; and as regards some of the essays, the attempt to patch them up reminds us of the notorious character who had a favorite oath, "God mend me!" which provoked a friend to say, "Mend you, indeed! It would be easier to make two new men." Still, as the preface justly remarks, 'No critical translation of these treatises is possible until a thorough revision of the text, with the help of the best manuscripts, has been made; and this is a task from which most scholars would shrink in dismay."

Whenever—if ever—this preliminary desideratum shall have been accomplished, the translator of Plutarch will at least be free from one difficulty which hampers all attempts to put some greater philosophers into a becoming English dress. In trying the experiment on Plato or Aristotle, we soon find that some of the fundamental and elementary words of their philosophy cannot be fitted with any constant and exhaustive English equivalent. Every schoolboy thinks he knows what *σοφός* and *σοφία* mean; *σοφός* is a wise man, and *σοφία* is wisdom. But, in fact, *wisdom* very inadequately expresses *σοφία*. The phrase "unlettered wisdom" is not a solecism in English; but the Sausage-Seller of the "Knights," who "had never learned the humanities," could not, under any circumstances, have been called *σοφός* (though he might be *δεινός*) because *σοφία* includes *ἐπιστήμη* as a necessary element. A distinguished scholar and teacher (Mr. Shilleto) was so struck with the inadequacy of the usual rendering, that he actually translated and taught his scholars to translate *σοφία* by *genius*. Of course, this was making the matter worse, for *genius* is even farther than *wisdom* from connoting *ἐπιστήμη*; but it shows to what straits a translator may be driven. Then take *ἐπιστήμη*. It means *science*, but so also (in another sense) does *μέθοδος*; and it embraces some things which our word *science* does not. *Acquired knowledge* is probably the best general rendering for it, but two words for one are a periphrasis, or a definition rather than a translation. Let us pass on to the other element of *σοφία*. *Νοῦς* we may consider Anglicized, at least as a bit of scholastic and literary slang; its Anglicized form, *nous*, instead of *nus*, seems to show its bodily importation. In this semi-slang sense it is taken to signify *sharpness* or *cleverness*. But the Greek word is something higher; it is *natural ability*. The fashionable translation of it is *intuition*; yet, if asked to express in Platonic Greek "he knew it by intuition," we should use some such word as *ἀνάμνησις*. *Φρόνησις*, roughly rendered by *prudence*, is another puzzling combination of the intellectual and the moral. Lastly, for *τέχνη* we can find nothing better than *art* or *design*, but they mean several things which it does not, and it involves at least one idea which they do not.

Little of this trouble in Plutarch. He is rarely metaphysical. The "Procreation of the Soul," and some of his polemical essays against the Stoics, are about the only exceptions to his usual simplicity. His morality takes a parænetic or homiletic turn. And this reminds us that a large portion of the large book before us, probably a full half, is not moral—that is, ethical—at all. "It need hardly be stated," says the editor, "that the name 'Morals' is used by tradition to include all the writings of Plutarch except the Lives." Even the exception is not unqualified, for there are Lives in the collection, though not *the* Lives. Indeed, the difficulty would be to say what of the then existing curriculum of knowledge these miscellaneous writings do *not* include. Some of them, as we have just intimated, are biographical; some are like memoranda for novelettes; some are physical, according to the physical notions then current; some are antiquarian, archæological, and philological disquisitions, such curious gossip as Aulus Gellius gives us in all its glory a few generations later. Many are dramatic dialogues, more or less on the Platonic model; and here it is worthy of remark how the narrative faculty (we might almost call it the gossiping tendency) in Plutarch gets the better of the dramatic element. Thus the discourse on the genius or inspiration of Socrates (commonly but most improperly called the *Demon* or *Dæmon*, as if it were a familiar spirit), has a little about Socrates and a great deal about the revolution in Thebes; and the "Banquet" winds up with the story of Arion, told in a manner which is not exactly an improvement on the original briefer narrative of Herodotus. The old saying, *omnes res et quædam aliæ*, is constantly brought to mind. One hardly expects an allusion to tobacco in Plutarch; the very mention of such a possibility sounds like a bad attempt at a joke; and yet the following will adapt itself very readily to the practice of some smokers:

"Now supposing those strong perfumes that are used by many men should prove offensive to their wives, would it not be a great piece of unnatural unkindness to discompose a woman with continual fits rather than deny himself a pleasure so trivial?"—*Conjugal Precepts.*

It is but fair to note that the purely moral element frequently starts up and asserts itself in the dialogue and elsewhere when we are not imme-

* In "How a Young Man ought to hear Poems."

diately expecting it, showing that the ethical sentiment was natural to the author, and not assumed for effect. And his conceptions both of private and public morals are for the most part accurately formed and clearly expressed. His lively, vigorous common-sense often reminds us of Xenophon, even if (also like Xenophon) he sometimes verges on commonplace. When we read such sentences as these, our admiration of their spirit is tempered only by regret that they should be as necessary—and as unheeded—now as then:

"Then saith Solon . . . I hold that state happy and likely to remain democratic, in which those that are not personally injured are yet as forward to question and correct wrong as the person who is more immediately wronged. Bias added, Where all fear the law as they fear a tyrant [as they would fear an autocrat]. Thales said, Where the citizens are neither too rich nor too poor. Anacharsis said, Where, though in all other respects they are equal, yet virtuous men are advanced and vicious persons degraded. Cleobulus said, Where the rulers fear reproof and shame more than the law. Pittacus said, Where bad men are prohibited from ruling, and good men from not ruling. Chilo, pausing a little while, determined that the best and most desirable state where the subject minded the law most and the orators least."—*Banquet.*

What would a conclave of leading editors and politicians make of the above? Would it be Greek indeed to them or "Heathen Chinee"? Would they understand it sufficiently to pronounce it a collection of glittering generalities or sickly sentimentalities, something very dreamy and unpractical?

And these passages, though less startling, are sufficiently striking:

"Solon thought that house most happy where the estate was got without injustice, kept without distrust, and spent without repentance. . . . Thales held that home most happy where the master had most leisure and respite from business."—*Banquet.*

"Besides, I find, by my own observation, that those persons who make it their business to speak so as to deserve the favor and approbation of the scum of the people, ordinarily live at a suitable rate [on a corresponding scale?] voluptuously and intemperately. And there is reason for it. For they who have no regard to what is honest, so they make provision for other men's pleasures, will surely not be any propense to prefer what is right and wholesome before that which gratifies their own inordinate pleasures and luxurious inclinations."—*Training of Children.*

Yet, in spite of many such passages, we cannot regard this beautiful edition without a certain feeling of sadness. As we view its almost gorgeous binding and its lovely large type, reflecting meanwhile how little has been done to popularize Plato or acclimatize Aristotle, we cannot but regret that a little of the luxury lavished on Plutarch could not have been spared for his betters.

JUST PUBLISHED BY

PORTER & COATES,

822 Chestnut St., Philadelphia.

LONGFELLOW'S POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, by H. W. Longfellow, with the addition of 150 pages of entirely new matter never before published, making it one of the most elegant and complete works extant. With Introduction, Biographical Notices, and Translations, from the earliest period to the present time. By Prof. Henry Wadsworth Longfellow. Illustrated with engravings on steel and engraved title. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6; sheep, marble edges, library style, $7 50; half-calf, gilt, $9; Turkey morocco, $12.

'This valuable work contains selections from about four hundred authors, translated from ten languages. Mr. Longfellow himself gives us translations from all these languages but two.'—Allibone's Dict. of Authors.

'This edition has been revised and enlarged by the author, and contains his last touches and additions to his labors.'—The Age, Philadelphia, Nov. 3, 1870.

HEDGE'S PROSE WRITERS OF GERMANY.

A new and revised edition. With Introduction, Biographical Notices, and Translations. By Frederic H. Hedge, D.D. With Six Portraits on Steel and Engraved Title. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5; sheep, marbled edges, library style, $6; half-calf, gilt, $7 50; Turkey morocco, $10.

'There is no book accessible to the English or American reader which can furnish so comprehensive and symmetrical a view of German literature to the uninitiated; and those already conversant with some of the German classics will find here valuable and edifying extracts from works to which very few in this country can gain access.'—Prof. A. P. Peabody, in North American Review.

A New Globe Edition of

THE WAVERLEY NOVELS.

By Sir Walter Scott. In 16mo size, on toned paper, illustrated. The most attractive edition for a small amount of money published in the country. Complete in 23 vols. Green cloth extra, per vol., $1 25; per set, $28 75. Half-calf, gilt back, per vol. $3; per set, $69.

"Hymns for Daily Use."

Contains 128 pages of Hymns and Tunes which every one should know. "Just the book we want for Prayer-Meetings."

Only $15 per hundred copies, in stiff covers.
" 10 " " in paper covers.

Sample copy mailed on receipt of 20 cents.

TWO NEW BOOKS.

I. MY STUDY WINDOWS.

By JAMES RUSSELL LOWELL. 1 vol. 12mo. Uniform with "Among My Books." $2.

CONTENTS.—My Garden Acquaintance; A Good Word for Winter; On a Certain Condescension in Foreigners; A Great Public Character (Hon. Josiah Quincy); Carlyle; Abraham Lincoln; The Life and Letters of James Gates Percival; Thoreau; Swinburne's Tragedies; Chaucer; Library of Old Authors; Emerson, the Lecturer; Pope.

This new volume of Essays appears in response to a demand created by the remarkable favor with which Mr. Lowell's recent volume, "Among My Books," has been received both in this country and in Europe. It has greater variety, and will commend itself to a large circle of readers, while it possesses in equal degree the ample scholarship and the unusual vigor and felicities of thought and style which secured so hospitable a welcome to his previous book.

II. MECHANISM IN THOUGHT AND MORALS.

By OLIVER WENDELL HOLMES. 1 vol. 16mo. $1.

This book contains Dr. Holmes's Oration, delivered before the Phi Beta Kappa Society, at Harvard University, in July, 1870, with copious notes and amplifications. It discusses some very curious psychological questions with great clearness and force, so that a subject which in ordinary hands would be simply tedious is made exceedingly interesting by the wealth of illustration and characteristic freshness with which it is treated.

*** For sale by all Booksellers. Sent postpaid on receipt of price by the Publishers.

WILLIS'S PRINCIPLES OF MECHANISM.

JOHN WILEY & SON,

13 ASTOR PLACE,

Having made special arrangements with the English Publishers for the sale in this country, offer to the Trade and Public,

PRINCIPLES OF MECHANISM,

designed for the use of students in the University, and for Engineering Students generally. By Robt. Willis. New and enlarged edition. 1 vol. 8vo, cloth, $7 50.

*** The above will be supplied to the Trade on the same terms as our own Publications.

J. W. & S. have recently published

WARREN'S MACHINE DRAWING.

Elements of Machine Construction and Drawing; or, Machine Drawing, with some elements of Descriptive and Rational Cinematics: a Text-book for Schools of Civil and Mechanical Engineering, and for the use of Mechanical Establishments, Artisans, and Inventors, containing principles of Gearing, Screw Propellers, Valve Motions and Governors, and many standard and novel examples, mostly from present American practice. By S. Edward Warren, C.E., Professor in the Troy Polytechnic Institute. 2 vols. 8vo—one of Text and one of Plates, $7 50.

TWO HIGHLY IMPORTANT ASTRONOMICAL WORKS,

Issued by

SCRIBNER, WELFORD & CO.,

By arrangement with the English publishers.

I.

NOW READY.

THE HEAVENS.

An Illustrated Handbook of Popular Astronomy.

BY AMEDEE GUILLEMIN.

Edited by J. NORMAN LOCKYER, F.R.A.S., F.R.S.

A new edition, revised by RICHARD A. PROCTOR, B.A., F.R.A.S.

1 vol. 8vo, profusely illustrated.

Reduced in price from $10 50 to $4 50.

CRITICAL NOTICES.

"If anything can make the study of astronomy easy and engaging to ordinary minds, it will assuredly be a work of the attractive style and handsome—we may almost say sumptuous—aspect of M. Guillemin's treatise on "The Heavens." It deserves to be spoken of with all praise, as one toward which author, editor, illustrator, and publisher have equally done their best. Of the translation itself we cannot speak too highly. It has all the force and freshness of original writing."—*Saturday Review.*

"The publication of this splendidly-illustrated handbook of popular astronomy is quite an era in the art of popularizing that most exciting of sciences. No book has ever been published calculated in an equal degree to realize the different astronomical spectacles of the heavens to the mind of an ordinary reader. Of all the marvels of astronomy, M. Amedee Guillemin and his gorgeous illustrations give us a far more vivid conception than any work on the subject known to us."—*Spectator.*

II.

WILL BE READY SHORTLY.

THE SUN:

RULER, FIRE, LIGHT, AND LIFE OF THE PLANETARY SYSTEM. By RICHARD A. PROCTOR, B.A., F.R.A.S., author of "Other Worlds than Ours," "Saturn and its System," etc. 1 vol. crown 8vo, cloth, $5 50.

The author of this work is distinguished as one of the boldest and most original of investigators, and in the Sun he has a subject of surpassing attraction. Mr. Proctor's aim is to give a full account of the remarkable discoveries made regarding the Sun, "with a complete explanation of the principles on which recent researches have been founded." In addition to the latest results of Spectrum Analysis applied to the mysterious phenomena of the Sun's corona, and the red prominences seen in total solar eclipses, etc., the work furnishes a view of the entire progress of discovery, culminating in our present knowledge of the Sun's condition. A profusion of illustrations, drawn by the author from his own observation, on wood, and fine colored plates, complete the object of bringing nearer to our conception the unspeakable glories of the Solar Orb.

These works sent by mail, post-paid, on receipt of the price, by

The Nation.

NEW YORK, THURSDAY, FEBRUARY 9, 1871.

The Week.

If any one is still in the dark as to why the majority of people in France are distrustful of the Republic, and prone to seek repose under despotism, we advise him to read carefully the history of the last week. We are now witnessing the natural and unavoidable consequence of not summoning a National Assembly immediately after the fall of the Empire. Nothing but a certainty of success could have justified rational men in prosecuting the war without the authority or support of some recognized embodiment of the national will, because —and this consideration seems too obvious to have escaped notice—in case of defeat there would be nobody competent to make peace, or willing to take the responsibility of making the concessions necessary to secure peace. Defeat has now come, and the National Assembly *has* to be summoned, but it is summoned under the most humiliating conditions—that is to say, by Prussian permission, and under Prussian protection. And now comes into full prominence the inherent falsehood and absurdity of the "Government of National Defence." Gambetta was sent out, appropriately enough, in a balloon, to act as Minister of War and organize armies for the relief of Paris. He at once went to work to call out the levies provided by the law of 1867, and got them out. He formed two armies, of raw farm-boys, officered them in large part with privates and non-commissioned officers of the regular army, and sent them immediately against the enemy. They have been beaten easily, until of late the Prussians have dispersed them with artillery, as they might disperse a mob, and capture them by brigades, Gambetta all the while shrieking defiance. Paris has fallen, and the "Government of National Defence" has done at last what it ought to have done at first, called on the French people to express its will with regard to the prosecution of the war. Gambetta, however, is determined to go on doing what he calls "fighting to the death;" and as one "Government of National Defence" is as good as another, and as a committee formed in the streets in Bordeaux is as competent as a committee formed in the streets of Paris, he set up Government No. 2 in the former city, whose business it was to carry on the war, even if the Paris Government made peace. Moreover, Gambetta, though only Minister of War under Government No. 1, under Government No. 2 assumed the functions of Minister of the Interior, and issued decrees defining the qualifications of candidates for the National Assembly. Nay, more—inasmuch as the National Assembly is to be a constitutional assembly, intended to set up a government where none exists, his prescribing to the constituencies whom they may elect indicated that he considered himself the Minister of Eternal Justice.

The probable effect of all this on the deliberations of the Assembly is, of course, obvious. The Republic was never likely to find much favor with it, or, if set up, to be set up for any better reason than that there was less diversity of sentiment about it than about anything else. But after the display which its leading advocates have been making of themselves, and the termination to which they have managed to bring the war, there is not much likelihood of its permanent establishment. Men who in the presence of the enemy split one provisional government into two, and who, after a series of defeats unparalleled in history and without the simulacrum of an army left, propose to fight on, are hardly likely to have much weight attached to their recommendations. Even if the Republic is established, it will doubtless be a conservative Republic, and the radicals will go to work to denounce it and plot against it; and it will go to work to strengthen itself by restoring the standing army and drawing tight once more the reins of centralization, and so on. We have sketched the probabilities more than once, but any one who is familiar with the history of the last forty years of French history can sketch them for himself. The first thing to be done now would seem to be to lock Gambetta up, and yet, if he were locked up he would become a glorious martyr. Who can help feeling sympathy for Jules Favre, who, in spite of an unfortunate tendency to cry over spilt milk, seems to have preserved his senses and his unselfishness? But he will unquestionably be before long, if he has not been already, added to the long list of French "traitors."

Although the French have certainly the strongest claims upon our charity, it ought not to be forgotten that the Germans are suffering deeply too. They have lost terribly in action and through the hardships of campaigning, and their losses are made all the more painful by the fact that their Landwehr, who are nearly all married men, have been in the field ever since Gravelotte. The Kummer division, which, finding itself assailed by a superior force at Bazaine's last great sortie, on the 17th of October, and the gaining of time being imperative, set its back to the wall and died *en masse* as it stood, was composed almost altogether of fathers of families. The misery wrought by one such day it is not in human power to calculate. Moreover, the Germans have had to support 400,000 French prisoners, a vast number of them sick and wounded—a burden before unknown in war. We must remind sensible people, too, once more, of the absurdity and injustice of the outcry raised against the Germans on account of their exactions and devastations. This outcry is heard against every invading army in every war; and it is raised in each war with as much vigor as if the world had never heard of war before, and as if "requisitions" and "contributions" and plundering were novelties in warfare, and as if the fact that these things are and have always been the inseparable accompaniments of war is not foremost among the reasons which make good and thoughtful men willing to move heaven and earth to avoid war. An invader inevitably becomes cruel and exacting as hostilities go on. He becomes so in the interest of his own safety. When men are dying at the rate of a thousand a day, and the fate of a nation is trembling in the balance, a peasant's roof-tree, or his horse, or his haystacks, become mere bagatelles. It must always be so. The North wasted and wrecked in the South when anything was to be gained by wrecking and wasting. The proper objects of denunciation for all these horrors are, therefore, not the Germans, or any other belligerent troops, but the wretches of all nations who foster the war spirit, and seek the solution of international controversies, not in reason, but in the wild impulses of their own savage and tumultuous breasts.

Excepting the theatre of the war in the East, all hostilities ceased in France immediately after the conclusion of the armistice which surrendered Paris. We hear, it is true, of the occupation of Abbeville by the Prussians without a fight, and of some movements in the vicinity of Yvetot, but all these took place within the limits dividing their forces from those of the French, according to that agreement. The troops of Frederic Charles and Chanzy—the only French general who has preserved something like an army—are separated by a line drawn from a point on the Channel between Honfleur and Caen to a point on the Loire between Tours—now the headquarters of the Prince—and Angers. In the East, fighting was continued in the vicinity of Pontarlier, in the Department of Doubs, General Manteuffel repeatedly assailing the rear-guard of the retreating French, and capturing nineteen pieces of artillery and fifteen thousand prisoners, and "nests of eagles," while the bulk of what was formerly Bourbaki's army—about sixty thousand—crossed the Swiss frontier and laid down arms chiefly in the Canton of Neufchâtel (in German Neuenburg, which our Cable reports, or their expounders, most ludicrously mixed up with "Neuenburg, on the Baden side of the Rhine") .Garibaldi's command, too, seems to be broken up. This continuation of the fighting was loudly complained of at Bordeaux before the exact tenor of the Versailles armistice was known there; and some of our daily papers even now write explanatory and apologetic remarks about it, after having given, in abstract and in full, the text of the armistice, including these words: "Military ope-

rations in the territory comprising the Departments of Doubs, Jura, and Côte d'Or, as well as the siege of Belfort, will continue independent of the armistice until an agreement is arrived at regarding the line of demarcation, the tracing of which through the three departments mentioned is reserved for an ulterior understanding." This supplementary agreement is now reported to have been concluded.

The most important communications concerning the political situation in France arrive from Bordeaux, where Gambetta and his followers seem to be inclined to keep or to put up an executive machinery independent of the majority of the Government of National Defence, remaining in Paris. On receiving the first despatch from Favre, announcing the armistice, Gambetta, expressing the "country's feverish anxiety" about it, telegraphed to Paris that he "could not order the elections for the National Assembly without further explanations." Soon after, he issued a proclamation to the people urging the necessity of "continuing with unrelaxed vigor the organization for defence, and for war, if necessary," and of "installing a National Republican Assembly, willing to make such a peace only as is compatible with the honor, rank, and integrity of France;" and also a decree ordering the elections for the 8th, but disqualifying as candidates all members of the Bourbon, Orléans, and Bonaparte families, as well as all persons who, under the Second Empire, acted as ministers or councillors of state, senators, prefects, or official candidates. This disqualification clause was protested against by twelve opposition journals at Bordeaux, and, as it seems, by public opinion in the North generally; disavowed by Jules Simon, who arrived in that city soon after its publication; ignored in the corresponding election decree issued by Jules Favre in Paris; declared by Bismarck contrary to the stipulation of the armistice; and finally annulled by a special decree signed by all the members of the Paris Government, and maintaining the supreme authority of the latter. Gambetta, however, defended his ordinance, as "frustrating the plans and insolent pretensions of Bismarck and his Imperialist accomplices," and issued a declaration maintaining the electoral disqualifications, and signed by himself, Glais-Bizoin, Fourichon, and Crémieux, who has since left for Paris, to explain the state of things. The Paris Government, on the other hand, is reported to have finally withdrawn all the powers of the Bordeaux Delegation. Amidst all this confusion, the elections (for 753 deputies) were to be held on the 8th, and the National Assembly to be opened on the 12th.

It is certainly of evil augury for the speedy conclusion of a definitive treaty of peace that the National Assembly is to hold its sittings at Bordeaux, a city with an excitable southern population, yet untouched and almost unthreatened by the war,and fired with the reckless patriotism of the Gambetta faction. Scarcely had the news of the surrender of Paris reached the capital of the Gironde when its municipality protested "against peace on any dishonorable terms," and implored the Delegation to remain at their post. A few days later a public meeting was held, in which a Committee of Public Safety was nominated for the future government of France, including Gambetta, Louis Blanc, and Rochefort. Whether these three, of whom the first thunders against "the insolence" of the German Chancellor, the second called the Prussian King "the Attila of the nineteenth century," and the third announces a new journal which "will advocate regicide," were thus chosen to carry on peace negotiations with Bismarck and William, or immediately to renew the war with them, is not stated. Another mass-meeting formally called upon Gambetta "to accept the Presidency of a Committee of Public Safety, and prosecute the war to the death." And if there be truth in the Cable report of a response made by the Prefect of the Department, in the name of Gambetta, to a later demonstration, that member of the Delegation will hardly be inclined to listen to the peaceful advice of the members of the Paris Government, who are to appear at Bordeaux to justify their conduct before the Assembly—a motley gathering, which it may not be impossible to terrorize into an attitude opposed both to the will and the interest of the people. However, it may be unjust to judge the intentions of Gambetta by his words. The populace of Lyons, with Bourbaki's defeat and Manteuffel's army before it, talks like that of Bordeaux, and clamors for the "Commune."

The cities of the North, however, loudly declare in favor of peace. That Paris, too, desires peace, in spite of all clamors to the contrary, cannot be doubted. In that capital, care for the opening of new supplies and preparations for the election engross all thoughts. All shades of parties seem to be active, and we hear of different electoral tickets, embracing "Reds" like Félix Pyat, Rochefort, and Delescluze; radicals like Victor Hugo, Garibaldi, Quinet, and Gambetta; moderate republicans like Jules Favre, Jules Simon, Picard, Pelletan, Emanuel Arago, Garnier-Pagès, and Jules Ferry; and monarchists like Thiers, Changarnier, and Keller. A report, which may or may not be founded on impartial observation, has it that "neither the Government of National Defence, nor the Red Republicans, nor the Imperialists have any chance of carrying the elections," and that "the public favor the moderate party"—which means the Orleanists. In the interest of the latter, the Duc d'Aumale has issued an address to the French electors, in which he reserves his opinion as to peace or war, speaks of the advantages of monarchy for France, draws a contrast between the France ruled by his father, Louis Philippe, and the France of to-day—a contrast which it required but too little skill to bring out—and declares his determination to be faithful to the Republic should the nation resolve to retain it. Trochu has declined to stand as a candidate, while Garibaldi is reported ready to represent Nice, his native land—which,with a consistency peculiarly his own, he will probably reclaim from France in case this country re-erects the throne. No opposition to the elections seems to be made by the Germans, even in the districts which they are determined to sever from France. The conditions of peace they mean to impose upon their prostrate neighbors are still kept secret, and the Emperor William not only speaks of the possibility of the war being renewed, but actually calls out fresh reserves—which is probably meant as an answer to the taunts from Bordeaux. Paris, which surrendered nineteen hundred pieces of artillery and about one hundred and eighty thousand regulars, marines, and Mobiles—besides the National Guard—has to pay for the armistice forty million dollars, and may soon have to pay more, possibly much more, for peace.

Foreigners have in the meantime but one duty, and that is, to do what they can to relieve the awful suffering caused by the war. A committee of the Chamber of Commerce has, we are glad to see, been formed in this city to collect and take charge of and forward contributions of all kinds, including supplies and seed for sowing the crops in spring, of which whole districts are now destitute. A similar movement has been begun in Boston. Of course, contributions in kind will take a good while to collect and forward; but in the meantime $10,000 have been placed at the disposal of Mr. Washburne by telegraph, and we trust other sums will rapidly follow. Money is what is most of all needed, and for the simple reason that money will bring speediest relief to the suffering. For the seed for their farms they can wait for some weeks; but food they must have now. We can only say that the reports of the agents sent out by the English for the relief of the peasantry in the rear of the hostile armies more than confirm the stories told by newspaper correspondents of their privations. They have in many places been fought over, then levied on by the Prussians, and levied on by their own armies, and informally robbed by the Francs-Tireurs. Nothing but prompt succor will prevent famine and pestilence next year. It must not be forgotten, too, that nobody's opinions as to the origin of the war ought to affect his action in the matter of relief. Congress has passed a resolution requesting the Government to furnish national ships for the conveyance of the supplies, which is an excellent idea; but the project was near being marred by an unseemly discussion as to whether we were more indebted to the French or Germans, the idea of some senators being apparently that acts of Christian charity should never be done except as a *quid pro quo*, and that whenever you are asked to do any helpless or suffering person a kindness, you should look in your diary and see whether he had ever done you a kindness, and then strike a balance, and see whether there was anything coming to him.

The admission of Mr. Joshua Hill as rightful Senator from Georgia has been the most marked event of the week in the Senate. The majority which ordered this simple act of justice was a large one, and Mr. Hill's colleague, Mr. Miller, will doubtless soon take his seat beside him. The Senate has passed the Consular and Diplomatic and the West Point Appropriation Bills, and a useful bill from the House to protect the food fishes on the coasts of the United States. On Wednesday week, the House, after a turbulent debate, virtually abolished the iron-clad oath for persons not constitutionally disabled from holding office. On Thursday, it very properly refused to extend the time for building the St. Croix and Lake Superior Railway, thereby saving the country a million of acres; but on Monday it gave a chance of success to the Southern Pacific Railway, by taking it from the Speaker's table. The Judiciary Committee has reported adversely to the McGarrahan claim, and one could wish that this might be the end of the swindle.

The Statement of the National Debt on the 1st of February shows a reduction of four millions on the net total of indebtedness. The bonded debt has been diminished nearly eleven millions, and the accrued interest reduced fourteen millions, making an apparent reduction of twenty-five millions, but as twenty-one millions of these were paid out of cash resources previously on hand, the real reduction out of surplus revenues is only four millions. The coin now in the Treasury, belonging to the Government, is sixty-seven millions, against which it owes twenty-one millions of accrued interest, leaving forty-six millions as the accumulation of coin upon which some persons base their anticipations of an early resumption of specie payments. The currency balance is nearly six millions lower than last month, which is a move in the right direction, reducing somewhat the extravagant amount of cash lying idle in the Treasury vaults, while we are paying six per cent. coin interest on the bonds. The Secretary's financial programme indicates a continued adherence to the wise policy of reducing the cash balances, since he proposes to sell only four millions of gold while buying six millions of bonds; so that, from this alone, his cash balance is likely to be diminished at least two millions. There is no good reason why it should not be reduced fifteen or sixteen millions more.

The very best thing the advocates of the San Domingo Annexation scheme could do to push it, would be to get England to entertain a secret hankering after it, or, failing England, Prussia or Spain. The report that Bismarck was determined to have it was worth any money as long as it lasted; but it reached the rascal's ears at last, and he has accordingly written over, declaring he has not the least desire for it or any other territory on this side the Atlantic. This is very awkward; but is there no consolation to be found in the fact that Bismarck is a very unscrupulous person, and does not mind what he says? In the meantime, we have some ships of war at Hayti, whose mission, it appears, is to warn the Haytians not to interfere, on pain of being bombarded—a not unnecessary precaution, as it was undoubtedly the interference of the Haytians which prevented the consummation of the last Spanish occupation. The Haytian opposition is, unfortunately, hardly sufficient to rouse popular feeling on the subject. On the whole, we think it may be said that the annexation plan, as far as it has yet gone, is one of the least creditable transactions in diplomatic history. The letter of Admiral Lee, in command of the United States ships off the island, recommending annexation at any cost, is one of the most objectionable passages in the story.

A jury has been found, in Ohio, to convict a husband of manslaughter for murdering a man whom he suspected of seducing his wife. He prepared for the crime with great deliberation, chose his pistol carefully, and practised with it the day before. The defence was, as usual, insanity; but it broke down. There were the usual scenes in court, but the fact that he was not acquitted in triumph as "a guardian of the family" shows that public sentiment is improving. He has gone to jail for ten years, with hard labor.

Somebody—"a valued friend"—wrote to the New York *Tribune*, from Washington, arguing against the absurd plan now proposed of reviving American shipping by levying duties on shipbuilding materials, and then handing the money over to ship-owners to enable them to sail the ships, which, without this aid, they could not do. He suggested that, instead of this, these duties should not be levied, and, the shipbuilders being thus enabled to build ships more cheaply, the ship-owners would not need subsidies. To this the *Tribune* replies, that it is opposed to this plan because it would not be "effectual" (whatever this may mean), and would "encourage smuggling," and would give "the lower class of demagogues an excellent lever for upsetting our whole tariff system, by crying out, 'Farmers, why should *you* not have your iron free, etc., as well as these millionaire ship-owners, etc.?'" There is no doubt it would; but then there is nearly as much mischief in mentioning this as in doing it. "The lower class of demagogues" can also demand subsidies, by parity of reasoning, for the farmers as well as free iron. For instance, most farmers now find it very hard work to make ends meet, particularly in New England. With a subsidy of say one hundred dollars an acre, every farm in the East would pay beautifully. So we shall have the Demagogues saying, "Farmers, is it not as important that your fields should bear crops as that the bloated ship-owners of New York should plough the ocean with their fleets?—and yet Old Greeley is willing to pay them large salaries out of the public treasury for following their own business, while to you he is not willing to give a cent. How long, Farmers—how long"—etc., etc.

Money is very easy, but not readily obtainable for new investments. Stocks are higher but not active; Government bonds firm. The risks of the Farmers' and Mechanics' Life Insurance Co., recently suspended, have been transferred to another company, approved by the Superintendent of the Department at Albany, so that the insured are better off than was at first anticipated. Real estate continues in a rather unsatisfactory condition, but without any positive decline, and in some instances even at an advance. Sales, however, are very restricted, few new buildings are contemplated, and the tendency of rents is apparently downward. The great coal strike continues, and is now alarming the railroads and the iron-furnace owners, several of which latter have suspended operations, nominally in consequence of the deficient supply of coal, but in reality, probably, because the business has not for some time past been over-profitable. The earnings of some of the roads, especially those which are not themselves owners of large coal properties, are materially reduced by the strike, and their whole business deranged. But so far, no one has been able to suggest any relief, and the first and only sign of a prospect of any change is the departure last week of a colony of Welsh miners from the Lehigh region to some of the newly-discovered coal-fields in the Western States. The production of coal for 1870 is more than two million tons, over twelve and one-half per cent. in excess of consumption. No amount of striking can permanently remedy such an evil. There have been some failures in the provision trade, especially among the butter speculators, but on the whole trade seems to be steadily gaining in regularity and stability.

The general business of the country continues fair but light, and some disappointment is expressed at the very quiet tone of all trade. But the latter is unquestionably due to the cessation of speculation of almost every description, which has been freshly illustrated by the complete indifference with which the surrender of Paris has been everywhere received. Breadstuffs and provisions, which were to advance enormously, have, instead, rather declined, while cotton has been weak and lower. The demand for bills for remittance to Europe has been slightly in excess of the supply, and a moderate amount of gold has had to be sent instead. The premium has, in consequence, advanced one and one-half to two per cent., and a feeling is growing up that large shipments are in prospect. The drain of coin from England to the Continent is thought by many to be only temporarily suspended, and to be subject to an early renewal, which might have the effect of compelling enlarged shipments from here, and an advance in the premium. But the condition of the foreign exchanges, though as yet far from healthy, is sounder now that at any time since the war at this season of the year.

THE WEST POINT TROUBLES.

The state of things at the West Point Academy, though on the surface it is only a question of military education, really throws fresh light on some of our most puzzling political problems. We do not mean to say that it offers any aid in solving them, but it certainly helps us to an understanding of their real nature; and no doubt it may be said that this *does* promise to render their solution all the easier. The school has had a brilliant and yet somewhat unfortunate history. It has proved a first-class instrument for the training of soldiers, but it also proved, in the days of slavery, a nursery of pro-slavery sentiment. This was by no means surprising, considering the extent to which this sentiment pervaded society, the church, the schools, and colleges, and associations of all kinds, all over the country, especially as the Academy always contained a large and by no means timid or retiring Southern element; and considering, too, that in the art of war obedience occupies the same exalted position among the virtues that it had of necessity to occupy in pro-slavery sociology. It is not possible, indeed, to make a man a good soldier without making him deeply sensible of its value and importance; and when we say that in all modern democratic societies, and more particularly in that of the United States, obedience has not only lost the character of a virtue, but is rapidly assuming that of a discreditable weakness, if not of a vice, we indicate in a very few words the great difficulty which the West Point school, or any school similarly organized, must always have in maintaining itself in a community like ours.

The school was getting rid of its unfortunate pro-slavery troubles, and was in a fair way of profiting by the splendid part its graduates had played in the war, and by the stern lesson of the importance of order and discipline which the war had given to a vast body of young men of all classes and conditions, when it encountered another difficulty which it has not yet surmounted, and which there is no knowing whether it will be able to surmount. The anti-slavery agitation had two effects on the popular or—if we may make the distinction—on the political mind of the country. It did a great deal—did what, perhaps, no other agency would have done—to clear people's conceptions as to the proper bases of the social organization. It gave the ideas of justice, equality, and human brotherhood a lodgment in the national conscience which they perhaps could not otherwise have secured without centuries of preaching and learning. But it also presented the world with the spectacle of a tremendous social and political revolution achieved within the lifetime of a single generation by the plainest and simplest presentation of a few homely moral truths. It was conducted without art, or method, or even tact. It won through sheer courage and persistence. It owed nothing to learning, skill, or discipline. It consequently fell in with and helped greatly to strengthen a tendency which has been growing rapidly ever since the application of steam to locomotion led to the growth of what may be called a great pioneer population at the West, and to an unprecedented influx of ignorant immigrants from Europe: the tendency to underrate learning, skill, and discipline, and to treat them as the instruments or toys of a worn-out civilization—the devices of privileged classes to justify their own monopoly of the work of government or direction—which has had a strong influence in lowering the character of the judiciary and the bar as well as of the legislatures.

The great success of the agitation, too, brought to the front and gave a powerful control over affairs to a class which we have taken the liberty of calling Sentimentalists for short, but who might more correctly be called "*à priori* politicians," and whose leading peculiarities we have more than once sketched. One of these is hostility to or profound distrust of *training* of all kinds. Some of them are really philanthropists who have been overpowered by the fumes of transcendentalism, but they have been reinforced by a larger body of mere ignoramuses, who delight in the *à priori* system not so much because they believe in an inner light as because it exacts no qualifications of anybody, and permits of no distinctions except those based on each man's account of the condition of his own heart. The influence of this party on legislation we have often described in the columns of the *Nation*. The badness of its effects on the character of politicians and on the administrative system it would be difficult to exaggerate. It is the great obstacle to a reform in the bar, in the judiciary, in the civil service, in the prisons, and to rational temperance legislation. It has begotten the Woman's Rights agitation—which is a different thing from woman's rights—and by its general hostility to tests, and to all systems of accountability, it may be held indirectly responsible for much of the prevailing political and commercial corruption.

In this class the West Point Academy finds, it need hardly be said, an uncompromising and jealous foe, eager for its destruction as a bad relic of a bad state of things. The entrance of the colored cadet into the school was, therefore, more than the assertion of the rights of an oppressed race; it was to be a test which was to reveal the rotten moral condition of the institution. It must be admitted that, considering the state of feeling about colored people among the white population of the country at large, from the bosom of which the white cadets come, it was a pretty severe test. The number of white persons in the United States who are willing to or who do in practice associate with colored persons on terms of perfect equality might, we venture to say, be contained in one room of moderate size, so that in asking the cadets to receive the new-comer with perfect cordiality, we were asking them for a display of self-control, not to say of moral heroism, of which, unfortunately, their fathers and mothers and uncles and aunts have not as yet shown themselves capable. It is not quite fair, it must be remembered, to cite against the West Point students the example of the comfort and equality enjoyed by colored students at Yale and Harvard and some others of the non-professional schools. In all of these a student's life is a very independent one. He eats, or it may be sleeps, where he pleases, and need never meet his classmates except at recitation. The relation in which students stand to each other may be, therefore, and in the majority of cases *is*, one of mere acquaintanceship. At West Point, on the contrary, the college takes complete possession of the student, and forces him to eat, sleep, and sit, and march in close contact, with all his fellows, and cuts him off, except under certain stringent restrictions, from all intercourse with the world outside, and this on an isolated plateau remote from any large town or city. A disagreeable mate becomes, under such circumstances, doubly disagreeable, and the prejudices and idiosyncrasies which forced companionship always brings out, are developed and strengthened. We are not now passing any judgment on the treatment experienced by Cadet Smith. We have no doubt his position has been very trying, and his treatment hard to bear. One only needs a little knowledge of human nature to know this; but it is unjust to throw the blame of it all on West Point or the West Point system. The root of his troubles is to be found in public opinion. When we see colored people generally rated in society as they ought to be, and as white people are, by their looks, and manners, and education, and character, we shall have a right to be uncompromising in our condemnation of the position of the white cadets towards Smith, but hardly any sooner. The easiest remedy to apply would be the break-up of the barrack system, and the relegation of the students to their own control, except at stated hours; but the difficulty in the way of this is, that the object of discipline, in the military sense, is, first, the formation of certain habits, and, secondly, the impressing on the mind the importance of small details—important in all pursuits, but nowhere so important as in war—and neither of these things seems possible without taking entire possession of the pupil.

The Congressional investigation which has just taken place into the outrage committed on three students of the first class by their fellows, has brought out into strong light the nature of the influence exercised on the Academy by "politics." "Politics" has, in fact, brought its discipline to the lowest possible ebb. In the first place, if we are correctly informed, the present superintendent not only was not entitled to his place in virtue of his acquirements—he graduated very low, almost the lowest in his class—but he owed it mainly to the early adhesion of a relative to the famous "policy" of Mr. Andrew Johnson, and the school has with his advent been removed from the management of the Engineers, in whose hands it has always hitherto been, and in whose hands, as the most highly trained body of officers in the profession, it ought always to remain. This is bad enough; but, in the second

place, the influence of individual Congressmen at Washington on the War Department has practically deprived the officers of the institution of the power of enforcing discipline. In a large number of cases of late —twenty-two, it is said, but we will not vouch for the exact number— sentences of court-martial have been set aside by the War Department on the demand of "men inside politics," and the culprits sent back to their duty. This abuse has been perpetrated, as might have been expected, notably in the interest of liars. Lying is a serious moral and social offence; it is a still more serious military offence. No liar can be tolerated in a body which has to rely so strongly for its comfort and credit on the honor and self-respect of its members as the army officers. It is destructive of character and discipline, and would, at the school, double the work of supervision. Officers and sentries have to take the word of cadets as to their observance of a good many rules, and probably nothing does more to keep up the moral tone of the institution and enable it, in spite of the prevalence of certain other vices, to produce the one body of public servants who have for a century served the Government unto death, without cheating it or stealing from it, than the pains taken to secure truth-telling. "Politicians," however, look on lying as a very trifling offence; most of them lie consumedly; it plays a prominent part among the tools of their trade. Sentimentalists, too, have no great horror of it. Indeed, if a man "is sound on the main question," whatever it may happen to be, they will excuse a great deal of lying; and some of their most honored and admired members are notoriously mendacious. Their very system, indeed—and particularly that feature of it which consists in ignoring facts—helps to form a habit of untruthfulness.

The readiness with which Congressmen and others rush to the War Department and obtain the remission of sentences passed for this offence is, therefore, easily understood. The cadets have, consequently, been reduced to despair with regard to its suppression by the constituted authorities, and, in their despair, some members of the first class carried three delinquents off to the mountains in the night, and warned them not to return. It was a gross outrage, but here, again, the sin and shame lie not so much with the young men who have committed the outrage, as with the community which permits its leading educational institution to remain in the control of the worthies whose nominees fill the civil service. If we are going to have reform, therefore, let it be thorough. These Congressional investigations are a sorry and disreputable farce. They cannot restore discipline. The committees are sent out by and report to a body which hates discipline. If we went to Yale, or Harvard, or any other leading college of the country, and asked their managers whether they thought they could conduct them to the promotion of sound learning and good morals and manners if subject to the same kind of supervision as that from which West Point suffers, they would answer unanimously and emphatically no; and we have no hesitation in predicting for West Point, as long as it forms part of the party "spoils," a steady and uninterrupted decline. Unless some means of delivering it from Congressional influence—a reform in the civil service would do it—can be devised, it were far better its work were undertaken by some of the existing universities which have absolute control of their own funds and rules.

THE MAJORITY IN FRANCE.

It is calculated that the peasantry, or at least the inhabitants of the rural districts either engaged in agriculture or in occupations closely connected with agriculture, form three-fourths of the population, and, therefore, of the voters of France. They will, consequently, probably exercise a larger influence not only on the composition but on the policy of the coming Constituent Assembly than any other class, and it is likely to be greater at this election than at any other which has preceded it, owing to the derangement of the administrative machinery through the war. When this machinery was in good working order, the peasantry voted, under the dictation of the Government for the time being—in 1848, for instance, under the direction of the republican commissaires, of whom Emile Ollivier was one, despatched from Paris for the purpose; and in 1852, and ever since, under the direction of the imperial prefects and maires. This explains the fact that the party in power in France has always an enormous majority in its favor whenever it submits any question to the people. M. Gambetta would now have an enormous majority in his favor if he had the machinery in good repair. Its partial paralysis over two-thirds of the country makes it probable that the peasantry will this time be more influenced in casting their ballots by their own hopes, fears, and prejudices, and by the advice of the curés, than they have ever been before. Their mental and moral condition is, therefore, just now a subject of considerable interest.

The hopes which the French liberals began to entertain in 1869, under the influence of three or four victories achieved in the rural districts over official candidates, of effecting a peaceful change in the character of the Government through the ballot-box, led to a good deal of discussion of the peasantry from the political point of view; and in the course of this discussion an interesting little volume was produced on the subject by M. Ferdinand de Lasteyrie, a member of the Institute and a distinguished Liberal member both of the Chamber of Deputies under the Orleanists and of the National Assembly before the *coup d'état*. He wrote with special reference to the elections then pending, and his observations have, of course, since then gained rather than lost in value. From them we shall try to give some idea of what the condition of rural life in France is.

As regards religion, no generalization would be accurate. There is the greatest difference in the strength of the religious sentiment in different parts of the country. In the neighborhood of the great towns it can hardly be said to exist; on the other hand, in the remoter districts, such as Bretagne, there remains to this day the old intensity of, and, we may add, the old unity of, belief. There are here no sects. The population is wholly Catholic and bigotedly Catholic. In other districts, where Protestants are to be found in large numbers, the effect of the division on the religious feeling of the community varies considerably. In old Poitou, for instance—the region around the beloved Rochelle of the Huguenots—where the fires of fanaticism on both sides once burnt so fiercely, the Protestants are now generally sceptical, and the Catholics indifferent. On the other hand, go into Alsace and Lorraine, where the Germanic element predominates in the population, and we find strong and deep religious feeling combined with complete toleration. Protestants and Catholics live in perfect harmony in the same villages. In the valleys of the Cevennes, on the contrary, the religious hates are still fierce and bitter, and are intensified by political differences. Through the greater part of rural France, however, Protestants are unknown outside the towns, and the Catholicism is neither very warm nor very cold. The peasant women are, almost universally, at least regular in their attention to church ordinances—those who are not really pious being kept to their duty by public opinion, or, more correctly, by the sharp tongues of their neighbors, who, if a woman failed to take the sacrament, for instance, would be sure to impute it to her inability to get absolution from the curé for some mortal sin.

The men are tolerably diligent church-goers, and for much the same reasons which influence the bulk of church-goers here. Some go from habit, others under the influence of sincere belief, and all in order to make a little break in the monotony of life. There are few peasants, however, who are not superstitious, even if not religious. The most indifferent and sceptical get their cattle blessed by the priest once a year, and are pretty sure to meet the devil now and then either in the shape of a wolf, or of a grey dog, or a black cow, or a white hen, in a wood, or a ruined castle, or other lonely place. The influence of the priest is great, though perhaps not as great as is commonly supposed. He is usually the only man of any education in the commune with whom the peasant comes in contact—that is, the only man competent to give advice or explanation on the few moral and social problems by which the peasant mind is troubled. The priest, too, it must be admitted, not only connives at but encourages superstitious observances and beliefs, his horror of rationalism leading him to regard the state of mind which generates them, if not as religious, as, at least, a great help to religion.

The peasant can hardly be said to have any education. In spite of the efforts of M. Guizot and M. Duruy, the public schools are few and

far between. In the districts which need them most, they can hardly be said to exist, and they are everywhere largely in the hands of the priests, and are, therefore, rather nurseries of Catholic doctrine than instruments of secular education. The want of all sense of the value and importance of instruction among the parents, and the absence of any display of interest in its diffusion on the part of the state and the clergy, make the attendance of the children even on such schools as exist very irregular, and the scraps of knowledge they pick up are, in the total absence of books and periodicals, rapidly forgotten. There does not exist in France anything like the cheap periodical literature of this country or of England, and every obstacle has been thrown by the Government in the way of the creation of one, so that neither books nor papers can be said to find their way out of the great towns. There are but few villages in which one would find anything but almanacs, song-books for the men, and perhaps a few hymn-books for the women. The consequence is that there is found to be no relation in many of the departments between the number of boys who attend school and the number of literate young men among the conscripts. A philanthropic gentleman, M. Jean Macé, recently attempted to set on foot an organized system of communal (town) libraries, but want of funds, want of a room for the books, and of volunteer librarians to take charge of them, and the difficulty of choosing books which the government and the church would both approve of, have thus far prevented his success. Indeed, it may be said that "the Man of Sedan" threw every possible obstacle in the way of anything which promised to increase the mental activity of the rural districts, well knowing it would be fatal to him and his régime.

If the men are ignorant, the women are still more ignorant. If the peasant boys get but little schooling, the peasant girls get none. The ideas current among the French peasantry as to woman's proper position in society would cause a woman's suffrage convention to dash their chignons on the floor and rend their velvet gowns. She is the mere servant of her husband. She scrubs, and cooks, and washes, and works by his side, if need be, in the fields. She waits at table when there are several males in the family, and only eats her meals after her own son has finished his. If there is wine brought up to treat a guest, no glass is ever set for her. She speaks of her husband as "the master," and obeys him loyally and implicitly. He, too, finds her company tolerably dull, and though he is on the whole kind to her, and peasant marriages are, everything considered, tolerably happy, he is apt to spend his evenings at the cabaret; and not for the sake of drink, for drunkenness is not a common vice among the peasantry, but for the sake of company.

It may be guessed from all this what the peasant's state of mind is as regards politics. He is perhaps the fiercest and most intense supporter of the institution of property known to modern society. He hates socialists and socialism as nobody else hates them. For the possession of land he has a perfect passion, and will plunge himself into any difficulties in order to secure it. A peasant with only $500 will, M. Lasteyrie says, often not only put the whole of it into land, leaving nothing for working capital, but buy $1,500 worth, borrowing the other $1,000, and laboring under a load of debt all his life, and living with the most extraordinary parsimony. Nothing can surpass his frugality and his industry.

Although the memories of the Revolution have died out, and none of the present generation knows anything of seigneurial oppression, of taille, or corvée, or gabelle, the passion for equality which the Revolution bred still survives, and is apparently strong as ever. The hatred of the well-to-do classes, too, that most alarming of all French social phenomena, is fully as strong among the peasantry as among the artisans of the towns. It is, in part, a legacy of the old régime—when those of the nobles who could live in the cities did so, steadily kept down all interest in country life, came to their chateaux as a sort of penance, and made no secret of the contempt and even horror with which they regarded the country people. The result was that not only did the feudal feeling of attachment between lord and retainer expire sooner in France than elsewhere, but it was succeeded, in the breast of the peasants, by a hatred of their lords for which it would be vain to seek for a counterpart in England or Germany or even Russia. This suspicion has not disappeared with the disappearance of the privileged noblesse. It has simply been extended over a wider area, and now reaches nearly every man who wears a black coat and has white hands, and finds vent occasionally in such outbursts of savagery as that which occurred recently near Tours, at the outbreak of the war, when a crowd of peasants assailed a gentleman of the neighborhood in the streets of a village, and, after torturing him horribly for an hour, burnt him alive, on suspicion of hostility to the Empire. Nothing perhaps has done more to attach the peasantry to the Empire than the feeling that, as long as they had it, they would not be governed by the black-coated people.

The peasant's conception of government is very simple, namely, that of an irresistible force, emanating from Paris, and protecting life and property. Of law, as a rule controlling the functionaries as well as the citizens, he has no conception at all. The state is known to him as "*l'autorité*," and it is personated in the prefect and the maire, who represent in their turn a mysterious power in Paris, which he obeys, and in which he trusts as in Providence. Revolutions have hitherto not in the least affected his allegiance to it. Provided a mandate comes to him along the regular channels, he obeys it implicitly and unquestioningly, whether the central government call itself a republic or an empire. He votes, not as a right or as a privilege, but as a duty imposed on him by the authorities for certain wise reasons, to him unknown and unknowable. The ballot he can rarely read, and he drops it in the box to oblige the maire or the brigadier of the gendarmerie. The legislature, during the Empire, he has always looked on as a collection of persons employed by the emperor in certain official duties, the nature of which he did not understand, and opposition candidates he considered turbulent, ill-conditioned people, who could hardly complain if they were locked up for setting themselves against the prefect. Hardly any peasant knows anything of the constitution, of its nature or effects, or of his rights under it. In fact, the idea of a constitution or an organic law is something almost incomprehensible to him. Nothing he has ever seen or heard of, or that his fathers have told him of, helps to explain its nature to him. On this point he is, however, not much worse off than his superiors in rank and education. There are very few Frenchmen indeed who, if placed in possession of the reins of government, do not find great difficulty in allowing themselves to be bound by the letter of the law. In fact, the drawing of constitutions has, in France, always been rather a means of expressing feelings and opinions, like preambles and resolutions at our public meetings, than of providing a paramount rule of conduct; and, in practice, everybody who finds that they interfere with his convenience treats them as a nullity when he can do so, or thinks he can do so, with impunity.

ENGLAND.—THE STATE OF PARTIES.

LONDON, January 20, 1871.

IT is three weeks to the opening of Parliament, and symptoms of the approaching contest are beginning to make themselves manifest. Mr. Forster and Mr. Stansfeld have been addressing their constituents, and have by no means found that complacent reception which is generally conceded to members of a powerful government. In both cases, amendments were passed at crowded meetings conveying some degree of censure upon these two gentlemen, who are generally considered to be amongst the ablest of our present officials. Though the significance of such symptoms may not in itself be very great, and though the demonstration against Mr. Gladstone, of which I spoke in my last letter, seems to be of doubtful authenticity, yet, putting these and other less definite indications together, I think that the prospect for the session is far from quieting. There is an uneasy movement in the political atmosphere; the confidence formerly felt in Mr. Gladstone's government has palpably declined; and though it may be difficult to point to any distinct and unequivocal omen of danger, we are, if I am not mistaken, in that state of vague yet serious disquiet which generally portends a storm. There is no loud cry of discontent, but there is much indefinite murmuring, and I have heard it said, though such sayings are based upon very uncertain conjecture, that if a general election were to take place to-morrow, the Government would be left in a hopeless minority but for the seats which still fulfil the functions of rotten boroughs. In a general way, the present

Government seems to be in a position something like that of the Whig ministry two years after the old Reform Bill. They came in with a large majority, due to the first impulse of the triumphant party; but they have failed to satisfy the expectations of their ardent supporters; there is a disappointment, more or less reasonable; and a kind of reaction is produced which threatens a new division of parties. Without dwelling upon the merits of the analogy, I will endeavor to point out what are, in my opinion, the most serious causes of the existing uneasiness.

In the first place, then, it is undeniable that some very good work was done in the last session of Parliament. In spite of all that can be said by way of drawback, it would be difficult to point to any previous occasion on which two such important pieces of legislation as the Irish Land Bill and the Education Bill have been passed in one session. Why, then, did they fail to give satisfaction? The answer must be found partly in the peculiar character of Mr. Gladstone. He is a man singularly open to influences from every quarter. No one shows more eloquence and greater powers of mind in advocating any measures which he has been led to adopt. But he is an impulsive man, in the sense of receiving rather than giving an impulse. He is wanting in independence and strength of character; he accepts a policy, but is not capable of originating one; and the consequence is that his measures are marked by a certain indecision and a desire to conciliate the support of all parties. Thus, in the Education Bill, he endeavored to steer a judicious middle course; and, instead of throwing himself unreservedly upon the support of the more thoroughgoing members of his party, tried in some cases to strike out a plan which should be satisfactory to everybody, and, in others, to shirk a decision and leave important questions to the action of the local bodies instead of Parliament. The result has been that the Liberal party generally have looked upon the measure with very qualified feelings. They feel that so large a majority ought to have produced a decided victory; instead of a victory, it has led to a drawn battle, in which each side may claim considerable advantages. Thus the zeal of the more ardent radicals has been decidedly damped; and though I think that they have been guided more by passion than by any calm appreciation of the results actually obtained, the result has been a very marked falling off in enthusiasm, and, indeed, in some cases, a distinct turn in the current. Mr. Gladstone is not held to be a traitor; but neither is he regarded as a trustworthy leader. Parties, according to somebody, are like snakes, where the head is propelled by the tail; but the head, though deriving his power from the tail, ought to impress the tail with a sense that the head is not in need of too much pushing: and the best feeling about Mr. Gladstone is the rather unsatisfactory belief that he will go right if he is sufficiently bullied. That is not a sentiment calculated to produce much enthusiasm.

But, beyond this, recent events on the Continent have contributed to shake the strength of the Government. Nobody is very well satisfied with our foreign policy. It is indeed difficult to say what Mr. Gladstone ought to have done which he has not done. But that is just the question which vehement partisans consider themselves dispensed from answering. They naturally say it is enough for us to find fault with your action; it is your business to discover the line of action which would have obviated our blame. Nobody in England was in favor of taking part in the war when it began; nobody, with a few exceptions, is in favor of taking part in it at the present moment. The Russian difficulty could hardly have been met by any policy substantially different from that which our Government adopted. All this may be true enough, and it may prove that the existing dissatisfaction is rather unreasonable. People seem to say, in substance, Our policy should have been spirited without being warlike; we should have obtained everything we required from Russia without ever firing or wishing to fire a gun; we should have pacified France and Germany by simple force of negotiation and fine words; and, in some way or other, we should have taken up a dignified position and exerted a great influence upon the counsels of Europe, without the material sacrifices which are the ordinary price to be paid for such a result. Mr. Gladstone might reply very fairly, You wished for impossibilities, and you must not blame us for failing to obtain them. We have managed to keep the peace, and that is a definite, tangible advantage; you have no business to be indignant if we have found it impossible with a peaceful conclusion to gain the credit of what is called a spirited foreign policy. I do not ask whether this justification would satisfy reasonable men; the question is of little importance, because few people are reasonable; and the fact is that, rightly or wrongly, the attitude of our Government in regard to foreign affairs has not been such as to strengthen their position at home. Perhaps the solution of the difficulty was impossible; the demands made by our native politicians were inconsistent and impracticable; and the real blame should be thrown not upon Mr. Gladstone, but upon the national temper, which he has reflected with only too much fidelity. However true this may be, the average of mankind is not the less angry with a piece of machinery that has gone wrong because it was their own handiwork. It is no use to tell a man that an ugly face is the reflection of his own countenance; he is not the less ready to blame the mirror.

The Government has been equally unfortunate in another way. Mr. Lowe's energetic financial reforms were doubtless intended to pacify the radicals, who are always crying out for a reduction of expenditure. But the same people who would have advocated them most eagerly are very much annoyed at the result. The diminution of our warlike armaments at the present moment has certainly been anything but felicitous; and the mode in which the economy has been effected has not been more propitious. The lowering of the income tax has a very indirect effect upon the working-classes; whereas the dismissal of a large number of artisans has touched them in the most sensitive part. They naturally say, You have kept up the incomes of the great ministers of state; and you claim credit for ruthlessly taking off a few wretched clerks in public offices and cutting down the numbers of workmen employed in the dockyards. The result of this precious piece of economy has been to leave us specially ill provided with the means of defence just at the very time when they are most required. A little incident which happened at Mr. Forster's meeting is perhaps worthy of notice in this relation. One of his constituents asked him whether he was prepared to cut down the "Queen's pay"—a term which shocks all official proprieties—to £100,000 a year. Mr. Forster, of course, gave a decorous negative to the enquiry; and the meeting does not seem to have insisted upon the question. It would, of course, be absurd to attach any importance to a noisy "interpellation" at a public meeting; but the question indicates a certain irritation, more or less widely spread, not against the monarchy, but against the supposed tendencies of our economical rulers. They are held to have begun at the wrong end.

Putting together what I have said, I think we may assume that Mr. Gladstone's government is just now incurring a very formidable amount of popular discontent. The clouds are gathering from various quarters. There has been a want of dignity and coherent policy on the part of the cabinet; and though it may be urged that they could not have been better under the circumstances, they have failed to make the desirable impression upon the country. A large majority is still bound to support Mr. Gladstone in the House of Commons; but there is increased discontent among his radical allies, and growing confidence amongst his conservative opponents. It would be impossible to guess from what quarter difficulties may first arise; and I am content to say that we have the prospect of a stormy session. I will venture very shortly to hint at another change of sentiment which, though it has little popular significance, is displaying itself in more than one quarter. The great popular remedy for all grievances is to bring everything more immediately under the action of Parliament. If the army is out of order, it is because the House of Commons cannot make its will felt with sufficient readiness. The Duke of Cambridge acts as a kind of lightning-conductor to divert the wrath of parliamentary orators by the reverence which gathers round the royal family. Let him be removed, and we shall be able to clear away all abuses. The opposite side of the question is put in a very able article in this number of the *Quarterly Review*, attributed to Lord Salisbury. According to him, the great evil is the incessant interference of Parliament, and the incessant change of policy and government which has resulted from it. No definite plan can be followed out for a series of years, because every minister upsets that which his predecessor had accomplished. We have a series of fits of extravagance, each followed by a fit of excessive economy; but no thorough reorganization is ever carried out on an intelligible plan. Now, what is true of the army is true of other things. Parliament is absolutely crushed under the enormous weight of every kind of business thrown upon it, and is, in short, as Mr. Bright truly said, a most clumsy piece of legislative machinery. Our ministers are men who need have no qualification for their place except the power of speaking to a large audience; they are moved about from one office to another; and just as a man learns something about education he is sent off to manage the navy, and thence transferred, it may be, to the government of the colonies. Of course, he is really crammed by his subordinates, and does his business well or ill with a main eye to pleasing his masters in the House of Commons or his constituents in the country. The conclusion has been drawn by many people that one of our most established commonplaces is radically wrong. There was no fact on which our ordinary political wri-

ters vaunted the superiority of the English to the American constitution more confidently than the responsibility of ministers to Parliament. It was said to be a gross defect in your system that the President and his cabinet should be capable of holding on in spite of the displeasure of Congress, and an equal merit in ours that a change might be effected at a moment's notice. The question is a very large one, and there is much to be said on both sides. I will simply remark that our eyes seem to be opening to the fact that there is something to be said against our practice, and that some reform is urgently needed. That Parliament should be supreme is admitted; but when the legislature becomes also an administrative body, and a committee of six hundred and fifty-eight gentlemen insists upon interfering in every petty detail, and making ministers its humble servants, to follow every change in its sentiments, the advantage of its interference becomes questionable. I am, however, straying rather too far, and opening a very complicated political problem. I will therefore conclude by simply noticing the fact that such discussions are exciting some attention, though they are far enough removed, in all probability, from any practical application.

THE WAR DRAIN.

BERLIN, Jan. 18, 1871.

THE war is daily assuming darker and uglier features; its worst effects begin to be felt in every household all over the country. Besides those who are sick, we have lost in battle 3,398 officers and 76,409 rank and file, of whom 1,025 officers and 10,622 rank and file are killed. Not exactly that the cradle and the grave are robbed to contribute towards the reinforcement of our weakened battalions, but we are compelled to fall back upon our oldest reserves. Even the landwehr of 1854—*i. e.*, those who had served their time and became landwehrmen in 1854—are called in, men of forty years are levied for garrisoning the fortresses and watching the prisoners, old cavalrymen are drilled into infantrymen, and those reserves which for some reason or other were excused from serving at the time of their becoming liable, and consequently have hitherto been spared, are now ordered to come forward and shoulder the musket. The old Prussian provinces bear the heaviest share of this burden, as the new ones and the other German states have either no landwehr at all, or only one which exists since 1866. The drain of men is so great that Germany would be unable to carry on this war, with all her energy, were it not for Prussia. Thus all the reserves which Bavaria up to this time has been able to raise are only 8,000 men, while Würtemburg could not send more than 1,700. Nevertheless, these small states demand a preferred position and a number of reserved rights in the new German empire; it looks as if they had taken South Carolina for their model, as it was before the great rebellion. "Demand as much as you can, and do as little as possible," seems to be their motto.

There is hardly a profession in Prussia which does not suffer enormously under this state of affairs. In December and January, 200,000 men have been raised and partly been sent to the seat of war; 100,000 more, the young soldiers who on the first of last October entered into the service, are prepared to follow; and, if need be, a full million of men will constitute the German armies in France, and practically refute the enemy's theory that Germany is not strong enough to impose her will upon the French. It is undoubtedly no pleasure-trip for our soldiers just at this season of the year, to travel in cold and badly ventilated cars, to have little warm clothing or any comfort, and to leave almost helpless behind their wives and children. But to the credit of these brave men, I must say that they face this unalterable fate heroically. They reflect and represent the common feeling of this country. In spite of all sacrifices, there is not a single man who is not willing to imperil health and life so as to bring the war to a successful issue. "We must conquer France in order to have peace in future," is the all-prevailing sentiment of the people, although every one desires the end of the bloody war.

Whatever is required of it will most cheerfully be done, and, if the last man and the last horse were necessary for terminating this war with the unconditional surrender of the French, they would be furnished. In this respect, there is not the least difference of opinion between the government and the people, or among the political parties, in which, however, I do not include the corporal's guard of a clique of so-called democratic socialists. The greater the devotion of the people, the more unpardonable are the petty ways of the Government in which it seeks to annoy and disturb those whom it dislikes. The press of all parties, with perhaps two insignificant exceptions, deserves credit for having stopped its private quarrels and domestic animosities, and for having assisted the Government in all its war measures. To thank them for this conciliating and patriotic spirit, the minister of war not only stops the circulation of those papers which he supposes inimical to the Government, but even destroys them, for the sole purpose of vexing the proprietors. Thus, Mr Franz Duncker, the owner of the *Volkszeitung*, the liberal organ of the party of progress, at the request of the Crown Princess had sent gratis one thousand copies of his paper to the several hospitals and camps, but nevertheless Mr. Von Roon, without any reason for this arbitrary mode of action, orders their seizure and destruction. Mr. Duncker has sued the minister for damages; but I doubt whether he will recover judgment, as the Government will raise a "conflict of competence" (between its courts and its organs of administration), one of its favorite and always successful means of arresting the course of justice.

Painful as is the necessity of doing the war business most thoroughly, it shows on the other hand how little the spirit of the people is imbued with a Cæsarian or aggressive tendency. The great moral advantage of the war consists in demonstrating to the world at large that a people of which every able man is a soldier, can more easily be injured in all its vital interests than any other, and that the equivalent for its readiness to take up arms is only given in the prospect of enjoying the fruits of its warlike efforts in peace and tranquillity. It looks as if even France had at last discovered in what our superiority lies. Not that it fights better than under the Empire, but within the last two months the French army shows more enthusiasm, more "élan" and more devotion and self-sacrificing spirit, than the old troopers. The secret is that the young educated men have now taken up arms against us. It is to be hoped, in the interest of the French as well as of the civilized world in general, that this exception will in future become the rule; that these young men will improve the military spirit of the people, and form a transition to the general obligation of military service as with us. Human blood will thus become more valuable, the family feelings will be called in, in quite a new way, for the control of the governmental policy, the educated and richer classes will no longer look down from the galleries into the arena, applauding or hissing their gladiators. The decision of peace or war will no longer exclusively rest with journalists, lawyers, or priests, but also with the fathers who have their sons in rank and file, and the politicians of course will become more prudent. This desirable change will give us the best guarantee for a durable peace among the two nations. Whatever may be asserted to the contrary, I believe that, to judge from the feeling and principles of all classes of the German people, a nation with a military constitution like ours is the last to rush into a war, and that it is only powerful and formidable in a purely defensive war.

It is a bad time just now for predicting, after so many prophecies on the result of our operations have failed; but I state only the common impression that the fall of Paris is near at hand, as it is not presumed that it will hold out longer than the end of this month. Even if it offers a longer resistance, the city is doomed. Chanzy is out of harm's way for at least some months to come; Faidherbe will not succeed in breaking through Goeben's veteran ranks, and even if Bourbaki should meet with better luck against Manteuffel and Werder, the advantages won by him would not enable him to interrupt all our four lines of connection with Germany nor to relieve Paris. The question now suggests itself, How to make peace after the surrender of the capital? There are two answers, or, rather, two versions of one answer, to the query. The first, which has been published by some English papers, says that only the forts of the city are to be occupied, and that they, as well as a sufficient extent of territory, will be held until the French accept our terms of peace. What these terms are is not stated, but it is settled beyond any doubt that, besides a heavy bill of costs to be presented, Alsace and the German part of Lorraine, with its three important fortresses of Metz, Strasbourg, and Belfort, will never be given up again to France. The possession of these fortresses will just reverse the former state of things, because by their loss the French will be prevented from ever invading again our territory, while we have the key for locking our doors. My information runs thus, that King William will not accept the surrender of Paris unless the *de facto* powers which have ruled during the siege shall have signed a peace acknowledging the German conditions. If they refuse to do so, it is even proposed to reject all offers of surrender, and let the starving population wait until they have come to a different conclusion. This apparently cruel way is, in fact, the most effective and mildest, as it saves all further bloodshed. A sufficient, if not the greater, part of the contribution to be laid on France will be collected in Paris, be it in cash, in men-

of-war, or in "rentes," so that the population of the country will in their own interest acquiesce in the terms imposed upon them, as it will thus have to pay the smaller portion of the contribution. It is, however, possible that a sudden change in the condition of affairs may affect the present resolution of King William and Bismarck. Under other circumstances, they may try another solution of the problem. At all events, it will become necessary to occupy some of the easily defensible departments, in order to secure the compliance with the German conditions, and even if the greater part of our troops can return in spring or summer, some 100,000 to 200,000 will be left in France for a year or two for the enforcement of our claims.

The sale of the Remington rifles by your Government to the French has produced a very painful impression here. The 750,000 pieces which came across the ocean in this way have enabled the French to arm the troops of General Faidherbe and other generals. Apart from other considerations, there is a great difference in a sale effected by private parties and by a government, for the articles sold by the latter are entirely alike, and for this reason, if for no other, superior to a collection of half-a-dozen other patterns sold by different parties. The 350,000 Remingtons sold on October 18, at Washington, a great portion of which have already reached Germany by having been taken from French prisoners, are even of a superior make. I do not say too much in asserting that without English and American arms and ammunition the French would not have been able to continue their resistance. I am not of the opinion of Count Bernstorff, according to which a neutral government must prohibit its subjects from trade in arms with a belligerent. On the contrary, I believe that under the present law of nations the subject of a neutral can deal in contrabands as much as he likes, but at his own risk. The case stands still stronger against us in our relations with the United States. Under the treaty of May 1, 1828, which in its twelfth article revives article twelve of the treaty between the parties in 1785, as well as articles thirteen to twenty-four inclusive of that which was concluded in 1799 (see "U. S. Statutes at Large," vol. viii., pp. 90, 168, and 384), "the free intercourse and commerce of the subjects or citizens of the party remaining neutral with the belligerent powers shall not be interrupted, . . . and to prevent all the difficulties and misunderstandings that usually arise respecting merchandise of contraband, such as arms, ammunition, and military stores of every kind, no such articles carried in the vessels or by the subjects or citizens of either party, to the enemies of the other, shall be deemed contraband, so as to induce confiscation or condemnation and a loss of property to individuals." Thus we cannot complain of any trespass upon our rights, but we think that, to say the least, it is an act of discourtesy on the part of your Government to sell those rifles just at the present moment. Uncle Sam is not so poor as to be in immediate want of the money, he could have waited a few months longer, and even if by waiting he had lost a few hundred thousand dollars, he would have done better to reciprocate the friendly feelings which Germany never has failed to extend to him. I remember that the King of Prussia, in the early days of May, 1861, was the first European prince who expressed his hearty sympathies with the then endangered Union. I know from a very careful perusal of the German press that, with a very few exceptions, it sided earnestly with the cause of freedom; and every American financial man knows that no country has bought more of your securities than Germany, which still holds some four hundred to five hundred millions of dollars of your bonds. You will object that our moneyed men acted in their own interest and not from sympathy. Probably and certainly so, but what other country of Europe was so well informed and so friendly disposed as to dare risk an investment of so large an amount? Perhaps England or France? Those Americans, however, and your own Government, who blame and wish to punish England for her policy towards the rebels and her omissions in the *Alabama* case, before pressing their claims too eagerly, will do well to consider the beam in their own eye instead of beholding the mote in their neighbor's eye.

FRIEDRICH KAPP.

Notes.

MR. THEODORE TILTON, lately editor of the *Independent*, gives notice of his intention to publish, on the 1st of March, a new weekly journal, to be called the *Golden Age*, "and to be devoted to the free and untrammelled discussion of all the living questions of church, state, literature, art, society, and reform." In the absence of any particulars, we are unable to say to what extent the paper will be religious and to what reformatory. The subscription price will be three dollars, and Mr. Tilton's address is Box 2848, N. Y. P. O.——Messrs. Hurd & Houghton have in preparation: "Stories from Old English Poetry," mainly from Shakespeare, Chaucer, and Spenser, by Mrs. Abby Sage Richardson; "Three Successful Girls," by Julia Crouch; "Castles in the Air, by "Barry Gray;" "The Débardeur," a posthumous novel by the late Fred. S. Cozzens; "Notes on the Gospels," by Dr. Chas. H. Hall; the two final volumes of the "Sermons of Dr. South;" the second volume of the "Surgical Memoirs of the U. S. Sanitary Commission," edited by Professor Hamilton, and the fifth of the "Final Reports;" and two valuable law books: "The American Life and Accident Insurance Cases," being all the reported cases decided on in the United States down to November, 1870, with notes referring to the leading English cases, by M. M. Bigelow, and "Leading Cases upon the Law of Fire Insurance," by Edmund H. Bennett and M. M. Bigelow.——Messrs. Little, Brown & Co., Boston, will issue, and will receive subscriptions for, a reprint of the "Lord Chancellor's Decisions" from 1849 to Michaelmas Term, 1865, for the first time in this country. "The reports will be reprinted verbatim, with notes appended to each case, referring to all the important English and American decisions which bear upon the points decided in it." There will be twenty-two volumes in all, deliverable monthly, at the subscription price of $5 each.——Messrs. J. B. Lippincott & Co., Philadelphia, solicit subscriptions for a "Life of Hon. John J. Crittenden," with selections from his correspondence and speeches, to be edited by his daughter, Mrs. Chapman Coleman. The work will make two large octavo volumes, of the best workmanship, accompanied by two portraits on steel, and will cost $5 a volume. It will have a kindred interest for the historian with the "Life of W. W. Seaton" just issued by Messrs. J. R. Osgood & Co.——A limited number of catalogues of the library of the late President Sparks are now obtainable of Messrs. Sever, Francis & Co., Boston and Cambridge. The sale of this important collection was announced in the *Nation* last summer, and a circular dated January 23 states that the family in Cambridge are prepared to receive offers for the library *as a whole*, at any time within five weeks from the date mentioned. The manuscripts, however, of which several are exceedingly valuable, may be included or not at the purchaser's option. One volume is expressly reserved—it contains twenty-six autographs of Washington, Franklin, and Lafayette which have an intrinsic interest apart from the celebrity of the writers. We should suppose that the Library of Congress, the Boston Public Library, and (poverty aside) the Library of Harvard College would, above all others, contend for this collection, whose richness in works pertaining to American history will be apparent to any one who examines the catalogue.——Messrs. Roberts Brothers announce that, in consequence of a blunder made by the stereotyper, pages 50 and 56 of the 16mo edition of William Morris's "Earthly Paradise" are transposed. Purchasers may obtain perfect copies by sending back the defective copies to the publishers.——Messrs Pott & Amery, 5 Cooper Union, solicit subscriptions to the "Collected Works of the Rev. Milo Mahan, D.D., late Rector of St. Paul's Church, Baltimore," edited by the Rev. John H. Hopkins, Jr. The work will be in three volumes, costing ten dollars; the first containing Dr. Mahan's "Church History," continued beyond the period which it reached in the edition already published, the second his work on Mystic Numbers, with a memoir of the author, and the third his miscellaneous writings.

—In May last, with Parts I.–XII. of Dr. Thomas's ("Lippincott's") "Universal Pronouncing Dictionary of Biography and Mythology" before us, we declared that work "the best, as well as the most comprehensive book of its description emanating from the pen of one writer—in any language—which has come under our notice;" and now that it is completed—in two large and handsome volumes—it gives us pleasure to state that there is nothing in its more recent parts which should make us alter or modify our opinion of its merits. On the contrary, to the praise of fulness, clearness, and correctness we must add that of surprising freshness, considering to what a degree the revision of the work, in numbers so rapidly following each other, must have absorbed the energies of the diligent author. Thus we read under *MacMahon* of the defeats of that marshal "at Wörth (August 6, 1870) and at the great battle of Sedan (about September 1);" under *Steinmetz*, that "he contributed to the great victory near Metz," and "was removed from command" soon after; and under *Trochu*, that "on the formation of the Republic, September 4, he became president of the Executive Committee, the highest office in the Provisional Government," and "commanded the forces which defended Paris against the Germans during the siege of that capital in the autumn of 1870." A very valuable introductory treatise on the pronunciation of the principal European and Asiatic languages has been added to complete

the "Preface," and a comprehensive "Vocabulary of Christian Names," in a number of languages, as a supplement.

—Of all the almanacs of the year the most curious is without doubt that product of the siege of Paris, "L'Almanach des Bastions," of which we do not pretend, however, to have seen a copy. Novel, so far as we know, in this country, is the almanac for 1871 published (at Minneapolis) by the University of Minnesota, and especially adapted to that State and institution. The pages devoted to the meteorology of Minnesota will find interested readers in other parts of the Union; the chronological tables, list of the State's libraries, and some other statistics have a more local character. Best of all almanacs with which we are acquainted is that published by Whitaker in London (New York: Pott & Amery), and which is sold for fifty cents. The amount of useful information compressed into this small volume of 325 pages is truly surprising, and its accuracy hardly less so, so far as we can judge. It would be difficult to state satisfactorily the contents of "Whitaker's Almanack," but an Englishman could desire little more than it gives him. He may turn to it for a summary of Parliamentary discussion, the statutes enacted, the Peerage and House of Commons, the census, state of the public debt, various rates of the income tax from 1842 to 1871, list of army officers by regiments, list of naval ships and their captains, university officers, masters and teachers of the principal schools and colleges, list of clubs, British administrations during the century, railway and life insurance statistics, hackney-coach regulations, Oxford and Cambridge races to date, banks and bankers, the chief societies and institutions, with the name of the president and secretary in each case, imports and exports, important occurrences of the year previous, the distinguished dead, remarkable discoveries and inventions, an outline of the British empire in all its parts, and of the constitution of every civilized and semi-civilized country on the globe. For much more, too, that we have not space to relate. The fulness of the *personnel*, if we may so term it, of this almanac is remarkable, and is what gives it an especial value to Americans (especially to American editors), though if they would study it for a better knowledge of Great Britain, they would find it a most useful and comprehensive instructor.

—The year 1870 has not been rich in historical publications. In this country especially it would be hard to name a single publication of the year which will take permanent rank in historical literature. The concluding volume of Dr. Draper's "History of the Civil War" has enough merits to be an exception, if these merits were not balanced by equally great defects; at any rate, it takes respectable rank. Several works, on the other hand, which one associates at first thought with this year, like Mr. Froude's closing volumes, Mr. Long's third volume, and Mr. Lea's "Studies in Church History," belong in reality to the closing months of the year before. Our brief survey, therefore, will not be confined to 1870. In the field of ancient history, the second volume of Lenormant and Chevalier's "History of the East" contains the history of the Persians, Phœnicians, and Arabians. It had been intended to include the Indians, but the plan was changed on account of the very doubtful character of the authorities in Indian history. This manual contains without doubt the best compendium of what is known of primitive Oriental history, and may be recommended as not only serviceable but indispensable to the student. The second volume of Ihne's "Römische Geschichte" has the same general character as the first. The author has made an eminently readable book, but will not keep his promise as to dimensions. This volume only finishes the Second Punic War, so that the entire work can hardly be shorter than Mommsen's. The author, who has himself lived in England, is engaged upon an English translation, for which we predict a good degree of popularity. Holm's "Geschichte Siciliens im Alterthume" is a thorough and valuable study of a very important and interesting branch of ancient history. The first volume brings the history down to the Athenian expedition against Syracuse, B.C. 415. In modern history, the most important contribution is probably the concluding volumes of Burton's "History of Scotland," which reach to the reign of William III. This is admitted to be by far the best history of Scotland in existence. Miss Jane Williams's "History of Wales" has neither the extent nor the importance and interest of Mr. Burton's work, but is worthy the regard of those who wish a more detailed account of the history of this interesting country than they can find in English writers. The second volume of Sir Edward Creasy's "History of England" covers the period from Edward II. to Richard III. inclusive, thus embracing the "hundred-year war" and the War of the Roses. The praise we gave to the first volume (see No. 208) is even better deserved by this. It is not a mere compilation, but abounds in admirable discussions of important points little understood. Baxmann's "Politik der Päbste," in two volumes (1868–9), is written from a Protestant point of view, but with great impartiality, and extends from the pontificate of Gregory I. to that of Gregory VII. The author was engaged upon a monograph upon Gerbert (Pope Sylvester II.), to which this was, as it were, a preparation; his death has, however, frustrated this plan. We find hardly anything more in mediæval history except a new edition of Dahlmann's "Quellenkunde der Deutschen Geschichte," revised and much enlarged by Professor Waite of Göttingen, who has been pronounced "the greatest living master in German history." This too belongs to 1869. Indeed, the most striking event for 1870, in connection with mediæval history, has been the death of Jaffé, editor of the *Bibliotheca Rerum Germanicarum*—an irreparable loss. We should, however, except the town histories, of which a large number have appeared. To this class, we suppose, should be assigned the late Toulmin Smith's valuable treatise on "English Gilds." Dr. Brentano's introduction to this, published as an independent work, has already been noticed by us. Probably the most important work in this field is Von Maurer's "Geschichte der Stadtverfassung in Deutschland," the third volume of which has recently appeared. This author rejects the guild theory of the origin of towns, and denies also the continuance of Roman municipal institutions (in German cities, we suppose), and considers the city institutions to have been in all cases developed from village institutions—a theory which, as a general, if not exclusive one, seems every way reasonable. In special town histories it will be enough to notice the publication of the mediæval chronicle of Strassburg, and the third volume of Ennen's "Geschichte der Stadt Köln." The latter covers the history of the fifteenth century, and a very little more—a most interesting period, when we consider that at its commencement belongs the triumph of the guilds, and at its end the beginning of the Reformation; and that Charles the Bold's transactions with Cologne fall within it. Baron Hübner's "Life of Sixtus V." has an especial bearing on the great pontiff's diplomacy.

—It may be a not accidental coincidence with the rapid development of Prussian power, that the recent literature upon Prussian history is especially rich. To say nothing of the documents published in the "Urkunden und Actenstücke," and in "Scriptores Rerum Prussicarum" (each of which has reached several volumes), and of Droysen's "Geschichte der Preussischen Politik," and Eberty's "Geschichte des Preussischen Staats" (of which volume 4 reaches to 1763), there are two special works of merit upon the period of the Great Elector. H. Peter has written a history of the war of 1672 against France, and Erdmannsdörffer a life of the great minister Von Waldeck, who inspired Frederic William's counsels for several years, and who first sketched the policy which Prussia has now taken up after an interval of two centuries—a union of Protestant Germany—it was then under the lead of Brandenburg. His plans were frustrated at the time by the war with Charles XI. of Sweden. In later periods of history we have a few valuable works. The completion of Von Sybel's "Geschichte der Revolutionszeit" places before us a work of the first historical importance. The fourth volume of Lanfrey's "Histoire de Napoléon I." reaches to the year 1809. Its special value—apart from its character as an able history—is in marking the reaction in France itself against the worship of the first Napoleon, of whom the author is a decided antagonist. The second volume of Taxile Delord's "Histoire du Second Empire" comes down to the year 1860. This is an equally significant expression of the French reaction against Napoleonism in its later and meaner form.

—Mr. A. R. Wallace reviews in *Nature* a pleasing volume of essays, written nearly a century ago, on the "Intelligence and Perfectibility of Animals from a Philosophic Point of View," and now published by Chapman & Hall, London. The author was Charles Georges Leroy, formerly Ranger of Versailles and Marly, and his aim was to prove that the mental faculties of animals are strictly comparable with those of man; that they remember, combine, and reflect; that they are capable of self-improvement; and even that they possess a true language fully adapted to their needs. We have used Mr. Wallace's words in this summary, who adds further that M. Leroy "was, in many of his conceptions, far in advance of the great philosophers of the last century among whom he lived." Some of his observations are cited and are very curious. Crows, for instance, he proves, can count as well as some savages. A man posted in a hut beneath a tree to shoot the old birds on their return to their nests, was, after the first time, always watched into the hut, and the tree avoided till dark or till he had left. Two men then went to the hut, and one passed on, but to no purpose, as the absent one was missed; nor could three men deceive; and it was not till five or six men went and left one of their number behind that the crows' reckoning failed them. M. Leroy also restricts instinct "to

those acts which are the direct consequences of organization, such as the grazing of the stag or the flesh-eating of the fox." Nest-building he declares is subject to improvement from experience—old birds building better than young ones, and those birds whose young remain long in their nests, and so have more opportunity of seeing how they are made, having the best-constructed nests. Migration, even, he ascribes to tradition, and says of the swallows, for example, that their preparations indicate clearly not a spontaneous impulse but the most careful deliberation and instruction; and the late-born who remain behind, because unequal to the flight, mature without "the supposed attraction to a certain region," and perish because of their ignorance due to their tardy birth.

—About a year ago, we compared, as we were able, the phonetic decay which the French language had undergone, in somewhat analogous circumstances, in the islands of Trinidad and Hayti, and in Louisiana, as the common speech of the negroes. The Creole grammar is an interesting study, and it may be extended much further than has just been intimated by any one whose field includes also the island of Mauritius. This favored spot has additional philological interest from the fact that the Indians and coolies corrupt the negro patois itself, which thus holds the same relation to their jargon that the pure French of the colonists does to the Creole. The latter agrees with the Creole of Trinidad and Louisiana in a general confusion of number and gender, and in simplifying the pronominal forms. *Mo*, to *vous*, and *li* pass for *je, tu, il, elle;* and *mien* is represented by *pour mo*. The writer in the *Athenæum* for December 31, 1870, from whom we are borrowing our information, cites the form *zot* (a "very common word") as a corruption of *les autres*. We cannot dispute with him, but the Trinidad *zôtes* (you), for *vous autres*, suggests another derivation. The coalescing of the definite article with the noun, by which the force of it is wholly lost (as, in Trinidad, *lapôte*, meaning simply *a* door), occurs also in Mauritius; *e.g., li çien*, a dog (*chien*). This substitution of *ç* for *ch* is peculiar to the latter country, where, on the other hand, the softening or dropping of *r* does not seem to be customary. At least, this is not indicated by the spelling of the examples give in the *Athenæum*. We have doubts, indeed, if the true method of reporting patois has yet been established. The temptation is much the same as that felt and yielded to by our humorists when they misspell words pronounced the same by everybody, merely in order to preserve to the eye their assumption of illiteracy. For instance, the negroes in Hayti, as in Trinidad, use the sign "noo" to indicate "we." For the first-named we have seen the form *nôu*, for the latter (more correctly) *nous*, set down, there being no difference in the pronunciation. In Mauritius, as in the West Indies, the word *était* degenerates into *té* (also *ti* in Mauritius), and in this form serves as an auxiliary for the past tenses:

"Si mo té va zozo (les oiseaux),"

—"if I were a bird" (the contracted plural noun forming a new singular);

"Et té blizé (obligé) posé tout moment,"

—"and was obliged to rest every moment." *Fin*, a remnant of *finir*, is another auxiliary for the past tenses, while with *après* an imperfect may be formed ("quand mo après faire ça," when I was doing that), and *talheure*, for *tout à l'heure*, supplies a future—*e.g.*, "talheure mo vini," I shall come presently. *Capav'*, the attenuated form of *capable*, takes the place of *pouvoir* in all possible relations. Curious in the Mauritius vocabulary is the selection of strong words to express simple ideas. Examples of this, which are frequent enough in the French itself—as *écouter* from *auscultare*, *chanter* from *cantare* with only the force of the primitive *canere*—are *guetter*, to look, instead of *regarder; ramasser*, to gather, instead of *cueillir; semb'* (*ensemble*), with, oftener than *avec;* and perhaps *chumbo* (*tiens bon*), catch hold. Some nautical expressions have likewise been weakened: "*laryuer*, to let go a rope on board ship, is Creole for letting go anything; and *amarrer* (to moor) is used for tying up anything." We conclude with what the writer vouches for as "a *bonâ fide* Volkslied," sung by children:

Mo passé la rivière Tanné:
Mo guetté là une grandmaman:
Mo causé li qui li faire là:
Li causé mo li pécé poisson.
Oi! oi! mes enfants.
Faut travaillé pour avoir son pain.

Beside it we may place the following words of a Louisiana *coonjai*, or minuet, in which *pancor* stands for *pas encore*, *ouar* for *voir* (*vu*), and the other words scarcely need explanation:

Mo déjà roulé tout la côte,
Pancor ouar pareil belle Layotte.
Mo roulé tout la côte,
Mo roulé tout la colonie;
Mo pancor ouar griffonne la
Qua mo gout comme la belle Layotte.

Trübner's Literary Record for Dec. 31, 1870, gives some interesting extracts from an essay on the philology of the Creole dialect, by Mr. J. J. Thomas, author of a Creole grammar, and adds a note on the extent of the Creole literature.

—The concluding number of last year's London *Athenæum* opens with a very extensive article on "Continental Literature in 1870," or, rather with a series of articles, contributed by various writers, on the latest literary productions of Germany, France, Belgium, Italy, Russia, Spain, Hungary, the Netherlands, and Denmark, those of the Swedish, Polish, Portuguese, and Greek press being passed over. Some of the single reviews, like that on French literature, are remarkable both for comprehensiveness and sound critical judgment, while others have at least the merit of speaking correctly and knowingly of literatures generally ignored, such as the Russian and Magyar; and the series as a whole presents an interesting and naturally checkered picture of a vast field of mental activity, from comparatively youthful Russia, where now "the spirit of poetry, no doubt, still lives, but writers are becoming too nihilistic to express it," to old and yet childish France, where "we find a professor of the University of France going so far as to draw a map giving the new political divisions of Europe such as they will be *most probably* in 1871 (with the Rhenish provinces and Belgium awarded, of course, to the Emperor Napoleon)." The most pretentious, though decidedly not the most valuable or the most substantial, of the single articles is the opening one on German literature. It is not only marred by glittering but superficial statements, but also by an exceedingly defective revision. The name of Becker, the author of the well-known Rhine song, "Sie sollen ihn nicht haben," is changed into "Beck;" that of Goethe's Eckermann into "Erckmann;" Kotzebue into "Kotzebu;" Carl Frenzel into "Carl Trenzel;" the title of Spielhagen's "Hammer und Amboss" into "Slommer and Ambos," and that of Meissner's "Ziska" into "Zinka," to mention only the more glaring mistakes. The name of the Empress Maria Theresa is repeatedly given in this form, "M. Theresia," which is neither English nor good German.

BENCH AND BAR OF NEW YORK.

PERHAPS a fourth of the eight hundred pages to which this volume is swollen might have been amusingly filled with the gossiping biographies it gives of thirty-three lawyers in the State of New York whose names and labors have escaped oblivion since the century began. Only three of these are among the many noted men who chose their field and gained their fame in this city, although the book introduces by way of sketch or allusion more than a hundred others—so that its omissions are as conspicuous as its selections. Very little attempt is made to distinguish or characterize the objects of its eulogy; and still less to explain the influence which any of them exerted in settling legal principles or developing jurisprudence during the early history of the State. It is disappointing to follow a college quarrel through a couple of pages, or to read the feebly dramatic recital of a common assault diluted into a dozen, when Kent, Emmet, and Walworth are dismissed with a paragraph apiece, and no notice is taken of the gradual, laborious adjustment by great minds of an inherited feudal system of law to the needs of a free people in a new land.

The most spirited personal sketches are those which were furnished to the author of the book by others. Still, a good deal of labor has been devoted to collecting details of the lives of its subjects, and tracing with wearisome repetition the part taken by almost all of them in the political contests of their time. So far, the book may be of service for reference, but the rest of it would speedily have lined trunks or wrapped parcels in the days when waste printed paper met that fate. Its slovenly style, florid and flaccid as a reporter's, could not rescue it, even though borrowing an air of comic freshness by invoking Themistocles, Fiesole the painter, and the great Rubens.

These indifferent sketches have, however, one use. They strengthen by touches of detail from individual example our just respect for the legal profession of the early times in the State of New York. They confirm the French publicists' judgment of American lawyers as the leading and conservative order in the State; and they may avail to regulate ambition and recommend probity, by depicting many an honorable career, begun in poverty, struggling fairly up to influence, deviating into politics, returning eagerly to higher and more congenial pursuits, and crowned through protracted years with the reverence of the community.

* "The Bench and Bar of New York. By L. B. Proctor, Counsellor-at-law." New York: Diossy & Co. 1870. 8vo.

How has the bar of New York forfeited this respect, and the bench lost this reverence? For no moralist can withhold his rebuke, and no patriot conceal his alarm, at the state into which both are sinking through a steady decline during the last twenty-five years, not judging only from the worst. The legal profession yet retains much of dignity and honor; but if all this good is too weak or too timid to control the flagrant evil, it must, perforce, share the blame of it.

With the bench, the beginning of this decline may be traced, by no accidental coincidence, from the adoption of the Constitution of 1846. It has become trite to say that popular election raised many a party tool, whose professional worth was measured by the paltry salary, to a brief occupancy of office necessarily spent in intrigues for its renewal. The system that creates such officials to use them, of course permits plunder, compels bias, and extorts partiality; so that the "fear, favor, and affection" which law forbids to its mere instrument, a jury, have invaded the seat of its chief ministers as the natural result of short terms, low salaries, and popular choice. The seed of all this rotten fruit lay potentially in the judiciary article of that constitution, and its growth was exactly foretold by more than one of the eminent jurists, then ripe with better experience, whom our author sketches. But the learning and the honesty which still at times maintain the impaired dignity of the courts prove that it could not have reached its present rankness without favoring conditions in the community. Bacon was the more venal because the men of his day were so, and Jeffreys's savageness grew with the rancor of the time. What these general conditions are can be better shown in speaking of the bar, which is more open to their influence. It is encouraging to know that some of the congenital evils of a judicial system which we have tolerated for a quarter of a century have wrought their own cure. The new one invites the services of capable men by lengthening the term of office and removing the prohibition of an increase of salary during its continuance. And the year after next will bring an opportunity to restore the practice of appointment to judgeships, which was so much more rarely abused than the present one of election has been. The direct and satisfactory effect of even this partial return by the last constitutional change to the older and better ways is seen in the high character of the newly-chosen Court of Appeals.

Under such a system as that we have just abandoned, a timid or pliable judge soon disgraces his office, and a bad one makes it infamous. Mental weakness and moral recklessness are both played upon by those men, to be found at the bar as in every other pursuit of life, who follow success regardless of principle. Flagrant wrongs get themselves defended before corrupt tribunals with a boldness and craft that bewilder public opinion. But it is neither indifferent nor demoralized, and it waits only to be enlightened as to facts before it calls judges to account for impeachable acts, and condemns lawyers who risk their reputations by becoming accomplices in them.

This attraction between the bad elements of the bench and the bar would have been less direct had not the same levelling legislation that cheapened the judiciary also thrown the ranks of the profession freely open to any aspirant. The royal road that formerly led through seven years of study to the learning of the law was beaten down into the democratic short cut, by which crowds of incompetent and untrustworthy fledglings pressed in. Perfunctory examinations and facile certificates to character form a poor substitute for the long years of probation in discipline of mind and morals that once preceded admission to practice. The law schools of the city did their best to uphold the old standard, but outside of these it would be curious to trace some of the sources from which the bar of New York is at present recruited. To the cant about privilege, which broke down the ancient safeguards, is added the poor excuse that, after all, ability will make its way. But even if stupidity lags behind, what is to prevent unscrupulous cleverness from taking a lead, and teaching and spreading its corrupt practices? When so many of the least worthy pass from the community into the ranks of the profession—and some, at least, of these work their way through it up to the bench—it is not easy, out of such material and in face of such influences, to create an *esprit de corps* that may prevent it from sinking into a mere money-making trade.

We say to create it, for it has died out, and needs to be again created. These biographies show how real, in the older time, were a common vigilance among lawyers for the interests, and a common jealousy for the dignity, of their calling. At this day no other profession is so incoherent, no other has so little unity of spirit, or power of concerted action, or habit of communion beyond mere business intercourse. Until very lately, its only point of grouping, such as merchants find in their Chamber of Commerce and doctors in their chartered societies, was the Law Institute, and the whole life and action of that have shrunk into its Library Committee, which has hard work to convene a quorum. In every other leading nation, the bar forms a compact and independent body; in ours, democracy, with its relentless individualism, has disintegrated it into helpless units. The English Inns of Court, incrusted as they are by routine and lazy with wealth, do retain and apply that disciplinary power which alone can keep up the standard of the profession. Among us that right of correction is lodged with the judges, who have long neglected to lift the rod with which so many of themselves deserve flagellation. Every lawyer of ten years' standing remembers with a blush that flagrant instance of the futility of this sort of control, when a counsellor disbarred by the chiefs of his own fraternity at home fled hither for refuge, as to a professional Texas, and when the combined effort of some of the best men in the profession failed to dislodge him from the position granted by a facile court. That failure betrayed and encouraged a laxity of discipline among lawyers that has gone on since, until the profession seems to have lost all power of self-correction. Men guilty of penitentiary offences have, it is true, been thrown over the bar within the last few years, though it is whispered that even these men have reappeared in the open conduct of causes. The line of exclusion might range a little higher. It ought to be so drawn and so held by the honorable tone of the profession that the military rule expressed in the 83d of the Articles of War could be adapted to define it; and any member of the bar convicted of conduct unbecoming a lawyer and a gentleman be dismissed the profession. Why not? Is the code an officer subscribes too nice for a barrister to be ruled by? Or, if this seems utopian, the bar might at least organize for its own protection, erecting some standard of respectable conduct, and creating from its own body some tribunal to maintain it, by enforcing rules and inflicting censure. The impatience of one class of men spurs the Bar Association, and the impudence of others defies it, to assume this function. The existence of that organization is indeed a most hopeful sign; but it has less than a year of growth, it is hardly yet compacted, and can at any rate control only its members. Unless we mistake its purpose, however, and the character of the men composing it, the Bar Association will neither shrink from such a responsibility at all, nor accept it when the proper time comes without such deliberate and mature proceeding as may give its action the force of a sentence.

Lawyers easily become politicians. One of our triumvirs, and one of their honored lictors, were trained here at the bar for municipal misgovernment. But those subjects of our biographer's sketches who entered into the politics of their time brought with them something higher than pettifoggers' chicane. The names of Marcy, Wright, Spencer, and Butler revive memories of dignified debate and statesmanlike measures. It is true that in our day, too, eminent jurists have devoted their abilities, not merely to the discussion of the serious constitutional questions springing from the civil war, but to their settlement, also, by legislation. But it cannot be denied that, in general, the association of politics with the profession in recent times has been highly demoralizing to the latter, particularly to its younger members. Party-managers have never before controlled such resources of money and of place, nor dispensed them with so bold a contempt for appearances. Political leaders systematically avail themselves of astuteness sharpened by legal training, and enlist for the shaping and enforcing of their iniquitous legislation a perverted professional ambition, which they reward by the gift or hope of office. In this city, above all, the connection of politics with the legal profession, chiefly through the patronage of political judges, has been utterly contaminating to the bar.

The laws of a people, it has been said, are never better than their morals. And it is equally true that, however pure the theory and life of individuals among them may be, the great body of the legal profession will never be governed by a higher morality than that of the community they live in. There is no reason why they should form an exception to the rules that control average human nature. The noted men into whose lives this volume gives us an insight were not free from blemish; and their faults, which are rather tenderly touched upon, reflected the temptations peculiar to their time. Some of the best of them were over-eager for place—some of the worst were stained by intemperance or profligacy. But it is not recorded of any of them, still less of the bar which they led, that they were especially mercenary. Now, this is the shape which censure of the legal profession oftenest takes nowadays. And it is quite natural that the haste to grow rich, which everywhere in modern days stimulates general prosperity somewhat at the cost of individual character, should affect the bar as it does all other classes. It should affect them even more directly,

because it happens that those combined colossal schemes for rapid accumulation of wealth which exploit our material development, are precisely the ones that oftenest need the aid of lawyers and legislation to shape and protect them. In the care of a private client's interests or fortune, a lawyer is far less likely to be tempted to wrong or extortion than in dealing with the millions which the directors of a railroad or an insurance company—vicarious owners—lavishly dispose of. It is for the statesman to consider the public aspects of that novel and stupendous power of corporations. He may find means to bind the soulless Frankenstein that modern greed has raised into life. But viewing them as mere clients, the lawyer looks no further than their private advantage and their success in contests with rivals, and there is danger, where transactions are so immense, lest he may lose sight of moderation in fixing a compensation which the managers of his clients do not personally pay. It may happen that boards of directors forget themselves to be only trustees for stockholders, and manage vast funds for their personal objects; it might even occur, since money no less than power has a tendency to steal from the many to the few, that the two or three sharpest and least saintly directors might usurp control of the whole corporate property. Yet in all their transactions they are likely to proceed under color of law, and by advice of counsel. More than this, the enormous aggregated wealth these corporations own is so distributed and so represented by the flexible contrivance of shares, that the existence for half-a-day of a judge's injunction order may cause fluctuations on the exchange that enrich all who are in the secret of its granting. We do not say that any or all of these things have been done; only a court of justice can decide whether they have or not. What we point out is that the temptation for faithless trustees to do them is enormous, and the temptation for a lawyer to find justification or prevent enquiry for their being done by his clients is dangerously strong. Whether fairly or not, members of the bar are charged with the offence of thus corrupting the sources and thwarting the course of justice. Against the names which illustrate the times that this volume sketches such a charge would have been impossible. It would have been impossible, both because the lawyers of that day were more fortunate in their associates, perhaps more punctilious as to their reputations, than many of their successors are, and because the haste to grow rich was a less besetting sin of that generation than it is of ours—because, moreover, it is lamentably true that the sterner earlier morality of the community rebuked such deviations from honorable practice as our modern public accepts with a careless shrug, or even admires as shrewd, and excuses when successful. If the legal profession is ever to become again what it once was, the most respected and powerful order of society, it must set the example of a sharper discrimination between right and wrong than now prevails; and it will take higher ground for doing this whenever legislation retraces all its downward steps as regards the judiciary, and the bar gains control over the admission and discipline of its members.

LIFE AND WORKS OF BEETHOVEN.*

The attention of the public in this country has been of late directed with a renewed interest to Beethoven and his works. A few years since there was no life of the composer to be found at any of our bookstores. Only at the principal libraries could access be had to dilapidated copies of the old two-volume London edition of 1841, of which the present neat volume, issued by Ditson & Co., is a reprint. Nor did the pianoforte works of the master appear on our concert programmes. But Charles Halle and Arabella Goddard, in England, set the example, and of late it has been followed by Miss Mehlig and Miss Krebs in this country, and the treasure-book of the Beethoven sonatas has been again opened to the public. Then, too, the centennial anniversary of Beethoven's birth, with the universal recognition given to it by the musical world, has assisted in fixing present attention upon this composer. This new edition of his life may therefore be considered a most timely one.

It was indeed singular that no biography was to be found of the man who had so profoundly impressed himself upon his age, who had exercised so powerful an influence upon his art, and who certainly was entitled to be called one of the master spirits of the present century. The one here reprinted is by Schindler. It is confessedly an imperfect work, and it can only serve until some better one is provided. Schindler was an intimate friend of Beethoven's, but he was not the man whom the composer designated for his biographer. It was by an accident that he was called upon to fill that position. Neither his mental habits nor his literary ability fitted him for the task. His work is defective in arrangement, meagre in its details concerning some of the most interesting years of the composer's life, and somewhat clumsy in execution. Many of its statements, too, have been shown by later research to be erroneous. Fortunately, some of these defects have been made good in the present edition, by a supplement containing as much printed matter as the original life, and consisting of sketches of the great musician from the pens of various friends, and of a short work entitled the "Life and Characteristics of Beethoven," by Dr. Heinrich Doring, being a translation of the biographical sketch prefixed to the Wolfenbüttel edition of his sonatas, and already printed in *Dwight's Journal of Music*.

The necessity for an adequate life of the great musician impressed itself so deeply on the mind of one of our countrymen, Mr. Alexander W. Thayer, that, years ago, he went to Germany, and commenced a series of investigations so minute and laborious as to astonish even the German scholars, who are ordinarily accredited with the fullest possession of these qualities. But one volume of this work has as yet appeared, and that carries Beethoven only through the earlier years of his life. Strange to say, this volume has only appeared in German. Mr. Thayer looked, doubtless, for the largest recognition of his labors from the countrymen of the composer, and in that view had his book first translated into that tongue. The difficulty with it will probably be that it will prove too long and exhaustive for the general reader. It is not every act and word even of a great genius that is worthy of record, and Mr. Thayer seems to have expended too much strength on the elucidation of trifles. Meantime, Schindler's work must suffice us, and in the main it cannot be doubted that it gives an accurate picture of Beethoven, who was, for that matter, an excellent subject for biography. His life was a fierce battle, from the beginning to the end, full of stormy and troubled scenes and strange episodes. Schindler has neither idealized his hero nor sought to tone down the peculiarities of his strong nature, but to represent him as he was. It was thus that he begged to be presented to posterity, and not behind a painted mask. Forced to struggle with the cares of this world and to provide for his daily bread, he chafed constantly under these distractions, for he desired to live wholly in the ideal, whereas the actual confronted him roughly at every turn. He was moody and morose, unreasonable, suspicious of his best friends, jealous often, unsocial, reluctant to meet those who desired to approach him, strange and careless in all his personal habits, far from neat—in fact, not a man to be commended so far as the affairs of everyday life were concerned. But the soul of the man was noble, scorning deceit and hypocrisy of every kind, desirous of being just to all, and in sympathy with whatever was noble and lofty. He was also of pure and good life—in manners rough, but in morals uncorrupt. All this Schindler's book brings out clearly, and no one can read it without a feeling of the deepest interest, and also one of profound sympathy with the lonely and isolated composer.

To this volume, "Beethoven's Studies in Thorough-bass, Counterpoint, and Composition," published by Schuberth & Co., forms a valuable sequel. There will undoubtedly be those who will be inclined to go beyond the mere biography of the man, and to look into the methods by which he attained his greatness. His genius, of course, no book of studies can explain; but even genius must labor by rule, and this book contains the maxims upon which he worked, with examples from his own hand in illustration of these rules. Beethoven went always directly and bluntly at his work, and these studies are characteristically concise and clear, giving explicit information in regard to the rules of harmony, the treatment of chords, strict and free counterpoint, and containing also elaborate instructions and illustrations of fugue and canon forms. The translator has added nearly a hundred pages of anecdotes, letters, fac-similes of Beethoven's manuscript, and other interesting matter.

The History of Music. A Series of Lectures by Frederic L. Ritter. (Boston and New York: O. Ditson & Co.)—It is a little curious that two musicians, of remarkable knowledge of their profession, should simultaneously have taken up the same subject and treated it in a similar manner. Mr. John K. Paine, of Boston, a Harvard graduate and an admirable organist and composer, is now engaged in delivering a series of lectures on the history of music, of which this work of Mr. Ritter's is almost a counterpart. Whatever may be thought of the latter's abilities as a conductor—a direction in which he has of late years been brought somewhat prominently before the public, and in which his success was somewhat questionable—there never has been any doubt as to his real learning and

* "The Life of Beethoven." Boston: Oliver Ditson & Co. 1871.
"Beethoven's Studies in Thorough-bass, Counterpoint, and the Art of Composition." New York: J. Schuberth & Co. 1871.

deep research into the history of his art. The little volume recently published embodies some of the results of that research. Commencing with the earliest Christian music of the Catholic Church, Mr. Ritter follows the art in its progress from century to century down to the time of Haydn. The first lecture treats of the Gregorian chant, folk-songs, and the invention of harmony, from the Christian era to the close of the fourteenth century. The second is devoted to the old Flemish, German, English, Italian, and Spanish schools, to the time of the death of Palestrina; the third, to the oratorio and Protestant church music, to the time of Schumann's death; the fourth to the opera, from its invention in Italy to the death of Gluck; the fifth, to the development of instrumental music from the sixteenth century to Haydn. The later history of the art is left for a succeeding volume.

Whoever would possess himself, at the expense of a few hours' pleasant reading, of those essential historical facts in regard to the history of music, with which every person interested in that art should be familiar, may find them well and interestingly stated in this handy volume.

P. Terentii Afri Comoediae. Edited by T. L. Papillon, M.A., Fellow of New College, Oxford, and late Fellow of Merton; Andria, Eunuchus. (London, Oxford, and Cambridge: Rivingtons. 1870.)—This book, one of the *Catena Classicorum*, edited by Arthur Holmes and Charles Bigg, is but a blind guide for the young. The basis taken for the text is the edition of Zeune, 1774. Considering what a stride has been made in the criticism of Plautus and Terence in the last twenty or even in the last five years, it is a little odd that the editor should go back a century, particularly when he had before him such texts as Fleckeisen, 1857, and Wagner, 1869. In fact, the very title of the book makes one suspicious of its quality; the editor writes *Terentii* Andria instead of *Terenti*, forgetful of the summary way in which Ritschl has disposed of such forms once for all: "in *ii* terminatos genitivos ut *ingenii* nihil quicquam præsidii habere tantum tironum caussa moneo, quamquam video etiam provectiores ætate tirones esse."

It is not surprising that the notes founded on this questionable text should be unsubstantial. The metrical explanations are reserved till the work is done. What they will be may be guessed from an occasional hint; for instance, the editor makes *argūmento* a word of three syllables. As a specimen of vague grammatical interpretation we may take Andria, 17: he reads here with Zeune—

Faciunt næ intellegendo ut nihil intellegant,

with this note: "næ] Bentley reads *nĕ* (interrogative); but *næ* is often written *ne; cf. vai, vή*." Here we may note: 1. That Donatus attests the *ne*, which *must* be interrogative. 2. That Bentley was aware that the affirmative *ne* must stand before a pronoun or pronominal adverb. 3. As to the droll statement that "*næ* is often written *ne*," the affirmative particle is *only* written *ne*, *næ* being a spurious form invented by Laurentius Valla, who died in 1457, never found in MSS. or any good printed book. In fine, if there is any one verse of Terence where the reading is beyond doubt, it is this very line of the Andria:

Faciuntne intellegendo ut nil intellegant?

In respect to orthography, the text is naturally an improvement on Zeune. But we find such exploded forms as *quum* for *quom*, or *cum; negligentia, hiccine, hoccine, hocce, siccine, adolescens, adolescentula, illico, futilis, cænare, inīicere*, and *reīicere, nunc iam* (as two words), *renunciare, mæror, Iupiter.*

After Ophir; or, Wild Life in Africa. By Capt. Augustus Lindley. (London: Cassell, Petter & Galpin; New York: Robert Turner.)—*Hunting Grounds of the Old World.* By the Old Shekarry. (New York: George Routledge & Sons.)—The undeniable close relation which exists between the robust physical nature of the English better classes and the practice of field-sports admits of a double interpretation, a dilemma of cause and effect, which it is worth the while of the moral philosopher to solve. We are disposed, from many personal experiences, to put the sport as cause, and join with hearty warmth any movement which will extend to the chase the consideration given to boating, to gymnastics generally, as a part of the education of a young man. We should be inclined to respect less the type of manhood of a young man whose humanitarianism to the beasts extended to a literal acceptation of the law, Thou shalt not kill. "He who needlessly sets foot upon a worm," is *per se* a brute, for needless cruelty is no part of a sportsman's nature, and the passion which animates his pursuit of savage beasts has nothing in common with a love of giving pain. That, as a general thing, Americans are deficient in love of these sports, there needs no better proof than the paucity and generally low quality of books on these subjects. Englishmen write all the good books thereon, as they do most of the shooting in all parts of the world. Our *boys*, however, take to it second-hand immensely, and a book like "After Ophir," while it delights the still unregenerate youthful heart with its peril and excitement of struggle with the kings of brutedom, is calculated to instruct as well. It is well written, and full of information as to the human as well as the brute races of Southern Africa. The author's portrait of a "long Yankee" will hardly, however, establish his reputation for accuracy in dialectic reporting. It is of a nondescript—a Yankee of straw, we fear. The illustrations are capital, and, if drawn by the author, prove him as clever with the pencil as with the pen.

"Hunting-Grounds of the Old World" is less noteworthy, both from inferiority of illustration and narrative interest. The name of the Old Shekarry is one known amongst East Indians for exuberant exaggeration, and the unartistic way in which he piles the ground with slain is too much for any but boys of that age which takes kindly to Munchausenisms. For the rest, it is of the same old field from which we have had hunting stories *ad infinitum*, and many better told than this.

*** *Publishers will confer a favor by always marking the price of their books upon the wrapper.*

MINES AND MINING

OF THE ROCKY MOUNTAINS, THE INLAND BASIN, AND THE PACIFIC SLOPE:

Comprising Treatises on Mining Law, Mineral Deposits, Machinery, and Metallurgical Processes.

By Rossiter W. Raymond, Ph.D., United States Commissioner of Mining Statistics, Editor of the *Engineering and Mining Journal*, New York, etc. Assisted by many Professional Experts.

Illustrated with 140 engravings. New York: J. B. Ford & Co. 1871. Bevelled boards, extra English cloth. Price $4 50.

This volume contains, in a marvellously condensed form, a greater amount of information concerning our American mining industry, its condition, prospects, methods, and appliances, than was ever before collected in any single work. It comprises a description of all the gold and silver-mining districts of the West; a careful discussion of the laws affecting their titles; a thorough essay on mineral deposits in general, their occurrence, characters, and classification; 27 chapters, profusely illustrated, on the mechanical appliances of mining, and on metallurgical processes; and an appendix, with valuable tables of statistical information.

Three alphabetically arranged analytical indexes, one of Mines, one of Mining Districts, and one of Subjects, complete the work. With these, the vast body of information contained in these 800 octavo pages is remarkably convenient and accessible for purposes of reference.

The style of the book is free from obscure technicalities, and eminently adapted to interest and instruct the non-professional reader; while yet it is clear, terse, and accurate enough to satisfy the demands of experts.

JUST PUBLISHED BY

PORTER & COATES,

822 Chestnut St., Philadelphia.

LONGFELLOW'S POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, by H. W. Longfellow, with the addition of 150 pages of entirely new matter never before published, making it one of the most elegant and complete works extant. With Introduction, Biographical Notices, and Translations, from the earliest period to the present time. By Prof. Henry Wadsworth Longfellow. Illustrated with engravings on steel and engraved title. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6; sheep, marble edges, library style, $7 50; half-calf, gilt, $9; Turkey morocco, $12.

'This valuable work contains selections from about four hundred authors, translated from ten languages. Mr. Longfellow himself gives us translations from all these languages but two.'—Allibone's Dict. of Authors.

'This edition has been revised and enlarged by the author, and contains his last touches and additions to his labors.'—The Age, Philadelphia, Nov. 3, 1870.

HEDGE'S PROSE WRITERS OF GERMANY.

A new and revised edition. With Introduction, Biographical Notices, and Translations. By FREDERIC H. HEDGE, D.D. With Six Portraits on Steel and Engraved Title. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5; sheep, marbled edges, library style, $6; half-calf, gilt, $7 50; Turkey morocco, $10

'There is no book accessible to the English or American reader which can furnish so comprehensive and symmetrical a view of German literature to the uninitiated; and those already conversant with some of the German classics will find here valuable and edifying extracts from works to which very few in this country can gain access.'—Prof. A. P. Peabody, in North American Review.

A New Globe Edition of

THE WAVERLEY NOVELS.

By Sir Walter Scott. In 16mo size, on toned paper, illustrated. The most attractive edition for a small amount of money published in the country. Complete in 23 vols. Green cloth extra, per vol., $1 25; per set, $28 75. Half-calf, gilt back, per vol. $3; per set. $69.

"Botany should be taught in every school, and these Volumes should be the Text-books."—Prof. J. S. Davis, University of Virginia.

BOTANICAL TEXT-BOOKS.

By Professor ASA GRAY,

Of Harvard University.

HOW PLANTS GROW,
SCHOOL AND FIELD-BOOK OF BOTANY,
MANUAL OF BOTANY,
STRUCTURAL AND SYSTEMATIC BOTANY,
Etc., Etc.

The publishers beg to call the attention of those about forming classes in Botany to the well-known works by Professor Gray. Having been carefully revised, they present the latest and most accurate principles and developments of the science, and it is sufficient endorsement of them to state that they are used in almost every noted College, High School, and Seminary in the country, and are recommended over other series by nine-tenths of the leading Professors and Botanical Teachers in the United States.

No author has yet approached Professor Gray in the rare art of making purely scientific theories and dry details popular and interesting. From his charming elementary work, "How Plants Grow," to his more elaborate "Manual," there is one simple, concise, and yet exhaustive method of teaching the various grades of the study.

Descriptive Circulars, giving full titles and prices, will be forwarded, by mail, to any address on application.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 16, 1871.

The Week.

VARIOUS gentlemen of the press, finding time hang heavily on their hands since the decline of the excitement about "the little church round the corner," have during the past week turned their attention to the steamer *Tennessee*, which carried out the San Domingo Commission. She sailed from New York on the 17th ult. for an island from which no news by regular channels could be expected before the 22d inst., and no extraordinary means of sending home word of her safe arrival had been provided or apparently thought necessary. So they proceeded to turn this long interval to account by working up a disaster. Some made certain sailors and officers refuse to sail in her before she left port on account of her well-known unseaworthiness; others took her good heavy engines out of her, and put in flimsy light ones, so as to raise her unduly out of the water; others then put on a spar-deck on her, which increased her accommodations, but made her top-heavy; and then another flattened her bottom, so as to make her sure to capsize. While she was in this miserable condition, other gifted writers arrived, and gave her only five days' coal for a voyage of ten days, thus leaving her to make her way as best she could under sail, all the while miserably "dragging her screw." But seeing she might possibly escape in this way, they worked her into a dismal region of eternal calm, known as the "Horse Latitudes," from which it appears, however, according to others, that she may be caught by the trade-winds, and carried to the coast of Africa, which, however, she may not reach for a twelvemonth; by that time the crew would probably have eaten the Commission and correspondents, except, perhaps, Dr. Howe and Mr. Wade, who, it is not disrespectful to presume, are too tough to be palatable. Things having reached this melancholy pass, the *World* mourned its correspondent on board the unlucky vessel, and under the style and title of "a gifted associate," in eloquent terms, and, not unnaturally, laid the blame of the whole tragedy on the odious Radical Administration.

The long delay in Mr. Schenck's departure, and the mysterious hints from the Washington correspondents that something was coming, have at last been explained by the announcement that it had been agreed by the two Governments to leave the settlement, not only of the Fisheries question, but of the *Alabama* claims, and all other outstanding differences between Great Britain and the United States, to a "High Commission," composed on both sides of very eminent men, including Mr. Schenck. It would have been difficult to have hit upon a better mode of settling existing disputes, and impossible to have selected a better body of men on both sides to do the work. The only two professed masters of international law among them are Judge Nelson and Professor Mountague Bernard, but all are very familiar with the questions to be discussed, and with the principles which should regulate them. It is now said that the Commission will not go into details, but simply lay down the rules on which the settlement is to be based; and as this cannot take very long—in fact, it is done already—we may probably look forward to seeing the work finished, if at all, by the end of March. Important as the appointment of the Commission is, and as its success will be, as regards the relations of England and America, they will be still more important as regards the provision of a substitute for war in the settlement of international controversies. To be sure, international disputes have been settled by commissions before now, but none of such gravity, and none by which popular feeling had been so strongly roused. Should the *Alabama* case be peacefully adjusted in this way, it will greatly weaken the chance of any resort to war in future, and proportionably foster the habits of mind which will eventually, let us hope, make the decision even of national quarrels by a court possible. In short, no greater triumph of civilization has occurred in our day, and, coming side by side with the savagery which has desolated France, it is all the more wonderful.

We may mention now, for the benefit of all savages and blatherskites, however, that a good way of frustrating the labors of the Commission, and keeping up the good old plan of knocking people on the head when we differ with them, will be to shake their heads over the Commission, to express the hope that the dispute *may* be settled in this way, but to see "many difficulties;" to trust that the Englishmen are not going to allow the national honor to be trifled with, and that Fish and Schenck are not going to be seduced by the blandishments of the aristocracy into "surrendering our just rights," and so on, and to insinuate that we need be in no hurry to settle; "if England can afford to wait, we can;" and then go to a peace-meeting, and howl against Bismarck and King William, standing armies, etc. Judging from the tone of the press, however, on this side of the water at least, the scheme will have the hearty support of the public here, and meets with the greatest satisfaction, though a correspondent of the *Tribune* writes a mysterious letter, warning the American Commissioners, as well as we can understand him, against doing anything to impede the peaceful withdrawal of England from this continent.

At the bottom of these dark hints is the idea that England is ready to go as soon as the Canadians will let her, and that, therefore, the true American policy is to make their connection with her so unpleasant that they will soon become as glad to dissolve it as she. Now, we have no doubt Great Britain will withdraw from this continent, in the natural course of things, before long, and that the Canadians will see before long that absorption by the United States is not only sure to overtake them, but the best thing that can overtake them; nevertheless, we think it is quite safe to point to this mode of hastening the desired result as one of the ways in which the war spirit is kept up and the peaceful settlement of controversies rendered difficult or impossible. It reminds one of the plan one hears of sometimes resorted to among individuals, of making a man buy or sell a bit of ground near his door by putting up a nuisance on it. The Fisheries question ought to be debated and settled as a wrong, on principles of international law, and not as a means of coercing the Canadians into doing something we cannot *of right* ask them to do. It is at points like this in a controversy that the peace societies ought to cry out. What they usually do, however, is to lie quiet till the throat-cutting actually begins, and then they raise their hands to heaven, and wail over the horrors of the battle-field.

Little enough has been done in Congress during the week. Naval matters have given more occupation than any other one subject, the House having before it the Naval Appropriation Bill, and the Senate the House bill to fix the rank of the staff, while an attempt to reinstate a naval constructor caused, in the House, the character of Admiral Porter and the staunchness of the *Tennessee* to be overhauled, with the usual amount of loose talking and misrepresentation. The House bill referred to does not seem to have been improved by the Senate Committee which has reported it, as they have restored the vague phraseology of "assimilated with," and otherwise failed, it seems to us, to meet the situation. The Senate passed on Monday the joint resolution to enable Mr. Miller, of Georgia, to qualify. By a vote of 106 to 103, the House avoided taking up the question of the repeal of the income tax, which will, therefore, hardly be disturbed this session.

When we read from time to time in the papers that Mr. Bancroft was associating with German scholars, and making speeches to Germans in the German language, and otherwise entering fully, freely, and with perfect familiarity with its ways and ideas, into German society, we felt he was trespassing a little too far on our patience, and we have been expecting for some time that he would come to grief. Accordingly, we are not surprised to find that the proposition, which we be-

lieve emanated from him originally, and which the President has embodied in a message to Congress, to send to the new German Empire a mission of equal rank with that of Paris and London, will, if carried out, as is probable, involve Mr. Bancroft's retirement by involving the suppression of the present Prussian mission. The new place, it seems, is wanted for Judge Orth, of Indiana, and he ought to have it, because he will bring to its duties a thoroughly fresh and unbiassed mind, owing to a thorough want of diplomatic experience and a fair ignorance of the German tongue. He will thus enter on his duties without any entangling alliances or prejudices, from which Mr. Bancroft can hardly be free.

The question of prohibitory legislation is once more making its annual appearance in Massachusetts. Last year was what might be called an off-year, owing to the preoccupation of the public mind by the Hartford and Erie trouble; but it was the turn of the license party, so they got the Prohibitory Bill of the previous year amended by authorizing the sale of beer, except on Sundays—though the defective wording of the statute, it appears, makes it also lawful on Sundays. This year it is the turn of the prohibitionists, and they are clamoring for the repeal of the beer clause, on the ground that it is used to cover the sale of all kinds of liquors. In the meantime, a new party of "moral suasion" is said to be looming up, with the view of resorting to the old methods by which the temperance movement began, and which have done ten times as much to diminish drinking as all the prohibitory laws put together. But "moral suasion" will never be successful till temperance advocates learn to be truthful and accurate. Truthfulness and accuracy, we know, to some minds are hateful, but they are the conditions of success wherever men are to be convinced. As long as the Rev. George Trask, for instance, persists in making such statements as he is reported to have recently made in this city—that young men addicted to smoking "rarely were successful and never eminent in their vocation in life," he must expect to be received by smokers with jeers and hooting, and even accused of something worse than silliness. And what can be the mental condition of an orator who holds up N. P. Banks as an example of what abstinence from cigars may do for a man, to a generation which knows Bismarck to be a smoker?

Financial circles are displaying a cheerfulness and confidence very different from the gloom recently prevailing. It is, however, difficult to see upon what the change is based. The dearth of employment for money in commerce keeps money cheap, and has induced large investments in Government securities, leading to a sharp advance in prices both here and abroad. But our five per cent. bonds are not yet selling at par in gold, though Mr. Boutwell is reported to be sanguine of success in selling his four and four-and-a-half per cents at that figure. The advance in Governments has favorably affected other securities, and lent a buoyant tone to all financial markets. Gold continues unchanged. The foreign exchanges remain at the point where specie shipments may be resumed at any day, but the gold premium seems immovable.

The provisioning of Paris has led to large purchases of breadstuffs and meat in this country, both for export and speculation, leading to some activity in trade, but no material change in prices. The cotton receipts for the week are the largest we remember, an unusual circumstance at this late period of the season, and indicating a crop equal to the highest anticipations. These heavy arrivals, and the growing uneasiness felt in England concerning the trade with the East, have depressed the price to the lowest point yet touched, although the English mills—owing to interruption in Continental production—are largely and profitably employed, and have just granted to their workmen an increase of wages, the first of the kind for a long time. All other trade is quiet, but not inactive. The cessation of the coal strike is announced for the 15th inst., but it is said work will be only partially resumed, so as to prevent a decline in the price of coal; a partial resumption will, however, undoubtedly prove a failure. The slight improvement in real estate appears to be totally lost, and sales have come almost to a stand-still.

The usual statistics of commercial credit for the whole of the United States have just been published for 1870. They show an increase of fully 25 per cent. in the number of failures, and an increase of nearly 20 per cent. in the amount of liabilities, compared with last year's. Neither the number of failures nor the amount of liabilities is alarming, compared with such years as 1857 and 1861, but they materially exceed the average of other years, and are, besides, noteworthy as showing a steady increase for several years past. The largest proportionate increase in any State of importance is found in California, nearly 300 per cent., no doubt mainly due to the bursting of the overblown real-estate bubble. Throughout the Southern and Southwestern States the increase is especially heavy, nearly 100 per cent.; only Kentucky and Virginia showing a decrease. In New England, both Massachusetts and New Hampshire show an improved state of credit, and New York State, including the city, likewise presents a healthy decrease. The West shows, on the whole, a moderate increase in failures. But the two States which give the character to the whole tables are Ohio and Pennsylvania, in which the increase has been very large, these two alone being responsible for fully one-half of the total increase throughout the whole of the United States.. These are the two States which are generally believed to have most largely benefited by the protective tariff, and to have added most largely to their new industries and their varied sources of wealth. Has this anything to do with it?

The people of Indiana have at last, we are glad to see, waked up to a sense of the mischief and immorality worked by their divorce legislation. Ever since the opening of the present session of the Legislature, petitions for a change, very numerously signed, have been pouring in from all parts of the State; and in response to these a bill was introduced into the Senate, and at the date of our last advices had passed that body by a vote of 37 to 3. It is expected that it will be equally successful in the House. The first section deals with the most disgraceful feature of the present law, by providing that where the cause of divorce has arisen in another State, the petitioner shall have to prove *bona-fide* residence of *three* years, instead of one, in the State and in the county in which the petition is filed; and, moreover—and this is perhaps of more importance than all—that the divorce shall not be granted unless the act or acts complained of were a good cause of divorce in the State in which they were committed. In addition to this, the bill forbids the granting of a divorce, where the place of the defendant's residence is known, without personal service of the summons. The causes of divorce, too, are distinctly specified, and nothing is left, as under the old law, to the discretion of the judge. They are six in number; but no divorce can be granted except for adultery, or conviction for an infamous crime, until the parties shall have been married at least three years. We believe there is a growing feeling all over the country in favor of giving the marriage relation stronger legal support than it has had of late years. A community which cares little for the strength of the family tie, which makes no effort to secure homes and parental care for its children, and treats the sexual relation as simply an affair of individual taste or "affinity," has no future on this earth. Purer and manlier races will thrash it in war, and surpass it in the arts of peace, and finally banish it out of sight, with its platforms, and preambles, and "soulful sermons," and all its gilded nastiness.

The French National Assembly, convened at Bordeaux, held a preparatory sitting on Monday, the 12th. Of the seven hundred and fifty-three members who were to be elected on the 8th, about three hundred were present. The political complexion of these deputies is not stated in the despatch. We hear, however, that the elections in the provinces have resulted largely in favor of the conservatives—that is, of monarchists of all shades—and that a rough estimate in reference to fifty-six out of the eighty-nine departments of France gives three hundred

and seventy elections to the Bonapartists and Orleanists, and eighty to the Republicans—no mention being made of legitimists, that is to say, Bourbonists. The proportion between Bonapartists and Orleanists seems to be vastly in favor of the latter, as no particular Imperialist triumphs are announced from any quarter, while we hear of the election of Thiers in eighteen departments, of General Trochu in seven—his success above his Republican colleagues shows that he was voted for by Orleanists on account of his former proclivities—of General Changarnier in four, of Dufaure in three, of Rémusat in two, and of Barthélemy-Saint-Hilaire and the Duc d'Aumale in at least single departments. None of the monarchical parties appears to have broadly unfurled its own flag; their candidates presenting themselves as "Conservatives," "Moderates," or "Liberal Union" men, and here and there triumphing by coalition votes combined against the Republicans. Whether the Orleanists have succeeded in carrying a majority, or something approaching it, of all the elections, or whether their ranks are likely to be increased in the Assembly by accessions of monarchists of a different color—from hatred of the Republic—or of moderate Republicans—from fear of an Imperial restoration or anarchy—is still to be seen. It is probable that most of those designated as "Imperialists" are so called simply because they have served the Empire, or given in their adhesion to it during its existence.

In so far as the influence of the priests goes, it has doubtless all been thrown for the Bonapartists, under whose sway the church has had better times in France than she has had since 1789, and from whom alone is an effort for the restoration of the temporal power at Rome to be expected. The sober, more intelligent, and well-to-do masses, not influenced by the priests, are probably mostly Orleanists. There is no period of French history to which this class can look back with so much comfort as the eighteen years of Louis Philippe's reign. It was the one taste of peace and freedom France has had in this century. With the Republic everybody except the socialists of the cities is pretty thoroughly disgusted, and M. Gambetta's performances have done nothing to revive confidence in it. He, like Louis Napoleon, came to grief through subordinating the military campaign to the necessities of his party. He fought the Prussians for the Republic rather than for France. If the Orleanists win the game at last, it is at least certain that France will commit her destinies to the hands of a family of pure, upright, and accomplished gentlemen, who in their time have seen, done, and suffered much, and are Frenchmen to the core.

Most of the Republican triumphs have taken place in the large cities, the *ouvriers* of which are their main support. According to more or less definite accounts, they have carried a majority of the elections in Paris, Bordeaux, Havre, Brest, Lille, Dijon, Strasbourg, Lyons, Toulon, Marseilles, and Perpignan, while Nantes, Rouen, Versailles, Poitiers, and Montauban have gone against them. Their victory in Paris is, of course, the most important, and, enhanced as it is by similar results in the towns of the second rank, once more reveals the pronounced character of the political dualism which so often, especially in times of a violent crisis, fatally divides the French people into a radical urban and a conservative rural population. In Paris, the ultra-radicals and the next shade of Republicans are reported to have rolled up the highest majorities, electing, among others—as far as could be ascertained at last accounts—Louis Blanc, Victor Hugo, Edgar Quinet, Garibaldi, Rochefort, Gambetta, Schoelcher, Delescluze, Félix Pyat, and probably also Ledru-Rollin, Blanqui, and Flourens. Gambetta is also elected in Strasbourg, and at one more place. Jules Favre, Picard, and Leflô are also members of the Assembly; but Garibaldi declines to take his seat, though elected both in Paris and Nice. General Faidherbe is honored by an election in the Department of Somme, which witnessed his defeats. Paris sends to the Assembly the Admirals Saisset and Pothuau. Altogether, it is clear that there will be no lack of talent of any kind—especially oratorical—in that extraordinary gathering, in spite of the absence of all the great lights of the Second Empire—lights which the day of Sedan has probably dimmed for ever. But it is not talent, and least of all oratorical talent, which is to save and regenerate France, but good sense, patriotic self-abnegation, and harmony; and heaven knows whether these will be forthcoming in a sufficient degree.

The doings of the two branches of the Government of National Defence during the fortnight following the armistice, and embracing the elections, have been far from evincing a spirit of harmony. Gambetta called out the military class of 1871; the Paris Government annulled the decree. Gambetta decreed sweeping electoral disqualifications; Favre and his friends annulled them; but on the eve of the elections, Emanuel Arago, having arrived at Bordeaux from Paris to act as Minister of the Interior, restored a part of them—if we are rightly informed by the Cable. Whether the threatened or actual restrictions exercised any influence upon the elections, by here and there excluding a pronounced Imperialist candidature or otherwise, we are not told. Nor do we know whether Napoleon's latest manifesto, dated "Wilhelmshöhe, Feb. 8"—the day of election, which makes us doubt the correctness of the date—was distributed in France in time to influence the voters one way or the other. The impudent tone of this document is enough to astonish any adherent of the Empire not entirely demented. According to it, the Man of Sedan is an innocent victim, "betrayed by fortune" and "crushed by injustice;" the Empire a still legitimate "authority, emanating from universal suffrage;" and France bound "to call to account the usurpers"—the overthrowers of the Imperial throne—"for bloodshed, and ruin, and squandered resources," erecting, or rather re-erecting, a government "able to heal the wounds, to bring hope to the firesides, to reopen the profaned churches for prayers, and to restore industry, concord, and peace." Of liberty there is not a word, not the slightest allusion to it; and it is evident that the captive of Wilhelmshöhe, while wrapt in "a profound silence, which is misfortune's mourning," proposes to reign over France, if recalled to her throne, as an undisguised tyrant. The usurpers he speaks of have, in the meanwhile, before the Bordeaux Assembly, "resigned the powers confided to them as Government of National Defence," remaining in office provisionally "until the constitution of a new Government."

At the German headquarters in Versailles the impression prevailed that the French National Assembly would frame a new Provisional Government, with the Comte de Paris, Louis Philippe's grandson, as President, and provide for a *plébiscite* to decide between the Orléans throne and the Republic. The Germans—both in Versailles and in Berlin—also believed that peace would shortly be concluded, and thus were not at all averse to a prolongation of the armistice—the less so as the stipulations of the latter did not prevent them from making progress in the reduction of Belfort, or from levying heavy contributions on Rouen, Dieppe, and other towns of the North. That the conquerors were wise enough totally to abstain from interference with the elections is proved by the result of the latter in Paris, Strasbourg, and other cities swayed by their arms. According to a report claiming particular authority, their peace conditions, too, are much less harsh than was formerly anticipated, especially as regards the pecuniary part of them. The delivery of arms by the Paris garrison is said to have been carried out to nearly the full extent stipulated. The revictualling of that city, in which the English Government and people have taken a creditable share, progresses with equal promptness.

The Roman question has progressed so far that the Italian Chambers have voted regal honors and a body-guard to the Pope, and a fund to support him; but the right of enlistment is of course denied him, and the libraries and galleries of the Vatican have been, in spite of ministerial opposition, declared public property. On some other points of settlement the ministry seem likely to be defeated, and it is by no means clear that the Government's will that the Pope should not be subjected to any temporal authority, will be fully respected. How to reconcile the demands for "regal honors" to two sovereigns within the same walls, is a problem that will come up after the removal of the capital to Rome. Meantime, the lieutenancy of that city, heretofore held by General Lamarmora, has been abolished, and the Minister of Public Works, Gadda, goes as Royal Commissioner to prepare the necessary accommodations for the transfer of the Government.

THE POLITICAL EFFECTS OF THE NEW APPORTIONMENT.

ONCE in each period of ten years Congress must fix upon the number of delegates which shall compose the House of Representatives, and apportion them among the several States according to their respective populations. The time for the performance of this duty for the next decade has now arrived. The provisions of the Constitution are few and simple: "Representatives shall be apportioned among the several States according to their respective numbers." "The actual enumeration shall be made within three years after the first meeting of Congress, and within every subsequent term of ten years." "The number of representatives shall not exceed one for every thirty thousand, but each State shall have at least one representative." There is here no express command that the House shall be rearranged immediately after the completion of a census, but such is the evident spirit and meaning of the clauses taken together, or else the members would not "be apportioned among the several States according to their respective numbers." While Congress undoubtedly has the power to postpone the measures of reorganization for a reasonable time, a delay continued unnecessarily would be an infraction of the organic law. The results of the late census in respect to population are now known, and it is possible to apply them to the Forty-second Congress, which commences on the 4th of March, 1871. This is possible, we say, but there would be inconveniences attending the proceeding almost insurmountable. Elections have been held in all the States except five. If the whole number of representatives in the new House should equal that of the present, nine of these States would lose one or more representatives. Even if the number should be increased within limits which seem to be at all possible, two or three States must each lose a member from their delegations. If the change were to be in every instance an increase, no inconvenience would be produced. The present delegation already appointed from a State remaining unaffected, the added member or members for the Forty-second Congress could be chosen at large, as is now done in Illinois. The effects of dropping out a member would be much more confusing; the election of last fall would be made inoperative. A new arrangement of districts throughout the State, and a second general election, would become necessary, all of which must be provided for by the local legislature. For these reasons, it is probable that the apportionment will be postponed until the next session, and will be made to take effect with the Forty-third Congress; although the members from Western States, which would generally gain in the new allotment, seem anxious to push the matter to a conclusion before the final adjournment. It has been suggested that, if the apportionment does not go into operation until the expiration of the Forty-second Congress, the next Presidential election may be affected, because the electors from each State must equal the number of its representatives and senators. This, however, is a mistake, so far as the popular vote is concerned. The whole scheme for organizing the House would be completed before the year 1872, so that the Presidential electors, as well as the members from all the States, would be ascertained, and the election would be held upon the new basis. There is still one contingency in which the election of President may perhaps be affected; namely, if it should be thrown into the House of Representatives during the last session of the Forty-second Congress. But even then, the possibility of an altered result would be exceedingly remote, since each State has but a single vote, which is, of course, controlled by the majority of its delegation, and it is not probable that this majority would be changed solely by any gain or loss of members under the allotment based upon the census of 1870.

We purpose now to exhibit at a glance the effects which the new apportionment will work in the House itself, and especially those which it will produce in the representation from different geographical divisions of the country, and, consequently, upon the relative amount of legislative power held by them. The House is now composed of 243 members. If the same number should be again adopted, eleven States will lose one or more representatives. It is hard for any community to surrender political power; it is harder still for individuals to lessen their own opportunity for office-holding. If, for instance, the delegation from Maine must, in a certain contingency, be reduced from five to four, it is natural that the present five should use all their endeavors to prevent such a catastrophe. This can only be done by adding to the whole number of representatives. Although no definite action has yet been taken, it may be considered as reasonably certain that this number in the new House will be fixed at or about 275. Any greater increase would render the body unwieldy and its legislative work difficult. We shall, therefore, base our calculations upon this assumption. In determining the delegation to which each State is entitled, the unit of representation must first be obtained. Four of the States, Delaware, Florida, Nevada, and Oregon, contain each a population considerably less than this unit, and are still entitled each to one member. Both the amount of their inhabitants and the number of their representatives must, therefore, be rejected from the totals in order to arrive at an accurate result, because their members do not depend upon the apportionment to be made, but are arbitrarily fixed by the Constitution. Making this deduction, the resulting unit of representation is over 138,000 (138,441). Dividing the total population of each State by this unit, and allowing a member for every remainder which exceeds one-half of the divisor, and the proper allotment will be reached. There will doubtless be some slight discrepancies between our results and those which will finally be adopted by Congress. A committee in which all the work must be done has ample facilities for manipulating the remainders, and thus transferring a gain or a loss from one State to another to subserve party and political purposes, and we must expect some "gerrymandering" with figures as well as with districts. The method indicated, however, is mathematically accurate, and by its means we arrive at the following conclusions:

The whole number of representatives will be 275. Fifteen States—Alabama, California, Georgia, Indiana, Kentucky, Maryland, Massachusetts, Minnesota, Mississippi, New Jersey, New York, Pennsylvania, South Carolina, Tennessee, and Virginia—will each gain one member. Kansas, Texas, and Wisconsin will each gain two members. Iowa, Michigan, and Missouri will each gain three, and Illinois four, members. A member is due in sixteen of these States to a remainder greater than one-half of the unit of representation; in seven of them this surplus exceeds 100,000. On the other hand, New Hampshire and Vermont will each lose a member. The relative changes made by this apportionment are somewhat concealed by the general increase resulting from the addition of thirty-two representatives to the House. As the relations of the several States to each other must be the same, whatever unit of representation is used, the correct proportions will appear more clearly from a computation based upon the assumption that the whole House remains unaltered. Adopting this basis, the unit or divisor will be a little more than 156,000, and we shall have the following results: The total number of representatives would be 243. Eight States—California, Georgia, Kansas, Minnesota, New Jersey, South Carolina, Texas, and Wisconsin—would each gain one member. Illinois, Iowa, Michigan, and Missouri would each gain two members. On the other hand, eight States—Connecticut, Kentucky, Maine, Massachusetts, New Hampshire, North Carolina, Rhode Island, and Vermont—would each lose one member. Pennsylvania would lose two, while New York and Ohio would each lose three.

By combining and tabulating these figures, we can indicate with accuracy the geographical tendency of population and of political power. The New England States, having now twenty-seven representatives, would lose six in a House composed of 243, and one in a House composed of 275 members. The four Middle States now send sixty-one delegates; they would lose four if the House should be kept at its present size, and gain three if it should be enlarged as proposed. Fourteen Southern States, now represented by seventy-five members, would gain either one or two under the corresponding circumstances. Thirteen Western States, including those on the Pacific coast, at present send eighty members; they would gain nine in the one case and twenty in the other. Passing from these actual to the relative gains and losses, and remembering that the relations of the various parts to each other remain the same whatever basis is adopted, we find that the New England States are at present entitled to 11 per cent. of the total representation, and under any new apportionment will be reduced to 9 per cent. The Middle States now hold 25 per cent., and will fall off to 23 per cent. The Southern States at present send 31 per cent. of

the members, and their proportion will remain unchanged. In the Western States there will be an increase from 33 per cent. to 37 per cent. A different geographical division will further illustrate the subject. Twenty seaboard States, embracing New England, the Middle States, and those Southern States bordering on the Atlantic and on the Gulf, under the existing apportionment send 140 members. They will lose eight in a House composed of 243, and gain ten in a House of 275. Fourteen States of the Mississippi and Ohio Valleys are represented by ninety-eight members; they will gain seven in the former House, and twenty-one in the latter. The three Pacific States now send five, and will gain one; the relative changes in these three divisions will be, on the seaboard, a reduction from 58 per cent. to 54 per cent.; in the Mississippi Valley an increase from 40 per cent. to 43 per cent.; and on the Pacific slope an increase from 2 per cent. to 3 per cent.

It therefore appears that the aggregate losses, amounting to 4 per cent. of the entire representation, are confined to the New England and Middle States, and that the loss in New England is relatively the greater. The relative representation of the Southern States will be unchanged. This result is not due to any proportional increase of population, for the percentage of such increase during the past ten years has been small; but to the fact that in the apportionment based upon the census of 1860 only three-fifths of the slaves were represented. The aggregate gains will be found alone in the Mississippi basin and on the Pacific slope, being three per cent. of the whole representation in the former and one per cent. in the latter. Among these States the largest additions occur in Illinois, Michigan, Iowa, and Missouri. Ohio will suffer a positive diminution of political power. It will be seen from these statements that, though the tendency of population has been steadily westward, the progress has not been so rapid as many ardent Western men have anticipated. The political sceptre has not yet been transferred from the seaboard to the regions drained by the Mississippi, the Ohio, and the Missouri. But if the change should go on for the next ten years at the past rate of movement, another census and apportionment would leave the States in the Mississippi Valley masters of the political situation.

If we enquire what effect the new apportionment will produce upon the relative strength of parties in the House, we find that in States which at the last elections were Republican there will be a gain of twenty-two and a loss of two members, and that in States which were at the same time Democratic, there will be a gain of twelve, indicating an excess of eight in Republican gains. This result, however, is utterly unreliable. It assumes that all the additional members to which a particular State is entitled would be in political accord with the dominant party therein. In order to approximate an accurate conclusion, we should ascertain the relative increase or diminution of population in the different parts of the same State. The States in which a change of representation is made must be arranged into new districts, and the members redistributed, before the actual political gains and losses can be determined with precision.

PARLIAMENTARY GOVERNMENT.

THERE is one feature of the Constitution of the United States which fell into considerable disrepute with many observers, and especially foreign ones, during the rebellion and during the reign of Andrew Johnson, but which has been rapidly rising again into favor with political philosophers during the last five years—we mean the independence of the executive. Many a time, during even Lincoln's administration, and oftener still during Johnson's, people sighed for the British practice of turning out the ministry by a hostile vote of the legislature, so as to keep the executive in complete and constant sympathy with the changes in public feeling or opinion. Indeed, at the close of Johnson's term, a good many people were fully satisfied that a President who could hold his own after a majority in Congress had begun to disapprove of him was a public nuisance; and probably nothing that he *said* won more popularity for Grant than his announcement that, when he took office, he would have no "policy" of his own—that is, would be in fact, though not in form, what the British Premier is, the exponent and champion of that view of public affairs which, for the time being, commanded most votes.

The British system has thus far had more imitators among the nations which have tried constitutional government than the American has had; indeed, the American may be said to have had none. Holland, Belgium, France, and Italy, the four monarchies which since 1815 have made a fair trial of constitutional government, have all adopted the form known as parliamentary government, that is, the government in which the executive is appointed or dismissed at pleasure by the majority of the legislature; but Belgium is the only one in which it has achieved a decided success. In all the others, though it cannot be said to have absolutely failed—the government of Louis Philippe was overthrown by the king's pusillanimity combined with excessive centralization—it has never produced quiet, orderly progress, and has never sufficed to deliver people either from the fear of revolution or from a series of dead-locks whose effects on politicians have been hardly less demoralizing than revolution. Austria is now trying it, and with a fair measure of success, but she is lucky enough to have in the Hungarians a set of men who possess remarkable and hereditary skill as parliamentarians. It has been set up, too, in Roumania, but has there worked so ill that Prince Charles threatens to abdicate through sheer disgust with its embarrassments. Professor Von Sybel, in his late article on the political future of Germany in the *Fortnightly Review*, says there is no immediate prospect of its adoption in Prussia, for the simple reason that the materials for it do not exist. In England, which invented it, and whose boast and glory it has been ever since 1688, there is growing discontent with it—a growing inclination to look on the American plan as its superior, or, at all events, as containing the germ of something better.

The objections to it are two in number, and they gain in force as the constituencies become more democratized. The first applies more particularly to France, Italy, and, according to Professor Von Sybel, to Germany. It is this: it is necessary to the successful working of the parliamentary system not only that there be two parties, ranged against each other in the legislature, one the administration and the other the opposition, but also that the opposition be united on a certain line of policy, and be ready, if it gets a chance, to go into power, and administer the government itself on that platform. Unless the opposition is ready to take the place of the ministry as soon as the ministry loses the favor of the majority, there is no parliamentary government. Now, in France and Italy such an opposition can hardly be said to exist, or ever have existed. The opposition in these countries, and this is true also of Roumania, agrees in only one thing—hostility to the party in power; but this hostility is due to all sorts of motives: with some it springs from disapproval of certain measures; with others from a habitual, and we may say hereditary, distrust of men in office; with others from a fundamental disapproval of the whole constitution, and a desire to upset it. These elements all act together in attacking and criticising the ministry; but it never enters into their heads to unite on a programme of their own, and ask to have the government committed to their hands in order that they may carry it out. Professor Von Sybel says that the last thing that occurs to a Prussian liberal deputy is to seek office in order to have things his own way. He considers his business to be criticism simply, and never dreams of its imposing on him the responsibility of framing a positive policy. The result is that when, under the parliamentary system as it has been tried in France and Italy, a ministry becomes so unpopular as to be unable to obtain legislation in support of its ideas, the whole machinery of state comes to a dead-lock. If the king, according to the English custom, sends to the chiefs of the opposition and asks them to make a cabinet and take the reins, he finds he might as well try to make a rope of sand. Some of them desire one thing and others another, and many the total destruction of the monarchy, or the reorganization of society on some new basis. A frequent consequence is that the ministry remains in office, but without power. It can only act with the consent of the legislature, and that it cannot get. In Prussia, at present, the ministry get over the difficulty by obtaining parliamentary authority for their acts if possible, but, if not, doing without it.

The second objection is one which is, thus far, only applicable to

England. Here the opposition is disciplined, acts under a leader, and has a platform of its own, and attacks the ministry with the avowed object of taking its place. But, as the constituency grows more democratic, public opinion grows more variable and acts more fitfully. The position of the ministry becomes more precarious, and its term of office has a tendency to become shorter. On the other hand, the work of government becomes every day more complicated. Society is slowly undergoing reorganization from top to bottom. Where the ground is so cumbered by tradition and custom, plans of reform have to be framed with great care, and need long periods for their execution. But such plans cannot be carried out properly if they pass every year or two into new hands. If there is no permanence in the executive, there can be no sequence in its acts. People are beginning to say, therefore, that, in order to enable it to do its work with any heart or hope or zeal or fidelity, it must be delivered for a fixed period from all anxiety about its existence, and from the necessity of fighting for its life every night in the House of Commons; that the premier must, in short, be anchored in his place for a term of years, as our President is.

Various criticisms on all this, suggested by American experience, might be produced, if we had time, here. The idea which underlies the English difficulty, and which is slowly obtaining recognition, is, however, a sound and wholesome one—and that is, that the world cannot be governed by the public opinion of any one week or month, particularly when it emanates from the vast bodies which now compose a modern state; that "the people," though omnipotent, is human, and has its gusts of passion and moments of weakness, against which it has to guard itself, by imposing on itself the necessity for reflection. The novelty which made the political machine so much of a toy in the early part of the democratic movement, and made the mere turning of the crank, without reference to results, so delightful, is rapidly giving way to a sober appreciation of the fact that self-government, besides being a mere evidence of freedom, is an instrument in the improvement of men's condition in society, and its efficiency is becoming an object of even greater interest than its looks.

The failure of parliamentary government in France and Italy and Roumania is simply the result of want of training in party politics, and will probably pass away with time and practice. Italian politicians, with a few splendid exceptions, were, until 1859, conspirators, and conspirators are always dreamers; and it is not unnatural that, on finding themselves legislators, their first efforts should be directed to the embodiment of the idols of their fancy in the shape and substance of votes and speeches, if not of acts. Besides, where a nation is suddenly put together, as the Italian nation has been, there are so many possibilities dancing before men's eyes, that it is no wonder it takes years for them to settle down on the existing constitution as a finality. In France the evil lies deeper, and is born of peculiarities of character as well as of historical antecedents. Parliamentary or even constitutional government will probably hardly work there successfully till somebody who is heartily friendly to it, and determined to have it fully tried, holds the central authority long enough and with a sufficiently strong hand to enable the constitutional system to lay hold of the French people as a habit—as one of the ultimate facts of their political life. Whoever, in doing this, enables a generation of Frenchmen to grow up in familiarity with the machinery of goverment, and with that affection for it which familiarity always inspires, will be entitled to the credit of having regenerated France.

CIVIL COURTS AND ECCLESIASTICAL TRIBUNES.

It is desirable to have well settled the test of what is and what is not a case for the intervention of a civil court in an ecclesiastical proceeding. The decision in the case of the Rev. Mr. Cheney, of Chicago, disposed of the petition before it in a way to which all must, as far as the result is concerned, assent; but instead of helping to settle the principle, the court has added a doubt to the subject.

The Rev. Mr. Cheney had been cited before a court of the diocese of Illinois, to answer two charges of having refused compliance with certain requirements of the canons of his church. He appeared and took exception to the organization of the court, the presentment, and the citation. These exceptions were overruled. He then filed his bill in equity, in the civil courts, asking for an injunction against the proceedings of the ecclesiastical tribune. This bill set forth that his rights of property and right to exercise a function of public concern and private advantage were involved in the proceeding, inasmuch as the ecclesiastical court might sentence him to deposal or suspension from the ministry, and thus he would be deprived of his salary as rector of the parish over which he was settled, and of the means of earning his livelihood by officiating elsewhere as a clergyman of the Episcopal Church. This was the ground for the right of intervention of a civil court. As reasons for an exercise of the right in his case, he alleged three classes of objections to the ecclesiastical proceedings:

I. That the ecclesiastical court was not constituted and organized in accordance with the canons of the Episcopal Church.

II. That the presentment did not set forth his offence with sufficient particularity of dates.

III. That he had not received sufficient notice.

All the objections seem to come under one of these heads.

The Supreme Court were unanimous in the opinion that the objections were not well founded. They held that the court was organized and constituted in accordance with the canons of the Episcopal Church; and that the presentment and notice were sufficient, whether judged of by the laws of the Episcopal Church or by analogy with the usages of civil courts, in criminal and penal proceedings. This decision disposed of the objections of the petitioner, and was enough to dispose of the case, if the court had been willing to say that they dismissed the petition on that ground, without attempting to say whether, if the objections had been sustained, it was a case for intervention. But the majority of the court, in the opinion delivered by Thornton, J., enter upon a discussion of the general principle, which drew out a dissenting opinion from Chief-Justice Lawrence and Judge Sheldon.

The majority of the court held that the case was not one for the intervention of a civil court had the objections been sustained. The minority held that it was such a case. The majority held that the decision of the ecclesiastical court as to its own jurisdiction, under the canons and laws of the church, was conclusive on the civil courts; while the minority held that it was not. Thus the case was disposed of on grounds of no general importance or interest, and a question of great general importance thrown into increased doubt.

After carefully examining the opinion of the majority, we find it difficult even to state the line of argument on which it apparently rests. It seems to us to lack order and clearness; and, so far as it is intelligible, the reasoning seems very loose. It adopts the unquestionable rule that there must be a right of property or some other purely civil right involved to justify intervention, and argues that there is no such right involved in the case before it. It is true, Mr. Cheney has a salary dependent on his being able to exercise his functions as a clergyman of the Episcopal Church; and by a deprivation of these functions he also is disabled from earning a living as a clergyman of that church anywhere. The only answer that we can see the court gives to this is, that his right to the salary is not a "vested" right, but contingent on his ability to exercise his functions; and that his right to pursue his avocation as a clergyman elsewhere, for pecuniary profit, is also not an absolute and vested right, but one dependent on the action of the church to which he has voluntarily submitted himself by joining it. To the best we have been able to ascertain, these are the only answers given to the claim that the case presented questions of civil rights.

The court then takes the ground, which is indisputable, that even if the case presented is one involving civil rights, a civil court will not revise a decision of an ecclesiastical court on the merits of a case before it, or on a question of ecclesiastical doctrine or discipline, but must confine itself to determining whether the tribunal assuming to act on the party's civil rights is really what it assumes to be, viz., an ecclesiastical court, organized under the laws of the church; and whether it has jurisdiction over the person and the subject-matter, by the laws of the church. If it is not such a court, and has not such jurisdiction, it will be enjoined; but otherwise, decision within the scope of its authority is conclusive. On this general proposition, the court was unanimous, and there is, we suppose, no doubt in the professional mind. The very pinch of the question comes just where the court divided. *If the case is one in which the jurisdiction of an ecclesiastical court depends solely on the interpretation of the laws of the church, is the interpretation that the ecclesiastical court gives to those laws conclusive on the civil courts?*

The question was fairly raised, if the court chose to discuss it, because the petitioner contended that the court was not organized in the way the canons required. He contended that the eight clergymen nominated by the bishop ought all to have been present when the court convened, whereas only five of the eight were present, and that the presentment was fatally irregular, because of the terms of the commission issued by the bishop to the presenters. These objections went to the very existence of the court, as a tribunal capable of acting on his case at all.

We make these extracts from the opinion of the majority bearing on this point, that the reader may have every opportunity of understanding the opinion:

"Without asserting the power of this court in cases of this character, yet, on account of the earnest, and able, and elaborate arguments of counsel, we will notice the objection, that the spiritual court had no authority to adjudicate upon the alleged offence." . . . . .

"The civil courts will interfere with churches, or religious associations, when rights of property or civil rights are involved. But they *will not revise the decisions of such associations upon ecclesiastical matters, merely to ascertain their jurisdiction.*" . . . . .

"Why should we review that and not every other decision which involves the interpretation of the canons? It is conceded that, when jurisdiction attaches, the judgment of the church court is conclusive as to purely ecclesiastical offences. It should be equally conclusive upon doubtful and technical questions, involving a criticism of the canons, *even though they might comprise jurisdictional facts.* It requires no more intellect, information, or honesty to decide what is an ecclesiastical offence than to determine the authority of the court according to the canons. The distinction is without a difference."

Does the court really mean to say that the distinction between construing a canon for the purpose of determining a question of jurisdiction, and construing it for the purpose of deciding a question of guilt or innocence of a spiritual offence, is without a difference? Also, does the court mean to say that if the jurisdiction of the ecclesiastical tribunal depends upon "doubtful and technical questions" of canon law, its decision is conclusive, while, if the questions are not doubtful or technical, it is not?

From the confusion into which it seems to us the majority of the court has drawn the subject, it is a relief to turn to the clear statement by the minority:

"We concur in the decision of the case at bar announced in the foregoing opinion, and we also concur in the opinion itself, except as to one principle therein. We understand the opinion as implying that, in the administration of ecclesiastical discipline, and where there is no other right of property involved than the loss of the clerical office or salary as an incident to such discipline, a spiritual court is the exclusive judge of its own jurisdiction, under the laws or canons of the religious association to which it belongs, and its decision of that question is binding upon secular courts. This is a principle of so grave a character that, believing it to be erroneous, we are constrained to express our dissent upon the record.

"We concede that, when a spiritual court has once been organized in conformity with the rules of the denomination of which it forms a part, and when it has jurisdiction of the parties and the subject-matter, its subsequent action in the administration of spiritual discipline will not be revised by the secular courts.

"The simple reason is, that the association is purely voluntary, and when a person joins it he consents that, for all spiritual offences, he will be tried by a tribunal organized in conformity with the laws of the society. But he has not consented that he will be tried by one not so organized; and when a clergyman is in danger of being degraded from his office, and losing his salary and means of livelihood, by the action of a spiritual court unlawfully constituted, we are very clearly of opinion he may come to the secular courts for protection. It would be the duty of such courts to examine the question of jurisdiction, without regard to the decision of the spiritual court itself; and if they find such tribunal has been organized in defiance of the laws of the association, and is exercising a merely usurped and arbitrary power, they should furnish such protection as the laws of the land will give. We consider this position clearly sustainable upon principles and authority."

AFFAIRS AT THE CAPITAL.

WASHINGTON, Feb. 13, 1871.

THE session of Congress and the fashionable season are both at their height, and members and senators find themselves subject to a divided duty. There are some peculiar features in Washington society. The commercial element, which is very unfavorable to the genial character of social intercourse, is entirely absent, and there are persons from all parts of the Union, of all pursuits and professions, who have while here a good deal of leisure time on their hands. The Presidential receptions are a type of all others. They are perfectly free to every one, and yet there seems to be no offensive intrusion. The opportunity thus given of seeing all the notables is extremely attractive to strangers, and must tend constantly to increase the disposition to make this city a place of permanent residence.

Of the political features, one of the most striking is the position of the representatives of the public press, not the newspapers themselves, but the individuals who conduct the telegraphic correspondence. If a person writes a letter to one of the papers in the great cities, this letter is subject to revision by the editor, and may be altered or rejected entirely. But the telegraphic matter is sent off at midnight to appear in the morning paper. It is paid for by the word, and cannot therefore be wasted. It occupies the most prominent place, and is read by everybody. The result is that there is not a member of either House of Congress who does not stand in positive awe of the twenty or thirty young men in the reporters' gallery. It is amusing to see the respect with which men having a lively sense of their own importance, return the salutations or receive the advances of others much their inferiors in age and station. As to the men who fill this important position, they seem to be generally of fair character and capacity, aiming to furnish news without the coloring of personal impressions, but they cannot of course be wholly impersonal; and it excites singular reflections to see the channel of information to the country represented, in the case of one of our largest commercial journals, by a boyish youth, with the appearance of a retail dry-goods clerk, and conversation indicating an education and habit of mind by no means Puritanic. It is not without significance that there is in this body a very general feeling of hostility to the administration. The press is almost the only weapon of the executive against the encroachments of Congress, and it is unfortunate, though perhaps not unnatural, that President Grant should have surrounded himself mainly with military men, and thus cut himself off from the medium of communication with the country.

At present the San Domingo business forms the largest cloud on the horizon, threatening both the administration and the Republican party. The absence of news from the *Tennessee* is causing some excitement, but apparently less because there is any real ground for anxiety than from speculation as to the political effect which her loss would have. In the debate upon the appointment of the Commission, it was evident that the scheme of annexation commanded very little sympathy from anybody, and would be supported only by those whose vision, unaffected by the distant future, extends only as far as the election of 1872. The temper of the House was shown by the amendment carried "that the appointment of the Commission should not be understood as committing Congress to annexation." The real struggle will begin when the report of the Commission appears. It is devoutly to be wished that the President would retire gracefully from so unpopular a scheme, but it is to be feared that the man who fought the battles of the Wilderness will not yield so easily, and, moreover, that the advisers who have his ear are not independent enough to place the question in the true light. What can be the motive of the President is a question often asked, but not answered. The Republican opponents, while they admit the personal honesty of the President, do not extend the same charity to the men by whom he is surrounded. The Republican senators in opposition are anxiously counting up their means of resistance. Annexation must be proposed, if at all, either in the form of a treaty or a joint resolution. In the first case, 25 votes will be sufficient, two-thirds being required for confirmation, and with the aid of the Democrats (misery makes strange bedfellows) they count upon having these, with two or three votes to spare. In the case of a joint resolution, there are questions of constitutionality as to the method, which are relied upon for restraining some votes in the House. At all events, it is a satisfaction that the question cannot come before the present Congress, as there are some 40 members who are to retire with its close, and might be open to influence from the hope of Executive appointments.

The appointment of the Joint Commission on the *Alabama* and other questions with Great Britain seems to give general satisfaction, notwithstanding that the range of subjects to be treated is somewhat too wide to give good hope of the result. It is an earnest of good intentions on the part of Great Britain that the Commission should meet in Washington, and our commissioners will be justified in yielding the utmost limit of concession that the feeling of the country will allow. Our experience of war is too recent to prevent a feeling of relief at the dispersion of even a slight war-cloud; and, notwithstanding the soreness at the conduct of England during our war, and the truckling of politicians to the Irish vote, it can hardly be doubted that the sympathy of the sober masses will be heartily with Great Britain in the European struggle which threatens to break out at no distant day.

The remainder of the session will probably be occupied with actual business in the way of appropriations and the like, leaving it for the next Congress (which meets on the 6th of March, and is expected to continue in

session for some time) to show whether there is any disposition to meet the great questions of internal reform. The bulk of outside bills are in what is called the calendar of the Speaker's table, and the consideration of this has been postponed because it contains some railroad grants which the House is afraid to meet, and this has caused the immediate business of the House to be rather further advanced than might otherwise have been the case.

It is noticeable that there has not been this session a single speech upon the requirements of the country for more bank currency. You are aware that at the last session provision was made for fifty millions more bank issues, but upon terms which would give little or no profit to the banks. The result has been that only a small part of the capital has been taken up, showing conclusively that what was wanted was not more currency for the country, but more chances of profit for banks. A central bureau of redemption is one of the topics now under consideration, but, simple and obvious as the utility of such an institution may appear, it has no chance against the adverse interest of the banks. The chairman of the committee confesses that they have an extreme dislike and distrust of any measures interfering with bank privileges. There is no doubt that the chief obstacle to specie payments lies in the interest of these corporations, and, whenever a serious attempt is made, it will be found that their political power is too strong for any machinery which can as yet be brought to bear upon them.

THE SIEGE OF METZ.

[THE siege of Metz, with the battles which preceded it, it is now clear, decided the contest between France and Germany; in other words was the most momentous event of modern European history. No clear and satisfactory account of it has, however, yet appeared, and we are, therefore, about to present our readers with three or four papers on it for which we think we may fairly claim a high degree of authority.]

I.

BAZAINE'S ATTEMPT TO RETREAT.

BERLIN, Jan. 17, 1871.

So rapidly do the events of modern warfare succeed each other, and so closely are they connected, that its science requires their history to be written with equal celerity. It is owing to this fact that I am enabled to-day to write a tolerably accurate narrative of the siege of Metz from a mass of as yet unpublished German official reports and documents which have been placed at my disposal.*

The army of which Marshal Bazaine assumed the chief command on the 12th of August was the *élite* of the French forces, consisting of seventeen divisions of infantry, each division having thirteen battalions, each battalion eight hundred men. Besides, it had five hundred pieces of field artillery, a hundred and fifty mitrailleuses, and several cavalry divisions. In all, the army was composed of more than two hundred and twenty thousand men, among them the French Imperial Guard. The Emperor accompanied it in person, while under Bazaine commanded three marshals and three corps generals, who were assisted in counsel by General Changarnier, a man of very considerable military ability, who had grown gray in the African service, and a patriot in the strictest sense of the word. Besides this army, Metz was occupied by a garrison of over twenty thousand men, partly of the Garde Mobile, but mostly regular troops—a body amply sufficient for the defence of the fortress. It had as post-commander General Coffinières, whose name, subsequent to the capitulation, has been stigmatized with opprobrium. In the French camp, however, there was no unity of counsel. The defeat of the French General Frossard at Spicheren on the 6th of August had rendered the French position so critical that the Emperor determined to withdraw to the Camp of Châlons without delay, and, uniting with the fragments of the army of MacMahon and the corps of Failly and Douay, to fight a decisive battle in Champagne. The plan was communicated to Paris, and at first received the approbation of the Council of Ministers, but two days afterwards a letter of M. Ollivier informed the Emperor that, after mature deliberation, the Council was of opinion that it had been too hasty in approving the retreat of the army to Châlons, that to abandon Lorraine would produce a deplorable effect upon public spirit in France, and he requested the Emperor to renounce his project. The Emperor for a time ceded to this counsel.

However, the French people were greatly affected by the news of the reverses which their arms had suffered, and the Emperor, seeing himself held responsible for these disasters, thought to shelter himself in future from similar accusations by giving over the chief command of the Army of the Rhine to Marshal Bazaine.

Bazaine saw the importance of repassing the Moselle and concentrating at Châlons. Time, however, had been lost, the weather was unfavorable, and the prompt execution of the order to retreat was retarded by the immense amount of baggage with which the army was encumbered; and it was not until the evening of the 13th that the entire army was concentrated about Metz. To oppose the French the Germans had two armies, composed almost entirely of troops of North Germany. The First, under command of General Steinmetz, consisted of the First, Seventh, and Eighth Army Corps—about one hundred thousand strong. A few weeks after Metz had been invested, the third division of reserves, including a brigade of cavalry Landwehr commanded by Lieutenant-General Von Kummer, was added to this army. The Second, under command of Prince Frederic Charles of Prussia, consisted of the Second, Third, Fourth, Ninth, Tenth, Twelfth or Saxon, and the Garde Corps—about two hundred and forty thousand strong. These two armies were under the superior command of the King of Prussia. The plan of operations, however, was naturally dictated by General Moltke, his chief of staff. The question is yet involved in obscurity whether or not it was the intention of the Germans to force a fight on the 14th on the east side of Metz; and this question will probably be found to be intimately connected with the withdrawal from General Steinmetz of the command of the First Army. The means we at present have of coming to a conclusion lead very strongly to the conjecture that a battle was not anticipated at headquarters. The headquarters of the King were, on the 13th, transferred from St. Avold, on the direct road to Metz, to Herny, a point southeast of Metz, on the direct road to Pont-à-Mousson, where it remained the whole of the two following days, to await the movements of the troops that were to be in readiness to cross the Moselle in order to intercept the retreat of the French to Verdun. The King, with General Moltke and the rest of the staff, remained the whole of the 14th at Herny, and only repaired to the field of battle after the news of the battle had reached headquarters, whereas in every other engagement during the war that could be anticipated, the King was personally present if it was in his power.

The action of the French troops in all the engagements was paralyzed by their absolute ignorance of the position and strength of the Germans, who very well knew how to conceal their movements behind formidable detachments of cavalry, which deployed before them in every direction, so that the French, notwithstanding the most persevering researches, never really knew where the main body of the Germans was, or, consequently, where to produce the greatest effect; and the promptness and rapidity of the German marches contributed in no small degree to this uncertainty. Neither on the 14th nor on the 16th did the French imagine that they had to do with almost the entire available force of the Germans, and they allowed their precious time to be wasted in dilatory action. And here it may as well be said that the whole history of the siege of Metz is a history of the greatest alertness and most energetic action on the one hand, and the most culpable weakness, indecision, and indolence on the other. Already the arrival of parts of the army of Prince Frederic Charles at Gorze was announced, and German cavalry had penetrated to Briey, when, on the morning of the 14th, Bazaine began to withdraw the main body of his army across the Moselle.

The part of the French general in this emergency was clear—either to give no battle at all on the 14th, or give battle with the whole army. If he adhered to his purpose of retreating to Verdun, he should not accept a battle on the right bank of the river, but cross it as rapidly as possible. Metz was amply sufficient to protect him from the advance of the Germans in the rear, and a battle would retard his movements at least a day. If, on the other hand, it had been his purpose to make a stand at Metz, and contest the line of the Moselle, he should on that day have attacked the Germans with his whole army. In the beginning, he was certain to be successful, and certainly not earlier than on the 15th would the Germans have sufficient forces to withstand him, although only unimportant bodies

*I may as well add that I have been assisted in forming my impressions by my personal presence at all three of the principal engagements about Metz, and at the capitulation, and by intimate relations with quite a number of prominent Germans who, in one way or another, have exercised an influence over the fate of Metz. I have also very carefully examined "Der Krieg um Metz. Von einem preussischen General. Berlin: 1871. Ernst Siegfried Mittler und Sohn. Königliche Buchhandlung," a curious pamphlet, which, whether really written by a Prussian general or by an apologist of Bazaine, or, as is most probable, by both, gives evidence of military talent and, when compared with the official reports, of a very intimate knowledge of the subject. I do not, however, pretend to say that I shall not, in the course of time, modify some of the opinions here expressed respecting the military operations about Metz, on obtaining access to more complete French reports than that of Bazaine, lately published at Brussels, who appears to have had no other purpose in writing it than to apologize for surrendering the fortress.—J. L. H.

had actually crossed the river. Both armies would, under such circumstances, have stood on the line from Metz to Saarbrück, and the French would have had the inside track. But Metz gave Bazaine the free choice of a battle with good prospects of success or of an undisturbed retreat. The part of the Germans was equally clear: in case they found the French in retreat, to march their main body across the river, leaving barely sufficient forces on the east side to retard the movements of the French as long as possible. Could this be accomplished without a bloody battle?

The Germans had been very carefully bringing forward their troops, and the First Army, the First Corps of which had just arrived, had advanced opposite Metz; while the Second Army, the Second Corps of which had not yet arrived, was in close union with it, but southwards above and below Pont-à-Mousson, extending along the river and ready to cross it. On the morning of the 14th, the Germans made a strong reconnoissance against the French, and finding them in retreat pressed them to within five miles of the walls of Metz. The First Army Corps followed the French, and at two o'clock attacked the Division Metman of the Third Corps. The French gave battle; the Fourth Corps, which had almost crossed the river, partly returned to repel this attack, taking up a position in front of Fort St. Julien. The engagement lasted until nightfall, the Germans having driven the French from the greater part of the field of battle, which was more sanguinary than any during the war of 1866.

From Metz there are three roads leading to Verdun. Two of these unite at Gravelotte at a distance of nine miles from the city: the southernmost leads direct to Verdun over Rezonville, Vionville, and Mars-la-Tour, and is the shortest of all; the next, a little longer, passes over Doncourt and Jarny to Étain, where it unites with the third and northernmost, and longest, which leads from Metz almost in a northerly direction along the Moselle to Woippy, thence defiles through the woods for a long distance over Saulny to St. Privat-la-Montagne, thence over Ste. Marie-aux-Chênes to Auboué into the valley of the Orne, thence again defiles to Briey, where the road divides, one part leading in a northwesterly direction over Longuion and Montmédy to Sedan, and the other leading due westwardly to Étain, uniting there with the middle route to Verdun. All these roads are wide and excellent. The movements of the French army on the left bank of the river continued during the next day, Bazaine having selected the two southernmost of these roads for his line of march. The Second and Sixth Corps were moved in échelon behind the cavalry division of General De Forton, who had cleared the road so far as Mars-la-Tour, while the division of General De Barail cleared the second road to Conflans-en-Jarnisy; the Imperial Guard was stationed in front of Gravelotte.

After having examined the field of battle on the morning of the 15th, and satisfied himself that the French had withdrawn their forces, the King returned to Herny and gave orders to cross the river. The First Corps remained before Metz, while the other corps of the First Army, the Seventh and Eighth, were moved to the river, and bridges were built for their passage near Corny. On that day the Third Corps crossed at Pont-à-Mousson and moved down the river to Novéant, where a narrow but serviceable pass leads over Gorze to the heights on the left bank of the river; the Ninth Corps followed the Third, and reached Vandières, three miles north of Pont-à-Mousson; the Tenth Corps marched from Pont-à-Mousson through Thiaucourt, towards the road to Verdun; the Garde crossed above Pont-à-Mousson; and the Saxons were still on the march to that town. The Second Corps was still at Forbach, and the Fourth never arrived in time to take part in any of the three great battles about Metz. On the part of the Germans, the purpose was to attempt by every means in their power to bring the French to a stand between the Moselle and the Meuse, and compel them to a decisive battle; and, although it was only late at night when the different corps of the Second Army reached the respective points above-mentioned, the march was recommenced at daybreak, in order to reach the plateau between the Moselle and the Orne in the direction of Verdun.

The French knowing that, on the morning of the previous day, the bulk of the German army was on the right bank of the river, twenty-five miles distant from their position, seemed to think they had time until the 17th to march the army, about two hundred thousand men, to Verdun, and that they could remain quiet during the 16th and allow their train, which was moving along the northernmost and longest road, to have a good start. This inactivity of the French and the energy of the Germans rendered a battle on the 16th inevitable. The concentration of the French Third and Fourth Corps on the plateau was not yet complete when, at nine o'clock in the morning, the attack was commenced by the German Third Corps, which, having marched for two hours from Gorze through narrow mountain roads, found the French stationed south of the road to Verdun along the heights from Tronville, to a point south of Rezonville. Upon the appearance of the Germans, Forton's cavalry division fell back upon the Second Corps. The battle was conducted on the German side by the Third Corps alone until half-past twelve o'clock; Tronville was carried as well as Mars-la-Tour, and thus the road to Verdun was reached. On this day time was computed in a much more valuable coin than money—an hour cost a division of cavalry. The attack on Vionville was abortive, and the Third Corps scarcely able to hold out any longer, when two cavalry divisions, coming from Thiaucourt, were brought into the fight, and went forward to the attack in the most reckless manner, broke through the French line, and rode over their batteries, and were finally almost annihilated; but in this way an hour was gained. Towards three o'clock the Tenth Corps came to the support of the left wing, over Puxieux and Mars-la-Tour, towards the woods north of Vionville, in the direction of Bruville, while the Ninth Corps came up on the right along the Bois de Vionville, and commenced the attack on Flavigny and Vionville; Vionville was taken, but the attack on Flavigny was repelled. At half-past four parts of the Seventh and Eighth Corps appeared still further to the right, having crossed the Moselle at Corny, climbed the sides of the mountain, and marched along devious paths through the Bois de Chevaux and Bois des Ognons, and gained possession of these woods; but they could not come out of them to the attack on Rezonville. The appearance of these new troops, however, encouraged the renewed attack upon Flavigny, which, finally, between seven and eight o'clock, fell into the hands of the Germans. Meantime, the attack of the Tenth Corps, forming the left wing, against Doncourt over Bruville, to obtain possession of the second road to Verdun by way of Conflans and Étain, was most decisively repelled, and that corps driven back to a point north of Mars la Tour; but this position it asserted up to the close of the battle. At the end of the day the French held the line Gravelotte, Rezonville, St. Marcel, Bruville; the Germans held the line opposite them, Bois des Ognons, Flavigny, Vionville, the woods north of that village, and the ground north of Mars-la-Tour. The soldiers of both the contending armies fought most courageously—at no time was there any such disorder as announces discouragement. The losses on both sides were equal, but equally great; few trophies were gained. The entire French army had been in position; the Germans had only three full corps and parts of two others—at the most, a hundred and twenty thousand men; yet with this inferior force they had not only been able to gain ground, but to obtain definitive possession of the Verdun road and cut off one of the principal avenues of retreat of the French. That they were able to do so can only be ascribed to the faults of the French commander. It appears as if Bazaine on that day made up in personal daring for his deficiency in military skill; for, with his entire suite, he was so entangled in the cavalry fight, at two o'clock, that he was saving his life at a time when it was absolutely essential for him to give his attention to the conduct of the battle.*

Correspondence.

SOME SUGGESTIONS FROM A LIFE INSURANCE OFFICER.

To the Editor of the Nation:

Sir: In an elaborate article entitled "The Condition of Life Insurance among Us," the *Nation* of the 26th inst. presents what it believes to be the dangers which threaten the safety of life insurance companies in this country. These dangers, as it believes, are two in number. The first it finds in the plan usually employed by the several companies for compensating its officers and agents, and the second (which it admits it hardly regards as a momentary danger) in the fact that their large investments in mortgages of city property have done and are doing much to swell the market value of such property, which value in this way often becomes speculative and unsubstantial.

It does not question the moral and social advantages of life insurance, nor the soundness of the great leading principles on which all companies are constructed. These are, indeed, now universally conceded. The method of compensation complained of is that of giving commissions upon the business procured or transacted, and it finds this method prevailing not only with reference to agents in the field, but to the home

* How sadly Bazaine was in ignorance of the purpose of the whole engagement, and of the numbers of the enemy, appears from his letter to the Emperor on the 17th of August, giving an account of the battle, in his "Rapport Sommaire," p. 6.

officers and employees of the several companies, from the president to the youngest clerk. It is evident that the larger the immediate receipts, the larger will be the present remuneration. The danger is, that to multiply present profits policies may be issued upon unsound lives, and that through this practice the mortality experience of such companies in years to come will exceed the mortality rates upon which their premiums are based. From this it appears beyond cavil that whatever officer is to pass finally upon an application for insurance, and whoever, in fact, is to make recommendation with reference to the action of that officer, should have his judgment as untrammelled and free as that of a juror or judge. To all such officers a percentage of receipts is as inappropriate as would be a *per-capita* compensation to a court in criminal proceedings—so many dollars for each conviction. But who are these officers who have to do with the issue of the policies? Different offices are differently organized, with their duties variously distributed, but ordinarily they are the president and his assistants, the secretary, the principal medical adviser or director, and the various medical examiners scattered throughout the country. These officers, then, should not experience a single farthing's immediate profit or loss by the approval or denial of a single application. If they have the interest we are discussing, they are imperilling, as we have seen, the future life of the company, and they are hourly tempted, too, to present extravagance and waste in the procurement of applications. The custom, so far as it exists, is emphatically and radically wrong. The interest as well as the purpose of the officers should be to make the company sound and reliable, and protect it from all injury, as well as to enlarge its usefulness. Every man in the principal office should be paid by salary only, and every medical examiner should be paid the same fee, and paid, too, only by the company, whether his recommendation be in the affirmative or negative. His appointment should be made by the company, and that only after it is abundantly satisfied of his personal integrity and professional experience and skill. Thus, while we recognize the principle involved in the first danger suggested by the *Nation*, we would avoid it not by a full change in the payment of commissions, but by applying the principle to all persons employed by the companies save agents or solicitors only. These last can surely be justly paid by commission, and we fail to discover how such payment can seriously prejudice the interests of the companies, while their payment by salary would inevitably persuade many of them remote from supervision to indolence, misrepresentation, and fraud. We believe that more money would be wasted in unearned salaries, were the present practice changed in this particular, than is now lost through the improper influence of agents of companies in which no other persons beside themselves are entitled to a percentage of receipts. We see no danger whatever in this direction to companies whose business is conducted in the manner we have defined and approved; but there is such inherent hazard and weakness in such as, through the payment to them of percentages on premiums, encourage their officers to lavish expenditures and the insurance of impaired lives, that we wonder not at the failure of the Great Western and the Farmers' and Mechanics', but only that others did not tumble earlier than they; and we would advise our readers, in selecting companies for insurance, to make careful enquiry upon the points we have been considering.

The second danger suggested by the *Nation* has already been stated, but cannot, as we believe, be regarded as one of a serious nature. We confess, in fact, that we do not really believe in its existence. In the large populous centres of the country, from their earliest settlement, real estate has been advancing in value, with uneven yet rapid strides. This fact is a familiar one, as is the anecdote related by Dr. Franklin, which well illustrates, in a humorous way, one view of the safety of real estate mortgages in the leading cities. We repeat the story in the best spirit, or rather allow the Doctor so to do in his own language, from his Autobiography. The facts occurred some forty-five years prior to their narration, and Franklin's remark upon his friend Mickle's advice was after abundant opportunity to judge of its soundness:

"There are croakers in every country always boding its ruin. Such a one there lived in Philadelphia—a person of note, an elderly man, with a wise look and a very grave manner of speaking. His name was Samuel Mickle. This gentleman, a stranger to me, stopped me one day at my door, and asked me if I was the young man who had lately opened a new printing-house. Being answered in the affirmative, he said he was sorry for me, because it was an expensive undertaking, and the expense would be lost, for Philadelphia was a sinking place, the people already half-bankrupt, or near being so—all the appearances to the contrary, such as new buildings and the rise of rents, being to his certain knowledge fallacious, for they were, in fact, among the things that would ruin us. Then he gave me such a detail of misfortunes now existing, or that were soon to exist, that he left me half-melancholy. Had I known him before I engaged in this business, probably I should never have done it. This person continued to live in this decaying place, and to declaim in the same strain, refusing for many years to buy a house there, because all was going to destruction; and at last I had the pleasure of seeing him give five times as much for one as he might have bought it for when he first began croaking."

We believe there is no safer investment than that secured by first mortgage upon first-class city property worth at least double its amount. But while we think the objection just considered is not well taken, we heartily commend the conclusion reached by the *Nation*, that the public should require every life insurance company "to possess large means of its own to give some guarantee to insurers, both as a financial security and as a means of insuring the interest and watchfulness of the stockholders and their representatives, the board of directors." This is the sum of the whole matter. The managers of a company must be pecuniarily interested in its integrity and soundness rather than in its volume of business, and must themselves be supervised by directors who likewise have large monetary interest in the solvency and safety of the institution. The directions and demands of the stockholders are more imperious and authoritative than the regrets of disappointed policy-holders, and we believe that among the signs of the times there is none clearer or more appropriate and encouraging than this, that life insurance companies must hereafter give larger pledges to the insured than they have done—pledges that all the contracts made by them shall be fulfilled, and that all the officers by them employed shall honestly, prudently, and economically manage the business, that all liabilities can easily be discharged.

Let public statutes, then, provide that no dividends shall ever be made to stockholders which shall impair to the value of a single dollar the capital invested by them, but that it shall always be kept intact for the indemnity of the policy-holders, and life insurance will be lifted out of the heated competition and conflicts of irresponsible and reckless managers, who, without personal investment or hazard of any sort whatever, ask policy-holders to insure themselves and pay to them large commissions for that privilege. The experience of the public with reference to fire companies is now being repeated with reference to life associations, and this experience demands that capital shall insure to policy-holders the integrity and fidelity of companies and their officers. PLURAL.

WEST POINT.

To the Editor of the Nation:

SIR: Whenever a discussion arises as to the unsatisfactory condition of the West Point Academy, it is plainly seen that the root of the evil is to be found in the laws which regulate the appointment of cadets. Allow me to suggest a very simple plan, which, while retaining Congressional patronage, would, I think, meet many of the objections to it.

Let us suppose, for example, that ten appointments are to be made from the State of New York in the class which is to enter the Academy next summer. Let a law be passed allowing each Senator and Representative from the State to nominate one candidate for a cadetship; and let a competent board, to be appointed by the President, or by the Governor, select from the thirty-one candidates so nominated the ten best qualified to enter the Academy. By this plan, to be applied of course to every State, each Senator and Representative in Congress would annually nominate a candidate, and would, in view of the examination, be careful to nominate a promising one.

Nine-tenths of the money now wasted in instructing cadets, who, at the end of the first year, are proved to be unfit for the school, would thus be saved; and the men trained at the Academy would be worthy of the education it offers.—Respectfully yours, B.

Feb. 11, 1871.

[Some Congressmen have, to their honor, opened these nominations to competitive examination; but even if this practice were general, it would not diminish the value of our correspondent's suggestion. On the other hand, even under B.'s system, what is to prevent the Congressman, when his nominee is convicted for lying, from bullying the War Department into remitting the sentence?—Ed. Nation.]

GOVERNMENT SALE OF ARMS.

To the Editor of the Nation:

SIR: Dr. Friedrich Kapp, in his letter of January 18, published in the *Nation* of February 9, repeats the charge against the United States Government of having sold contraband of war, especially fire-arms, to the

French. Would it not be well to say that this has been denied upon very good authority? It is true that cases of arms, with the sign of the Government factory on the cases, have been sold and shipped to France. Our Government sold the arms then, as it always does, to private parties, who, in turn, sold them to the French. It was no surreptitious transaction, nor was it a feigned one.

I mention this simply to correct an erroneous statement made in good faith by the distinguished writer. Were we to discuss the law of neutrality as it stands, and as it ought to stand, it is very probable that I should be found more strict than Dr. Kapp, as it would appear from his very letter. Here we have to do with the simple question, Has our Government sold arms to a belligerent, or has it made any extraordinary sales? The answer, I believe, is, It has not.

I cannot help seizing upon this opportunity to say that, immediately after peace shall have been concluded, the subject of neutrality ought to be taken in hand, whether officially or by agreement, among international jurists, but in either case authoritatively, and ought to be brought nearer to a state agreeing with the growing inter-connection of nations. The modern law of nations rests first of all on the principle of neighborliness; and, as our civilization advances, so does good neighborhood become more important, and so, in turn, does the subject of neutrality grow in comprehensive importance. F. L.

New York, February 11.

Notes.

In justice to the writer of the review of Parker's "Historic Americans," in No. 292 of the *Nation*, we note a typographical error which would regularly have found its place among the errata at the close of the volume. In the sixth line of the second paragraph in the left-hand column of page 77, it is stated that Arnold was in Virginia "from January to June, 1780." This should, of course, read 1781. This error, it may be remarked, is not in Mr. Parker's favor.—Chicago having spent over $8,000 in purchasing, importing, and arranging the theological library of the late Dr. Hengstenberg, of Berlin, has deposited it in the building of the University at Chicago, and aims to make it the "nucleus of a Universal or General Theological Library, to be managed and controlled without any sectarian prejudices against, or special advantages to, any religious body, persons, or denomination." Since the securing so valuable a collection was really a benefit conferred upon the whole country, the Association which has interested itself in this enterprise feels justified in asking subscriptions to its capital stock, by which it hopes to pay for the library and for additions to it. A circular which describes the character of the upwards of twelve thousand volumes gathered by Dr. Hengstenberg, and as yet uncatalogued, may be had of Mr. J. Young Scammon, President, or Mr. W. W. Everts, jr., Secretary, of the Free Theological Library of Chicago, to whom also subscriptions may be sent. ——A "Life of Gen. Robert E. Lee," by John Esten Cooke, will be published this month by Messrs. D. Appleton & Co.——Messrs. Pott & Amery publish immediately "Musings on the 'Christian Year' and 'Lyra Innocentium,'" by Miss C. M. Yonge, to which several friends of Keble have added some recollections of him; also, "A Concordance to the 'Christian Year,'" uniform with the preceding; and "Seven Lenten Sermons on Psalm LI." by the Rev. W. W. How, M.A.——We must refer readers to the forthcoming number of the *Book-Buyer* for full particulars of the simultaneous publication of the "Speaker's Commentary" by John Murray, in London, and, from stereotype plates, by Charles Scribner & Co., in this city. This work has been in preparation some eight years, employing upwards of thirty clergymen of the Church of England, with other co-laborers, and is designed to be a plain and popular commentary of the Scriptures, devoid of purely scholarly discussions, but correcting the manifest mistranslations of the authorized version of 1611. The American publishers hope to compress the Pentateuch into one volume, royal octavo, of 1,000 pages, which, in cloth, will be sold at the low price of $5. Nine other volumes, at the same price, will, it is hoped, embrace the entire Commentary. The typography will be adapted to the eyesight of elderly readers.——Mr. Frederic Louis Ritter calls our attention to a possible misapprehension of the remark, in our last issue, concerning the appearance of his "History of Music" at the same time with Mr. John K. Paine's lectures on the same subject in Boston. Mr. Ritter says the greater part of his work was prepared and delivered as lectures more than three years ago, in his regular course of instruction at Vassar College. We had no intention of implying any other than a merely accidental relation between his book and the Boston lectures.

—It is pleasant to witness the yearly growth of the Wisconsin Historical Society, whose seventeenth annual report is before us. We have more than once referred to its valuable library, which now contains 45,530 volumes, documents, and pamphlets, including the unusual and (west of the Alleghanies) unequalled number of 1,601 volumes of bound newspapers. Three of these last were printed in the seventeenth century, 153 in the eighteenth, and the remainder during the present century. The principle that unto him that hath shall be given, is the best guide for would-be donors to libraries as to universities, and *à fortiori* to would-be founders of either. If it is duly heeded in this instance, the Wisconsin Society is likely to establish the strongest claim on the liberality of the West, at least.

—A contribution to the comparative legislation of the United States will be found in "The Rights of Property of Married Women under the Laws of Kentucky," a paper read by H. Marshall Buford before the Lexington Bar Association, and now published by request in pamphlet form (Cincinnati: Robert Clarke & Co.) The attempts to remedy special cases of hardship and injustice growing out of the common law in regard to the *feme covert*, appear to have introduced much confusion into the statutes of Kentucky, and the author appends as a substitute for them an act by which he would regulate the property of married women. It is characteristic of the State's backwardness in reaping the benefits and accepting the fact of emancipation that the existing laws give a man a life-estate in the slaves of his wife.

—We observe that the *Evening Post* makes the statement that in and after the year 1872 the standard of admission to Harvard College is to be considerably raised. Now, although the classes at Cambridge are so large, it is nevertheless true that, as regards the thoroughness and the scope of the examinations for admission, Harvard may be said to be about one year ahead of other American colleges; and it is a question of a good deal of interest whether the standard of admission can with profit to the college be still further raised. There is no American college of high pretension and of tried and approved excellence and usefulness which is so rich, or rather so far from poverty, as to be able to dispense with the revenue derived from the fees which its undergraduates pay for tuition. All students, even the most careless and the dullest, everywhere take pride, of course, in believing themselves members of the college which makes the most stringent demands upon them, and whose matriculation papers and degrees are hardest to get; and no doubt the rule holds good up to a certain point, that severity of examination attracts candidates and swells the size of classes and, by consequence, the college revenues. To determine just where this point of highest attraction is to be found—just where severity will, for a time at least, work damage to the college treasury, must, we imagine, be a task of great difficulty. As long as the opinion is prevalent that at twenty-two or twenty-three years a young man should have finished his general studies and begun to work for his living, our college authorities will consider anxiously and long before venturing to take upon themselves, and to throw upon the preparatory schools, more work than is now laid upon school and college to perform. It must be frankly confessed, we take it, that the country is not as yet quite ready for a true university, and that the friends of higher education must still for a while take counsel of prudence and be content to make haste slowly.

—We have seen, we suppose, the same circulars and reports as those upon which is based the statement made by the *Post*, and since reading that statement have given them a renewed examination, in order to discover whether in the judgment of the Cambridge authorities the time has come for making further demands upon candidates; or, rather, in order to see whether they think it so near at hand as 1872. So far as we can learn, the *Post* is mistaken, and intending applicants for admission to Harvard may dismiss any apprehensions which the *Post* has caused them. In 1872, as we read the circular containing the "requisites for admission," candidates who have passed the ordinary examination and secured their admission may, if they so choose, request the college to examine them in the following subjects: The "Odes" of Horace; any three books of "Livy;" Cicero's "De Senectute;" the "Apology" and "Crito" of Plato; the fourth, fifth, sixth, and seventh books of the "Iliad." "No candidate," says the circular, "will be *required* to present himself at these additional examinations;" but every one who hopes to obtain distinction in Greek and Latin and intends to graduate with special honors in the department of classical studies is "strongly advised" to pass them, and is promised that, if he do pass them, he shall be placed "in advanced sections in Latin and Greek immediately on entering college." As for the ordinary

examinations, it appears that they will be, except in two particulars, the same in the future—in the immediate future, at all events—that they have been in the recent past: there will be required a knowledge of the elements of physical geography, "which is indispensable for the intelligent study of history," and a knowledge of the *use* of logarithms, "familiarity with which is required at every step in the study of mathematics and physical science, while the necessary drill can be much better given in the schools than in college." These new requisites are to be requisites at the examination in June next and thenceforward. There is, indeed, another change made in the list of requirements; but it is a change which amounts neither to an increase in them nor a diminution: it is hereafter to be permitted to the student to choose whether he will come better prepared in mathematics than is now necessary and with less of Latin and Greek or whether he will pass the regular examination. In past years men have been turned away who, while they had not read all of Virgil, for example, or all of "Xenophon's Anabasis," were very well qualified to go on with advanced sections in mathematics, and better qualified than the vast majority of the graduates of our classical schools to pursue with advantage chemistry and the allied sciences. Some Western schools turn out such men. We have not space to explain the new scheme; but any one interested—and the subject is interesting to educators and to educated men generally—may easily procure the circular and the reports which are our authority for these statements we have made.

—Whoever procures them will find in them many things suggestive and important, and Harvard men will find them full of encouragement. The president's report, in particular, is as cheerful as a brisk breeze, and will give to all friends of the college strong grounds of hope—hope that will not be dashed, but on the contrary increased, by the concluding passages, in which President Eliot, after expressing gratitude towards some munificent benefactors for their gifts, asks with an air of perfect confidence for some three hundred and fifty thousand dollars more! This is to be expended in building a new hall of lecture-rooms and laboratories; a library building for the divinity school—which, by the way, the churches ought to pay for—a lecture-room and working-room at the Botanic Garden; and an addition to Gore Hall, where is deposited the college library, which—badly as it needs money to keep it even with the literature of the age—now overflows its limits. It would appear, too, that what Mr. Eliot asks for he is not unlikely to get. Since the making of his report two persons have come forward with gifts which secure the immediate erection of two dormitories, which both for convenience and for architectural effect will probably be superior to anything now owned by the university. That alone would not be much to say, though a taste for Massachusetts Hall and for Holden Chapel may be acquired—in fact, has been acquired by many persons—their ugliness being that of another day than the present. So of Harvard Hall, also, which has undergone some changes that improve its external aspect, which, the President remarks, "had not been pleasing." Nobody would have expostulated earnestly, we should say, if he had asserted that it bordered upon being an affliction to every eye. What with the erection of Thayer Hall, Holyoke House, and the two new dormitories, the proposed removal of Dane Hall, the alterations in Harvard Hall and College House, the cutting-off of the vistas of the college yard, and the giving to it—happy substitution—a look of quadrangular snugness, at the same time that the Appleton Chapel and Gore Hall are screened from observation—what with all these alterations and improvements, the older graduates will hardly recognize their ancient haunts.

—Other interesting changes, which we shall note desultorily, the report chronicles. "The Governing Boards have simply accommodated the statutes to the changed opinions and habits of the community at large," by ordaining that students who spend Sunday with their parents or with friends whom their parents choose may go to church or not as the parents or friends concur with the students in deciding; and, furthermore, have ordained that students who on Sundays as on other days are within the jurisdiction of the college are to be compelled to go to church but once instead of twice. The office of dean of the college faculty has been created, and the president of the university is relieved of much of the strictly clerical and administrative labor of the college proper. The various recesses have been abolished, and the winter vacation shortened to two weeks, so that there may be a summer vacation of three months. Thus time is given instructors and pupils for independent labor—which it is well for the community of letters and science that the former should have opportunity to attempt, and well for the latter themselves that they should be encouraged to attempt. After 1872, the university will give no ordinary degree, whether in Arts, Law, Divinity, Medicine, or Science, without an examination—a needed change, which will make the higher degrees mean something; something more than that a graduate has been willing to pay five dollars for the right to put "A.M." after his name instead of "A.B." Salaries, President Eliot says, have been raised, and evidently not too soon. A tutor still gives his work for a salary of but a thousand dollars a year, though probably there is no tutor at Cambridge who might not get considerably more money by teaching in a public or private school; and probably there is none who can live comfortably at Cambridge rates of living without spending a larger sum than his salary—a sum which has to be earned by work outside of his tutorial work, and by work which perhaps is not detrimental to the right performance of his tutorial duties, but is to some extent incompatible with the advancement in knowledge which is to fit him for collegiate promotion. It appears, however, that a change for the better in respect of this is acknowledged necessary. Of the system of University Lectures, newly established, the report remarks that they are a great addition to the teaching power of the university; and it goes on to insist that "if the university is hereafter to provide advanced instruction in History, Philosophy, Art, the Humanities, and Pure Science, funds must be provided from the income of which each instructor may be paid a moderate stipend." As yet, the zeal of the friends of higher education has kept the list of lecturers full; but, certainly, it is not to be expected that "so great an amount of labor will be performed by thirty or forty teachers, year after year, without any adequate compensation." To give to the thorough and ardent student information and help which he cannot find in books—to aid and supplement the labor and acquirement of true students, not to give to ignorance a smattering of knowledge—is the design of those who planned the system of University Lectures; and, of course, in a community such as any of our American communities—or, for that matter, such as any community anywhere—it is necessary to wait a while before pronouncing the system profitable and a success. It is earnestly to be hoped that it may be. And it is easy to hope too confidently, and to be too impatient. Perhaps a better employment for money than that of setting this system of lectures upon a sound financial basis it might be difficult to find, for few things are more certain than that there never was a falser opinion than that which one used to see expressed by the picture in the old "reading-books:" a tree was figured with its roots in view as well as its trunk and branches, and for roots, trunk, and branches there were names deemed appropriate; "academies" was the name labelled upon the trunk; the topmost twigs were marked "colleges," and for the roots from which these sprang the name was "common schools." That the relation of the university to the primary school is—not very obviously, perhaps, but most truly—as that of the mother to the child, and not as that of the child to the mother, is a truth for which a wider acceptance among us is to be wished.

—The death of Miss Alice Cary, which occurred on Sunday, not only leaves a regrettable vacancy in the ranks of American poetesses, but breaks up the living partnership of work and fame which she had so long enjoyed with her sister Phœbe. They came of original Massachusetts stock transplanted to Ohio, and began writing poetry for country newspapers at the early ages of eighteen and seventeen respectively. Their removal to New York, some twenty years since, brought them into better relations with the literary world, and enabled them to publish those numerous works, both in prose and verse, which have confirmed their reputation and won for them the affection of a wide circle of readers. The writings of the deceased—and we say it without insinuating any comparison with the survivor—abound in womanly sympathy for all humankind, which overflows for those who need it most, the poor, the outcast, the sick, the demented; and in innocence as well as kindness—a sort of incapacity to dwell on the dark side of things, or to view nature (which she painted better than she did character) as anything but a wholly lovely creation. Her poetry, without being of the first order in form or substance, was pure and graceful, and made those better and happier who felt its influence. The friendly intimacy between these sisters and Mr. Greeley—part of whose churchgoing it has been to take tea with them every Sunday evening—should not be forgotten, nor its probable effect in lightening his incessant labors, and preserving, as far as a politician and the editor of a daily paper can preserve, his sweetness of temper.

—Those whose charity commonly takes the form of a *quid pro quo* have a good opportunity of contributing to the French fund by purchasing one or more copies of Father Hyacinthe's London Address ("France et Allemagne: Discours prononcé à Londres, le 20 décembre, 1870"), which may be had for twenty-five cents of Messrs. Macmillan & Co. or the trade

generally. The words are those of a man who, if not possessed of an absolutely clear vision, is able to rise above the feelings of the hour, and to discuss in a beautifully calm and philosophical manner the relations between the two contending nations in Europe. The discourse is devoted to disproving the assertion that the present war is essentially one of races and religions—a position first and at the outset assumed by the French themselves, from Napoleon to Laboulaye, and never echoed by the Germans unless in defiance. Father Hyacinthe in reality, therefore, argues for peace with his own countrymen, barely addressing a few words of warning to the Germans lest they take into their veins the poison of military despotism. He does not think Alsace and Lorraine necessary to the greatness of France any more than the division of Germany—"je n'ai point ressenti," he says, "les angoisses patriotiques qui ont suivi Sadowa"—nevertheless he considers it a point of honor not voluntarily to abandon those provinces. Nowhere, he remarks, has he seen religious toleration as between Catholic and Protestant so perfect as in Germany, and of Döllinger he speaks in the highest terms for his resistance to Papal infallibility. In short, all his allusions to the German character are so generous, and to the French character so modest, that one's respect for the author cannot fail to be heightened on reading this little pamphlet. It concludes with rejoicing in the freedom of Rome, in the unity of Italy as in that of Germany, and in the probable regeneration of France under the form of a conservative republic or of a liberal monarchy—"deux mots qui expriment presque une même idée."

—The following are some of the more important English publications either recently or soon to be issued. A "Life of Ambrose Bonwicke," by his father, edited by John C. B. Mayor; "Life of Dr. Adoniram Judson," the famous missionary to Burmah, revised (we suppose from some one of the American biographies) and edited by Horatius Bonar; "Life and Adventures of Count Beugnot," minister of state under Napoleon I., from the French by Miss Yonge; "Life and Letters of William Bewick," the artist, by Thomas Landseer, in two volumes; "Memoir of Daniel Maclise, R.A.," by W. J. O'Driscoll, who gives some wood-cuts of unpublished sketches drawn by this overrated artist in letters to his friends; "Miscellaneous and Posthumous Works of the late Thomas Henry Buckle," edited, with a biographical notice, by Ellen Taylor. In travels a few titles: "Norway and the Vöring-Fos;" "Impressions of Greece," by Sir Thomas Wyse; "Turkish Harems and Circassian Homes," by Mrs. Harvey, with colored illustrations; "Recollections of Society in France and England," by Lady Clementina Davies; and "The Playground of Europe," by Leslie Stephen, late president of the Alpine Club, whose "playground" is the one in question. Among historical works the following: "Student's Manual of the History of India," from the earliest period to the present, by Meadows Taylor; "The Historical Geography of Europe," by Edward A. Freeman; "English and Scotch Historical Ballads," with introduction, notes, and glossary, edited for the use of schools by Arthur Milman, and likely to be instructive in more ways than one; "History of the Gothic Revival," especially in its relation to the taste for mediæval architecture in England during the last two centuries, by Charles L. Eastlake; and "The Keramic Gallery," by William Chaffers, comprising six hundred illustrations of rare, curious, and choice examples of pottery and porcelain, of all ages, from the British, South Kensington, and other museums and collections, together with historical notices and descriptions. Two of Mr. Murray's announcements deserve separate mention: "A Copious English Grammar, a methodical, analytical, and historical treatise on the orthography, prosody, inflections, and syntax of the English Tongue," from the German of Prof. Maetzner, of Berlin, whose qualifications to instruct even English scholars will not be disputed; and "A Mediæval Latin-English Dictionary," founded on Ducange's, by E. A. Dayman.

—While a certain amount of attention is being attracted towards China, the following extract from a modern native work (Peking, 1845), entitled "*Shing Wu Chi*," or "A History of the Wars of the Present Dynasty," to which our attention has been called by a correspondent, is of interest, and speaks volumes for the light in which recent action on the part of the great civilized powers is viewed by the literary classes of the empire. Referring to the "nations of the West," the writer (an official of high rank) says: "The books even of the British and other barbarians acknowledge Russia as the greatest of nations. Our own envoys in their journeys thither have had only interviews with the (Russian) territorial governors, *and have not been admitted to see the Emperor*." We are assured by residents in China that the trading classes expressed considerable surprise at the cordial receptions vouchsafed by the President and the crowned heads of Europe to Chinese who were of too low a grade to be permitted to seat themselves before provincial governors. It is a pity that pains are not taken to explain to the Chinese the reasons which induce civilized nations to dispense with an etiquette which in their own country is regarded as all-important. The hint above given might, if acted upon, be of service in our future intercourse with a people who construe the amenities of civilized life as an acknowledgment of inferiority to the all-powerful children of the "Brother of the Sun."

ABBOTT'S SHAKESPEARIAN GRAMMAR.*

THE language of Shakespeare is not a different language from the English of to-day. It is not even a different dialect of the same language. In all that part of grammar which relates to the forms of words—the part in which dialect shows itself—the two are alike, or very nearly so. Yet Shakespeare's English is distinguished from ours by numerous, not to say innumerable, differences. If any one doubts the fact, a glance through the pages of this book will be sure to work conviction. The book does not, indeed, profess to take account of *all* differences between Shakespearian and modern English. Differences in vocabulary are not included in its plan; it gives no list of Shakespearian words which are now obsolete, nor any list of words now used which were unknown to Shakespeare; and in most cases where words common to both periods have changed their meaning, it is silent as to the change. It is not a dictionary, but a grammar, or, more precisely, a syntax of the Shakespearian language. Changes of meaning are only noted as they pertain to what may be called syntactical words—such as pronouns, auxiliary verbs, prepositions, conjunctions—which only serve to express relations among nouns and verbs, the substantial elements of speech.

The *sounds* of a language are within the rightful province of the grammarian; but Mr. Abbott has not entered on the subject of English pronunciation in the sixteenth century. This, probably, is not because he regards it as differing little from the pronunciation of the nineteenth. It is more likely that he would refer those who desire information on this interesting but difficult subject to the great work of Mr. A. J. Ellis on the history of English pronunciation. If Mr. Ellis's conclusions are correct in all their extent, we should, perhaps, have to retract the statement that Shakespeare's English is not a different dialect from ours. In the simple phrase, "one touch of nature," he finds that every syllable has changed its sound during the past three hundred years. "One," he thinks, was sounded in Shakespeare's time very much as we sound "own;" *ou* in "touch" had the same sound as in "you," "youth;" "of" had the Yankee short sound of *o* in "bone," "coat;" while, as to "nature," he holds that, in all but accent, it was pronounced like the French "nature," having in its first syllable the sound of *a* in "far," and in its second the peculiar French *u*, so hard for modern English organs. Though Mr. Ellis's views on some points admit of question, it is certain that Shakespeare's pronunciation of his own text, were it possible for us to hear it, would seem to us excessively uncouth, or even ludicrous. But as no one would think of requiring that Shakespeare's text should be read now as the poet himself would have read it, this subject of Shakespearian pronunciation has no great practical importance, and we cannot blame Mr. Abbott for leaving it altogether unnoticed.

On the other hand, he has given much prominence to the proper rhythmic utterance of the Shakespearian verse. By the majority of readers this is almost wholly neglected. Many are endowed by nature with little or no feeling for rhythm; others are afraid to read rhythmically, lest it should seem like sing-song; others, again, look upon rhythm as inconsistent with dramatic propriety, since nobody uses it in actual conversation. It is not uncommon for teachers to direct their pupils to read verse just as if they found it written like prose, and believed it to be such. Many make a point of hurrying on, wherever they can, from one verse to the next, as if shooting rapids, without regard to the rhythmic pause—slight, perhaps, yet perceptible to a fine ear—which should mark the close of the rhythm. But it is evident that the author of this grammar is a lover of rhythm—one of those who hold that verse has its rights which readers are bound to respect. "My own experience," he says, "leads me to think that the prosody of Shakespeare has peculiar interest for boys, and that some training in it is absolutely necessary if they are to read Shakespeare *critically*." This experience, however, he would hardly have gained if his taste had not set him to teaching rhythm—if his ear had not been offended when good verse was murdered by unrhythmic reading. He has taken extraor-

* "A Shakespearian Grammar. An attempt to illustrate some of the differences between Elizabethan and Modern English. For the use of schools. By E. A. Abbott, M.A., Head-master of the City of London School, formerly Fellow of St. John's College, Cambridge. Revised and enlarged edition." London and New York: Macmillan & Co. 1870. 16mo, pp. xxiv., 511.

dinary pains with his treatment of this subject, introducing, as he says' "*every difficult verse of Shakespeare* where the text was not acknowledged as corrupt, or where the difficulty was more than slight." In his dicussion of the apparent irregularities, he brings out many interesting facts, particularly as regards the contraction of words, the suppression of syllables by a slurring pronunciation, which must have been carried much further in Shakespeare's time than it is by good speakers at the present day. Some of his explanations—especially some of those in which he assumes a dissyllabic pronunciation for words that ordinarily are monosyllables—we are hardly prepared to accept. And we think that the gross carelessness shown in the printing of the earliest texts would have justified him in removing a much larger number of the seeming anomalies by slight and easy changes of the text. However this may be, Mr. Abbott has made it clear that Shakespeare was not negligent in the construction of his verse, but followed definite principles of rhythm, showing himself in this respect as in all others a true artist.

To the statement that, in regard to grammatical inflection, Shakespeare's English does not differ from ours, there is at least one noticeable exception. In the plural of the present tense, forms ending in *s* (such as "knows," "makes," "runs") are frequent in Shakespeare, especially when the verb is put before its subject, or when it follows two singular nouns connected by *and*, or where it stands in a relative sentence. The number of these forms is much greater than would be supposed by readers of the common editions, in which the *s* has been silently and almost unconsciously withdrawn from most of them. The extent of their use through the sixteenth century and much of the seventeenth was shown by Mr. T. R. Lounsbury in an exhaustive article, read before the American Philological Association at their meeting last summer. Both Mr. Lounsbury and Mr. Abbott derive the form from the Anglo-Saxon plural in *dh*, through an early English plural in *s*, which was current in the north of England. There can be no doubt that this is the true origin. Yet it is remarkable that a similar appearance—the use of the third person singular, instead of the proper plural forms—is common in the Celtic languages, the Welsh and Gaelic, where no similar explanation can be given of it; where we can only say that the third person singular, as the form oftenest used, has shown a tendency to encroach upon and supplant other forms of the tense.

But the book is mainly taken up with syntax: it presents, classifies, and describes the particulars in which the syntax of Shakespeare differs, more or less widely, from present usage. No attempt is made to give a strictly logical arrangement. The facts are grouped under a few leading heads: *adjectives, adverbs, articles, conjunctions, prepositions* (*personal, relative, and interrogative*), *relatival constructions, verbs* (*forms, auxiliaries, inflections, moods*, etc.), and these heads are placed in alphabetical order. Supplementary chapters treat of *ellipses, irregularities, compound words, prefixes, and suffixes*. This looseness of arrangement is an advantage, as permitting the author to bring in many observations for which, in a stricter system, it might have been hard to find a place. At the same time, the captions of the paragraphs present the subject of each with great distinctness, and, with the copious and excellent indexes, make it easy to lo k up what is said on any particular point.

Among the most interesting matters contained in the volume is the discussion of "thou" and "you." The Shakespearian use of "thou" is found to be surprisingly similar to that of the corresponding pronoun "du" in German. It is one of the curiosities of language, that one and the same pronoun should express veneration for the deity, familiar affection for kindred or near friends, and depreciation or dislike for other persons. Coke, in the trial of Raleigh, addressed the prisoner as "thou viper," and then added, "for I thou thee, thou traitor;" and yet Coke, every time he prayed, "thou'd" the Almighty. With the greatly restricted range of "thou" in modern English, its power to express insult or contempt has passed out of our consciousness; and by pointing this out in Shakespeare, Mr. Abbott has given a new force to many passages. The Quaker use of "thou" and "thee" seems to us now a mere oddity; but, in the intercourse of society two hundred years ago, it was a violation of courtesy, carrying the appearance of disrespect and rudeness; it required much the same fearlessness that the Quaker showed when he wore his hat in the presence of crowned heads. Mr. Abbott notes the fact that where "sir" is used in Shakespeare, "you" goes with it; and so, even where it comes, as it often does, in expressions of contempt or anger, the same irony which then breathes in the usually respectful "sir" dictates also the accompanying "you."

In noticing such forms as "Mars his true moving," "the count his gallies," Mr. Abbott rightly considers the "his" as not a true pronoun, but a graphic variation, caused by mistake, for the possessive inflection *'s*. It is but a short time since an elaborate attempt was made by Serjeant Manning, in the "Transactions of the Philological Society," to prove the opposite—to show that the possessive inflection *'s* is only a variation or contraction of the pronoun "his." Mr. Abbott, it is clear, has found his arguments unsatisfactory; and such, we think, must be the conclusion of every sound philologist.

After describing the use of "it" as the *indefinite* object of a verb (in such expression as to "fight it out," to "smooth it with the king," to "foot it"), Mr. Abbott says that this "use of 'it' with verbs is now only found in slang phrases." It may be so in England, though we doubt the fact; in America the expression, "I propose to fight it out on this line," can never cease to be classical. This is not the only case where he denies the present use of idioms which we had not thought of as obsolete or incorrect. Thus, while he admits that it is proper to say "this coat of yours," as the person addressed has, or may have, more than one coat, he asserts that we cannot say (except colloquially) "this head of yours," it being impossible for him to have more than one head. We believe, however, that if one should write, "Mrs. C. has a tongue of her own; and that tongue of hers is a sharp one," the propriety of the expression could not fairly be questioned. In "this coat of yours" the final pronoun does not mean "your coats," but "all that is yours," "all that belongs to you;" there is no reason, therefore, for objecting to "this head of yours." Again, the form, "He is the best man that I have ever seen," appears to him incorrect, unless it is taken as an abbreviation of "He is the best man of the men that I have ever seen." But there is nothing amiss here in the syntax, nor any necessity for the insertion suggested: "man that I have ever seen" denotes one of a class, that class being "the men that have been seen by me;" and "the best man that I have ever seen" denotes, simply and naturally, the best one of that class. Compare "the greatest painter living," or "the greatest living painter," with "the greatest painter who is now living:" none of these forms requires the assumption of an ellipsis.

Nothing is more common than to hear men speak of a peculiar "freshness" of style as belonging to the writers of the Elizabethan age. The impression thus described is, no doubt, partly an illusion. The style appears to us as fresh partly because it is not familiar to our ears and minds. A thought which, in the language of our own day, has become hackneyed and feeble, assumes vividness and interest when we see it in the strange costume of the sixteenth century. Yet it must be admitted that there is also a real ground for the impression of which we speak. The Elizabethan writers used the English language with a freedom which we dare not exercise. They treated it as their slave, not their master. Not having to dread a minute verbal criticism, not having the fear of grammarians before their eyes, they were ready to adopt any expression which most intelligibly and strongly represented their meaning. As examples of Shakespearian constructions, vivid and expressive, which a strict grammatical logic could not approve, and which are no longer in use, we may instance: the double comparative and superlative, as, "to some *more fitter* place," "the *most unkindest* cut of all;" the ethical dative, as, "hear *me* this," "he plucked *me* ope his doublet;" the relative pronoun, as a general sign of relation, without construction of its own, as, "*who*, when he lived, *his* breath and beauty set gloss on the rose," "*who*, if *he* break, thou may'st with better face exact the penalty;" the subject of a dependent clause brought in by anticipation with the principal verb, as, "you hear *the learn'd Bellario* what he writes," "*the dead man's knell* is there scarce asked, for who" [*i.e.*, it is scarcely asked, for whom is the dead man's knell], etc. It must be owned that this freedom of construction is sometimes the cause of obscurity. The citation last made is an example of this, and others are easily added: thus, "let what is meet be said, it must be meet" [*i.e.*, as to what is meet, let it be said that it must be meet]; "'tis our hope, sir, after well enter'd soldiers, to return" [*i.e.*, after our being well entered as soldiers]; "this must be known; which being kept close might move more grief to hide than hate to utter love" [*i.e.*, to hide it might cause more grief than unwillingness to utter it would cause love]. It can hardly be denied that the influence of grammatical criticism, narrow, overstrained, and tasteless as it has very generally been, has tended, on the whole, to greater precision and perspicuity. Yet it must bear the charge of having mistaken the true nature and ends of language, and of having unnecessarily and unreasonably abridged our resources of expression. Both the interests of literature and the spirit of the time call for a freer treatment of the language, for a return in some degree to the independence of the Elizabethan writers.

It is hardly necessary to declare more explicitly our high opinion of this "Shakespearian Grammar." It should be in the hands of all students of Shakespeare, and that is a designation which ought to include all cultivated readers of the English language.

THE MAGAZINES FOR FEBRUARY.

THE *Galaxy* and the *Atlantic* vie with each other this month for the praise of being called the best of the February magazines, and it might be hard to say which of the two is the better. Both contain articles which are very well worth the attention of persons who care nothing for most of our periodical literature. Mr. Thurlow Weed, giving to the *Galaxy* a chapter out of his forthcoming autobiography, relates the history of a few days that he spent with Mr. Lincoln just after the presidential nomination and election in 1860 had made it necessary for the Republican candidate and the President-elect to bethink himself about the conduct of the campaign and the choice of his Cabinet. Mr. Weed, as everybody knows, had worked hard for his friend Seward; and for various reasons, about which Mr. Horace Greeley and Mr. George William Curtis probably know more than anybody else, he had failed to secure the nomination of his favorite, and had seen him beaten by a rough Westerner of no great reputation outside the limits of his own State. Mr. Weed confesses that he was very much annoyed at this result of his labors, and confesses, too, that he was very despondent when he thought of the future of the party and the country; and whoever has a clear recollection of the condition of the country ten years ago will admit that a cool-headed Republican, seeing Douglas, Breckinridge, Bell, Everett, and a united South, threatening secession and war, arrayed against a divided North and an obscure Illinois lawyer, to whom was necessary the support both of the odious abolitionists and of the men who hated Garrison, might not unreasonably have thought there were good grounds for dejection and fear. While in this state of mind, Mr. Weed was waited upon by two friends of Mr. Lincoln, who wished to commend the new nominee to the favorable consideration of prominent Eastern politicians. Mr. Weed informed them that the result of the convention's action had been so disappointing to him that he had no heart to talk about the canvass, and that he must relieve himself by travel and change of scene, after which he hoped to be able to come home refreshed, and perhaps do something for the success of the party in the approaching contest. That he might be better enabled to do good service, Mr. Lincoln's friends arranged that Mr. Weed and Mr. Lincoln should meet at Springfield and thoroughly discuss the political outlook. The meeting took place soon afterwards, and Mr. Weed says that he was much struck by Mr. Lincoln's practical sense and by his familiarity with the virtues and infirmities of politicians. Apparently the practical politician saw clearly that he had come upon a practical politician who was also a statesman, and at once gave him cordial respect and hearty liking. Again meeting Mr. Lincoln after the election, Mr. Weed's good opinion of the new President's mind and character appears to have been confirmed, and his relation of the conversations that passed between them, when the selection of cabinet officers was the subject of consideration and argument, is highly interesting and, unless authoritatively contradicted, will be held to be creditable to both the interlocutors. That there will be authoritative contradiction we are at present much inclined to disbelieve, for Mr. Weed's whole manner inspires confidence in his truthfulness and accuracy. He seems to be very frank, and his clear, straightforward talk impresses one as the words of a good-hearted and truthful man. His enemies—and certainly he used to have enemies—might, true enough, point to the fact that, when he was out in Illinois consulting with Mr. Lincoln, Mr. Lincoln was in daily receipt of telegrams from many gentlemen in the East, who earnestly warned him against the insidiousness and plausibility of the New Yorker; but of the goodness of these missives as evidence against him, there will be doubt among people who know much about the correspondence of the men so far inside politics as to send telegrams to Presidents-elect. Whatever the value of Mr. Weed's contributions to history, it is worth while to call the attention of the readers and writers of newspapers to the style in which they are couched. It has none of the graces; but to mistake the writer's meaning is an impossibility. What he wishes to say he says; and, furthermore—to go above matters of mere composition and to get into the region where "the style is the man"—Mr. Weed may well be praised for the courage with which he gives free expression to his estimate of various well-known politicians, about whom most men not their partisan enemies talk smooth things and tell little that is true or intended to be accurately descriptive.

Other good articles in the *Galaxy* are that in which Mr. Donn Piatt gives some reminiscences of his life at the French Court in the early days of Napoleon and Eugénie, and that in which Mr. Jeremiah Black locks horns with Senator Wilson. Mr. Stanton's character is really the subject-matter of the dispute between Mr. Black and Mr. Wilson; and while the ex-Secretary shows plenty of ill-temper, and is compelled to plead guilty to the charge of having made several inaccurate statements, and while his manners are in many respects none of the best, we think that upon the whole he shows to advantage in comparison with his antagonist: and it would seem that his production has considerable historical value. He is in such heat, however, and the spirit of the advocate is so native to him, that one would not care to pin one's faith to any of his assertions. Mr. Stanton, meanwhile, what with the one and the other of his eulogists, fares ill. Perhaps it is best to believe that during the earliest part of our late troubles he was a politician, with many of a politician's small tricks; that when afterwards he rose to the level of statesmanship, he nevertheless retained some of the characteristic traits of a Democratic office-holder; and, moreover, that he was a man of such robust confidence in himself that he often exposed himself to misconstruction by doing for old secessionist friends of his things which no Union Secretary of War could do who was a mere Secretary and nothing more. He would put a rebel friend upon his honor, and let him pass through the lines to Richmond, and he would keep on friendly terms with Mr. Black while giving Mr. Sumner secret information as to the counsels of Buchanan's Cabinet; but neither his duplicity nor his rather carelessly audacious gratification of his personal predilection for rebels prevented his being a public servant to whom the people owe a vast deal.

Mr. Piatt, in his "Souvenir of Imperial Sovereigns," tells in his racy way some pleasant stories of the once famous John Y. Mason, formerly our Minister to France; of Napoleon III.; of General E. V. Sumner, a bluff soldier; and of Eugénie, to whose imperial ears General Sumner was, one day, much inclined to give a sound boxing. Of Napoleon, Mr. Piatt seems to have formed, on sight of him, an opinion which, as most people will think, subsequent events have proved just. In his Western fashion Mr. Piatt pronounced the ex-Emperor a fool, and was bold enough to predict that it was not in him to make his new government last five years, and that, when it fell, the fall would be the result of the so-called sphinx's feebleness and incompetence. Another of the February *Galaxy's* articles which deserves mention as agreeable reading is Mr. Durand's sketch of the life of Madame Le Brun, the French artist, of whom he tells some pleasant anecdotes.

The best thing in the *Atlantic* is Mr. Fields's "Recollections of Hawthorne," which constitute an important addition to American literary *ana*. We do not know whether admirers of Hawthorne should welcome them or not. To our mind, they present their subject in an unfavorable light, and will do anything rather than conciliate the liking of the reader. A morbid, unhappy, and in no way overpleasant sort of a person is the figure which, as it seems to us, they present to us. Reading the essay, one begins to consider again the question how far it is justifiable to let the world at large into the heart of a great man's mystery. We learn something, truly, when we learn that our shining idol has feet of clay; but, perhaps, too, we lose something of the capacity which he developed in us for reverencing the divine as manifested in him, and perhaps the loss is greater than the gain. The question is a difficult one from whatever side we look at it. Meantime, Mr. Fields's article is interesting.

"The Friend of my Youth" is some account of an odd adventurer and rascal, whom Mr. T. B. Aldrich calls "The Friend of my Youth," and concerning whom he makes a sketch that is agreeably humorous. Mr. John Fiske begins a series of five papers with the general title of "Origins of Folk Lore," in which he will give, in a desultory way, and without any pretence of originality of matter, a short history of the rise and growth of the commonest popular myths. The author's wide reading, his careful industry, and his command of the most approved methods of philosophizing on these and similar subjects, will make the essays in question both useful and entertaining. There is nothing else, we believe, in this month's *Atlantic* that requires particular notice, unless it be Mr. W. D. O'Connor's lines, entitled "To Fanny," which we think we have never seen equalled in worthless and offensive absurdity by any contribution to any magazine.

In *Old and New* there is a singular article—unaccountable, so far as we can see, as regards motive, and remarkable, also, for the manner of the author's treatment of his subject—written by Mr. J. A. Bolles, and entitled "Porter-Humphreys-Hardin." These names are the assumed names of a commonplace swindler, now in the Massachusetts State Prison, whose per-

formances are treated of as if somehow or other Mr. Bolles had taken a deep personal interest in running the rascal to earth. The effect is very curious.

In the editorial part of the magazine there are some suggestive remarks about the decline in American political writing and the alleged indisposition on the part of the college-bred American to busy himself with politics and government. The subject is too wide a one for us to undertake its discussion here. It may be remarked, however, that the political writing of the founders was comparatively easy work. They dealt with admitted propositions and axioms, and the question was only of the application of these to the uses of a people already trained in working the machinery of government, and who were called upon to say little more than whether or not they would make certain changes of gearing. The American political writer of to-day has laid upon him, in addition to the labor of explicating a constitution, the infinitely more arduous task of exploring the wide field of social science, and utilizing his observations and inductions by applying newly discovered and little known laws to the legislation of a community immensely larger and with interests immensely more varied than it ever entered into the imagination of the "Federalist" writers to conceive. Our success may not be so marked as that of the founders; but we have heavier work than theirs, and we do not wholly fail.

The chief article in the *Catholic World* is the first article, which is a review of Baron Hübner's book on Sixtus V. There is not very much ground left by the definition of the new dogma for one who wishes to write the history of the Popes, and still wishes to be a good Catholic, and perhaps it may be true that in this article Sixtus V. is overpraised. But he was a good civil ruler, certainly, and deserves the praise he gets for the suppression of the brigands in the Roman States. He did not spare the monks, either, in his attacks on fraud and robbery, and the story of some of the penalties that he inflicted sounds like a page out of our earlier New England history. Moses was his lawgiver. The robbers whom he brought to justice took their revenge in the famous pasquinade which was affixed to the statues of Saints Peter and Paul, which stand at the entrance to the bridge of St. Angelo at Rome.

"Why," says St. Paul to St. Peter, "have you your travelling wallet on your back?"

"Because," replies St. Peter, "I must get away from this place, or I shall be arrested for cutting off the ear of that fellow Malchus."

The other articles are a review of Dr. Newman's "Grammar of Assent," or, rather, a half-review of it; two slight performances, one on New York Lodging-houses, and one on the "Missions in Acadia;" another "Winter Evening" with that astonishing family in that remarkable New England town which has become or is becoming Roman Catholic; a continuation of the account of the really wonderful miracles of "Our Lady of Lourdes;" some praise of the well-known "Milesian race" in its early days; some praise, not too much modified either, of the Early New Englander; and, finally, the usual very bad book-notices which end the number.

In *Harper's* a friend of Woman with a capital may find some pretty writing in her, or his, or its, favor by Mr. Curtis, who makes us feel ashamed of our illiberality, and pity Addison also for being behind our age; a learned discussion of Columbus's claims to be regarded as the first discoverer of the New World; and a very full list of illustrated and other articles of the staple quality of the *Harper's Monthly* articles. This last number is as admirably fit as all of its predecessors for perusal in Texas and Montreal, and Key West and Eastport, and by every conceivable type of average American of either sex and of whatever age.

Scribner's Monthly, too, under its new management, begins to show a noticeable power of adaptation to the average taste and needs of our reading public. Dr. Holland's previous success in pleasing the general public might reasonably have been taken as a guarantee that he would make a magazine which should have a very wide acceptance, and such expectations would seem to have been already perfectly fulfilled. The new number opens with an interesting article, not too well written, but intelligent, giving an account of the founding of the New York Mercantile Library, and of the way in which that excellent institution is now carried on. The second article is a short historical paper—and when the clerks who visit the Mercantile Library undertake to read it we wish them joy of it—which attempts to tell the story of the French acquisition of Alsace and Lorraine, and the subverting of the innumerable bishoprics, free municipalities, duchies, and lordships which, from the time of Henry IV. to the time of Louis XVI., were fought for and intrigued for until at last France made prize of them. Third in the table of contents —counting out a "Tartar Love Song" with Mr. R. H. Stoddard's name appended—is a pretty little love-story by Mr. Edward Eggleston; and for the rest there is a scientific essay about balloons; another entitled "Weather Telegrams and Storm Forecasts," by Professor T. B. Maury; an impudent and sensible article, of the kind called lively, by "Gail Hamilton," in which "conferences" (of churches in Massachusetts) and women's rights women are laughed at; some chapters of Mr. George MacDonald's new story; a good deal of editorial matter of the general nature of the "social article," but without the sense and philosophic discussion which sometimes make the social article good, and without the point which oftener constitutes its claim to the reader's respect; and, finally, an instalment of a story by Andersen. It is neither a story for children nor is it one of Andersen's novels, and it is, therefore, neither bad, as Andersen's grown-up stories are apt to be, nor thoroughly good, as almost always are his children's stories, in which he is almost always both childlike and wise—a story-teller for children and a poet for men.

MAUDSLEY'S BODY AND MIND.*

THE aim of these lectures is to point out the correlation of the physical and chemical forces with vital force—including in this the energy manifested as thought and volition—"to bring a science of life into close and indissoluble relations with other sciences, and thus to establish in cognition, or to reflect in consciousness, the unity which exists in nature." In the execution of this purpose, Dr. Maudsley is disturbed by the vision of an adversary, a metaphysician, who, for the purpose of mere speculation, insists on separating mind from body, and treating each as if it were an abstract entity, and even dares to feel ashamed of the body, and to declare it vile and despicable. He keeps up a running fire upon this antagonist which somewhat interferes with the satisfaction of the reader, who would gladly hear what Dr. Maudsley has to say without being troubled to consider futile objections. Indeed, we cannot help thinking it ammunition wasted, for we have reason to believe that "the metaphysician" has taken himself off to parts unknown, in company most likely with the philosopher who used to evoke camels and other objects from the depths of his own consciousness, and the gentleman who denied that brutes reason. They are gone, we hope, for good; and it is useless to keep up their memory. Metaphysicians nowadays (witness Dr. Stirling, a Hegelian too—though, it is true, a Doctor of Physic as well) admit, and even insist, that mind and body are one—subjective idea and objective idea—or, as Dr. Maudsley says, "*laws* or ideas in nature." This *oneness* does not, of course, mean that they are one *thing;* but neither would that be Dr. Maudsley's meaning. All things in nature are indeed, he considers, wrought from one stuff, and no doubt reducible, could we see nature as a whole, to one force. What disappears and reappears is form—matter neither is born nor perishes, but is only *transformed*. The proper conclusion evidently is that what is essential in all phenomena, what makes each thing such as it is, is form, and that the contrasted image of matter, as that which is and remains the same in all things, is only the abstract conception of potential being, receptivity, readiness to take form, *i. e.*, to exist, when the right conditions arrive. The universe, as Dr. Maudsley conceives it, is a continuous process of *formation*, in which the principle of form, of definite co-ordination, appears in ever-increasing sharpness of contrast to the vague indifference of elementary conditions. Nature is a hierarchy of forces and of tissues, beginning with the undefined dualism of mere tension in attraction and repulsion, and rising at last, through more and more sharply-pronounced differentiation *and* integration, to definite co-ordination in conscious volition. "Elementary matter thus passes upwards into chemical and organic compounds, and then downwards from organic to chemical, and from chemical compounds to its elementary condition." What is common to the whole of this process is the *tension*, the negativity or reflexion back upon itself, of elementary force. This constantly reappears in higher and higher shapes, more and more concentrated and specialized; both the antagonism and its reconciliation more and more complete. "Attraction is recognized in gravitation, cohesion, magnetism, affinity, love; while repulsion is found in the centrifugal force, in heat, in electricity, in antipathy and hate." As we go upwards in the scale, the amount of tension, the latent energy, becomes greater, but the outward display less; on the other hand, translating a higher mode into a lower, we *increase* the display. "One drop of water contains, and may be made to evolve, as much electricity as, under different modes of display, would suf-

* "Body and Mind: An Enquiry into their Connection and Mutual Influence, etc. Being the Gulstonian Lectures for 1870. By Henry Maudsley, M.D., etc." New York: Macmillan & Co., and D. Appleton & Co. 1870.

fice to produce a lightning flash. The decomposition of matter is the resolution of force, and in such resolution one equivalent of chemical force will correspond to several equivalents of inferior force." The drop of water is endowed with a certain amount of self-restraint, power to hold fast a particular set of relations to its surroundings. In the phenomena of life, this inwardness, this negation of mere extension, becomes still more apparent, and establishes itself, in the organism, in pointed antagonism to the levelling tendencies of the physical and chemical forces. The organic cell is the result of these forces, but of these forces as taken possession of and turned against themselves. It accordingly resists their action, or, rather, *appropriates* it. "The fundamental law of life is the same for its conscious and unconscious manifestations; it is individuation by appropriation."

Evidently Dr. Maudsley has no quarrel with metaphysicians, for his doctrine is plainly that ancient one, that "soul is form, and doth the body make," which no metaphysician, we trust, will deny. This ancient truth he reinforces and illustrates in a very interesting way from the phenomena of disease, bodily and mental. In the living body, in its normal state, the various organs, very happily says Dr. Maudsley, "agree in a consent of functions;" the mark of which is the common sensibility. It is not an aggregate, but a *whole*, whose duty, so to speak, or essence as an individual of specific character, is to live in certain relations with its surroundings. "When it is not so living, it is really degenerating, losing its nature or kind, passing more or less quickly toward death." The degeneration is accompanied, very naturally, by an increased demonstration of force, which, however, is in reality not power but weakness. When, from disease, a particular constituent of the body is prevented from rising to the dignity of its specific constitution and energy, there will be a production of an element of a lower kind, and therefore an increase in volume and motion. "It is as if the substance of a polype were produced amongst the higher physiological elements of the human body, and went on increasing there without regard to relations with surrounding elements of tissue." So the stormy rage and demonstrative activity which characterize inflammation really show degeneration of vitality. The muscular rigors, heat, pain—in short, violent and aimless molecular activities, testify to a retrograde metamorphosis, and the increased action of inflammation is in fact diminished vital action; just as the violence of emotion is vastly inferior to the self-contained activity of definite productive aim. "Perhaps it might once for all be stated, as a law of vital action, that the dignity of the force is in an inverse ratio to its volumetrical display."

The highest form of being, then, will be that which makes least show, viz., mind, ideas, as such; whilst, on the other hand, translated into the appropriate forms, it makes the most, or is the most real of all things. As vital force is "by far the highest force in dignity, a small quantity of it will correspond in value to a much greater quantity of an inferior force; . . . vital force surpasses chemical force apparently in as great a degree as chemical force surpasses physical force. How great, then, must be its mechanical equivalent! Who can measure the power of a great idea? Armies fight in vain against it, and nations yield to its sway." There is, however, some danger of misconception here. The great idea *as idea* cannot be *measured*, in the sense meant, not because it is the greatest, but because it is the least of all things, *i. e.*, that which has the least volumetrical display. Its material greatness comes after it has undergone retrograde metamorphosis into force of a lower kind. Dr. Maudsley reaches here a point of view from which he might not improbably, on reflection, characterize as ambiguous and misleading many statements scattered through the book—such, for example, as that emotion means special sensibility of the vesicular neurine; that memory and volition are physiological functions of the nervous centres, etc. Such statements are unsatisfactory and even slightly exasperating, just because in one sense they are correct enough, but not in the sense in which they are likely to be received. In one sense, thought is a function of matter, just as in one sense the winding-up of a watch is the function of the watch-key. But thought is a function which matter performs by losing its distinctive character, by becoming endowed with life and individuality. Life, as Dr. Maudsley says, is surrounded by forces that are always tending to destroy it; not to destroy it as matter, but to break up the special combination which it opposes to the indifference of elemental nature. The question is, What is the power that *resists* the natural operation of the elemental forces—resists them, to be sure, by using them against themselves, but still resists them? We are at present, Dr. Maudsley admits, unable to discover any cause of life except life itself. External circumstances are needful conditions, "but the inward fact is the important condition—it is the determining condition." But it is some comfort, he thinks, that this scientific difficulty "only reflects a corresponding difficulty in nature," as shown by the fact that "considerable time elapsed in nature before vital force followed on the physical and chemical forces." But we may say of this "difficulty" what Hume said in a similar case, that it is either irresistible, or has no manner of force. Nature can have no difficulty in doing what is according to nature, and no ability to do anything else.

We cannot pursue the discussion of this point further, indeed, we have left ourselves no room to speak of what is perhaps the most interesting topic in the volume, viz., mental disease in its relation to bodily disorders; insanity as arrested development or retrograde metamorphosis of intelligence, the ravelling-out of reflection into instinct and animalism, the brute's brain within the human, the insane neurosis showing itself in the lack of purpose and human sympathy, the regress to primitive modes of function, chance impulses, and isolated motives, instead of rational, co-ordinated motives. But the book is short, and may be safely left to make a way for itself.

The Story of a Working Man's Life: with sketches of travel in Europe, Asia, Africa, and America, as related by himself. By Francis Mason, D.D. With an introduction by William R. Williams, D.D. (New York: Oakley, Mason & Co. 1870.)—The title of this interesting narrative would probably not suggest to most readers the sense in which it is used by the writer, nor his motive in choosing it. The author began life as the son of an English shoemaker, and, after passing to this country, rose from the ranks of a merely manual laborer to that of a teacher of religion, without ceasing, nevertheless, to be a most industrious worker with hands and brain. Both parts of his checkered career, therefore, entitle him to call himself, as he is pleased to do, a working man; but so far as his book has a distinct aim, it would seem to be to offer to the mechanic or laboring class an example of the progress of which it is capable, if it will cultivate its natural faculties, improve its opportunities of learning, and desist from bad habits. Dr. Mason, to be sure, inherited his religious office quite as naturally as his trade, his father having been both a shoemaker and a preacher of no little power, while his grandfather was the founder of the first Baptist society in York. On the other hand, though his father "did not believe in teaching religion to very young children," but believed rather in teaching them history, Dr. Mason says:

"From the time I was four or five years of age till I passed my eighteenth year, there was rarely a Sunday passed in which I was not taken to meeting twice. I must have heard within that time more than 1,500 sermons, 3,000 prayers, 4,500 hymns, and a distressing number of exhortations; and yet not a single one of the whole ever made the slightest impression on my heart. They were all to me as if I had never heard them; but to sit under the delivery of the sermons was the greatest agony I have ever been called to endure in the threescore years and ten of my existence. Fever and ague were nothing to it." "For many years," he adds, "I was constrained to attend Sabbath-schools, but they were as unprofitable to me as the preaching of the sanctuary. I committed to memory, during those years, an untold amount of Scripture texts; but they were like water poured into a sieve. They all ran away and left nothing behind. My moral nature was untouched."

It was not till after this "Yorkshireman by chance," having crossed the ocean and journeyed through the United States, finally reached Boston, and became "a New Englander by election," that his religious capacity was revealed to him, and that he prepared for the mission to Farther India, in which he has so greatly distinguished himself.

The extract we have quoted is a fair sample of the frank and confidential language of the autobiography, which is equally remarkable for good sense and simplicity, and abounds in entertaining anecdotes. Resisting a strong temptation to reproduce several of these, we select the following:

"While Monroe and Jackson represented widely separated classes in society, Harrison was equally a representative man of another class—the farming community. In 1819, Harrison had nothing in his manners to distinguish him from a common farmer. I recollect selling him a pair of shoes for his daughter, in my uncle's shop in Cincinnati, and he brought a stick the length of her foot, just as country people usually do, and she was fitted with shoes by that. He was a thoroughgoing politician. He had been recently elected, I think, to the Ohio Senate, and he entered into a long defence of himself and his policy, against electioneering charges that had been brought against him, though we had no personal acquaintance. Politicians sow by all waters, and they reap."

Here is a chapter on woman's rights:

"The Burmese are a people, in many respects, with a higher civilization than the nations around them, and this is especially manifested in their treatment of women. According to the Burmese law, a married woman can hold property as independently of her husband as if she was not married. If a girl has property when she marries, it remains her pro-

perty; and if she acquires property after marriage, that also is her own. This is manifestly just, the English laws to the contrary notwithstanding. . . . Since woman can enjoy her own earnings in Burmah, it is found she has a great aptitude for business; and at least half the trading done in Burmah is done by women. When a woman is the wife of one of the governing class, she usually does about as much of the governing as her husband, if not more, and often sits with him on the bench of justice—so called. The wife of the seek-kai, the highest officer in Tavoy, sat constantly in court with her husband; she allowed the suitors to crowd around her; and when she put her hands behind her, if any one slipped a roll of rupees into them, she immediately began to advocate the cause of that party; and it was noted that she gained every cause she supported. Of course the husband knew nothing about it, and could not be charged with taking bribes."

We have left ourselves no room in which to speak of Dr. Mason's brilliant contributions to philology and natural science. At the age of seventy-two he is still far from being inactive, and far, we trust, from passing away.

Dorothy Fox. By the author of "How it all Happened," etc. With numerous illustrations. (Philadelphia: J. B. Lippincott & Co. 1871.)—This is an entertaining and pleasantly written story which we commend to such readers as are tired of the mental struggles and the moral and metaphysical difficulties which are served up in the pages of most modern novels. It contains two very pleasant love episodes, in which nobody's agonies are unduly protracted, and in which all the principal characters are agreeable people. It has no special moral that we know of, except that it is better to marry for love than for money, and this it enforces pleasantly and without any effort to harrow the reader's feelings. The book comes, in short, really under the head of light reading of an unobjectionable sort, a peculiarity which it does not share with most of our current fiction.

BOOKS OF THE WEEK.

JUST PUBLISHED BY

PORTER & COATES,

822 Chestnut St., Philadelphia.

LONGFELLOW'S POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, by H. W. Longfellow, with the addition of 150 pages of entirely new matter never before published, making it one of the most elegant and complete works extant. With Introduction, Biographical Notices, and Translations, from the earliest period to the present time. By Prof. Henry Wadsworth Longfellow. Illustrated with engravings on steel and engraved title. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6; sheep, marble edges, library style, $7 50; half-calf, gilt, $9; Turkey morocco, $12.

'This valuable work contains selections from about four hundred authors, translated from ten languages. Mr. Longfellow himself gives us translations from all these languages but two.'—Allibone's Dict. of Authors.

'This edition has been revised and enlarged by the author, and contains his last touches and additions to his labors.'—The Age, Philadelphia, Nov. 3, 1870.

HEDGE'S PROSE WRITERS OF GERMANY.

A new and revised edition. With Introduction, Biographical Notices, and Translations. By Frederic H. Hedge, D.D. With Six Portraits on Steel and Engraved Title. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5; sheep, marbled edges, library style, $6; half-calf, gilt, $7 50; Turkey morocco, $10

'There is no book accessible to the English or American reader which can furnish so comprehensive and symmetrical a view of German literature to the uninitiated; and those already conversant with some of the German classics will find here valuable and edifying extracts from works to which very few in this country can gain access.'—Prof. A. P. Peabody, in North American Review.

A New Globe Edition of

THE WAVERLEY NOVELS.

By Sir Walter Scott. In 16mo size, on toned paper, illustrated. The most attractive edition for a small amount of money published in the country. Complete in 23 vols. Green cloth extra, per vol., $1 25; per set, $28 75. Half-calf, gilt back, per vol. $3; per set, $69.

"ECCE HOMO!" "ECCE DEUS!"

TWO NEW WORKS BY THESE CELEBRATED AUTHORS.

ROMAN IMPERIALISM,

And Other Lectures and Essays.

By J. R. Seeley, M.A., Professor of Modern History in the University of Cambridge, England.

AD CLERUM;

Advices to a Young Preacher.

By Joseph Parker, D.D.

Here are two books which are invaluable to all interested in the cause of literature and education. The *London Athenæum*, in reviewing Prof. Seeley's book, says: "We cannot help thinking that future historians of English literature will regard him as the typical writer of the present day;" and the *Literary World* says of "Ad Clerum:" "This volume is specially addressed to clergyman, but laymen will find it by no means devoid of interest; in fact, it is a book that will be read and enjoyed by all classes for its wisdom and its wit."

Price of each, uniform with "Ecce Homo" and "Ecce Deus," $1 50.

NEW EDITIONS NOW READY OF

MR. MORRIS'S EARTHLY PARADISE. Part 4. Price $3 and $2 25.

GEORGE SAND'S SNOW MAN. Price $1 50.

MISS PRESTON'S ASPENDALE. Price $1 50.

BOOKS,

NEW AND OLD,

BOUGHT AND SOLD AT FAIR PRICES.

J. SABIN & SONS,

Booksellers and Importers,

84 NASSAU STREET, NEW YORK,
22 BUCKINGHAM STREET, STRAND, LONDON.

Bookbuyers who desire to receive a monthly Catalogue of Old and New Books, a List of New English Publications, and a Repository of Notes and Queries, will be kind enough to furnish us their names, and a specimen of the "American Bibliopolist" will be sent free on application. Subscription to the "American Bibliopolist," printed on fine toned paper, $1; the same, printed on cheaper white paper, 36 cents per annum.

The January No. of the "Bibliopolist" contains a catalogue of Theological and Architectural works. We shall be happy to be put in communication with any who wish to receive Auction and Foreign Catalogues.

J. Sabin & Sons will shortly republish a very important book—a work of extreme importance to all interested in the early history of America. The original is so extremely rare that there are but four perfect copies known in America, and very few in the world. This book is of such great rarity and importance that a copy at a late auction sale sold for $975 (nine hundred and seventy-five dollars), and at which price it was considered reasonable. This book, "De Brys Illustrated Edition of Hariot Virginica," will be reproduced letter for letter of the text, and line for line of the engraving of the original, exactly imitated. But a few copies will be printed, and subscribers will oblige and gratify us by sending in their names. The work, comprising about a hundred plates, will be published at $25. The number of copies for sale will be limited to 125.

As a work of great historical interest and importance, and an exact reproduction of a book which cannot be bought at any price, it should commend itself successfully to American Public Libraries, as we have no doubt it will to the prominent Libraries of Europe. The price is a mere bagatelle in comparison to the ordinary cost of engraving such an elaborate work.

List of a few of the Books for sale by

J. SABIN & SONS.

ERASMUS. Praise of Folly. New edition, 16mo, half-morocco, gilt top. London, 1870. $2 25.

MINES AND MINING

OF THE ROCKY MOUNTAINS, THE INLAND BASIN, AND THE PACIFIC SLOPE:

Comprising Treatises on Mining Law, Mineral Deposits, Machinery, and Metallurgical Processes.

By ROSSITER W. RAYMOND, Ph.D., United States Commissioner of Mining Statistics, Editor of the *Engineering and Mining Journal*, New York, etc. Assisted by many Professional Experts.

Illustrated with 140 engravings. New York: J. B. Ford & Co. 1871. Bevelled boards, extra English cloth. Price $4 50.

This volume contains, in a marvellously condensed form, a greater amount of information concerning our American mining industry, its condition, prospects, methods, and appliances, than was ever before collected in any single work. It comprises a description of all the gold and silver-mining districts of the West; a careful discussion of the laws affecting their titles; a thorough essay on mineral deposits in general, their occurrences, characters, and classification; 27 chapters, profusely illustrated, on the mechanical appliances of mining, and on metallurgical processes; and an appendix, with valuable tables of statistical information.

Three alphabetically arranged analytical indexes, one of Mines, one of Mining Districts, and one of Subjects, complete the work. With these, the vast body of information contained in these 800 octavo pages is remarkably convenient and accessible for purposes of reference.

The style of the book is free from obscure technicalities, and eminently adapted to interest and instruct the non-professional reader; while yet it is clear, terse, and accurate enough to satisfy the demands of experts.

☞ The above book for sale by all booksellers, or mailed, post-paid, on receipt of price by

J. B. FORD & CO., Publishers,
39 PARK ROW, NEW YORK CITY.

ATHENS.

VIEWS OF THE ACROPOLIS.

The undersigned publish for the author an Album of photographic views, entitled 'The Acropolis of Athens, Picturesquely and Architecturally Illustrated, by W. J. Stillman,' printed in carbon by the Autotype Company, London.

These indestructible photographs are from 8x10 inch negatives, taken by Mr. Stillman during the winter and spring of 1869, and include all the views which are necessary to give the most complete idea of the existing ruins on the Acropolis, and their relation one to the other. They were taken with architectural lenses correcting the perspective distortions, and so that the proportions of the buildings may be measured as to scale, on any given plane; and most of them by Dallmeyer's wide-angle rectilinear lens, by the aid of which views never before successfully photographed have been rendered.

Price, delivered at the *Nation* office, 3 Park Place, New York, $25.

ECCLESIASTICAL LAW.

BY THE

HON. MURRAY HOFFMAN.

8vo, cloth, $2 50; sheep, $3.

Questions connected with the incorporation of religious societies frequently come before our courts of justice, and are often influenced by the ecclesiastical system of the church or body in connection with which they arise. In the above work is set forth, in a convenient form, the statute law, the decisions of courts of justice, and such ecclesiastical regulations as are useful in explaining the positive law and its mode of execution. An historical notice is introduced of all those churches which had a place of any importance in the Colony before the Revolution.

"Botany should be taught in every school, and these Volumes should be the Text-books."—Prof. J. S. Davis, University of Virginia.

BOTANICAL TEXT-BOOKS.

By Professor ASA GRAY,

Of Harvard University.

HOW PLANTS GROW,
SCHOOL AND FIELD-BOOK OF BOTANY,
MANUAL OF BOTANY,
STRUCTURAL AND SYSTEMATIC BOTANY,
Etc., Etc.

The publishers beg to call the attention of those about forming classes in Botany to the well-known works by Professor Gray. Having been carefully revised, they present the latest and most accurate principles and developments of the science, and it is sufficient endorsement of them to state that they are used in almost every noted College, High School, and Seminary in the country, and are recommended over other series by nine-tenths of the leading Professors and Botanical Teachers in the United States.

No author has yet approached Professor Gray in the rare art of making purely scientific theories and dry details popular and interesting. From his charming elementary work, "How Plants Grow," to his more elaborate "Manual," there is one simple, concise, and yet exhaustive method of teaching the various grades of the study.

Descriptive Circulars, giving full titles and prices, will be forwarded, by mail, to any address on application.

The Week.

THE news of the arrival of the *Tennessee* at San Domingo, after an uneventful voyage, has come in due course by the regular channels. It is safe to say that nothing in the history of sensational journalism can match, in impudence and success, the attempt to spread the belief that she had been lost. Usually, when newspaper men get up "a cruel hoax," they aver that they are in possession of certain intelligence; but in this case their capital consisted of the absence of all intelligence. They simply pointed to the fact that there was no news from a quarter from which there was no reason to expect any news, and on the strength of this by no means remarkable state of things they managed to fill half the American public with a horrible fear that a well-found, well-manned ship-of-war had gone to the bottom with all on board. They filled the whole country with anxiety for a fortnight, and we believe, towards the close, managed even to shake the nerves of the Navy Department itself, and produced the curious spectacle of crowds gathering eagerly on the wharf to receive from the mail steamer the information that a national ship had got into port safely, after an average passage and with fair weather. Nay, so effective was the imposition that we have ourselves, within a day or two, received a grave rebuke for trifling with the feelings of the relatives of the Commissioners, by ridiculing the stories of their untimely end, and suggesting the possibility of their being eaten by the crew after having been carried out of the "Horse Latitudes" by the trade-winds to the coast of Africa, as some of the authors of the hoax suggested was not unlikely.

After what has happened, it is difficult to see what is to prevent the production of a similar "scare" before long about another steamer. A vessel leaves this port for Liverpool, for instance, with some well-known person on board. When she is five days out, another vessel arrives from Queenstown, bringing no news of her. Then a brig comes in, and says she has seen a steamer which looked like her, but which the owners acknowledge cannot have been she, the rig being different then a bark arrives, having seen nothing of her; and finally, another steamer which has left Queenstown two days before she could possibly have reached that port, brings no news of her. Suppose that all this while a parcel of wretched wags are filling the papers with stories of her unseaworthiness, of the flatness of her bottom, the weakness of her engines, or with anecdotes about the *President*, the *Pacific*, the *City of Boston*, icebergs, and water-spouts, and with obituary notices of the people on board, and suppose that when at last the regular mail arrived, which left Queenstown when the ship had been eleven days out, and reported her safe arrival, the whole city was filled with rejoicing, and the bulletin-boards surrounded by large crowds, would it not be at once a ludicrous and melancholy spectacle? Would it not throw light on some curious points in mediæval history? And yet it would almost exactly resemble the *Tennessee* hoax.

There are signs that the work of the High Commission is not going to be so easy as at first seemed likely. It seems not improbable that an attempt will be made in the Senate to make the settlement of the *Alabama* case depend on the willingness of Great Britain to abandon all her possessions on this side of the ocean, including her West Indian Islands. The germ of this idea made its appearance in the columns of the *Tribune* about two years ago, in the shape of a hint that nothing short of the cession of Canada would suffice to satisfy the American public for the wrongs it had suffered. The source of this suggestion could hardly have been doubtful, as it was a natural enough deduction from Mr. Sumner's statement of the measure of damages in his famous speech. Under the rule he laid down, the surrender of Canada indeed would have only been a moderate atonement. Since then the conception has grown and expanded, until it involves the total retirement of England from the Western continent and the adjacent isles; and Mr. Sumner is apparently as anxious to connect his name with the execution of this great scheme as the President is to connect his with the settlement of the affair in the ordinary way by the payment of pecuniary damages. Of course, the production of the plan by the American Commissioners is not at all likely, as they are all rational politicians and men of business; but it is not at all unlikely to find supporters enough in the Senate to secure the rejection of any treaty the Commissioners may agree on.

The scheme is somewhat modified since it first made its appearance, by the introduction of a proposition to purchase from Great Britain such territory as it is deemed proper she should abandon, instead of exacting it from her as a simple penalty; but this is hardly likely to render it any more acceptable in England. It is the surrounding circumstances rather than the terms of the proposal which give it its character; and no infusion into it of a mercantile element is likely to deprive it of its minatoriness in English eyes, coming, as it does, as part and parcel of a demand for redress of a grievous wrong. It will sound very much like an address of this sort from a private gentleman to a neighbor with whom he had quarrelled: "You are a great rascal, and have done much injury, and you know it. I have half a mind to give you a good licking; but I hate fighting, and will let you off if you will pay for the damage done me by those dogs of yours killing my sheep, and will sell me that bay mare I see you driving about. She is a very pretty animal, a great deal too good for you, and will match my mare exactly. So now, just say what you want for her, and let us have done with it. As long as you keep her, there will be constant quarrels between us, for it makes me mad to see you sitting behind her with your complacent smirk."

The peaceable cession of English territory in this hemisphere to the United States would be a glorious thing, but it would have to be negotiated in quiet times, and when both parties were on good terms and in a good humor. If any settlement made by the Commission were now rejected in the Senate, for the purpose of furthering any such demands, there is no doubt that it would be taken in England as a sign that America wanted to fight, and it would find public opinion there in a highly inflammable condition. It would put the complaints too, which have been so frequently and strenuously made on this side of the water, of the wounds inflicted on American *feelings* by the conduct of Great Britain during the war, over and above the actual damage done to the shipping, in a somewhat ludicrous light. It does not do to say to a man that he has hurt your feelings as well as torn your coat; that the injury is, after all, only a small matter; that it is the indignity which most troubles you; but that, nevertheless, if he will make it worth your while, you will let bygones be bygones. In fact, if the "code of honor" be applied to an international difference, it must regulate the nature of the satisfaction as well as measure the extent of the injury, and that code knows nothing of pecuniary atonements. Under it, you may either fight, or take an apology, or cut the offender's acquaintance; but you cannot forego an apology and renew your friendship with him for a "valuable consideration."

As regards the composition of the Commission, it has been suggested that it would have been proper to have put Mr. Adams and Mr. George Bemis on it on the American side. Of the fitness of these gentlemen, as far as knowledge goes, there can be no question; but Mr. Bemis is disqualified for the same reason that Mr. Vernon Harcourt is disqualified, and that is, that he has discussed the question polemically, or, in other words, has, to all intents and purposes, played the part of counsel in the case. The same objection may be made, though with less force, to Mr. Adams, who, besides, was committed by his instructions to one or two points which the present administration has aban-

doned. It is, of course, desirable not only that the Commission should be judicial-minded, but that the public of the two countries should consider it so; and no pains should be avoided which are likely to secure this result. The man who ought to have been put on the American side, and has not been, is President Woolsey, of Yale College. We doubt if there is anybody on it on either side who unites as many qualifications for the place—that is, who adds so much moral weight to so much of the needful kind of learning.

The Forty-first Congress reaches its end next week, and business in it seems to have closed already. The last session, though in appearance a barren one, has been really very creditable, owing to the fact that nearly everything has been let alone. The tariff was not tinkered, so that the value of property has been left to the ordinary influences of supply and demand. Specie payments have not been restored, and as all the great financial measures of last session have turned out failures, the present winter has not been illustrated by any new ones. The grand plan for diffusing "capital" through the country in equal measure, by the establishment of new national banks, without regard to the actual distribution of real wealth, has, owing to the working of a well-known law of trade—confound it—left things pretty much as they were. Mr. Boutwell has got his new bonds ready, but has not as yet succeeded in disposing of them, though the shadowy forms of several new "German bankers" are once more said to be stretching out their hands for them. The income tax has not been repealed, in deference to Mr. Boutwell's remonstrances, and we are bound to say that, if he is to be held responsible, as he ought to be, for the management of the finances, his remonstrances on such a subject ought to be listened to, and it is a good sign that Congress does listen to them. There are about thirty times as many financiers in that body already as a republic of this size can find work for. All the great subsidy schemes have been defeated, including the plan of paying people high salaries out of the Treasury for engaging in the shipping business.

The McGarrahan claim has received aid and comfort from the passage of a resolution reported by the minority of the Judiciary Committee of the House, directing the patent, which is alleged to have been issued to McGarrahan in 1863, but which Mr. Cox maintains was not signed by the proper officer, to be restored to the books of the Land Office "without any mutilation or erasure whatever" (the theory of an "erasure' is part of McGarrahan's case), and that the President be required and authorized to do whatever seems to him equitable in the matter, without regard to any proceedings taken after March 14, 1863, the date of the patent. This performance is really an appeal from the Supreme Court to the Legislature, as General Garfield pointed out in the debate, and the House in it assumes the right to set aside the decisions of the Court, on the ground that the appeal in which the decision was given was improperly taken, the time within which it could be taken having elapsed; in other words, it resolves that the Supreme Court is not competent to pass on the question of its own jurisdiction. The danger and scandal of all this it is hardly necessary to point out. This extraordinary vote passed by 95 to 82.

The complication in the coal-mining regions is assuming a very serious aspect. After a two months' suspension of work, agreed upon between the mine-owners and the working miners, the latter are willing and anxious to resume work. But the former, determined to destroy the organization by means of which, they assert, the working-men have been enabled to exact unreasonable terms from their employers, now refuse, under various pretexts, to recommence operations. They will not treat with the association representing the miners, and have induced the railroad companies—or rather themselves under another name—to nearly treble the freight on coal to New York, evidently with the intention of putting an entire stop to the trade. What the result will be it is not easy to foretell. But it seems clear that the conflict, which thoughtful men have for some time past been looking forward to with dread, between irresponsible and unscrupulous corporations and equally irresponsible and unscrupulous labor-unions, isnolonger very far distant.

Business continues dull and light. The South complains of poverty, the large cotton crop, produced at high wages and high prices for manures and provisions, yielding but little profit to the producers. The West, although relieved from the anxiety caused by last spring's low prices for produce, is still cautious, and has been further restrained from coming into the markets as a buyer by the high railroad freights. Merchants generally are preparing for a small trade, and are seeking to make it more profitable by reducing the extravagant expenses for rent, travelling agents, and advertising, which have of late years outgrown all reason. The railroads were beginning to feel the falling-off in traffic, and have reduced their rates of freight. The foreign trade in exports continues moderately active, but its exact proportions are not known, owing to one of those charming imbroglios in the Custom-house, where the removal of a clerk, probably to make way for one more sound on San Domingo but less versed in business, has thrown the whole Statistical Bureau into confusion—a circumstance, of course, only faintly alluded to by the daily press in their respective departments, which would otherwise be deprived of the usual "facilities." Cotton continues to arrive in large quantities, although not equal to those of last week, and the export continues active, although some uneasiness is experienced both here and abroad as to the probable effect of continued uncertainty in France. Breadstuffs and provisions are dull, under disappointment at the slight result of the surrender of Paris.

Money, owing to the general dulness of trade, continues extremely abundant, and at lower rates of interest than have ever before permanently prevailed in this country. But even the low rates of interest furnish no temptation to embark in new enterprises, and all securities not thoroughly well established in public confidence are neglected. Investment is running more and more into old railroad mortgages and Government bonds. The latter continue firm, and encourage Mr. Boutwell to believe confidently in the success of his funding measures, although, with the probability of more active money in Europe, and with the certainty of heavy loans pressing on the market there, many shrewd business men pretend to doubt the Secretary's judgment in the matter. In spite of our heavy cotton shipments, the state of the foreign exchanges continues adverse to us, and we are again exporting moderate amounts of coin and bullion, the movement commencing much earlier in the season than usual. But the utter absence of all speculation, and the recent anomalous course of all markets, seems to prevent all important changes in the premium on gold.

The last published returns of the British Board of Trade for the eleven months of the years 1869 and 1870, ending November 30 of each year, enable us to correct what seems a very general misapprehension concerning the influence of the Franco-Prussian war on our exports of breadstuffs, at least so far as England is concerned. These returns show that, in spite of materially lower prices during part of the year, we sent to England during the period named only 400,000 cwt. more wheat in 1870 than in 1869, an increase of less than 4 per cent., although, during the same time, the receipts from France, Prussia, Turkey, and the Danubian Principalities had fallen off 4,700,000 cwt., or ten times the increased amount furnished by us—the principal part of the deficiency being supplied by Russia, and the balance by England herself. Our exports of flour to England show, however, an important increase, over 600,000 cwt., or nearly 50 per cent., the amount being almost identical with the corresponding decrease in the English receipts from France, the total receipts from all countries being about the same during the two years. Our own statistics, though only completed up to the end of September, confirm this view very strikingly, our *total* export of wheat during that period of 1870 being a trifle less in amount, and nearly 25 per cent. less in value, than that for the same time in 1869, while the exports of flour, although showing an increase in quantity of ten per cent., produced actually 7 or 8 per cent. less in value. Precisely the same is the case with provisions and meats of every kind. Few persons not familiar with the facts would be disposed to anticipate this result, the general belief being that our exports of breadstuffs and provisions have largely increased in consequence of the war.

The *Evening Post* was very rash in asserting that the *Nation* was "entirely wrong" in saying (Feb. 9) "that in a large number of cases—

twenty-two, it is said, but we will not vouch for the exact number—sentences of court-martial at West Point have been set aside by the War Department on the demand of 'men inside politics,' and the culprits sent back to their duty. This abuse has been perpetrated, as might have been expected, notably in the interest of liars." The *Post* was also rash in saying that only fifteen such cases had occurred, and that only two were those of liars. The official report shows that in twenty-two cases of dismissal by court-martial between 1861 and 1870, the sentence has been either wholly remitted by the Secretary, or suspended or commuted. Two of these cases were direct lying, and two were deception by sharp practices—in other words, practical lying. In short, almost twenty-five per cent. of the sentences were inflicted for falsehood—a very fair proportion—and were all set aside, which leaves perfectly justifiable the general conclusion that a liar *quâ* liar cannot be turned out of the Academy. Between 1865 and 1870, seven cadets were suspended by sentence of court-martial; of these, six had the sentence commuted or remitted by the Secretary, and one got a mitigation from the President. We may add that the fact, which has been revealed in evidence, that Cadet Grant occasionally tried to get his fellows out of scrapes by appeals to the President, shows that the President, though he did not attend to the young man's very improper petitions, let slip an opportunity of giving him a stinging and very valuable rebuke.

Our mention of Mr. Motley's manner of parting his hair as one of the alleged reasons for the President's dislike and distrust of him has given rise to a good deal of discussion. The *Springfield Republican* took a severe view of the matter, and rebuked us, more in sorrow than in anger, for giving currency to such wretched gossip, as if a tolerably well authenticated reason for the dismissal of an ambassador from an important post could ever be a paltry or trivial matter. Other papers have taken up the subject, we are glad to say, in a much broader as well as more charitable spirit; and, so far as we have followed the discussion, it has fully supported us in the belief that, on the question of the proper place to part the hair in the case of men, public opinion is divided by a line which may be roughly said to start from the eastern extremity of Lake Erie, and run due south—much the same line, in short, which, according to Mr. B. F. Butler, divided opinion upon the question of paying the bonds in greenbacks. The West, in short, is in favor of a side-parting as the only one worthy of a manly man and good Republican; while at the East, if the side-parting also has its advocates, and the middle-parting its enemies, it is generally admitted that the matter is one of individual taste. One Southern paper has very properly pointed out that some of the greatest men of modern times, Milton, Prince Rupert, Hampden, and Bolingbroke, parted their hair in the middle. It might have gone further, and alleged that the middle-parting is the natural one. The side-parting is artificial. This view is strengthened by Mr. Darwin's remark that such of the monkeys as have long hair on their heads—and he maintains that they all have a certain relation to man—the *Macacus radiatus*, for instance—part it in the middle. Those who maintain that it is of absolutely no consequence where an American minister parts his hair must, if honest, have forgotten the amount of discussion which some of our ablest statesmen have bestowed on his breeches and coats. The arrangement of the hair is part of the attire, and if the middle-parting really indicate a want of thorough sympathy with American institutions, or a low view of man's destiny, we certainly ought not to be represented by any person who uses it. Our own opinion we reserve till we can base it on wider and more careful observation.

The French National Assembly opened its regular deliberations on Wednesday, February 15, with the verification of the elections of its members. The electoral reports from Alsace and Lorraine were received with demonstrations of sympathy. On the following day, the Assembly, by an almost unanimous vote—only nineteen out of five hundred and thirty-eight members dissenting—elected for its president M. Grévy, a staunch Liberal and moderate Republican, combatant of 1830, and Vice-President of the Constituent Assembly of 1848, whose election and re-election in the Department of Jura, as member of the Corps Législatif, within the last years of the Bonapartist rule, were considered heavy blows at the Second Empire. His present choice thus appears in the light of an almost unanimous demonstration against the Empire, in which the desire of the Orleanists to conciliate the Republicans played a part. On the 17th, Grévy assumed the presidency, and four vice-presidents were chosen; among them Benoist d'Azy and Vitet, conservative Vice-Presidents of the Legislative Assembly of 1851, in which capacity they presided over the last sitting of that body on the day of the *coup d'état*, and first affixed their names to the decree of *déchéance* and impeachment for high treason launched against Louis Napoleon. The vote for vice-presidents was a decided victory of the Monarchists, and was followed by violent recriminations between Conservative and Republican members.

In the same sitting, M. Keller, a deputy from Alsace, presented a declaration signed by the representatives of Haut and Bas-Rhin, Meurthe, and Moselle, protesting against the threatened severance of these departments from France. The declaration was referred to a committee, which, in words expressive of lively sympathy, reported it back to the Assembly, and recommended it to the attention of the French negotiators for peace. The Assembly then proceeded to vote on a resolution presented by Dufaure, Malleville, Vitet, and Barthélemy-Saint-Hilaire, conferring upon M. Thiers the dignity of Chief Executive of the French Republic, pending the decision of France upon her definitive institutions, with power to appoint his Cabinet. The result of the ballot was an almost unanimous vote in favor of the resolution, which shows how fully all parties are convinced, all manifestations to the contrary notwithstanding, of the necessity of an immediate conclusion of peace and of postponing the fundamental reorganization of the country. Keller, however, again adjured his colleagues to declare by resolution against the cession of Alsatian or Lotharingian territory. The Assembly seemed disposed to delay the consideration of the subject, but Thiers, naturally enough in his new position, insisted upon an immediate and unequivocal declaration by the Assembly, "on its own responsibility," of its wishes on this momentous subject. The Assembly went into committee on Keller's motion, but the result of its discussions has, of course, not been made public.

The new Executive was unhesitatingly recognized as such by the ambassadors of England, Austria, and Italy, and his recognition on the part of Russia is expected to follow. On the 18th, he constituted his Cabinet, composed, in the main, of well-known Orleanists and moderate Republicans, as follows: Favre, Foreign Affairs; Buffet, Finance; Dufaure, Justice; Simon, Public Instruction; Picard, Interior; Lambrecht, Commerce; General Leflô, War; Admiral Pothuau, Navy; Larcy, Public Works. This Cabinet embodies a coalition, both natural and wise under the circumstances, of the liberal Monarchists with the practical wing of the Republican party, against Legitimists, Clericals, and Bonapartists on the one side, and radical Republicans and Socialists on the other, with the distinct understanding of making peace first, restoring order next, and then submitting the decision as to the permanent form of government to a general vote of the nation, through its Assembly or a *plébiscite*. Should the political parties represented in the Cabinet remain firmly united against all opponents, their common success could hardly be doubted, as they unquestionably represent the great majority of the leading portion of the French people.

In the sitting of the 19th, Thiers addressed the Assembly in his capacity of Chief Executive, dwelling on the distress caused by the war and the necessity of peace, but promising to discuss courageously with the Prussians the terms of peace, and to purchase none with the dishonor of France. Acting on a proposal by the Government, the Assembly then resolved to send a commission of fifteen members to Paris, to act as intermediary between itself and the peace negotiators. Thiers then recommended the suspension of its sittings during the negotiations, and on the same evening left for Paris, together with his ministers, Favre and Picard. What conditions of peace "consistent with the honor of France" Thiers may still hope to receive, we are not told, nor do we believe he can receive any which France will recognize as such.

SALARIES.

The Constitution of the United States wisely provides that the members of the national judiciary shall "receive for their services a compensation, which shall not be diminished during their continuance in office." That compensation was fixed at the very modest amount at which it has stood until this winter, in the year 1855. In spite of the provision quoted, since 1861 the salaries of the judiciary have been diminished, both directly and indirectly, by the immediate action of the national Congress. While the income tax acted as a direct curtailment, just as much as if so much salary had been docked off, the issue of a depreciated currency further diminished what was left by an amount exactly equal to the always fluctuating premium on gold. It is safe, therefore, to say that, in direct and indirect violation of a constitutional provision, the members of the national judiciary have been deprived during the last ten years of, upon an average, not less than 33 per cent. of their at best inadequate compensation.

Under these circumstances, it has certainly been rather disheartening, during recent debates, to hear of members of Congress from New England, and even from Massachusetts—men who ought to know better—meeting a proposal to remove this stigma of meanness, if not fraud, from the record of a great people by the usual cant of demagogues with which we are very familiar in respect to such topics. Every one has listened to it until the gorge rises with disgust at a mere reference to the subject. "It is no time to raise salaries when the price of everything is falling"—as if prices were not twice as high as when the salaries were fixed. "Large salaries are undemocratic," or "unrepublican," is now the more popular form of expression; as if it was not more "unrepublican" to cheat servants out of their wages. If a private person—Mr. A. T. Stewart, for instance—were so to pay a very responsible and lifelong employee, who served him from a sense of attachment, that his children, after his death at his work, were left in absolute want, few people would say that Mr. Stewart was a model man of business. This is exactly what the nation has done as regards a Chief-Justice of the United States. The last and clinching argument in favor of under-paying officials is, that no difficulty is experienced in filling the situations at existing wages. This, undoubtedly, is very true. It is also true that if these salaries were reduced fifty per cent., there would be still less difficulty in filling vacancies; if they were reduced yet another half of the remainder, the difficulty would be still smaller; and, finally, if they were brought down to a laborer's day wages, there would be least difficulty of all, inasmuch as all the laborers in the country would be applicants for them. The lower an official salary is, except in the few cases where an extreme honor and dignity attaches to the position, the larger is the class of persons who are eager for it, and the less are they qualified to earn it. Our great corporations have long since learned this. They know perfectly well that $25,000 men are rare, and always hard to be secured; $15,000 men are always to be had; $10,000 men are common enough; and as to men worth in the market the late salary of a Chief-Justice, they are as plenty as the dried leaves in autumn. Below this the competition far exceeds the demand; among $3,000 men any corporation has but to pick and choose. Meanwhile, our political communities go on canting about "democratic" salaries, and meanly asking high public officials to accept a modicum of honor in lieu of a competence.

An admirable illustration of this penny-wise and pound-foolish spirit has recently been afforded in Illinois. The legislature of that State is profoundly exercised by the railroad problem which the new constitution has devolved upon its hands. The popular voice insists on something being done, but no one has the least conception of what is the correct thing to do. This is not unnatural. The State has no statistics, no returns, no treatises, and no men who have made a study of the subject. It has neither the materials to use, nor any one competent to use them. Under these circumstances, the legislature shows some disposition to half-do the wisest thing it, under the circumstances, could do. It proposes to content itself with a minimum of crude legislation, and to turn the whole task of maturing some scientific action over to a small body of salaried and permanent commissioners. So far, it is well. The next thing is to secure at least one competent man on this commission; of course, more than one can hardly be expected, and that one should be forthcoming is not probable. It is well to consider the task which this one man will have before him; that understood, the market value of such a man will better enable us to appreciate the probability that the State of Illinois will secure his services at the rate it seems inclined to offer for them.

Illinois is, as every one knows, *par excellence* the railroad State of the Union—its railroads created it, and with its railroads its whole future is indissolubly bound up. Through it pass all the greatest railroad combinations of the country, and very many of them centre and make their headquarters at Chicago. It is difficult to exaggerate the size and consequent wealth and influence of these corporations; the figures which should convey an idea of these things are so multiplied that the mind fails to grasp them. For instance, in one single depot in Chicago, and under one roof, are centred 2,000 miles of track, represented by over $20,000,000 of annual income. Eight roads could be named, all centring in Chicago, which own or work upon an average 700 miles of road each, and, likewise on the average, earn considerably over $8,000,000 each per annum. There are in the State considerably over 4,000 miles of road, the annual income from which is estimated at little, if anything, short of $50,000,000. So far as the community is concerned, the corporations may now be said to be almost absolutely irresponsible, as regards the methods in which they may see fit to levy this very considerable sum. Competition, so far as it makes itself felt, and a regard for their own interests, are the only controlling influences; beyond these, the privilege of levying the $50,000,000 per annum is wholly unrestricted.

How to deal with these enormous corporations is now the great problem before the people of Illinois. A whole policy is to be originated, absolutely to be created out of nothing, or, even worse than that, to be re-created out of reluctant and hostile elements. He is a bold man who will even undertake the task; the man who will carry it successfully through must, in addition to being a very bold man, be also a very brilliant one. He must, in fact, possess about all the qualities which bear the highest value in the labor market of the world. He must have tact and firmness and temper; he must have prodigious powers of application and origination; he must know himself, and know his opponents; he must be prepared at any moment to be ejected from office in contumely, and he must be heedless of disappointment and discouragement. In fact, he must be just such a man as any dozen corporations in the country would be glad to secure on the salary of the President of the United States.

That which is expected of this man or these men is to originate a policy. The office of a judge or a governor is one comparatively easy to fill. The duties are well defined, the precedents are well established; with average abilities and fair labor any man may, in those positions, earn a fair if not a great reputation, without incurring an undue risk of failure. The present case is different. The Legislature of Illinois has sat down in blank despair before a novel problem—how to take the first step towards solving it, it knows not; and yet its solution involves everything to the State—it involves political purity and financial success; it cannot well be measured in money, unless we suppose a relief from ten or fifteen millions of annual taxation. It is, therefore, very singular to observe the money value which the Legislature of Illinois sets upon the services of these men who are thus to represent the State in controversy with the railroad potentates—the ablest, the richest, and often the most unscrupulous men in the country. We quote from a Chicago paper extracts from the debate in the Senate at Springfield on this point: "Mr. Washburne offered an amendment cutting down the salaries of the Commissioners from $5,000 to $3,000, and followed it with an economical speech, to the effect that no man would refuse to accept the office, no matter how small the salary, . . and that the people could not stand this piling up of fees." . . . Mr. Richardson favored $3,000, . . the people wanted a cutting down, and they should have it in all things. . . Mr. Fuller thought $4,000 was sufficient, with the honor of the thing, to get good men. . . After a long discussion, the sum was reduced to $3,500."

We have then here the exact money value which an advanced State of the West sets upon the highest class of service, and we can form a very good guess as to the result of the struggle between the

$3,500 men, representing the people, and the $35,000 men, representing the corporations. Of course, the corporations will be successful, as they always have been. They know the value of success; they know that it involves millions; and to secure it they will not haggle over hundreds. It is very pretty and very refreshing, both in Washington and Springfield, to hear the representatives of the people talking of the "honor of the thing;" but what business, after all, has any community to levy services out of the public-spirited which it is not willing to pay for in the labor market of the world? Are the people of Illinois too poor or too mean to pay their officials, who are to represent them in transactions involving millions a year, more than the salaries of the third and fourth-rate subordinates of those with whom such transactions must take place? There would be no man fit for a day to represent in such capacity the interests of the State whom the corporations would not be glad to secure at four times the compensation.

There is, indeed, something singularly pitiable in that frame of mind in our public men which is always thus willing to place the nation in the position of a mendicant. The public servant must be one of two classes—a self-sacrificing patriot, or a thief. He must give to his country that which everywhere else commands a higher price, or he must pay himself in unpermitted ways. The system of meagre and inadequate salaries is the great and fruitful progenitor of fees and pickings and perquisites. The New York Custom-House is a superb specimen of this vicious system elevated to a science. But, of course, the answer is reiterated that the offices are easily filled—that applicants swarm at the present rates of compensation; to which we can but again and again reply that they certainly do, and a sorry tribe they are. So would they also swarm if you reduced your salaries one-half; and the further you reduced them, the more they would swarm, and the sorrier and the less competent would they become. After all, even when serving republics, the laborer is worthy of his hire; the Chief-Justice of the United States should not for so many years have been rated so far in value below a Broadway salesman.

THE HISTORY OF THE NAVAL STAFF QUESTION.

There is just now a good deal of discussion at Washington, kept alive elsewhere by occasional articles in the daily papers, upon a subject which, considering its real importance, is surprisingly ill-understood—namely, the reorganization of the navy, more commonly called the "Staff Question." Mainly because the discussion relates to a "specialty," and is therefore gladly left for argument and settlement to those specially concerned, and partly because of the ill-advised efforts of too zealous advocates who rush into print on either side, the real matter at issue has been lost sight of in a fog of side-issues and technicalities, until the interested public has been narrowed down to the small number whose relatives and friends are directly affected by the present status of the navy, which a part of them desires to change. Yet, if it is worth while to have a navy at all, it is worth while to see that it be efficient; and the smaller the number of ships and officers to which it is reduced, the more important becomes the state of efficiency and readiness in which it is maintained. No doubt, small quarrels and petty conflicts of authority and precedence will inevitably and frequently occur among gentlemen whose bile is daily stirred up and temper soured by the discomforts and confinement of sea voyages, and the public has very sensibly ceased to take much interest in naval squabbles. But the resent dispute really appears to be rooted too deeply to be lightly disregarded. On shore as well as at sea, and during more than two years, the division has been growing wider and deeper; and it is persistently alleged that, unless certain points are settled definitely by law, and no longer left to the elastic rules of usage and precedent, the efficiency of the service will be seriously impaired, while its internal harmony can now scarcely be said to exist at all. These points of issue are between the line officers and those of the staff, the latter being inclusive of surgeons, paymasters, and engineers; and can scarcely be made intelligible without a brief explanation.

The functionaries of a man-of-war are, first, the commanding officer; second, an "executive officer," or first lieutenant, who *executes* the orders of the commander, and should not originate any orders himself. This officer presides in the ward-room, and is supposed to exercise general supervision over all departments of the ship. Officers desiring to leave the ship or to communicate with the captain, whatever their nominal rank or length of service, must first ask the "executive's" permission; all reports to the captain must be first presented to him; and, in fine, he stands between the commander and all others on board, and, by special regulation, takes precedence of all staff-officers. Next in rank among line officers is the navigator, who performs the duties indicated by his title, which on merchant vessels belong to the captain; and below him are four or more watch-officers, who take the charge of the deck in turn for four hours at a time. Of the staff there are a surgeon, paymaster, and engineer, and on large vessels an assistant surgeon and one or more assistant engineers.

Previously to the late war, the highest rank known in the navy was that of post-captain, the title "commodore" being given, by courtesy only, to the senior captain commanding a squadron or fleet; and a staff-officer, after due length of service, might attain to the rank of commander, the second grade then existing. The dispute now raging was then unknown, for the reason, as the staff allege, that, promotion being very slow, officers of the line were not advanced to positions of power and command until they had thoroughly mastered the details of their duties, and had learned by experience to recognize the responsibilities of others as well as their own. The "grey-haired lieutenant" who was first officer in those days (the term "executive" is of recent growth), although perhaps no classical scholar, had appreciated the application of Menenius Agrippa's fable long before he had attained to that position of authority; and a courtesy which left the authority unfelt, and its exercise unneeded, was then as constantly the rule as we are compelled to believe that it is now the exception. The staff contend, moreover, that in the earlier days of the navy the first lieutenant was really what he purported to be, the executor of the orders of the captain, and not, as now, an independent authority, resenting as "interference" any personal action of the commander concerning the details of ship management, and as "insubordination" all efforts of staff-officers to improve the condition and efficiency of their respective departments.

When the enlargement of the navy consequent upon the war rendered it desirable to create the additional grades of commodore, rear-admiral, vice-admiral, and admiral, there was no corresponding advance in the staff grades until Mr. Welles, in 1863, by a general order, raised their possible rank to that "with" captain, granting the chiefs of the several bureaus the "assimilated" rank of commodore. With this they were content, although varying interpretations of the word "assimilated" began early to be a *casus belli*, more or less suppressed by the common danger and consequent nearer fellowship of the war. But in 1869, Mr. Borie's General Order No. 120 was promulgated, reducing all staff-officers to their status of 1846, and additional regulations were issued, confirming in many ways the supremacy of line officers, even the very youngest, over all the staff. Meanwhile, promotions among the line officers, especially in the lower grades, became so rapid that the midshipmen who made their first real voyage in the fall of 1867 have returned as lieutenants, having been promoted through the successive grades of ensign and master; while the surgeons, paymasters, and engineers who sailed with them, of the "assimilated" rank of commander, returned with that of lieutenant. Not unnaturally, such a change has produced anything but a pleasant state of feeling—a state of feeling to which it is very desirable to put an end.

In support of the present condition of affairs, the line officers contend that efficiency requires rigid discipline, which implies absolute, irresponsible command on the one hand, and unqualified obedience on the other; that such power of command must reside in the captain and in his representatives, whatever their nominal rank; and that such representatives are the executive officer and the officer of the deck for the time being. Should staff-officers be allowed actual rank—say the line—circumstances might frequently arise in which they would be entitled to command the ship, a sphere of duty for which they are totally unfitted by education. Moreover, they maintain that, for the proper maintenance of discipline, a superiority of their own, as the governing class and

essentially *the navy*, must be acknowledged, particularly by those whom they delight in calling "the auxiliary officers" of the navy.

The staff, on the other hand, claim to understand best the details of the management of their several departments, and state that, under the present system, the efficiency of the service is frequently and seriously impaired by unwarrantable and petty interferences on the part of young and subordinate line officers. They therefore ask for the control of their respective departments, subject only, though entirely, to the captain of the ship. They demand, to this end, and as the only practical remedy, actual rank (but expressly disclaim the right of command in the line, or outside of their several specialties) and the right to quarters in the cabin. With this rank they ask for the dignities, immunities, and privileges which it conveys to the line, with the exceptions abovementioned; and that the precedence of the executive officers over themselves be limited, as in the line, to cases in which he is senior in lineal rank, or by date of commission. These demands have been embodied in the Stevens Bill, which is now pending in the Senate.

The result of the present state of uncertainty is certainly bad, and calls for a remedy. The naval service has become a house divided against itself, to the point of almost absolute non-intercourse. Officers go to sea bristling with jealous watchfulness of each other's actions, and ready constantly to seize upon the first pretext for a dispute. Reports, based often upon the most trivial grounds, are more frequent than in a young ladies' boarding-school; and, from such a state of feeling, delays, want of *esprit de corps*, and occasionally positive public damage have resulted. In the medical corps, for example, although an examining board is constantly in session, there are to-day over fifty vacancies, and when, in a profession notoriously so overcrowded as the medical, not so many can be found able to pass the moderate examination, and willing to accept a position which should be honorable, there follows a strong presumption that the alleged injustice to staff-officers has good foundation in fact. The medical profession, indeed, has taken up the cudgels actively, and there is now scarcely a medical association in the country which has not passed resolutions calling for legislation in this matter, and, so far, discouraging capable physicians from offering themselves as doctors in our national vessels.

In support of their assertion, that actual rank will prove a sufficient remedy for the hardships and hindrances which they suffer, the staff-officers point to the well-known success of the staff organization in the army, where the provisions of the Stevens Bill have been long in practical operation. The efficiency of the Army Medical Department has really been a wonder to the scientific world in general. Its circulars are accepted as the best of authorities in Europe as well as at home, and it has become a legitimate source of pride to every American who knows its history and values the true honor of his country. If this great success and acknowledged superiority be, as alleged, the result of independence of action and of freedom from the control of those not experts in medical and surgical matters, doubtless the instance is well chosen and applicable.

Or take the case of the paymasters: the cost to the Government of disbursing its money, including the pay of officers' transportation and *defalcations*—much noise has been made about this and that notorious case of embezzlement—was less than one-sixteenth of one per cent.—a fact showing, as the advocates of the Civil Service Bill have well said, that the surest protection to the Government against the dishonesty of its officials is to be found by making its offices permanent and respectable, thereby attracting a class of men so high as to be above the commoner temptations to fraud. Concerning the army system, Gen. Sherman writes to Admiral Porter that it "works very well in practice," and such is the testimony of army officers generally.

It appears, also, that in other countries this distinction which staff-officers find it so hard to endure does not exist. In the Russian navy, for example, they attain to the highest rank (general admiral); in the British and Spanish to that of vice-admiral; in the French and Austrian to rear-admiral, without impairing either efficiency or discipline.

There are at least two facts to be deduced from the mass of contradictory statements on both sides of this quarrel. One is, that the staff-officers of the navy are quite convinced that they are unjustly treated, and are clear as to the remedy: and the other is, that this remedy has the merit of being no new or untried experiment, but a plan which has worked well in practice; in the United States army and in the navies of other countries. Its merits must be decided by Congress, since every effort to settle the question by means of mixed boards, and by reference to those most thoroughly cognizant of the circumstances, has resulted in a strictly party division and no agreement upon essential points. Certainly the picture which has been presented of the aged fleet-surgeon or paymaster asking the executive officer, not born when he entered the service, "for permission to go on shore," reporting to the beardless ensign pacing the quarter-deck that he has "permission to leave the ship," and then waiting for a still lesser youngster to take command of the boat which is to convey him ashore, manifests an inherent absurdity, which is yet the necessary result of existing laws and regulations. Or think of a competent surgeon condemned by a naval court-martial for declining to take a man off the sick-list and declaring him too ill for duty, when a certain line officer—who had disabled the man by punishment—demanded that the surgeon should report him well.

The subject is of more importance than it seems, for few of those who remain at home are aware to how great an extent foreign ideas of Americans, particularly outside of Europe, are based upon the demeanor, attainments, and ability of the officers of the navy. Aside from the undoubted necessities of war, it is a matter of considerable importance to this country that, at least until the diplomatic service can be set upon a more creditable footing, the navy should be so constructed and directed as to attract the best attainable material into both staff and line corps. And in no way can this be better effected than by at least equalizing the status of professional men on board ship with that which they would occupy in the military service on shore.

Much, if not most, of the trouble now existing is to be attributed to the introduction of equivocal terms, such as "assimilated rank," admitting of various constructions according to the whim or prejudice of different officers, and it is to be hoped that the subject will not only be fully discussed in Congress, but finally settled by a plain and intelligible enactment.

ENGLAND.

LONDON, Feb. 3, 1871.

THERE is, for I feel as though it were right to remind your readers of the fact, a country known as England. It occupies, it is true, a very subordinate place in the affairs of the world at the present moment. In London, one would suppose that it should excite as much interest as anywhere; but for some time past, I have scarcely heard the name mentioned. The exorbitant demands reported to have been put forward by Prussia, in regard to the French navy and colonies, have reminded us that there is an insignificant island more or less directly concerned in the result; but we can spare little attention to such trifles from the absorbing news of the moment. Paris is the one word upon everybody's lips, and I must descend into the obscure corners of newspapers or collect gossip of the most insignificant character, in order to find raw materials for a correspondent's letter. I fancy that I have made this excuse once or twice before; and a dim recollection occurs to me that I promised not to make it again. If so, I can only apologize, and add my sincerest hopes that the excuse will soon cease to have any validity.

One topic has recently come up upon which it seems necessary to say a few words. The members of Parliament who have recently been addressing their constituencies have developed a certain prejudice in unsuspected strength. To judge from the "interpellations" addressed to them, it would seem that the British constituent has suddenly become possessed with a certain fixed idea. He is indignant at the thought that Parliament should be asked to pay a dowry to the Princess Louise on her marriage with the Marquis of Lorne. Members for some of the more radical constituencies have pledged themselves to vote against the proposal; and I presume that we shall have some kind of discussion, in which Prof. Fawcett and a few of his friends will make a few speeches, very unpopular in the House, but considered by a certain class as proofs of patriotism and public spirit, and that the number of true believers who follow him into the lobby will be exceedingly small. The matter has been argued very seriously in the leading journals, which are, of course, in favor of the dowry. It has been urged, for example, that Parliament having assumed the management of the crown property, in return for a certain stipulated

sum, is equitably bound to do what the Queen might otherwise have done for herself. The simpler and, to my mind, more cogent argument is that so long as we keep up the monarchy, we ought to keep it up handsomely; that cavilling at perquisites and haggling over the terms on which we get a Princess taken off our hands is a rather unworthy method of beginning an agitation; and in short, that if any large number of persons are converts to republicanism, they had better say so openly instead of appealing by indirect methods to the lurking stinginess of the British public.

Does the agitation, then, really indicate a growth of a republican sentiment? I do not believe in anything of the kind. A little fuss was made in the papers recently over a "republican club" which had been founded amongst the university dons at Cambridge. All sorts of absurd stories were told about it; but the real truth of the matter was simply this, that half-a-dozen fellows of colleges agreed to have a cheap dinner together at fixed intervals, and, being of ultra-radical views, chose to call themselves republican. Everybody knows that there are a good many strong radicals amongst the younger authorities at the universities; and, so far, there was nothing surprising; but the notion that they were forming a society for the propagation of their creed, or that they had any precise creed to propagate, was totally without foundation. Nor do I believe that there is anywhere much republican sentiment, except in a latent condition. The fact, however, is, and many other circumstances might be mentioned to prove it, that the personal popularity of the royal family has exceedingly diminished. A few years ago the mention of the Queen's name was certain to provoke a genuine outburst of enthusiasm. Now it is received with considerable calmness; and there is still less zeal on behalf of the younger members of the family. A constitutional sovereign who will not take the trouble to put herself in evidence, and a Prince of Wales who is seldom heard of except in connection with the shooting of partridges, drop easily into a very insignificant position. And when it is proposed to give a large sum for the dowry of a Princess, there is a certain degree of irritation on the part of sulky radicals, and still more on the part of small tradesmen, who hold that the first duty of a sovereign is to run up large bills at as many shops as possible. Under easily conceivable circumstances, such a state of feeling might have serious consequences; but at present I should hardly mention it, were it not for the comments which have been put forward in a good many quarters.

The recently elected school-boards are beginning to contribute more or less decidedly to our amusement. The worst symptom about them is that the religious sects seem to be doing their best to stir up a jealousy which will be dangerous to the efficiency of the system. The effect of the plural vote has been to secure a representation of small minorities, rather, as some people fancy, to the exclusion of majorities from a fair preponderance of power. At any rate, it has contributed to the development of the feeling of which I have spoken. Thus, for example, the London School-Board had a long and disagreeable talk the other day upon a proposal made by some of the dissenting ministers to open the proceedings with prayer. Nobody would of course object to any number of individual members meeting together and praying as earnestly as the spirit might move them. It was desired, however, that the Board should in some way make provision for praying in its official capacity. Perhaps the most distinguished member is Prof. Huxley, who, if I am not mistaken, took part in a controversy which raged some time ago in the *Pall Mall Gazette*, with the view of showing that prayer was altogether an unphilosophical proceeding. The debate was, therefore, calculated to produce a very unpleasant and undesirable discussion. The Board, I am glad to say, had the good sense to get rid of the objectionable proposal by an indefinite adjournment; and nobody will be troubled to devise a form of prayer in which every religious sect known to England, including sects which would not in popular parlance be called religious at all, might take part without offence. We are not without symptoms that the spirit of which this is a trifling indication, may provoke discussions equally irritating and of greater intrinsic importance. The wide discretion left by the act of last session to the local authorities gives ample opportunity for very vigorous party fights over religious questions. The motion just noticed looks rather like the preliminary trailing of an Irishman's coat through Donnybrook Fair; but I still believe that the good sense displayed in avoiding the challenge on this occasion, will be exhibited in more important matters; and, at the worst, the act will have done infinite service in stirring up the popular attention to so important a subject. From every part of the country we hear of school-board elections, which everywhere excite a deep interest, and there is an apparent determination to put the powers conferred by the act into vigorous operation. There is a novelty to the English mind in the very notion of any public body taking the initiative in making due educational provision for the wants of the people; and it is satisfactory to observe that, having got hold of the idea, it seems to be grasping it with considerable tenacity.

And, now, what shall I tell you more? That we have had a winter harder than has been known for years, and that, in the intervals of downright freezing, the weather has passed through more phases of detestable combinations of fog, rain, and raw wind, than the mind of man could have invented? That the small-pox has been breaking out with unusual violence, and that we are all going off in a panic to be vaccinated? That we have had an unusual abundance of ingeniously contrived railway accidents? That pauperism, which had slightly declined in the metropolis, has risen to its old limits under the influence of the severe weather? That we are all a little out of temper in consequence of these various annoyances and the still more serious causes of melancholy which influence us from beyond the sea? I do not know that any of those topics will bear any prolonged treatment, as they are all rather depressing in themselves. I will therefore confine myself to the comparatively cheerful statement that we are going to have one of those exhibitions of things in general which have done so much, since 1851, to promote a pacific spirit, and, indeed, to render wars impossible. Long galleries in brick are extending themselves down the piece of ground at South Kensington bought from the proceeds of the great exhibition of 1851. The huge dome which rises between them, known to the gods as the Royal Albert Hall of Arts and Sciences, but to men as the Hall of Omniscience, is all but finished. The biggest organ in the habitable globe is erected beneath its roof, and will be worked by steam-engines of I know not how many horse-power. Its music will be discoursed to the largest audiences that can be gathered together under any roof within this metropolis. Some grand ceremony of inauguration will take place in April; and we shall listen once more to demonstrations of the mode in which large temporary bazaars promote peace and good-will amongst mankind. On this occasion, it is true, the scope of the exhibition is to be more limited than of old. Instead of including every object that has ever been manufactured by mankind, there will be only a few select classes. I presume that the expectations to which assurance will be given will be proportionally limited; and that the foreigners who resort to our stalls for the purpose of inspecting pottery, educational inventions, and textile fabrics (if my memory serves me right) will be in a sober frame of mind. The Continent, however, will not be a very lively place for some time to come, and the attractions provided by Mr. Cole's enterprise in London will have little to rival them elsewhere, unless indeed people prefer to see the terrible scars left by the war on what was so lately the most generally attractive centre of European travel.

Correspondence.

ANOTHER DEFENCE OF THE CIVIL SERVICE.

To the Editor of the Nation:

Sympathizing as I do in your efforts to reform the Civil Service, and coinciding in the general editorial management of the *Nation*, I have frequently been tempted to correct what to me seem erroneous views as to the manner in which this desirable reform can be achieved; and as I am addressing you, who have thought much upon the subject, and an audience educated by you, I can afford to be brief.

First. A ten years' experience in the Civil Service (Treasury Department) has convinced me that *earnest political convictions* are essential to the success of the executive service; and that it is in proportion that political qualifications have been subordinated that the civil service has fallen into decay. Surely, sir, in a land where it is the *solemn duty* of each and every citizen to assist in the government of the country, the ability to think politically ought not to be made a disqualification. You would not admit that you yourself should be excluded from the public service because you have well-defined opinions upon all political questions. I maintain that the only other bond except pure self-interest is the enthusiasm and earnestness with which the civil officer may be devoted to his country, and, as a means, to his party. That great Secretary, Chase, made the bulk of his appointments from young men who had made great sacrifices for the party, and who were capable, by pen and speech, of defending it; and, without an exception, these appointments were a success, giving vigor and power to the administration.

The difficulty is only this, that it is not easy to distinguish the demagogue

from the political thinker, and that men who have no administrative ability may be preferred over men who, in addition to executive ability, possess political talent. But statesmanship consists in the ability to separate the wheat from the chaff; and the head of a department who cannot distinguish between the *brawler* and the *thinker* will also be imposed upon no less if political activity is considered a disqualification.

Secondly. The head of a department, so far as the non-commissioned officers of the service are concerned, stands before the public *without a shield*, or a division of responsibility. He can appoint or dismiss at pleasure; and if we have inferior men in the service, it is owing, in part, to the fact that neither he nor any one can buy sufficient capacity to the creditable discharge of public business for $1,200 to $1,800 per year.

Lastly. I will only make one more observation. I think, as Eastern and European people are apt to, you overestimate the value of a mechanical examination. At present, our school education consists less in the formation of character than in the mechanical memorization of a number of facts. Without wishing to underrate the value of mental discipline or of extensive reading, there are yet qualities which escape the crucible of technical examinations. Judgment, power, industry, and devotion, as well as high integrity, are qualities which no competitive examination can adequately ascertain. Surely you would not deny to that brave old man, ex-Senator Wade, an honorable place in American history?—and yet there is not a sophomore in college to-day who does not speak more grammatically.

I am afraid that you are, unconsciously, I am sure, sharing in the prevailing tendency of our age to reform the world by means of machinery, by checks and balances nicely contrived. Reform is upon every lip; but it is so much easier to reform others than ourselves. It gains for the author so much greater renown to patent and advertise a reforming machine than to labor quietly and individually, that machines of all sorts are brought forward. Instead of regarding law as an adjunct, as something that should follow in the wake of reform to give it fixity and expression, it is now regarded as the active agent, which it is not, and can never be. Eight-hour laws, female suffrage, and divorce laws are only specimens of the general tendency.

If public sentiment, or, rather, if individual reformation were to demand of the Government a higher order of public servants, you would have them; but if you trust to law exclusively, you will be disappointed.

Very respectfully,

J. FRED. MEYERS.

WASHINGTON, D. C., February 13, 1871.

[First. No sane person has, to our knowledge, maintained that "the ability to think politically ought to be made a disqualification" for the public service. What the advocates of civil service reform say is that under the present system a candidate's ability to think politically, or to do anything else decently, is not ascertained before appointment by any test whatever; and that even if the ability to think politically be not a *dis*qualification, it ought not to be treated as the *only* qualification.

Secondly. The statement that a head of a department stands before the public "without a shield, or a division of responsibility, as far as the non-commissioned officers of the service are concerned," is not only incorrect, but—Mr. Meyers will excuse us for saying—so notoriously incorrect that his making it seems to indicate something very like contempt for the intelligence of his readers. It is almost as patent as the sun at noonday that the non-commissioned officers of the service are appointed on the *demand* of members of Congress; that their dismissal even for gross misconduct is treated by members of Congress as a personal offence; and that the patronage has in practice passed almost entirely out of the hands of the Executive. In fact, the head of a department has hardly any responsibility left him with regard to the great mass of his subordinates, and he has in this division of responsibility a ready shield. Mr. Meyers will find in the last number of the *North American Review* the testimony of a head of department on this subject.

Lastly. Nobody has ever said or insinuated that a competitive examination would reveal a candidate's "judgment, power, industry, and devotion." What we say is, that they would reveal *some* of a candidate's qualifications for office. The peculiarity of the present system is that men are appointed without being subjected to any test whatever, either as regards knowledge, judgment, power, or industry. Their "devotion," doubtless, is ascertained, but it is a kind of devotion which as often operates as a disqualification as a qualification, by leading a man to neglect the particular duty which he is paid to perform. He may be a very "devoted" politician and a very worthless clerk. Mr. Meyers's protest against the use of machinery for purposes of reform is good, but covers too much ground. It would, if sound, forbid the testing of a man's qualifications for any position whatever. "Devotion" hardly qualifies a man to command a man-of-war, or take charge of an observatory, or to be a judge of the Supreme Court. It would, therefore, be absurd to talk of a law which provided that an admiral should understand navigation, or an engineer the steam-engine, or that a judge should know law, or a clerk should know arithmetic, or that all four should be temperate and of good moral character, and which prescribed tests for the ascertainment of these facts, as a "mere adjunct." Mr. Boutwell—Mr. Meyers's chief—said, in his last report, quite correctly, that the business of the Treasury resembled that of a bank. Now, fancy the following scene occurring in a bank:

(*Enter the banker and a candidate for a clerkship.*)

Banker.—You want to be a clerk, I understand? Have you ever filled a place in a bank before?

Clerk.—No, sir.

Banker.—Have you ever been in any commercial house?

Clerk.—No, sir.

Banker.—What has been your occupation?

Clerk.—I was for a short time a reporter on the *Oshkosh Sentinel*. After that I tried photographing; I then peddled hair-pins, and then lectured a little on temperance, and wrote advertisements for a drug-store; then published a campaign paper, and then canvassed for a horse insurance company, and then brought out a patent double-action tooth-pick. In the last Presidential canvass I stumped Poorcuss County for Grant, and have warm recommendations from Governor Fenton, Charley Spencer, Hank Smith, and Collector Murphy.

Banker.—Then you have absolutely no business experience whatever? Are you quick at figures?

Clerk.—No, sir; never could get hold of arithmetic.

Banker.—Then, what *are* your recommendations?

Clerk.—Well, my heart is in the right place. I am a friend of banking and banks. I believe the good they do in a great commercial country like ours is simply incalculable. What with their taking care of money for people who have no safe place to put it in, and lending it to others who will use it to develop our vast material resources, it is hard to say how we should get along without them. I think their accounts ought to be well kept, and admire people who can cast up a column of figures without a mistake. Every bank should contain a few such men. I may mention also that I am in favor of equal rights for all, and abhor caste.

Banker.—Well, I must tell you frankly, your own account of yourself is not very promising; but if you like to undergo an examination in arithmetic and book-keeping and, say, geography, and let me make enquiries about your character of persons who have known you outside politics, I am willing to give you a chance. We must have honest and competent men in our business, or else we should be ruined.

Clerk.—Ah! sir, you make a great mistake in wanting to examine me. I do not wish to underrate a knowledge of arithmetic and book-keeping—happy are those who have it; but a man might have it in a very high degree, and yet be a very poor stick as regards judgment, power, industry, and devotion to your interests. The qualities of my soul, which are what I most pride myself on, you cannot get at in this way. There are scores of eminent men in the community who could not pass such an examination as you propose, and yet who are very valuable members of society. With regard to testimonials about my moral character, the fact is, you can trust nobody to give them honestly. Everybody lies and equivocates on this subject, just to save themselves trouble and annoyance. You know how it is yourself. So, if you take my advice, you won't do anything about it. All these devices for satisfying yourself about the honesty and competency of your employees, believe me, are delusive; they simply show that you share in the general love of "machinery" of reform. Be honest and upright yourself, and honest and upright clerks will rally round you without any of these invidious enquiries. You must rely on the general pro-

gress of society in morality for the character of your employees. Let the community be good, and your cash-box will always be safe.

We "must clear our heads of cant," as Dr. Johnson said on this subject. The community at large has, like the individuals of which it is composed, certain work to be done, which differs in no respect from the work carried on in banks, counting-houses, and stores, except in its vastness. It needs the same kind of machinery, and the same kind of qualities for its proper performance, and it ought to be done as cheaply, faithfully, and efficiently as possible. All talk about the need of "devotion" or "enthusiasm" in Government servants which is not needed in bankers' or manufacturers' servants, is simply cant concocted to cover up one of the greatest violations of all sound principles of administration ever witnessed.—Ed. Nation.]

THE LICENSE OF THE PRESS.

To the Editor of the Nation:

Sir: In your article upon the Field-Bowles controversy, you speak of its "arising out of some very unwarrantable gossip about Mr. Field, written from New York by a correspondent of the *Republican*, and of a kind in which its correspondents are apt to indulge."

Is this altogether consistent with your late praise of George Alfred Townsend, Donn Piatt, and another Washington correspondent, for fearless and independent criticism? I did not go out of my way to speak of Mr. Field, but my comments were in the course of a general sketch of the New York bar. The subject was certainly a proper one to treat; and in referring to Mr. Field, I could not avoid giving the current view of his standing. If my report of the latter is not correct, it might be called "unwarrantable," but as that has not been shown, I think I have a right to take exception to your criticism.

Yours very truly,

"Carlfried,"

New York Correspondent Springfield *Republican*.

New York, February 14, 1871.

[We think the rule in these matters is tolerably clear, and we have never approved of any violations of it, either in the case of Donn Piatt, George Alfred Townsend, or anybody else. It is this: A newspaper or newspaper correspondent may fairly comment upon or even "gossip" about so much of a man's sayings, or doings, or habits, as are sufficiently before the public to enable the public to judge of the fairness or accuracy of the criticisms on him or of the stories told about him. The speeches or general political action of a politician; the books or articles of a literary man; the professional career of a lawyer, in so far as it passes in open court; the decisions and demeanor of a judge on the bench; the sermons of a clergyman, are all fair game. Anybody who enters any of these callings, enters it under perfectly well-known conditions, and one of these is constant exposure to the animadversions of the public and the press; and this exposure, let us say, *pace* Mr. D. D. Field, is necessary to a healthy condition of society. There are abuses now, and the license of the press is amongst the worst; but they are bagatelles compared to those of the era of secresy, silence, and irresponsibility. But it is not permissible to drag to light and comment on portions of a man's character or career, or incidents in his history, about which the public has no means of forming a judgment. An editor may say that Smith in his speech on the San Domingo question, as in all his speeches, makes a great ass of himself, because every reader has the means of estimating the value of this judgment on Smith's powers; or he may say that Brown behaved very unprofessionally in the trial of the Wilkins case, because the public can examine the Wilkins case if it likes. But he may not say that when Smith goes home from the Senate he abuses his wife, and goes to bed drunk, and that Brown takes a large amount of his fees in lottery tickets, and is notorious for cheating butchers, because about these things the public knows nothing and can learn nothing.

We are here putting the matter on what some people will call narrow and technical ground. We presume most editors and correspondents will claim a wider range than this for their investigations. Well, then, to these we say: If you will insist on invading what is called a man's privacy—that is, in dragging before the world a portion of his life which he, in the exercise of an undoubted right, keeps concealed—you are bound, at least, to spare his feelings to the utmost extent of your power. This he may fairly claim of you as men, no matter what your tastes as journalists may be. Some persons do not dislike to have their private affairs revealed, or their personal characteristics described in the newspapers, *but all dislike to have anything revealed which will put them before the public in an odious or ridiculous light.* This peculiarity, a weakness if you will, they have a right to have respected. So, if you must look into their parlor windows, you are bound, if you report anything of what you see, to report only what will please your victim, or cause his fellows to think more highly of him. You are bound not to report what will pain him and lower him in the public estimation. You have no right to torture people for the entertainment of anybody, or for your own emolument. You may be grossly mistaken in what you say, or the reports you hear may be totally unfounded. Nevertheless, the person you assail may be a sensitive man, who in contradicting or refuting you will suffer positive agony.

We shall not here go into the effect of all this newspaper gossip on the public mind, morals, and manners. That is a large subject. We have no intention in saying all this of throwing any special blame on "Carlfried," who, as far as our observation has gone, manages to write a great deal that is interesting, with very few infringements of the rule. In the case of Mr. Field, he undeniably did infringe it; but the responsibility for such things rests largely with the editor of the paper for which the correspondent writes. Every correspondent is constantly and naturally tempted to overstep the limits of propriety in his eagerness to make his letters spicy. It is the duty of the editor who reads his productions calmly to see that he keeps within bounds, but this is a duty which many editors grossly neglect. Many of them, who pass for decent men, take into their pay unscrupulous wretches, and give them full swing in their columns; and an unscrupulous wretch, with but little education and little mind, and no manners, venting his private hates and spites and malignities on his enemies, bedaubing his friends and flatterers and benefactors with praise, through the columns of a newspaper, is as repulsive a sight as Christendom has to show, and we do not know one which reflects more discredit on our civilization.—Ed. Nation.]

Notes.

The March number of the *Radical* contains the first instalment of a translation of "Goethe's Conversations with Chancellor von Müller" (which we lately reviewed), by the Rev. C. C. Shackford. We presume this is the first English version. When completed, it will be published in book-form.——Mr. Horace B. Fuller announces for publication, next month, "In the World," a sequel to "Battles at Home," by Mary G. Darling; and, in the spring, a new volume by the Rev. Robert Collyer. ——Messrs. Gould & Lincoln will publish their usual "Annual of Scientific Discovery" on the 10th of March; it has been edited for this year by Profs. John Trowbridge and W. R. Nichols. The same firm have in press "The Life and Letters of Hugh Miller," by Peter Bayne, two volumes; "The Bremen Lectures on Fundamental, Living Religious Questions," translated by the Rev. Dr. Heagle; Dr. L. T. Schultze's "Of the Son of Man and of the Logos," translated by Dr. Alvah Hovey; and "The Puritans; or, The Court, Church, and Parliament of England during the Reigns of Edward VI. and Elizabeth," by Samuel Hopkins, in three volumes.——Messrs. Harper & Brothers have in press "The History of Rome," by William Ihne.——Messrs. Charles Scribner & Co. announce "Truth and Trust: Lessons of the War," by the late Dean Alford; "On the Ruins of the Second Empire," by a witness of its fall, Azamut-Batuk, the well-known correspondent of the *Pall Mall Gazette;* and Lord Palmerston's "Diary of Two Visits to Paris in 1814 and 1815," discovered since his death among his papers.——A work of importance for merchants and all others who have frequent occasion to use the telegraph is Major Frank Bolton's "Telegraph Code" or Dictionary, designed to effect economy and secure accuracy and secresy in the transmission of dispatches. It is a quarto of over 1,200 pages, and is sold only by subscription by the American publishers, Messrs. Francis B. Felt & Co., of this city, or their agents. The price is $40.——Messrs. J. E. Tilton & Co., Boston, announce a Globe edition of Tennyson's Poems, including the latest and least of them, "The Window."——Messrs. Sever & Francis begin at once the republication of the "Catena Classicorum," edited by

Oxford and Cambridge men. They have in hand Thucydides (Books I. and II.). Demosthenes (Olynthians and Philippics), and Aristophanes (Acharnians and Knights).

—Yale College will have no reason to regret, and the general public only cause for congratulation, that the Rau library of Political Economy went to Ann Arbor. To the college the loss is more than replaced by a collection larger in extent and in scope—the library of Robert von Mohl, the distinguished writer on political science, for many years professor at the universities of Heidelberg and Tübingen, and now ambassador of Baden at Munich. The library contains some 6,000 volumes, distributed, in round numbers, as follows: 1. Political Encyclopedias, 150 vols.—2. General Theory of Politics and Social Science, 500 vols.—3. Public Law of Germany, England, France, United States, Switzerland, etc., etc., a careful selection of the principal works in this department, 1,500 vols. The Public Law of Germany is *complete*, so far as the constitution of Germany in the present century is concerned; quite sufficient for all scientific and practical purposes concerning the old German Empire and the constitution and administration of the separate German states. One rare series may be specified—the "Official Collection of the Proceedings of the German Diet" (Protocolle des Deutschen Bundestages), 1817 to 1866, 1–3 vols. folio per annum, of which but 170 copies were printed, exclusively for Government use.—4. International Law, 300 vols.—5. Political Economy, in all its branches, particularly in its practical application to internal government, 2,000 vols.—6. Statistics, chiefly large official publications of different governments, 300 vols.—Important Works in Political History, in different branches of law, and a few of miscellaneous character, make up the balance of the collection. For the means of purchasing this library, which is now on the way to New Haven, the college is largely indebted to Mr. William Walter Phelps, of this city.

—The Library of the Boston Athenæum has just received a valuable work, published by the English Ordnance Survey Office, entitled "Facsimiles of National Manuscripts of Scotland, photozincographed by Sir H. James." It is similar to the National Manuscripts of England, of which we have already spoken. Of course, it will not have for other than Scotchmen all the interest of its English predecessor, for, after all that Sir Walter Scott has done, English history is much more read, and English names much better known, than the Scottish. Vol. I. contains documents written between 900 and 1296, and is edited by the late Dr. Joseph Robertson. Vol. II. extends to 1488, and is edited by Cosmo Innes, author of "Scotland in the Middle Ages," etc., who has prefixed an Introduction, written with more spirit than one usually finds in works of this sort. Among the most interesting documents are the patriotic letter of the Barons of Scotland to the Pope (1320), hung with a multitude of seals, and a charter (1282) of Devorgilla, mother of King John Baliol, and founder of Baliol College, Oxford, which gives considerable information on the character of education in her new college. This volume has the new feature of containing specimens of illustrations, which Mr. Innes gives because illustrations are rare in Scottish MSS. A third volume is in course of preparation.

—Prof. Agassiz, it has been recently announced, is preparing an illustrated work on the American Salmonidæ, including trout, salmon, and whitefish, of all which he is very desirous of obtaining live specimens, but will be thankful even for dead ones. They should be sent to him at the Museum of Comparative Zoölogy, Cambridge, Mass., with full and distinct labels of names and locality. The service is one which may be rendered either for the sake of Prof. Agassiz himself, or of science, as embodied in the proposed work, or, finally, of the Museum, which the country owes to Agassiz's untiring and unselfish industry, and which is the best nursery of natural science on this side of the Atlantic. Some remarkable statements were lately made by the Professor before a Committee of the Massachusetts Legislature (the committee on education) in regard both to the economy and the efficiency of the Museum. In it, he stated, are engaged twenty-six persons, all told, while the total income available for salaries, and for all other purposes, is but $10,000. How the Museum could be run at such a figure was explained by reference to a list of private subscriptions:

"You will see that to the share of one individual goes $6,000 for salaries at the Museum; to another, $7,400 for salaries, and for the support of young men; and $4,100 from the same source for material, and for the arrangement of collections. Constantly, when it would have been necessary to stop the work, private individuals have come and given largely and liberally. At one time a lady gave $3,000, at another time $2,000, at another time $1,500, and so on. These donations, in money alone, including the grants of the State, amounted to $473,000."

Regarding the arrangement of the Museum as better, in consequence of its recent foundation, than that of European museums, Prof. Agassiz called attention to the opportunities of securing for America private collections abroad, "which are likely to be lost or scattered at the death of their owners, for the simple reason that the public institutions of Europe have similar collections; and another reason is, that those who have made these collections are not in particular favor with the government, which is very frequently the case." He estimated the price for which they could be bought at $300,000.

—Much has been said, and much more might well be said, if intelligent people who have knowledge of the facts would say it—about the murderer Ruloff, now lying in confinement at one of our State prisons under sentence of death. It is, to be sure, repeating newspaper talk, for the accuracy of which no one could safely vouch, but it is told of him, that up to the age of thirty or thereabouts he lived an inoffensive, scholarly life, pursuing linguistic and other studies with a great deal of eagerness and industry, and with results in some respects remarkable; though, doubtless, it would not be true to say that he pursued them with real success. We read, for instance, that while imprisoned in a New York penitentiary, he wrote some observations on a certain philological treatise, and that in these he quoted—necessarily from memory, but yet almost verbatim—page after page of several Greek authors; so that it would seem as if he had considerable learning, and possessed in a singular degree one, at least, of the philologist's powers—retentiveness of memory. Furthermore, we are told that, having won the heart of his jailer, he was permitted to receive pupils in his cell, and that he there gave them excellent instruction in several languages. This first imprisonment of Ruloff's has some other strange features besides the one just mentioned. As we have said, he is reported as having lived a blameless, studious life up to the age of about thirty. Then suddenly he came under suspicion of having committed a double murder, the victims being his wife and only child. Arrested on the charge of murder, he escaped the penalty of the capital offence, for there was no *corpus delicti;* and from that day to this not a trace of the woman or the child has been found. Somehow or other, we are not informed how, the charge of abducting his wife was made good against him, and he was sentenced to ten years' imprisonment. Among the pupils whom he had during his incarceration was the son of his jailer, and if all is true that is told—as the Arabs say, "It is related (but God is all-knowing)"—Ruloff set himself deliberately to work to improve the intellect of the boy, and at the same time to corrupt thoroughly his moral nature and make of him an accomplished member of a school of robbers and murderers, of which he himself was the lawgiver and head. At all events, the boy did become a burglar and murderer, and a few months since he perished miserably in an excursion which he, in company with Ruloff and another professional robber, was making in the neighborhood of Binghamton, if we remember right, and which had for its object the robbery of a merchant's safe in that town. This was Ruloff's last excursion, and the last of the robberies of his two companions also, for there fell upon the three a punishment almost as swift and ghastly as falls upon the robbers in the old tales. The three dissolute ruffians of the terrifying story in which it is told how they went forth from their carousing to meet and fight with Death, of whom they had heard people talk, were hardly overtaken by a speedier or grimmer fate than overtook our robbers. The store was entered, and the pillaging had begun, when the burglars were attacked by two clerks, whose custom it was to sleep there. In the struggle that followed, one clerk was killed and the other wounded, as also was one of the thieves, and these latter fled, one of the younger ones carrying the other; but, in crossing the river, which was at that time much swollen, the wounded burglar and his companion were carried away by the flood, and Ruloff alone escaped alive. Suspicion falling upon him, he was arrested, tried, and condemned. We have not read the report of the trial, but it is stated that his conviction was secured by testimony which, curiously enough, his better-self might be said to have furnished against his worse. Apparently he was proud of his attainments, and constantly, when he could find any one to listen or any editor to print, used to ventilate his theories in linguistics. In an unlucky day, he found a certain editor who printed a certain essay of his, and it so happened that when he came to load the pistol with which afterwards the murder of the clerk was done, he took for wadding a piece of the newspaper that contained this production of his. Carelessness or, perhaps, tenderness for his literary offspring caused him to keep by him the printed copy of the essay; it was found in his room, and, at his trial, was used against him with fatal effect Ruloff was not only a worker in the science of linguistics, he had studied

the law, and it has been said that he was a good lawyer, and that he has on some occasions had the effrontery to appear, and the ability to appear successfully, as counsel in New York courts where accomplices of his were upon trial. Here, again, it is, perhaps, as well to remember the Arabic exordium above quoted, and to wait till some competent hand shall give us a trustworthy account of a person whose character and course of life are of precisely the kind to excite the wonder of illiterate and unsagacious people, and to furnish the basis for stories full of the exaggerations of bewilderment and the vulgar love of the marvellous and mysterious.

—A year and a half ago we think it was that we received from Ruloff a printed circular, in which he set forth the fact that he had some sort of a method—we forget what—which, when applied to the study of linguistics, was to work we do not know what miracles, and the secret of which he would sell for five hundred thousand dollars. He intended, he said, to go before the American Philological Society, then on the point of meeting at Poughkeepsie, and see if he could not persuade it to give him the half-million. The half-million it was that he was going to try to get from the members of the Society, or else it was their approval of his method for which he was hoping—the latter, probably. A very wild lunatic, indeed, it would be who should hope to get five hundred thousand dollars from any assembly of the philologists of the United States. Our memory is at fault about the details of Ruloff's scheme, and even about its general scope; but we recollect very well that the circular seemed to us the production of a brain crazed—of a man whose fit home was in an asylum for the insane; and were we, in the present state of our knowledge concerning Ruloff, to order him to execution, we should be more than doubtful as to whether we were not killing a man out of his wits. And the testimony of his life, as recorded in the newspapers, appears to us confirmatory of the testimony which his philological circular afforded us. Whether or not there are better uses to which you can put a certain kind of man than are subserved by hanging him, Ruloff it would seem to be worth while to save for study and investigation. A more noteworthy case than his it would be hard to find in the annals of criminal law. Eugene Aram's is commonplace and simple and uninteresting in comparison.

—There is a German fable, in which the badger and the hare run a race, in parallel furrows of a ploughed field, the badger winning by the simple artifice of placing his wife—who exactly resembles him—at the farther end of his furrow, while he remains snugly at the starting-point. Singularly enough, the counterpart of this fable was current before the war among the negroes of South Carolina, and has been published in the *Riverside Magazine* (November, 1868; see, for the German story, the September number). It opens in this way ("coutah," we may explain, being negro for terrapin):

"Once upon a time Br. Deer and Br. Coutah was courtin', and de lady been lub Br. Deer more so dan Br. Coutah. She did been lub Br. Coutah, but she lub Br. Deer de morest. So de noung lady say to Br. Deer and Br. Coutah both, dey mus hab a ten mile race, and de one dat beats, she will marry him.

"So Br. Coutah say to Br. Deer: 'You has got longer legs dan I has, but I will run you. You run ten mile on land, an' I will run ten on water.'

"So Br. Coutah went and git nine of his fambly, and put one at ebery mile-post, and he himself, what was to run wid Br. Deer, was right in front of de noung lady door, in de broom grass.

"Dat mornin', at nine o'clock, Br. Deer meet Br. Coutah at de first mile-post, wha dey was to start from. So he call, 'Well, Br. Coutah, is you ready? Go 'long.' As he git to de next mile-post, he say, 'Br. Coutah.' Br. Coutah say, 'Hullo!' Br. Deer say, 'You dere?' Br. Coutah say, 'Yes, Brudder, I dere too.'

"Next mile-post he jump, Br. Deer say, 'Hullo, Br. Coutah!' Br. Coutah say, 'Hullo, Br. Deer, you dere too?' Br. Deer say, 'Ki! it look you gwine for tie me. It look like we going to de gal tie.'

"When he git to de nine mile-post, he tought he git dere first, 'cause he mek two jump; so he holler, 'Br. Coutah.' Br. Coutah answer, 'You dere too?' Br. Deer say, 'It look like you gwine tie me.' Br. Coutah say, 'Go 'long, Brudder, I git dere in due season time.'"

And so he does. At the end of the race Br. Deer "saw Br. Coutah in de piazza, had de noung lady hooked hands, walking up and down." But now for what is curious indeed. Prof. C. F. Hartt, lately returned from the Amazons, contributes an article on the Lingua Geral of that region to the *Cornell Era* (Jan. 20). "At Santarem," he says, "I found an old Indian, Laurenço Maciel, whom I trained to dictate to me in Lingua Geral, . . . and through his aid I made a considerable collection of fables and stories. . . . There are some very curious stories told about the *Fauti*, or forest tortoise, who cheats the onça and tapir and other large animals." Of one of these, which is "of Mundurucú origin, but appears to be generally current in the Lingua Geral," Professor Hartt gives a free translation—"How the Tortoise outran the Deer;" and, minus the peculiar humor and piquancy of the negro fable, it differs from the latter only in the object of the race. In the Indian fable, the "noung lady" does not appear; it is purely a challenge of speed. The tortoise craftily chooses to run in the forest, while the deer runs in the path; and so great is the number of the tortoise's relations posted along the line of the course, that the deer runs himself to death from sheer fatigue.

—A sensible consolidation has taken place in England between the Anthropological and Ethnological Societies, whose fields were nearly identical, and which, therefore, had no good reason for keeping up separate organizations. The Anthropological Society was, intellectually speaking, the weaker of the two, and hence gains most by the alliance. Both ethnology and anthropology are to receive the attention of a new scientific periodical just started in Italy, encouraged, no doubt, by the establishment, within a year past, of the National Museum of Anthropology at Florence. We find in the *Gazetta Medica Italiana* (*Lombardia*) of Jan. 14 a circular from Signor Mantegazza, the head of the Museum, requesting of physicians in all parts of the peninsula contributions to his collection of *crania Italica*—the total number of skulls, native and foreign, being already over five hundred. "Railroads," says the director, "and brotherly concord will soon melt in one crucible the blood and cranium of all the Italian races, and if we do not act promptly, we shall lose the opportunity of determining the ethnology (*fare l'etnologia*) of the modern Italians, rich and varied as it is." Inasmuch as German unity promises to obliterate distinctions in the same manner, a similar appeal in the *Zeitschrift für Ethnologie* of Drs. Bastian and Hartmann would not be untimely; and by a sad fortune, the hospitals of Germany might now furnish large and valuable contributions to a national museum.

—We have received from Switzerland a letter, in which the writer says: "I am not of those Americans who found in French imperialism a never-failing theme for praise and adulation; but I fear that while one devil has gone out of the European household, the rooms are only being swept and garnished in order to receive, in the Prussian domination, seven devils worse than the first." Holding these views, and having observed in the *Nation* of December 29 a list of German pamphlets on Alsace and Lorraine—"disentombing," to use his language, "from the dust of centuries arguments for the assertion of brute force in the present day"—he sends us some advertisements from the *Journal de Genève*, of "brochures d'actualité," or pamphlets for the times, from the French point of view, which he thinks may have some interest for our readers. The list, however, contains but two titles relating to the Germanic provinces of France: one, "L'Alsace et les prétentions prussiennes," an Alsatian's reply to the Germans, by Edouard Schuré; and "La République neutre d'Alsace," by Count Gasparin. We commend both to whoever would judge fairly of the rightfulness or expediency of annexation. Among the other pamphlets treating of various phases of the war, we will, with our correspondent's permission, mention only the one which stands last on the list—"La Paix," by Roger de la Lande, concerning which the advertisement says: "This brochure was seized at Bordeaux by order of the Minister of the Interior."

—When the French artillery was forced to abandon the plateau of Avron, there retreated with it the commander of a battery, Baron Stoffel, formerly military attaché of France at Berlin. It was not unnatural that upon him should have been turned some of the odium justly excited against the Imperial Government, because of its neglect to inform itself thoroughly of the Prussian military system and resources. In justification of himself, the Baron publishes a very complete study of the Prussian staff system, which he sent to his Government in 1868, and which was either unopened or utterly disregarded. The same reception befell other similar communications made in that year, and which, with a truly loyal frankness, exposed the French ignorance of its neighbor in every respect, and the vast inferiority of the French army to that of Prussia.

"How should it be otherwise," he asks, on one occasion, "since a young Frenchman receives no notion of that important part of history which concerns the institutions of the moderns, their character, their genius, their tendencies, that he is not seriously instructed in any foreign language, or inspired with a taste for study? The result is that generation succeeds to generation without any knowledge being obtained of the people by whom France is surrounded. Is there a single person in France who has followed the curious development of Prussia since 1815? Here are a people full of life, who in fifty years double their population; who, laying the foundation of their edifice on two great principles—obligatory instruction and obligatory military service—place themselves in the first rank of the enlightened nations of Europe, organize a formidable army, provided with an armament *sans pareil*, and led by the best instructed officers in the

world—and this spectacle remains unperceived until this people reveal themselves like a thunderclap in 1866. We then began to study the causes of these great events, but already this nation, capable, energetic, and unscrupulous, whose frontiers are within nine days' march of Paris, without any natural obstacle interposing, counts 30,000,000 of souls, and disposes of a million of soldiers.

"Within the last fifteen years," he goes on to say, "we have had two great wars. What lesson have we learnt in a military point of view? Have we attempted to ameliorate any branch of our service? It was no doubt said, Everything appears to be satisfactory, since we have beaten the Russians and the Austrians."

And how fully has this warning been justified:

"Should war break out, take care not to believe in France that we shall have to deal with Austrian troops. The Prussian army will show us a vigor and audacity and a science of war which we did not encounter in Italy. How would the Prussians have acted in 1859? Directly hostilities commenced, they would have entered Turin before a single French soldier had crossed the Alps. At Solferino, the Fourth Corps, in spite of its heroic efforts, would have been broken by noon. There can be no doubt of this, looking at the energy and intelligence displayed during the war of 1866."

LOWELL'S LATEST PROSE VOLUME.*

This latest book of essays by Mr. Lowell opens with two which are perhaps the best. That is hardly the right word, either, there are so many kinds of goodness in the book—as of criticism often unsurpassable in acuteness; of criticism unsurpassable often in the delicacy of its sensibility to imaginative beauty; of humor; of wit, sarcastic, or playful, or almost poetically fanciful; of penetrative thought; of a cheerful hopefulness for the future; of righteous indignation at certain things, yet of unfailing kind-heartedness; of keen enjoyment of nature; of poetry. The most delightful we should perhaps do better to style the two opening essays. "My Garden Acquaintance" is the title of one, and "A Good Word for Winter" that of the other. Both will be remembered by many of our readers as having adorned the first numbers of the "Atlantic Almanac," and in a way in which almanacs have seldom been adorned. They bear witness to the truth of Mr. Lowell's prefatory remark about the title he has given to his new volume. It is not a title that he likes, he has been saying; he would have preferred something simpler; but publishers are "inexorable on this point"—that is to say, they care more for a title that will look well on a placard than for one that may suit a book—and having no time to find one thoroughly to his mind, he hastily snatched that which the volume now bears; but, he says, it "is meant to imply both the books within and the world without, and perhaps may pass muster in the case of one who has always found his most fruitful study in the open air." The book is mainly about books and men of letters; but both "A Good Word for Winter" and "My Garden Acquaintance" manifestly show that only an ardent and persistent lover and companion of nature in all her moods and of the open air in all weathers could have written them, or, let us say rather, could have had them to write. Much that is in them is literary, but more of them is as freshly natural as a brook, or a leaf shooting; and of the literature much, being quoted from other lovers of outdoor life, is literary as Cowper's "Winter Morning Walk" is, the first part of which, though read in an air-tight library, would still give almost the very sensation of a walk in the snow amid the sights and sounds of rural England, or New England either for that matter. Mr. Lowell's garden acquaintances are the birds that frequent his trees, and we remember that it was like being out in the fields in the nest-building time of the year, and afterwards in the time of fruit, to read his account of them when it was first printed. Better yet is the essay on the shows that winter affords, and whoever is not now persuaded that winter is that season of the year when man has most days in which to enjoy life out-of-doors, and also has then more to enjoy than the other seasons can give, may very probably, after reading this "Good Word for Winter," find themselves of his opinion. Perhaps such a convert should live neither in the city nor in the unmitigated country. In the city winter is apt to mean streets vile with defiled snow, and is worse to endure than summer. In the country, if man is not shut by roads blocked with mud or snow into a hermetically sealed house hot with stoves, he is likely to be made to feel something of the sordidness of the struggle for mere animal comfort, and to know by catarrhs and colds and enforced isolation that we have not yet subdued nature and made the world habitable. The city man knows the winter as so much mere unsightliness and additional expense; but the country liver has not so wholly guarded himself against its fiercer attacks that he does not still feel something of that fear which our cave-dwelling ancestors justly felt. The struggle has lost most of its terrors, and is irritating and spiteful now rather than a matter of life and death; but its meanness makes it none the less dislikable. The converts of whom we speak will probably be dwellers in suburban towns, where winter, indeed, has been made tributary, and has lost the power to harm, but has not been robbed of everything, as the cities have robbed him, and still can show us all his treasures. It might, by the way, be worth while to enquire whether the alleged greater enjoyment of external nature by us moderns is not in great part due to the fact that we are so much more independent of the vicissitudes of the elements, and have also learned to know so many of the mysterious secrets which awed our fathers. We speak rather of our more immediate predecessors than of the ancients; and of a question not the same as the question whether the Greeks and Romans, for instance, had the sentiment for nature which Christianity as opposed to paganism is said to have brought into modern as opposed to classical literature.

In the essay entitled "On a Certain Condescension in Foreigners" Mr Lowell humorously and with abundant wit complains of the supercilious tone with which our British cousins have been wont to criticise us and patronize us; and, to confess the truth, he finds so many excellent reasons, based on our condition and on theirs, why they should have done so, and also so many and so much better reasons why they should not, that we almost wonder he thought it worth while to say anything about it. This the more, inasmuch as the American people, having recently made some great discoveries as to its own strength and its own weaknesses, has discovered the animus of the more impudent and exasperating criticisms and the reasonableness of some of the others, and is now able to profit intelligently by the most that its relatives say about it. Moreover, we should say that, on the whole, the American people is henceforth likely to pay too little rather than too much regard to foreign criticism. The man of the Mississippi Valley—who is soon to be America, so far, at least, as regards the Committee on Foreign Relations—is more likely, we imagine, to sin on the side of Mr. Zachariah Chandler than on the side of Washington Irving and the Prominent Citizen of Boston. However, Mr. Lowell says nothing which is not perfectly justified by a long array of facts; and it is to be recollected, too, that his essay was intended not as complaint—which was the fault of the general run of the protestations that we used to make—nor as retaliatory criticism; but as a warning to Englishmen who desire amity with this country, and as a frank declaration to his own countrymen that they are obnoxious to some of the blame which used to be over-insolently showered upon them. Nobody among us need care at this time of day for the things that Carlyle said when he "freed his mind," as they say in New England, about the late rebellion; but everybody among us ought to care a good deal that some of the harsh things he said about us are so true that Fisk and Drew and Vanderbilt and Hoffman and Tweed represent not so badly one of the most pervading and powerful tendencies of our national life. There is something for Englishmen to care about, too, when a man like Mr. Lowell—not General Butler nor Senator Chandler—talks to them about a "settled sense of wrong" in the minds of his countrymen caused by the attitudes which England has so often adopted towards this country.

As a specimen of wise criticism of the kind most different from reviewing and most capable of directing the labors of such workers in literature as endeavor to understand the philosophy of their art, we would call attention to an essay entitled "Swinburne's Tragedies." The attempts at doing the antique which, in one form or another, periodically breaking out, have constituted a main curse, if not the main curse, of our later modern literature, would hardly have troubled us if it had been permitted to Goethe, say, a century ago to see so clearly and lay down so forcibly the law which, we trust, may now work out our deliverance from that mother of shams, pseudo-classicism. Of her earlier broods less is to be said; for how could men foresee that there would come a time when readers and writers would no longer be those alone who knew Greek and Latin; and what more natural than that the Greek and Latin forms should, in the larger number of cases, dominate the mind of the writer whose vehicle of expression and of thought was the Greek or Latin tongue? But between Petrarch writing "Africa" in Latin and a man of our day writing "Merope," or a man of the last century writing Pindaric odes, the difference is great indeed. The one, by training if not by birth, was in good part a true Latin; and, moreover, could not foresee that all of that posterity to which he appealed would not also be as genuinely Latin as himself; the other, ninety-nine parts Englishman or German or what not, in spite of himself ninety-nine parts modern, endeavors to throw away the ninety-nine parts, and with the other produce work worthy of himself

* "My Study Windows. By James Russell Lowell." Boston: J. R. Osgood & Co. 1871.

In the nature of things this he cannot do, and his performance is either nothing, or it is such a mixture of classic and modern work and ideas as to be bad on both sides. This pernicious fallacy Mr. Lowell so exposes as to make one hope that a great deal of useless labor may be left unattempted by many men whose time is worth saving.

"Thoreau" and "Carlyle" are two most admirable studies of character, of which we do not know which is the better. We fancy that the enemies of Thoreau and the friends of Carlyle might perhaps be more pleased in the perusal than the friends of the one and the enemies of the other. Thoreau's distinctive quality as a writer to people who are extravagantly fond of him, as we know some who are, is the power he has to make them breathe the very air, and smell the very scent, and feel in all ways the very presence of the virgin woods in their solemn wildness; it is, they say, as natural and utterly unadulterated a flavor that one gets from him as from a cranberry picked and eaten in the swamp. Perhaps this view, if it be at all deserving the name of a view, of one side of Thoreau, is not brought out by the essay before us. But, so far as we know the man, we should say that he gets full justice. People who are able to be the friends of such a person as we take him to have been, are usually capable of being blind and partisan worshippers. Carlyle is perhaps discussed with something of that feeling of the semi-affectionate respect with which, as we fancy, more men of the last generation regard him than any man who will be writing of him twenty years hence. He is now a part of the recollections of many men's youth, of their time of early and uninstructed but noble aspiration, delightful even in the pensive retrospect. So, perhaps, Mr. Lowell speaks of him in a tone that many will think somewhat too laudatory. We do not say no. But, let that be as it may, the general summing-up of Carlyle's character is as truthfully severe, and severely truthful, while both dignified and considerate, as anything that we at present recollect in English criticism.

We have left ourselves but little space, and cannot speak at length of the very richly-deserved excoriation which Mr. Lowell gives Mr. W. Carew Hazlitt, one of the most ill-natured of critics, and not honest either, and, as it would seem, almost utterly incapable of doing literary work of the least value. Of the "Chaucer," a charming essay, full of unmistakable fellow-feeling, and which cannot be otherwise than a permanent gain to the literature of criticism, we have before this called the attention of our readers; and our readers had the pleasure of reading in our own columns the fine tribute which Mr. Lowell pays to Mr. Emerson the lecturer, the lecturer whom all the world was mad about—and not with so much unwisdom—some thirty years ago, when he began his work of emancipating and vivifying so many American minds, and giving to the best men of our last generation, or our risen generation, so strong an impulse towards a saving idealism. The essay on Abraham Lincoln closes with a passage so good and just that we regret our inability to quote it; and not unlike this essay, for its power of incitement to higher ways in politics, is that entitled "A Great Public Character." On the whole, we think this volume may with probability be expected even to increase its author's great reputation as one of the best of critics and one of the wittiest of men. We still mingle with our gratitude, however, some grumbling that there should be so much too much wit and point, and some supersubtleties of interpretation; while the judgment on Pope seems to us little less than astonishing. But no student of English literature, and, we should think, no American worker in literature, can afford to be without the body of criticism contained in "My Study Windows" and its predecessor.

GUSTAVE DROZ.

It may seem a little hard-hearted to look upon the present war as merely an interruption of French literature; but, even regarded from that point of view alone, it may well give us plenty of food for thought. Here is a whole school of writers, a whole generation of novelists, whose works, only six months ago, we were all reading with interest, and of many of whom one might almost say they are now as much men of the past as George de Scudéri or M. le Président de Brosses. In the prostration of France everything will be changed; even the very *dramatis personæ* must be different; and in reading the novels of last year, not the most enthusiastic friend of Germany can forbear a feeling of pitying regret for the elegant and witty society, which seemed made for pleasure only, and is now in such terrible distress. As to certain of these writers, we feel that they are finished. But there are others who, if France becomes once again peaceful, cannot help bringing to more serious use in the future the grace acquired in the luxury of the Second Empire. And to the student of modern literature it will be extremely interesting to watch the subsequent career and change of those writers with whom he is familiar. Théophile Gautier, who will never change, is in Paris, and we may confidently expect from him an interesting account of the city during the siege. Our opinion of MM. Erckmann-Chatrian our readers know, and from them also we feel justified in expecting continued activity, and activity with excellent results. And Edmund About may perhaps look forward to a new career as creditable as the old. It is, however, of another writer, Gustave Droz, that we wish to speak more especially to-day. He has already published two volumes of short essays—"Monsieur, Madame et Bébé," and "Entre Nous;" two novels, "Autour d'une Source," which appeared in the *Revue des Deux Mondes* in the year 1869, and "Le Cahier bleu de Mdlle. Cibot," which came out last year. Besides these, we should mention a little book, called "Un Paquet de Lettres," which also was first written for the *Revue*. He is probably a young man, for his first writings appeared only five or six years ago in a flippant paper, "La Vie Parisienne," which thoroughly deserved its name. These two volumes it would be telling but half the truth to call frivolous. They are of the sort which are to be hidden beneath the sofa cushion rather than literature *virginibus puerisque;* but, in spite of that fault, they are in many respects admirable. Most of the sketches are little scenes of life in Paris, told with a charming wit and an aristocratic elegance which is seldom outdone even by the most practised writers of that city. They are written with just that art which redeems the most ordinary incidents from appearing commonplace, and which is so necessary if the subjects, personages, and incidents are to appear natural. A few of them are pathetic, and lack that additional pinch of salt which the *blasé* appetite of Droz's French audience demanded. Such, for example, is the little tale called "L'Omelette," the first one in "Entre Nous." Others again, in fact the most, are satirical, but with the grace of the satirist who will not be listened to unless he amuse the reader, and who is himself too little of a moralist to forget his craft as a story-teller. Observe the cleverness of this passage, which very well serves as a specimen of his lighter manner. It is in the chapter called "Causerie," in this same "Entre Nous." The scene lies in Paradise, in the Faubourg Saint-Germain of the place, in the Paradise of the blessed of good family. The speakers are two Parisian ladies. We quote the original French. A translation into English would be harder than a translation of Faust:

"Lucile (*se levant tout à coup du fauteuil où elle est assise, et venant au-devant de Berthe, qui se promène lentement*).—Hé quoi! Vous ici, comtesse? Quel heureux hasard, ma belle! (*Elles s'embrassent avec effusion.*)

"Berthe.—Heureux hasard, en effet, ma chérie; car je ne comptais guère vous rencontrer sous ces ombrages.

"Lucile (*éclatant de rire*).—Et, de bon compte, où vouliez vous que je fusse?

"Berthe.—Eh! mon Dieu! je craignais que vous n'ayez été .... retardée. .... Cela peut arriver.

"Lucile.—Non, vraiment; tout s'est parfaitement passé. J'ai eu une réception—oh! mais une réception, ma chère! Figurez-vous que toutes ces dames sont venues à ma rencontre en grand uniforme. C'était un coup d'œil enchanteur. Saint Pierre lui-même—

"Berthe.—Ah! qu'il est bien! Du premier coup il a fait ma conquête—

"Lucile.—N'est-ce pas qu'il a l'air distingué? Il est en relation avec tant de monde! cela forme— Je vous disais donc que, malgré ses occupations, il est venu au-devant de moi, et, après avoir fait taire par un geste l'orchestre, qui jouait un air de circonstance, 'Madame la baronne,' m'a-t-il dit, 'je vous attendais. Veuillez croire aux sentiments de respectueuse sympathie,' etc., etc. Enfin il s'en est admirablement bien tiré—pour un parvenu.

"Berthe.—Je trouve votre *parvenu* ravissant. Ah! ah! ah!

"Lucile.—Pourquoi ravissant? Il est clair que saint Pierre est un grand saint, mais enfin il n'est pas né duc et pair; c'est comme cela, ma belle.

"Berthe.—C'est certain, mais ce n'est point l'endroit, entre nous, de lui faire des reproches— Ne trouvez-vous pas qu'il ressemble au comte de N. de profil? C'est prodigieux."

And so they run on, expressing their elegant horror at the number of vulgar people they meet. Another clever sketch is that called "Sous l'éventail," the prattle of a number of pretty young girls at a party, which he overhears. He is a keen social satirist, quite free from ill-nature, in full evening dress, witty, gay, brilliant, and polished, without heartlessness on the one hand, and, on the other, without sentimentality. He points out the follies of society with a truth that must convince the most thoughtless, and a calmness of good taste which prevents that abuse of the methods used which so often diverts the attention from the object of the satire. He paints his women so charming, witty, and fascinating that they cannot help feeling complimented in spite of the little mercy shown to their follies; and his men, too, see themselves exposed, with all their petty vanities and foibles; but it is done so delicately that they will probably be rather proud of their faults.

We speak thus at length of these slighter works because they are really so clever; his longer novels, however, are masterpieces of fiction. "Autour d'une Source" strikes a much higher note. The *Revue* naturally demands something more serious than the debauched "Vie Parisienne." We find here the same merits, unstained by the faults we have mentioned above. The story is simple and pathetic. The hero is the priest of a little village; the other characters, a spendthrift count, who is a man of pleasure of the Second Empire; his rich wife; her father, who is a speculator; and a few others. We shall not give an analysis of the novel which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers as truly as the works of the French period of dramatic success immortalized the great dramatists. The poetry of those authors was cramped by its form, but French prose is far more poetical than the poetry, and, of course, much less hampered by artificial canons of art. Every reader knows its charm, its ease, its accuracy, and its dignity. This book has more than that—the characters are admirably drawn without exaggeration, but clearly and impressively. Droz has had the great advantage of knowing that he had readers whose taste was delicate enough to make that exaggeration which coarser minds need absolutely disagreeable—an advantage which, except our poets, our English-speaking authors lack so entirely that most of them find difficulty in conceiving of it. It has its ill effects, to be sure; it shows itself unpleasantly in the French contempt for other nations; but an immense advantage it is, nevertheless. The best of our novels treat of far nobler themes than most of the French. Take, for instance, this other one of Droz's, "Le Cahier bleu de Mdlle Cibot." It is the sad story, written half in the form of a journal, half-told by the author, of the life of a French woman. Her girlhood in the convent with priests who frighten her; her life at home with a mother who does not care for her at all, and with a henpecked father; her marriage with a broken-down, odious man; her love for a friend of her husband; the contrast between the wretched life she leads at home and her almost innocent devotion to her lover; her husband's death; the polite contempt of her lover, and her despair—such is the story. In our analysis the tale gets but very scant justice. It seems simply improper; in fact, it is simply piteous. In our novels we pay for their innocence by too many pale, passionless figures, or else, just at the present time more particularly, we find works which give us improprieties or crimes without that analysis of the moving passion which alone could make of them real works of art, which alone redeems them from utter vulgarity. A novelist, like every one else, should avoid prudishness; and we could pray that English-writing authors, while they still retain their present ground of moral dignity, which, after all abatements have been made, is still the ground that English fiction holds, might set themselves to work—if the thing could only be learned—to learn some of the methods of their French brethren. Whether Droz has survived this war, we do not know. We sincerely hope that he has, and that he is destined to go on as well as he has begun. And if, as seems not impossible, we are now beginning the twentieth century—for centuries, like the magazines, always come out in advance of their time—and if Germany is to have the position which France has held, let us hope that during the new literary age that is upon us, each nation may acquire some of the merits of the other; the moral worth of the one be made more attractive by the charm which has so long been gilding vice; and the elegance of the other ameliorate the manners and style of a people which, if it has all the virtues, certainly has few of the graces. And, as for us Americans, a more ductile and more quickly apprehensive race than the nearer neighbors of the French, who can say that this twentieth century which we are beginning may not turn out to be that age of literature in which, combining French skill and lightness of touch with German force and depth of thought and feeling, we are going to astonish and disgust all the contributors to *Blackwood* by flooding the world with American books which everybody will read, written in English superior to the best of Doctor Beattie's himself? Seriously, however, and whatever may be going to happen to us in the next hundred years, it will be a good day for American literature when American authors, before they write many books, make careful study of a writer whose workmanship is like that of Gustave Droz.

The Recovery of Jerusalem. A Narrative of Exploration and Discovery in the City and the Holy Land. By Captain Wilson, R.E., and Captain Warren, R.E. With an Introduction by Arthur Penrhyn Stanley, D.D., Dean of Westminster. (New York: D. Appleton & Co.)—American scholarship and American enterprise led the way, in recent times, to the scientific exploration of the Holy Land. Dr. Robinson was the pioneer in that method of investigation which gave to ancient historical records, to the itineraries of early travellers, to local associations and natural features, and to Arabic names and memories, precedence over the monkish traditions which everywhere in Palestine had usurped the place of authentic history and of a rational chorography. Dr. Robinson was greatly assisted by Dr. Eli Smith, whose knowledge of the Arabic language and familiarity with the country and the people supplemented at every point his own historical learning and his habit of patient observation. But Robinson himself was a little apt to proceed upon a theory, and to come at results by a foregone conclusion. This is especially noticeable in his treatment of certain disputed points at Sinai and at Jerusalem, where, though we follow him in the main, we should prefer a less dogmatic assertion of facts not fully established by discovery. Still, Robinson and Smith remain to this day almost unimpeachable authorities upon the topography and archæology of Palestine. Dr. William M. Thomson, an acute observer, and of great shrewdness and tact in dealing with human nature of the Oriental and especially the Arab type, has added much to our knowledge of the details of sacred localities and of Biblical manners and customs. To Captain Lynch and his party the scientific world is indebted for the careful tracing of the Jordan and the successful exploration of the Dead Sea. A host of European explorers, of different nations, have followed in the wake of these; but only within a few years have well-appointed expeditions been sent out for the study of Palestine.

The benevolent wish of Miss Burdett Coutts to provide water for Jerusalem, gave the first impulse to investigations which have been followed up systematically by the committee of the "Palestine Exploration Fund," under the presidency of the Archbishop of York. By the favor of the British Government, the ordnance survey of Palestine was undertaken by a corps of engineers, and the position of many important points, especially in the northern section of the country, was for the first time accurately determined. The Lake of Gennesareth was explored with a thoroughness which enables us to fix with reasonable certainty the sites of Capernaum, Bethsaida, and Chorazin. This is especially true of Capernaum; for the identification of the fountain at Tabigah with the fountain of Capernaum by the discovery of an aqueduct carrying its waters into the plain of Gennesareth, seems to establish the claim of *Tel Hum* to be the ancient Capernaum. The labor of the "Fund," however, has been chiefly expended upon the Holy City, and its results are now published in the attractive volume with the somewhat ambitious title given above. In a scientific point of view, the book is disappointing. It presents, in the form of a popular narrative, the results which had already been given more drily in the quarterly statement of the "Palestine Exploration Fund;" and these results are meagre in comparison with the time, money, and labor expended upon the object. Yet, when we consider the difficulties of the case, the incessant warfare to be waged with ignorance, prejudice, and fanaticism, the perils to life and limb in underground tunnelling, and the climatic dangers attendant upon any kind of exposure or exertion at Jerusalem, we may rather wonder that so much has been achieved. Some advance has been made toward determining the course of the ancient walls, the course of the Tyropœon and its depth, and the area of the Temple. Dr. Robinson's discovery of the arch of an ancient bridge across the valley has been confirmed. The city has been more carefully surveyed and mapped, and the specimens of cartography given in the volume are extremely beautiful.

The publication of this book is timely as a stimulus to the work of exploration. It will acquaint multitudes with one of the most interesting enterprises of archæological research. An American committee for the exploration of Palestine has just been constituted, and we understand it is their purpose to send a party to the regions lying east of the Jordan which are known to be rich in the monuments of antiquity. A meeting will soon be held in this city for the purpose of bringing the plans of the committee more fully before the public. Americans should resume their leadership in this field.

Kitty: A novel by M. Betham-Edwards, author of "Doctor Jacob," etc. (New York: Harper & Brothers. 1870.)—This is not only an unusually good novel, as novels go, but, in point of readability and general interest, it is also a marked improvement upon a previous novel by the same author, which was published rather more than a year before. That it is intrinsically very much better we are not certain. Clever as its character-drawing is, and ingenious and little tiresome as is its moralizing, "Doctor Jacob" quite equalled it in these respects; and the hero of that

story, although not nearly so pleasantly interesting as "Kitty," was an earlier study of the same kind of character, and his history pointed a moral not dissimilar to that of hers. His lines were cast in unpleasanter places, however; the little German town in which he practised his fascinations, and the prosaic German pastors and schoolmistresses who were beguiled into loving and trusting him even beyond the period when their judgment decided that he was unworthy of either feeling, though they were carefully studied and well described, are less interesting to ordinary novel-readers than Kitty's vagabondish life in Paradise Place, and her subsequent adventures in more or less fashionable English society. And Kitty herself, a young, handsome, variously gifted woman, is a person the secret of whose power of fascination is not so far to seek as it was in the case of the elderly Doctor Jacob, whose well-preserved beauty and clerical character did not of themselves account for his personal popularity. Kitty seems to us sufficiently consistent and accountable—and that Doctor Jacob was not equally so was, we think, rather more the fault of the author than of her readers. It is reasonable, at all events, to suppose that people who write novels give every clue in their possession to the elucidation of their characters; and the key to Kitty's faulty virtues, which is supplied in the remark that her "moral perceptions were as acute as her practical morality was lax," and which would have equally well applied to Doctor Jacob, seemed not to have been suggested to Miss Edwards in that instance. The secret of his success with good people—a success not wholly undeserved either—was apparently a puzzle to herself. Her own lack of faith in the character was too evident. Kitty, however, she understands better, and she has made her sufficiently plausible.

The book is all pleasant reading, though it is a trifle too suggestive of Thackeray at times, perhaps; but all that portion of it which introduces the reader to the artistic Bohemia of Paradise Place seems better done and more real than the rest. We at least were always glad to get back from more genteel company to Polly Cornford and her proverbs, and Perry is as cleverly drawn as Kitty herself, and is a more satisfactory person. As for Kitty, with all her faults, she interests her readers too, as well as her friends, and her failure at the last seems rather ignominious. Apparently, however, there is to be a sequel to her story, in which we may hope that she is to learn that true wisdom and worldly wisdom are not so widely opposed as even the least sceptical among us are sometimes inclined to believe.

I. Elements of German Grammar. I. First Book in German. By E. C. F. Krauss. (Boston: S. R. Urbino.)—In these two really excellent little books the student will find all that he needs for a very good reading knowledge of German, and he will find it put in a simple way, and made intelligible to those who may not have had a scientific grammatical training in other languages. These qualities admirably fit Mr. Krauss's volumes for the use of any of our preparatory schools or many of our smaller colleges. The first of the two is arranged in the usual order, save that it omits all exercises, it being especially intended as a book of reference. For this reason, and to this end, it contains what many grammars lack, namely, full lists of the nouns which are exceptions to the ordinary rules. In another edition, these lists might be made complete. In that upon page 11, § 6, 3, we do not find *Genoss, Gesell,* or *Gefährte;* nor in § 8, b. *der* and *die Geissel, die* and *das Gift, der* and *das Mensch, der* and *das Messer, der* and *das Reis.* The explanation of the German passive, so often a stumbling-block to beginners, is clear and intelligent. The third chapter, upon the words incapable of inflection, is admirable; it contains just that information so often lacking in the grammars, but which every teacher must never weary of repeating.

The other volume will be found of service to single students more particularly, or to a small class under a teacher. The principle on which it is arranged is a good one. A bit of the German text is given, with an interlinear translation for every word at its first appearance, with the rules of pronunciation as they are needed, and such grammatical information as is founded upon the text and required by it. There certainly seems to be great economy of time in this method. The beginner learns his grammar at the same time that he has a peg on which to hang his information.

As the names imply, these books are both elementary. They do not contain the long discussion of the knottier points which is required by the more advanced pupil, but which so dazes the beginner; but for a young student, or for one who is painstaking, but to whom the more artificial methods of the conventional grammar are distasteful, we can recommend them heartily.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*

JUST PUBLISHED.

THE PROSE WRITERS OF AMERICA. With a Survey of the Intellectual History, Condition, and Prospects of the Country. By Rufus W. Griswold, D.D. New and revised edition, with a supplementary Essay on the Present Intellectual Condition and Prospects of the Country, by Prof. John H. Dillingham, A.M. With seven portraits on steel and vignette title. Imperial 8vo, cloth, extra, gilt top, bevelled boards, $5.

Wm. Cullen Bryant says of the original edition:

"We are glad to possess, in this form, portions of many authors whose entire works we should never own, and, if we did, should probably never find time to read. We confess our obligations to the author for the personal information concerning them which he has collected in the memoirs prefixed to their writings. These are written in a manner creditable to the research, ability, and kindness of the author."

Edgar A. Poe, in his Literati, says of it:

"This is a book of which any critic in the country might well be proud, without reference to the mere industry and research manifested in its compilation. These are truly remarkable; but the vigor of comment and force of style are not less so; while more independence and self-reliance are manifested than in any of the series. There is not a weak paper in the book, and some of the articles are able in all respects."

The present edition has been thoroughly revised, every page has been gone over, and notices of authors who have passed away since the previous editions were published, have been revised and continued to the period of their decease, and long and critical articles on the authors of the present day have been added, making the work complete in every respect to the present time. It should occupy a prominent place in the library of every cultivated American. With Prof. Hedge's "Prose Writers of Germany," Prof. Longfellow's "Poets of Europe," and this volume, the purchaser will obtain a most excellent survey of the literature of America and Europe, a condensed library in three portable volumes.

"The supplement now furnished atones for some of the original omissions. . . . It is a book of more than ordinary value, and one, we are happy to find, reproduced in so attractive a style."—*North American and U. S. Gazette, Phila.*

"A book that can be cordially recommended for its sterling qualities and the handsome style in which it has been gotten up. It will be cordially welcomed by a multitude of readers."—*Evening Telegraph, Phila.*

HURD & HOUGHTON,

13 ASTOR PLACE, NEW YORK,

THE RIVERSIDE PRESS, CAMBRIDGE, MASS.,

WILL PUBLISH THIS WEEK:

1. A HANDBOOK OF LEGENDARY AND MYTHOLOGICAL ART. By Clara Erskine Clement, author of "A Simple Story of the Orient." Fully Illustrated. In 1 vol. crown 8vo, price $3 25.

This book gives in alphabetical order brief and intelligent statements, without comment, of those myths and legends which have grown up about classical and Christian life, with special reference to their representation in art. The symbols employed in art are also explained, and the legends of places, the Rhine, Baden, etc., have been narrated.

2. FROM FOURTEEN TO FOURSCORE. A Novel. By Mrs. S. W. Jewett. In 1 vol. 12mo, price $1 50.

A quiet novel of domestic life, with careful delineation of character and a shrewd insight into human nature. The tone of the book is high, and there is a peculiar interest in it, growing out of the author's skilful management of that very difficult theme—a man and woman in love with one another, yet turning down different roads to marriage.

3. STORIES AND TALES. By Hans Christian Andersen. With Illustrations. In 1 vol. crown 8vo, price $2 25.

A companion volume to "Wonder Stories told for Children," in Hurd & Houghton's edition. These two volumes contain the only complete uniform collection of Andersen's famous shorter tales published in English; and this volume is made especially interesting by a long introduction by the author, giving an account of the origin of his stories.

LATELY PUBLISHED:

SUBURBAN SKETCHES. Howells. $1 75.
POEMS OF LUCRETIA M. DAVIDSON. $2 50.
SAM SHIRK. A Novel. $1 75.
THE CHILDREN'S CRUSADE. Gray. $1 75.
THE BUSHWHACKERS. Cozzens. $1 50.

*** Any of the above sent, postage paid, on receipt of prices annexed.

JUST PUBLISHED.

WALKS IN ROME.

By AUGUSTUS J. C. HARE.

2 vols. 8vo, cloth, 446 and 464 pages, price $5.

Mr. Hare's wide reading and extensive culture, and his long residence and many visits to the scenes which he describes, render him peculiarly fitted for this task. The works, coming at the present time when interest is excited on the subject, cannot fail to be interesting and instructive.

GINX'S BABY.

HIS BIRTH AND OTHER MISFORTUNES.

The SECOND American from the SIXTH London Edition.

16mo, cloth, price $1 25.

THE COUNT OF MONTE-CRISTO.

By ALEXANDRE DUMAS.

A New Edition. With Twenty Illustrations, drawn on Wood, by M. Valentin. 8vo, cloth, $3.

*** The above works are for sale by all Booksellers, or will be sent to any address, post or freight paid, on receipt of price, by the Publishers,

THE CATENA CLASSICORUM.

A SERIES OF

NEW AND EXCELLENT CLASSICAL BOOKS

FOR THE USE OF

SCHOOLS AND COLLEGES.

Edited by Members of the Universities of Oxford and Cambridge, England.

THUCYDIDES. Books I. and II. Edited by Charles Bigg, Christ Church, Oxford. 1 vol. 12mo, cloth, $2.
DEMOSTHENES. The Olynthiacs and Philippics. Edited by G. H. Heslop, Queen's College, Oxford. 1 vol. 12mo, cloth, $1 50.
ARISTOPHANES. The Acharnians and Knights. Edited by W. C. Green, King's College, Cambridge. 1 vol. 12mo, cloth, $1 50.

"For carefulness and thoroughness of editing, this series will bear comparison with the best, whether English or foreign."—*London Athenæum.*

"The excellence of the print, and the care and pains bestowed upon the general getting-up, form a marked contrast to the usual school-books of our day."—*Churchman.*

"The reputation and high standing of the editors are the best guarantees for the accuracy and scholarship of the notes."—*Westminster Review.*

"This series promises to be the most useful collection of the Classics yet furnished to the English student. The volumes are of a convenient size; the Greek type—a great point—is admirable; the arrangement luminous and simple; and the subsidiary matter of all kinds complete and abundant."—*Pall Mall Gazette.*

Other volumes of the series in preparation. Any of the above sent by mail, post-paid, on receipt of the advertised price. Teachers supplied with copies for examination for one-half the above prices.

MR. TILTON'S NEW PAPER.

[To be issued March 1.]

THE GOLDEN AGE.

A NEW WEEKLY JOURNAL EDITED BY

THEODORE TILTON,

Devoted to the Free Discussion of all Living Questions in Church, State, Society, Literature, Art, and Moral Reform.

PUBLISHED EVERY WEDNESDAY IN NEW YORK.

Price, $3 a Year, Cash in Advance.

Mr. TILTON, having retired from the *Independent* and the Brooklyn *Daily Union*, will hereafter devote his whole Editorial labors to the GOLDEN AGE.

Persons wishing to subscribe will please send their names, with the money, immediately, to

THEODORE TILTON,
P. O. Box 2848,
NEW YORK CITY.

OUR BOOKSTORE

IS THE

ONLY ONE ON THE LINE OF BROADWAY, BELOW SPRING STREET,

Where can be found a well-selected stock of the

BEST ENGLISH LITERATURE.

Business men and others located down-town who are gradually forming libraries, and seek books of permanent value, are invited to call at our store and examine our stock.

We offer liberal inducements to those who will entrust their orders to us, feeling confident we can give satisfaction. We give special attention to this department of our business, and bring to it an experience acquired during a period covering twenty-seven years in the "trade" in this city.

DE WITT C. LENT & CO.,

PUBLISHERS AND BOOKSELLERS,

451 BROOME STREET,

A few doors WEST of Broadway.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

The Nation.

NEW YORK, THURSDAY, MARCH 2, 1871.

The Week.

It is curious and interesting to see how the San Domingo affair tends to a decision on a collateral issue. The main question is and always has been whether the annexation would or would not prove advantageous to the United States. On this point there is hardly any difficulty in putting the authors of the scheme to open confusion. But Mr. Sumner raised a fearful hullabaloo in the Senate about the frightful wrong, fraud, outrage, and cruelty the annexation would prove to the black man, and on this ground they are delighted to close with him and all other opponents. The interest of Americans in the matter has been quietly pushed aside as something subordinate, and the question which is now being debated with most interest is whether the Dominicans would like to be annexed. It is to this the Commissioners have been first directing their enquiries, and they have, of course, not the least difficulty in finding thousands of Dominicans who declare that there is nothing they would like better; and the New York *Tribune* swears before high heaven that if they don't want to be annexed, they sha'n't be annexed. Mr. Wade says the same thing, and so do all the correspondents, so that the public is being gradually worked into the belief that this is the only point on which its mind is to be satisfied, and that if the Dominicans say they would as lief be American citizens as not, there is nothing for it but to naturalize them.

The point to which the attention of most intelligent men, however, will still continue to be directed, is the probable effect on American politics of the admission of such a State as Dominica must prove. On this point the correspondents—many of them unwittingly—furnish much useful information. Their accounts agree in making it plain as possible that republican government in the hands of such a community as they describe would be a wretched farce, and that the political machinery would inevitably be worked by white sharpers and adventurers and speculators from the North. The population is grossly ignorant, poor, superstitious, and indolent, and horribly afraid of the Haytians. Indeed, fear of the Haytians seems to be their principal reason for wishing to be admitted to the United States. If their account of the Haytians be true, however, we shall either have to keep constantly fighting the Haytians—and what a fearful expenditure of life this would entail, French and Spanish experience shows—or else annex Hayti also, and then we should have a nice job on our hands. South and North Carolina, and Arkansas, would be nothing to it. Considering the condition of certain grave problems now before the country at home, one can hardly help looking on the enterprise as little short of mad.

There is one touch in the reports from the island which would give the whole transaction a comic air, if anything so serious could be made to look comic. Part of the bargain is to be the assumption by the United States of the debts of the Republic. Now, those who best know what has been going on behind the scenes ever since this project of annexation was first broached, have constantly maintained that it was in this that the materials for the job were to be found. It has been alleged for months by the knowing, that it was an essential feature in the plan that an opportunity should be given to divers persons, as soon as annexation was resolved on, to bring in "claims," "certificates of indebtedness," and paper issues of the Republic, to be paid off by the United States, and that it is the expectation of this which has given the scheme most of its strength. We do not mean to insinuate that the President was or is cognizant of this, but the President is more unsuspecting than is good for himself or the country.

Accordingly, we find now that when the Commissioners ask Baez for a statement of the liabilities of his government, he cannot furnish it. He knows there is a debt, and a respectable one, but how much, or to whom due, or in what species of money, he cannot tell. He has no books of account or memoranda, or signs, or memorials—not as much as notches on a stick, or chalk-marks on a door-post. Now, there may be people who, on reading this, did not perceive what a prospect it opens up to us, but we suspect they are few in number. We must not imagine, however, that because he does not know how much the Dominican debt is, nobody knows. There are plenty of gentlemen, we may be sure, who know to a cent for what sum the American people will render themselves liable when they take possession of the island, and who have their statements of account all ready in their carpet-bags. The last argument in favor of annexation comes from Dr. Vinton, who says the American people need a sanitarium. Perhaps they do; but what about a sanitarium which cost two soldiers' lives for every consumptive provided with a mild winter? Besides which, any sanitarium bought with Government money ought to be open not only to wealthy consumptives—these can go anywhere they please—but to all consumptives. Ought the poor ones to be sent South every winter at the public expense? Is a mild climate one of the "natural rights" of delicate citizens?

Both branches of Congress have been engaged on appropriation bills during the week, and have accomplished little worth noting. The Senate passed on Friday the House Bill, amending the present law for securing the purity of elections; and, after ineffectual opposition by Mr. Conkling, the bill assigning to Philadelphia the industrial exposition that is to celebrate the nation's centennial anniversary. The South Pacific Railroad Bill, which had been amended and bettered in the House, was not accepted by the Senate; but the usual committee of conference has been agreed to. On Tuesday, the McGarrahan claim got the cold shoulder in the Senate, and in the House a bill passed removing the duty on foreign coals.

The excitement of the week has been the coal famine. The remote cause of this semi-annual trouble is the desperate effort to keep mines and railroads of a productive and carrying capacity of 20 millions fully employed on a market incapable of consuming more than 15 millions of tons. This, and this alone, is the radical cause of the trouble. To ascertain with whom lies the blame for the immediate cause of each suspension, is a thankless task. The responsibility of all suspensions alike finally rests with those who, having misguidedly invested too large a capital in a certain business, think they can interfere with the laws of nature and prevent competition from deciding who shall be obliged to withdraw his capital, and who shall be allowed to remain. If the railroad companies and mine-owners even get the better of the workingmen on this occasion, and force them to submit to terms, the question will be no nearer settlement, for then the fight between the different carrying companies will commence, and where *that* will end no one can tell. In the meantime, no one can refuse his tribute of respect to the 40,000 workingmen on strike, who, during a suspension of sixty days, have not given the least cause of complaint, and have made the mining regions as orderly, quiet, and peaceable as any portion of the United States.

The political condition of the South at the present moment is deplorable. If we take only the reports of the week, it appears that there is neither public order nor security in the States of Arkansas, Kentucky, Tennessee, Alabama, Georgia, and South Carolina. In the last-named State the point has been reached, namely, the inability of judges and sheriffs to enforce the laws, which chiefly deterred Governor Scott from sending the military into the up-country; and he has at last called upon the President for troops to aid him in repressing the or-

ganized disturbance of the peace. United States troops are also stationed at Little Rock, to prevent the bloodshed likely to flow from the mixed-up politics of Arkansas. Here we have the Democratic House conspiring to put the Lieutenant-Governor in the Governor's place, by impeaching the latter; the Supreme Court enjoining the Lieutenant-Governor from assuming power, and the Chief-Justice impeached in consequence by the House, the Senate all the while avoiding a quorum in order not to have the impeachment tried before them. In Kentucky, a murderer, whose victim was a colored man, is forcibly rescued from jail in order that he may not be convicted by negro testimony. In Tennessee, Alabama, and Georgia, colored schools are broken up, and teachers and pupils variously outraged. In short, the worst days of mob violence at the South are recalled, if not surpassed. If the lawlessness were concentrated, it would be easy to deal with it, but it covers a vast and thinly-settled territory, difficult to police, and impossible to hold without a numerous body of troops. In spite of the Congressional investigations now proceeding, we doubt if the Government will undertake to garrison the South anew. It is perhaps better that the outrages should continue till the necessity of ending them unites the decent and respectable citizens of each State, without regard to party, in a last effort to make life tolerable and property safe among them.

Business continues to improve, but scarcely in proportion to the reasonable anticipations of the season. The reduced railroad freights have led to increased purchases of almost all descriptions of goods for interior trade, and although the markets are more lively, there is great complaint of the low prices. The iron-men have for some time past been, as they declare, doing a losing trade, though the coal suspension has helped them wonderfully; the coal suspension itself was mainly caused by the steady decline in price; the copper-smelters have for months been applying Wall Street manœuvres to their markets, in hopes of preventing the inevitable fall; and the spike and nail manufacturers have just been in session in Philadelphia devising means to keep up prices. The receipts of cotton have at last begun to fall off, as was to be expected, but they continue large, while the shipments of the week equal the heaviest of ante-war times. In spite of a moderate and continued decline, the European markets continue active and sound, and Lancashire is unwontedly prosperous, and is evidently not seriously alarmed at the cotton goods coming back unsold from China and the East. Breadstuffs and meats have been lower, but the export has been active, though the figures are again missing, the last "Murphy man" in the Statistical Bureau of the Custom-House not being "up" in a dition, though otherwise sound.

The extreme ease in money, owing to the general dulness of business, has favored another sharp advance in stocks, in which the public seems disposed to participate more largely than they have done of late. Mr. Boutwell's programme for March favors the movement. He proposes to increase his sales of gold and his purchases of bonds, a move in the right direction, as far as lowering his excessive balances is concerned. It is to be feared, however, that his object is to influence prices and facilitate his funding scheme, in which case the result is doubtful. The Secretary has certainly made a good selection for his principal European agents, among whom the Rothschilds and Barings figure prominently. The Alabama Legislature has authorized the payment of the interest on the bonds on which the Alabama and Chattanooga Railroad made default last January; and, regardless of the warning, the State of Louisiana has just authorized the issue of about eight millions of her bonds, mainly to aid in local improvements, the result of which may be foreseen. Government bonds have materially advanced, and gold has slightly declined.

The Methodists are at last engaged in doing what they ought to have done a year and a half ago—selecting accountants to examine and report upon the affairs of the Book Concern. It is reported, however, that the committee charged with the duty find it very difficult to agree upon anybody, and at this writing have not succeeded in doing so, though the city abounds in this class of experts. We trust they are not going to adopt the Congressional mode of dealing with the Civil Service—that is, agree that an accountant ought to be appointed, but keep doubting whether "this particular accountant" is the right man for the place. We may add that, if so, they have hit on a capital plan for preventing the investigation, far better than anything they have yet tried. "Certainly, the accounts ought to be examined, but whom will you get to do it?" is an observation that will silence the most troublesome caviller. All accountants have their faults. Some are not religious; some are not temperate; others are not chaste; and others are not skilful. In fact, it begins to look as if the affairs of the Methodist Book Concern were past human unravelling.

The President of the Michigan Agricultural College reports that the experiment of admitting women to the college has proved very successful. He says "they study botany, chemistry, horticulture, and surveying, and other branches," and make rapid progress in them. Their open-air work thus far has consisted in preparing seed for the ground, transplanting the lighter plants, trimming shrubbery, etc. This is about the most cheering news about "the condition of woman" which has reached the world for a long time, as it promises the opening to her of a new field of industry, which will swell the ranks of capable, strong-nerved women, equal either to rearing families or supporting themselves by healthy labor. Thus far the tendency of the "woman's rights movement" has been to swell the ranks of feeble orators, third-rate lecturers, and sentimental politicians, and tricky speculators. In other words, it has borne in many of its phases all the marks of unhealthiness, and has seemed to promise, if successful, an aggravation of some of the worst diseases of modern society. Two of its most prominent leaders —Woodhull & Claflin—a pair of female Wall-street speculators, were brought before the courts in this city a week ago, by a poor governess, who, in her confidence in them as "champions," had given them all her hardly-earned savings—$500—to speculate in gold with. Of course they lost it all, and the jury, believing the governess's story as to the representations by which they got her money out of her, gave her a verdict.

We have no doubt this is but a specimen of hundreds of cases of which the public hears nothing. Nothing can be worse than the effect on the vast army of unemployed and discontented women all over the country than the career of these itinerant female orators, for nothing can be better calculated to deepen the average girl's already deep distaste for labor that hardens the hands, and strengthens the back, and browns the face, than the stories which the press tell of Woodhull's stock operations, and of her gorgeous weekly paper, and of other women's large audiences, and velvet robes, and heavy gold chains. As the New York *Tribune* well says: "Women betake themselves to lecturing and writing on the hypothesis that, because they want bread and butter, they are qualified to be the world's teachers. A young man of their calibre, not fancying that idleness or discontent could anoint him with a holy chrism, would go to a trade, and become a respectable carpenter or blacksmith." We know all that may be said as to the effects of hard work in the open air in destroying woman's moral as well as physical delicacy, and there is a good deal in it; but the disease which is ravaging the female world needs heroic treatment. We need in that world now of all things sound, strong bodies and healthy brains, capable of taking a wholesome, hearty view of life and of its duties.

We cut from the marriage notices of the *Philadelphia Press* the following illustration, omitting names, of the way in which attempts to reduce human marriages to the level of those of the lower animals are dressed up in fine language:

"In Philadelphia, on February 23, ——— and ———, the parties protesting against all marriage laws, whether legal or conventional, which subject either the wife or the husband to any control or influence on the part of the other which is not in accordance with the dictates of pure and mutual love."

This is, of course, simple "pairing." Marriage means the assump-

tion by a moral agent of an obligation to perform certain duties, even after they become disagreeable. The arrangement by which the parties live together as long as they find it thoroughly pleasant, is that common among birds, beasts, and fishes, and has nothing human about it.

The preliminaries of peace between Germany and France were signed on Sunday afternoon, Feb. 26, subject to the ratification of the Bordeaux National Assembly. It seems to have taken a great deal of hard bargaining before this result, so desirable in the interest of both nations, was attained, and, according to the *Journal des Débats*, which ought to be well informed, Thiers and Favre were several times on the point of breaking off negotiations, yielding only—which need hardly be stated—"to dire necessity." The terms of the treaty are, however, in some respects at least, less harsh than anticipated by outsiders, though, certainly, hard enough almost to drive to despair the French diplomatists that had to affix their names to them. France cedes Alsace and "Metz," which latter term undoubtedly includes all of the Department of the Moselle lying east of that fortress, as well as Thionville, on the western bank of the river, and possibly some other portions of Lorraine. The Germans restore to France the Alsatian fortress of Belfort, probably with a portion, if not with the whole, of the French-speaking district around it. France pays, in three years, one thousand millions of dollars, the Germans, in the meanwhile, holding, as a guaranty, some of the fortresses occupied by them—we presume the border fortresses of Longwy, Montmédy, Sedan, and Mézières, if not also Verdun.

The peace negotiations and their final termination absorbing all interest, we have been left rather in the dark concerning the composition of the French National Assembly and the motions of the political tide in the distracted country. The little we hear is far from sufficient to justify a decided opinion concerning what France, freed of the German incubus and once more left to herself, will first undertake for her self-regeneration. Thiers and his associates appear to act with decision and in harmony with the majority of the Assembly, and the appointment of the Duc de Broglie as Ambassador to England may be considered an Orleanist move on his part. The Duc d'Aumale and the Prince de Joinville are reported to be in the Department of Gironde, awaiting a decision of the Assembly on the legality of their elections, and Louis Blanc, Victor Hugo, and Rochefort to contemplate a joint motion of impeachment against the ex-Emperor. In Paris, the Reds celebrated the anniversary of the proclamation of the Republic of 1848 by a disorderly manifestation on the Place de la Bastille, which terminated in an atrocious murder. Disorders of various kinds have also taken place in Marseilles, Nice, and Algeria. An outbreak was apprehended in Corsica. Much of the coming situation may hinge on the decision of the Assembly to go, or not to go, to Paris after the conclusion of peace—a removal naturally demanded by the radicals and just as naturally opposed by the clericals and other ultra-conservatives.

Of the wisdom of putting Thiers at the head of the Provisional Government there can be no doubt. He is the ablest, shrewdest, most experienced, and most trusted politician France now has. There is all the more fitness, too, in his selection, since he, more than any other man, is responsible both for the rise of the Empire and for its downfall. He nourished and spread, through his writings, the Napoleonic legend which made Louis Napoleon's success possible; and he preached more fervently than anybody the detestable doctrine that French greatness and prosperity needed the division and humiliation of the neighboring nations, which finally drove the unfortunate Emperor to his doom. Considering what his career has been, and of what a number of antiquated and immoral and absurd ideas he has in his time been the apostle, it is amusing to see him cited as a protectionist authority by the New York *Tribune*. He is probably better able to shoulder the responsibility of a humiliating peace than any other Frenchman, particularly as he has not long to live; but he has a task before him which might fairly appall a man in his prime. He will probably stave off decision as to the form of government as long as possible, the Reds all the while growing more furious and impatient. Should the Republic be set up, the Government will have to surround itself with strong guarantees in the interest of order—or, in other words, will have to "betray the people." Should a monarchy be set up, there is Rochefort's delightful paper, *Le Mot d'Ordre*, preaching regicide. Whichever way one looks, there is a prospect of "lively times"; but it is quite certain that the great body of the French people desire quiet and security, and will have it at any cost, even if they have to slaughter the Reds. It would show great magnanimity on the part of the Germans not to enter Paris, but when one reflects on the character of the gentlemen whose feelings would be most hurt by it, one feels that most of the preaching against it is a little superfine.

If the Cabinet programme published in the official journal of Vienna contains a candid statement of aims and intentions, the meaning of the late ministerial change in Cisleithan Austria is this: Count Potocki, failing to bring about a compromise with the Czechs, has made room for a Cabinet which is determined to defend the unity and constitution of the western half of the Austro-Hungarian Empire against all Slavic opposition—Czechic, Polish, or Slovenic. The new Ministry is willing to take the initiative in extending the legitimate autonomy of the provinces as far as compatible with the interests of the whole of Cisleithania; but it is firmly resolved "not to enter upon any greater compromise with separatism at the expense of the unity of the State," nor to allow its prosperity to be endangered by "excesses of licentious party manœuvres." The principal measure it proposes to advocate in defence of unity against the encroachments of provincial separatism, is the substitution of direct elections to the Reichsrath by districts, for the present elections by the Provincial Diets, which secure the complete victory of every centrifugal nationality, in its own sphere, over the provincial minority favoring a firmer Austrian union. The programme is decided and bold in its tone, and, while promising strict constitutionalism and the extension of freedom, it threatens an unsparing use of all legal powers against factious opposition; but it remains to be seen whether a cabinet which is composed of so little known and, we might almost say, strange names as Hohenwart (Interior and Presidency), Habioninek (Justice), Holzgethan (Finance), Schäffle (Commerce), Jericek (Worship and Education), and Scholl (National Defence), can muster sufficient authority and parliamentary influence for so complete and difficult a task. Hungary, of course, has nothing to do with all these troubles of her Cisleithan associates in the Empire, and her Andrássy Ministry is as firm now as it was at any time since its creation in 1867. It has, however, suffered a grievous loss by the death of Baron Joseph Eötvös, its most eminent member.

The Turkish difficulty is passing away with remarkable facility, thus justifying the predictions on which we ventured when it first arose. The London Conference has apparently found no difficulty in reconciling the claims of Russia with the safety of Turkey and everybody else's dignity. The possession by Turkey of a powerful fleet, including iron-clads which she did not possess in 1856, is held to constitute both a sufficient reason why the Russian war-vessels should be again admitted to the Black Sea and why Turkey should not be afraid of them. The only guarantee which is now considered necessary for Turkish safety is said to be provided by the opening of the Dardanelles and the Bosphorus to the navies of all powers except Russia. This would give them all access to the Black Sea, and thus in fact, though not in form, neutralize Russian preponderance. In addition to all this, the Conference has found Turkey more apathetic about the whole matter than any of the other co-signataries of the treaty—the result, it is said, of the strong assurances given the Government at Constantinople by the Russian Ambassador that Russia in her last move had no ulterior designs. It appears to be certain that Prince Charles will not govern the Roumanians any longer for anything they can offer him. The fact is that trying to work a parliamentary government at Bucharest is very like trying to navigate a man-of-war with a ship's company composed of a large picnic party of both sexes. Every one wants the thing to go, and thinks it would go if somebody else would only keep quiet.

"CORNERING" THE PUBLIC.

The coal strike is useful in one way, at least, and that is in giving people a still clearer view than they have ever had before of the nature of the labor problem. A great city like New York threatened in time of profound peace with a total deprivation of fuel while the snow is still on the ground, is a spectacle which has rarely, if ever, been witnessed; but the more startling and impressive it is, the better. It is not generally true in politics that things must get as bad as possible before they get better, because, in the downward course, the very sentiment from which reform must come is apt to be destroyed or weakened. But it may be said, in a general way, of tendencies which are not the result of wickedness, but only of delusion or mistake, that we can only look for a change from a complete and thorough *reductio ad absurdum*. The theories which now agitate the world of labor nobody can fairly call evil. They are the result of a legitimate longing for an easier and more comfortable existence, and it is doubtful whether they can ever be upset either by repressive legislation or by declaiming against them or refuting them. The cure will probably come from an effort, on a great scale, to put them into execution, and we come every year a little nearer to seeing this effort made. The leaders of the "labor reform movement" are steadily endeavoring to make strikes universal, instead of being confined to a particular district or country, and it is quite plain that their machinery works better and better. Whenever they succeed in securing a simultaneous strike, in any particular industry, in two or three of the leading nations of the Western world, we shall have that demonstration of the real danger and impracticability of the present relations between labor and capital which the political economists have thus far in vain tried to produce.

Let us say, first of all, that the doctrine on which these coal-miners, and all other strikers on a great scale, base their action, that a body of workers owe no duty to society, but are at liberty, whenever they think they can extort a few cents more wages out of it, to throw down their tools and fold their arms, no matter what loss or suffering their idleness may cause, is a detestable and anti-social doctrine, and that the strong hold it has taken of the working-class mind is a striking illustration of the demoralization wrought by the last thirty years' cultivation of individualism, or, in other words, the war on the correlation of rights and duties which a certain class of reformers has been steadily waging. "Every man for himself, and God for us all," is, perhaps, as delusive a war-cry as ever was raised; for experience has abundantly proved that, as far as this world is concerned at all events, it is about the states in which the ties which bind a man to the community at large are most sedulously cultivated that Providence, to all appearance, most concerns itself. The Prussian has been enabled to conquer the Frenchman mainly in virtue of the greater strength and multiplicity of these ties, or, in other words, in virtue of his stronger sense of *duty*. The French "dry-rot of equality," as Mr. Wasson well called it the other day in Boston, which occupies a man's mind all his life with the degrading and malignant business of seeing that nobody else is any better off than he is, has, according to the almost unanimous testimony of intelligent observers, done more than anything else to scatter French armies like sheep before the Prussian bayonets, and convert French politicians, in the hour of supreme peril, into screeching and feeble demagogues.

But it will not do, in passing judgment on the mode in which these miners are carrying on their war against capital, to forget that it is from capital they have learnt what is worst in their policy. The business of "cornering" the public; that is, of extorting money from it by the sudden production of artificial scarcity for the benefit of one class or body, was first begun by capitalists for their own benefit, and they carried it on with the aid of legislation in nearly every civilized country for centuries, without admitting the laborers to any share in the profits, or booty, whichever one pleases to call it. The whole protective system was in its origin neither more nor less than legislation in aid of great trades-unions, and the real nature of the operation was concealed from society by the device of giving all the great industries a share of the proceeds. The manufacturers generally "cornered" the farmers pretty successfully, because they were the more intelligent class, and lived in compact bodies in the great towns, and were thus better able to act in concert; but the farmers gradually learned how to imitate them, and got laws passed helping *them* to "corner" the manufacturers.

It is only in our own day that the laborer has begun to find out that he only had derived no benefit from protection. He has nothing to sell but his labor; and the policy of nearly all governments, while pampering the capitalist, has been directed to forcing the laborer to sell his labor as cheaply as possible. As the laborer has grown in intelligence, however, and as improved means of locomotion and of intercommunication have enabled him to combine more readily, the first thing he has tried to do is to seize and turn against society the very weapons which he has seen the capitalist use. The trades-unions are but substitutes, and very imperfect ones, for the legal artillery which the laborers are in nearly every country hoping one day to have at their disposal. They serve the purpose of "cornering" the public simply till such time as the laborers are able to get hold of the legislature and give their exactions the form of law. In those countries, for instance, in which the laborers' necessities are greatest and his intelligence quickest, he makes no secret any longer of his belief that the true remedy for the evils of his condition lies in such use of the majority which he has, or will soon have, at his command, as will force the rich and well-to-do to hand over to him a larger share of the products of the year than he has fairly—that is, according to the received notions of fairness—earned. We doubt if he will much longer make any secret of it in any country.

The Pennsylvania miner, in having got possession of the source from which the seaboard States draw their supplies of fuel, feels exactly as the capitalists feel who have secured a great line of railroad communication or of an act of Congress giving them the monopoly of the sale of a particular commodity—that is, that he has got hold of a very good thing, and that he ought to make the most of it while he has it, no matter what happens to the rest of the community. In fact, in most of the great fields of trade and industry, the idea that anybody has any duties to society grows fainter and fainter. Take the case of railroads. The community, in giving a company the monopoly of certain valuable business, imposes on them a very solemn trust as regards safety, speed, and punctuality, and efficiency in the transportation of goods and passengers. The stockholders, in electing officers to manage the road, impose on them a trust of still greater delicacy and gravity towards the owners of the road. Now, we are only saying what everybody knows, when we say that few companies have more than the dimmest sense of obligation to the public, or, indeed, ever think of the roads as being anything but private property. Supposing them, however, to be simply private property, it makes the trust committed to presidents and managers all the more binding. Every man who holds the bonds or stock of a railroad has as strong claims on the officers as one human being can have on another for the care, protection, and prudent management of his interests. Bnt the notorious fact is, that within the last few years the sense of trusteeship is rapidly vanishing from the minds of the officers. The managers of our great corporations are gradually becoming mere "operators," who make it a business not to raise the value of the stock or bonds, but to make money out of the holders, by running them up and down in the market—that is, to speak plainly, by cheating the persons for whom they are trustees. The number of railroads of which it is dangerous to hold the securities unless one is in the "ring" of officials which is doing the cheating, increases yearly. The Erie road is the most prominent illustration of how the system works, but by no means the only one; and how deep the evil has gone is well shown by the fact that Fisk's predecessor or pioneer in mismanaging that corporation was a pious and wealthy church-member, who "manipulated" other people's property entrusted to his care as dexterously and impudently as any pedlar or faro-banker.

We might travel through nearly all the great industries and multiply our illustrations at every step. The enormous facilities of combination offered by the telegraph and by the concentration of dealings in a few great markets, is making "cornering" the community in one commodity or another the sole business of great bands of unscrupulous capitalists. They began by making "corners" in stock; they then made "corners" in gold and in greenbacks; and now they make "corners"

in anything in general use which they think they can get hold of for a few weeks, be it corn, or pork, or coal. It is by no means wonderful that the coal-miners, as well as other laborers, should have learned the trick, and, having learned it, should practise it, and less wonderful still that a great trades-union should be found, as at this moment in Pennsylvania, co-operating with a great capitalists' union to extort, by withholding from the community one of the necessaries of life, not what intelligence, industry, and skill would fairly bring them in the market, but what they are pleased to fix on as a desirable rate of remuneration. In the last *North American Review* will be found some account of the rapidity with which all the great lines of communication from the seaboard to the interior are passing into the hands of bodies of capitalists who have managed to emancipate themselves from all sense of trusteeship. What is passing in Pennsylvania may serve to give some idea of the kind of surprises to which the country will be treated when the great monopolist organizations, whether of laborers or capitalists, have got fairly into working order.

The remedy it is very difficult to write down on paper. The working-classes are suffering partly from the delusion that capital in the possession of rich men is not used for the benefit of labor—as if capital could be made to yield any returns without benefiting labor—and that if the trifles which rich men spend in personal luxury could be wrested from them, the workingman's condition would be improved. This delusion is strengthened and its dangers increased by the manner in which the tariff is managed by rich men, in which Congress distributes charters, subsidies, and land-grants among rich men, and by the way in which these rich men use their advantages, and the decline amongst them, as we have said, of that sense of trusteeship which is the only thing which can reconcile any community to possession by individuals of the power which large fortunes inevitably bring with them. No matter how good or well adjusted the social machinery may be, if individuals refuse to be guided by anything but their own passing inclinations or consult anything but their own selfish interests, a deadlock or general ruin must come sooner or later. No constitution and no social system can stand one year in a country in which everybody yields nothing but what the law wrings from him, and demands everything which the law allows him. This is but another way of saying that no reform is radical, and no guarantee for good government or honest trade can be considered permanent, which does not rest in character—and character is formed in schools and homes. It is there that we must look for the first radical check to the outrageous pretensions of unscrupulous laborers and unscrupulous capitalists.

THE RESULTS OF THE WAR.

Now that the Franco-Prussian war is over, it is not unreasonable to ask some of those who have busied themselves with commenting upon it and making predictions about its results, to sit down soberly and reflect upon their own sayings. We are not going to taunt those who were quite sure that the French would rise in their might and sweep the Prussians to perdition, or who would have it that the poor "professors" would be so wasted by famine and pestilence in their ridiculous attempt to take Paris, that by the spring there would hardly be enough of them left to fill the prison of Mazas, in which Trochu would, more in mercy than in anger, shut them up. Nor shall we guess at the contents of that luminous discourse on the war which the Republican Committee in Massachusetts wisely, and just in time to save the German vote, prevented the perspicacious Mr. Banks from delivering, or of those of a similar character which other philosophers were doubtless preparing when the disaster of Sedan interrupted their speculations. Over all these unpleasant passages in the history of several eminent persons we are quite willing that a kindly veil should be drawn. The wisest men may and do make mistakes in foretelling the course of military operations, just as the military commanders themselves make mistakes in conducting them.

The points to which we wish to call attention are the inferences as to the political future of Europe which many people, and amongst them many who enjoy a high reputation as political observers, have drawn from the overwhelming success achieved by the Prussian military system. Take, to begin with the most important, the prophecies, with which we are all by this time familiar, about the influence on the character of the German soldiers of the license which they have been enjoying during the last six months in unhappy France, and of that intoxication which the ease and rapidity of the German victories cannot but have wrought. True, it is said, the German army is a citizen army. The men are drawn for a short period of service from all employments and occupations. At home they are doubtless industrious, sober, law-abiding, intelligent, and, in many cases, even learned citizens. But as the war has gone on, the self-restraint and discipline which characterized them in the first month of the campaign have visibly declined, and they have declined in the ratio in which contempt for the enemy has increased. The mere habit of making "requisitions"—that is, of taking private property without payment—must diminish a man's respect for all property, and must tend to blunt his perception of the distinction between *meum* and *tuum*. It has been said even of the German judges, some of whom are in the army, that after a few months of this sort of work they cannot possibly carry back to the bench their old reverence for justice and for law. It has been said, too, of the ordinary run of German youth who fill the regular army, and of their elder brothers and fathers who fill the landwehr, that after having passed half a year in the daily perpetration of acts of violence, and in triumphal marches through conquered territory in pursuit of a flying foe whom they hate and despise, they cannot go home and settle down calmly in the dull and monotonous pursuits of peace. On these assumptions has been based a dismal view of the future of Europe. A great race, occupying the very centre of the continent and the highest position in point of training and intelligence, has suddenly learnt that it possesses vast and overwhelming strength. It has crushed almost at a blow the foremost military nation of the world. It will now devote itself exclusively to thoughts of conquest. The army will not return contentedly to civil pursuits, and the nation will not wish to have it. It will dream of fresh invasions, and occasions or excuses for attempting fresh invasions will be constantly arising. To-day it fights for "German unity," but to-morrow it will fight for a longer line of seaboard and annex Holland, or for the union of all German-speaking races under one government and annex Switzerland, and attack the Baltic provinces of Russia. In short, there will be no check on its turbulence and ambition.

Now, is all this a fair deduction either from history or principles of human nature? Did those who said that "the cause of France was the cause of human freedom" really believe that, the cause of France being lost, as it has been, the cause of human freedom would also be lost? Do they really believe that it *has* been lost by the surrender of Paris? Do they believe that Europe is now helpless at the feet of a conquering horde, and that the nation which has made the greatest advances in civilization is really going to abandon its industry and its mental culture and its aspirations after political freedom, and convert itself into a mere instrument for subjecting the civilized world to a military despotism? Of course they do not. If they did, they would, if true men, be to-day in sackcloth and ashes, mourning over the approaching return of the dark ages. The fact is, they are as good-humored and hopeful as ever, and are discussing all the events of the day with the same pleasant anticipations as if no Franco-Prussian war had ever taken place. Why, then, did they talk this way? For almost the same reason—and we do not mean to be disrespectful in saying it—that a cow lows or a dog barks: to give vent to certain feelings which oppressed them. To many men, language, like the inarticulate cries of the lower animals, is simply a means of expressing the emotions of pain or pleasure. If they like France and do not like Prussia, they express this idea by saying that Prussia will hereafter be the scourge of mankind, and will throw off all restraints of law and morality. They do not believe this really, but saying it gives them a certain relief, and, the feeling which prompted it having passed away, they contemplate Prussian success with as much calm and as much confidence in the future as anybody.

When we come to look for any basis of fact for these assumptions, we make some curious and instructive discoveries. We are told that the German citizen army will never return quietly to the pursuits of

peace after having tasted the fierce delights of battle and rapine. There have been two such armies as the Prussian army seen before now. One was Cromwell's New Model Army, and the other the American army, on both sides, in the rebellion. Cromwell's was, perhaps, the finest body of fighting-men the world has ever seen. It was not only never beaten, but destroyed every foe that was ever opposed to it. It crushed the famous Spanish infantry just as surely as it crushed the Irish kernes and gallowglasses, and ruled England for nearly twenty years. When it was disbanded "it was expected," says Macaulay, "that the discharged veterans would be seen begging in every street, or that they would be driven by hunger to pillage. But no such result followed. In a few months there remained not a trace that the most formidable army in the world had just been absorbed into the mass of the community. The Royalists themselves confessed that in every department of honest industry the discarded warriors prospered beyond other men; . . . that if a baker or mason or wagoner attracted notice by his diligence or sobriety, he was, in all probability, one of Cromwell's old soldiers." Of the still more wondrous absorption into the mass of the community of the armies both of the North and South, we need not speak. All our readers are familiar with that extraordinary phenomenon of an extraordinary struggle.

In estimating the effects of war on the character of soldiers as individuals, many philosophers constantly forget the fact, which appears prominently in the history of every army, that it is not so much the mode in which the war is carried on as the weakness of discipline which makes campaigning demoralizing. It is safe to say that few soldiers were ever rendered less fit for civil life, no matter how much "requisitioning" or even pillaging they may have taken part in, as long as they remained firmly under the control of their officers. This control serves the purpose which law serves in civil life. It keeps the man in constant remembrance of the idea of duty, and keeps up the habit of self-control, which lies at the basis of character. As long as military excesses even are committed under order or with the permission of a man's superiors, they no more lessen his respect for the property and persons of his neighbors in time of peace than his killing men in battle disposes him to murder. We might support this proposition in a dozen ways if it were necessary or if we had time. The subject is an interesting one, and calls attention to a corner in human character which has been rather neglected by moralists and psychologists. The most prominent fact of military history is that the disciplined soldier makes an excellent citizen, and that the armies whose discharge threatens public security and tranquillity are armies whose officers have failed to make themselves obeyed.

It is said, however, that the Prussian army differs from the Cromwellian or American army in that it is officered and controlled by a military caste. But the influence of this circumstance on the future of Germany can be best estimated by examining its influence on the past of Germany. The Prussian army has been officered by Junkers ever since the foundation of the monarchy—that is, one hundred and fifty years. During that period Prussia has had, including the campaigns of Frederic the Great, just twenty-five years of war. No other first-class power can tell the same story; and, curiously enough, the people which has been during the last eighty years most frequently engaged in the work of destruction is the very one whose army has been most democratic in its organization. In other words, the French army, with its bourgeois officers, has been engaged in about ten times as many wars during the same period as the Prussian army with its noble officers. It must be remembered, too, that although the constitution of Prussian society has within fifty years undergone a complete revolution, it offers, in connection with the constitution of the army, guarantees for peace such as the society of no other country offers. If the Junkers want war, they have, owing to the constitution of the army, to overcome obstacles in having it declared such as the officers of no other European army would meet with—that is, they have not simply to get the supplies voted and the army mobilized, but they have to stop the machinery of industry and break up nearly every household in the country. This would be more than the Junkers are equal to, even if they had to deal with a poor and ignorant agricultural population. Dealing with a highly civilized, highly educated, wealthy manufacturing community, it is almost absurd to suppose them equal to it. Future German wars, like this one, will be the expression of intense national feeling, and when they break out the Junkers will have to serve the nation faithfully and efficiently, as they have served it in the two last; and there cannot be a more striking refutation of the theory that they are or consider themselves in any sense the masters of the nation, than the extraordinary pains they take to be thorough masters of their profession. They have none of the *insouciance* of a military aristocracy. Insolent they doubtless are; but the insolence of men who work at their calling with the diligence, industry, and self-denial of poor students or poor clerks, and whose places depend on their keeping constantly in the front rank of the educated class of the country, are not men from whom a great people need fear any serious hindrance to its social or political progress. Of course, German political progress will be slow and toilsome, but, after witnessing what has come of the quick and brilliant leaps of the French towards liberty, every intelligent lover of liberty will pray God that it may be slow—if, as seems plain, it is only on a broad foundation of habit that strong and great political edifices, "cemented by reverence, cemented by law," can really be built.

STATE TAXATION.

Proofs are multiplying of the growing recognition, even among professional politicians, of the fact that Government cannot be permanently carried on in total disregard of the dicta of social and economic science. The systematic remodelling of the Illinois constitution, the similar efforts in Missouri, the Railroad Commission of Massachusetts, and now the Tax Commission of New York, whatever may be thought of their results, must be acknowledged as practical illustrations of decided progress in the right direction. The report of the New York Commissioners, recently submitted to the Legislature of the State, grapples in a spirit of practical enquiry with one of the most difficult problems of the age; and if it does not solve it, it certainly furnishes a large amount of important matter for its solution, and marks clearly and emphatically the direction in which future discussion and enquiry must inevitably run.

The object of all State taxation must be exclusively the raising of revenue. The question here is not complicated, as in the case of Federal taxation, by the seemingly irrelevant, yet practically controlling, issue of the object of the tax—the issue of protection or free-trade. It is reduced simply to the question of revenue: how the State can best obtain—justly, equitably, and economically—the necessary income to maintain its necessary expenditures.

Our State revenues are levied principally by means of a direct tax on personal property and on real estate. The tax on the former is, next to an avowed protective tariff, the worst tax which it is possible to imagine. It is equally objectionable in principle and in practice. Personal property consists, with the exception of national and State securities (the former of which are already exempt from tax), almost exclusively of active property (or the evidences of it) engaged in production—ships, railroads, machinery, banks, money, raw material, and merchandise of every description. To tax these is to swell the tax ultimately paid by the consumer by the addition of a profit, interest, and commission for every hand through which they pass before they reach the actual consumer. It has been estimated that a tax on personal property in the shape of money employed in loans is quadrupled before it is finally paid by the consumer of the article manufactured by its aid; so that one dollar levied on the manufactured article in the hands of the retailer would cost the consumer one dollar, and yield the State one dollar; while one dollar levied on a money loan to a manufacturer, while yielding the State that one dollar only, would cost the consumer of the manufactured article four dollars. But in addition to this grave objection to a tax on personal property, no human ingenuity has yet been able to invent the means of ascertaining the amount of such property owned by each citizen, while the efforts to disguise and hide it, so as to evade the tax, have been eminently and conspicuously successful. By far the largest and most valuable part of the report before us is devoted to an exposure of the inefficiency, the injustice, and the immorality of this tax, as now levied; and no thinking person can even hastily glance over it without being convinced that this tax

on personal property is a fraud and a farce, and that its abolition is one of the very first and most imperative measures calling for the action of the people of the State.

The tax on real property—houses and lands—is partly open to the same serious objection as the tax on personal property, that it is a tax on capital employed in production. But, to a very large extent, this objection is not well founded. Dwelling-houses, which form a very important part of all real estate, are certainly not employed in production. On the contrary, the tax on a dwelling-house is an almost direct tax on the consumer, to whom the rent is certainly as much a daily expenditure as his butcher's or grocer's bills; while, even when applied to farming lands and retail stores, the objection loses much of its weight from the fact that the tax on a retail store is levied almost directly on the consumer, while the product of the bulk of our farming lands enters more immediately into consumption than any other product of human industry. It is, therefore, only apparently true that a tax on real estate is a tax on capital employed in production, and should on that account be considered objectionable. But if the objection were far better founded and far more generally true, it would fade in importance before the one great fact, which will probably in all time to come make real estate the great basis of all taxation—the fact that a tax on real estate is the only tax impossible of evasion, except by corrupt collusion with the collector. A tax on real estate, honestly assessed and faithfully collected, is the most just, the safest, the simplest, and the most productive tax ever yet put into practical operation by the ingenuity of man. It is the great merit of this report that, while nowhere announcing the doctrine, it yet throughout leads to the conviction, that, in the future, real estate will inevitably be made to furnish the bulk, if not the whole, of our taxes.

But after thus rendering clear and conspicuous the nature of real estate as the basis of all future State taxation, and sweeping away the confusions and fallacies of the tax on personal property, leaving a great problem plain and intelligible to the public mind, the Commissioners, in a most unaccountable manner, proceed to confuse their work by a supposed substitute for the tax on personal property which they condemn. The Commissioners make a distinction between a tax paid by the owner and a tax paid by the tenant, and propose to collect from the latter a special tax, to take the place of the objectionable tax on personal property. But not only is it unimportant who pays the tax to the State, as it is always ultimately repaid by the occupant (except in the very rare case of unoccupied buildings), but the collection of the two kinds of taxes, ultimately paid by the same person, necessitates a double expense, a double army of assessors and collectors, and introduces either an element of uncertainty in the collection, as the occupant of a building offers no security, or else it enforces the bad principle of holding two persons for the same obligation, making one responsible for the other in case of failure, instead of placing the obligation at once upon the one who really offers the security, the owner of the building. The proposition of the Commissioners is to tax the owner of the building a percentage on its valuation, the same as now; and then, in addition to that, to tax the occupant according to an imaginary assessment on the rent he pays, as a substitute for the former tax on his personal property. It is evident that this is only a cumbrous, inconvenient, and expensive way of raising the tax rate on real estate, while disguising it from the owner under some other name.

Besides this objectionable suggestion, which does not, however, affect the main argument of the Commissioners, we find only one other serious fault in the report—the total silence of the Commission on the subject of taxes on unimproved property in cities and towns. This question is now attracting increasing attention among taxpayers, especially in the cities and suburbs, in which much real estate speculation has been going on. Large blocks of unimproved property are in many places held for a rise in the midst of other improved property, the owners of which latter are taxed for the paving, lighting, etc., of entire streets and squares, benefiting largely the value of the unimproved property, which contributes but very slightly to the expense. That there is a grave injustice here no one is disposed to doubt, although it seems difficult to suggest an adequate remedy. But it is certain that this question will shortly come up for action, and it is to be regretted that the Commissioners should not have bestowed some thought upon it.

The report, in spite of these faults, emphatically vindicates the appointment of Mr. Wells as one of the Commissioners, and encourages the hope and belief that the invaluable services of this gentleman will not be lost to the public, who have so uniformly benefited by his labors.

AN ENGLISH ART ENTERPRISE.

In the year 1861, seven artists or amateurs connected with the so-called Pre-Raphaelite movement conceived the idea of carrying artistic reform into domestic furnishing, and, in order to do so, formed themselves into a company, each contributing the sum of £25 as capital to commence operations with. They were Rossetti, Webb, Morris (the poet), Burne Jones, Madox Brown, Marshall, and Faulkner. Morris was made director, and the company entitled itself Morris & Co.

Beginning with a modest workshop in Red Lion Street, their first operations were in ornamented furniture, chiefly in painting and stamped leather, for which the members of the firm furnished the designs, being paid therefor from the fund subscribed to its full amount, so that it may really be said that they have only contributed a certain number of designs. They borrowed no money, but made their enterprise limit itself to the means in hand, and for several years allowed the profits (after paying the director's salary) to accumulate as capital.

Of the seven, two are already well known in America—Morris by his books, and Rossetti through his pictures and poems. Jones is one of the leading painters of England, both for color and poetic conception, while Madox Brown is perhaps the most accomplished master of design, in its diverse branches, in England, or, if exception must be made, it would be in favor of Rossetti alone. Webb is an architect of great ability, the others being in artistic power unknown to the public. Morris also made his *début* as a painter, and has in his designs a peculiar mediæval grace which adapts them, in a remarkable degree, to the higher ornamental work, such as stained glass.

The problem they proposed to themselves was not an easy one. It was not merely to make a paying enterprise, it was more still: to set a standard of ornamental art for the country, and quicken the sluggish, indifferent taste in England to the perception of what really good work was, in branches which the artists of reputation and influence either neglected or were ignorant of. The modern idea of absolute naturalism in ornament on one hand, and the renaissance system of ornamentation by lines and forms without meaning, are the extremes of bad designs for ornamental purposes. To draw from nature forms of beauty and tints in artistic relation, without either the wearisomeness of complete elaboration which suggests rather putting the work into a cabinet than a possible useful function, and makes the ware of Sèvres and Dresden oftener bad art than good pottery, or the fidelity of rendering which is inconsistent with the playfulness and lightness necessary to good ornamental work; and, on the other hand, to avoid the senseless invention of forms and combinations of tint which only display the designer's ingenuity in avoiding nature and all possible natural forms, was the problem which the new school (for so it may justly be termed, having to educate its workmen and the public) had before it. To give the results of the highest artistic feeling in England to household decoration was a boon which, perhaps, might have been better bestowed than on an English public; but this was the gift of the organization which, prospering, may now be found in quiet quarters in Queen's Square, Bloomsbury, with no other indication of its whereabouts than the title of the firm painted in small letters on the door-lintel. It uses no advertisements, makes no attempt at publicity, save such as the work itself makes. And this, one kind with another, reaches now the amount of £5,000 per annum average product; and the original £175 has more than tenfolded in investment, while last year it paid a dividend of £50 per share.

The first work done was in elaborately ornate furniture, with panels in stamped leather, the intervals being done in gold and color designs of simple ornamental forms. These forms, be they for the most trivial or important character, are always furnished by one of the firm, Morris himself being one of the most fertile of the number, and, indeed, this rule is followed throughout, every design of any kind being the conception of Morris, Rossetti, Burne Jones, Madox Brown, or Webb. The system of ornamentation in stamped leather, which is so admirable a feature in mediæval furniture, was well reproduced for a time, but a deterioration in

the quality of the leather furnished compelled its abandonment, and with it, to a great extent, the production of furniture, and the firm then turned its attention more to stained glass, to the manufacture of which it brought a thoughtful development of the laws of color and monumental effect. The modern practice of painting glass, with a complete ignorance of the tasteful employment of color in stained windows, has almost destroyed the value of the windows of to-day—the stainer emulating the effects (impossible to him) of the painted glass, and in the effort at chiaroscuro not only losing color in white and black, but sacrificing the light and cheerfulness of the entire work to pictorial subordination, as if a window could follow the same law as a picture in relation of its parts.

Morris & Co. at once recurred to the principles of the mediæval glass-stainers, and make the maximum of color the object of the design; and as any great brilliancy of color necessitates a great degree of light, the masses of the design in their windows are of middle tint as to light and shade, with no more approach to black than is necessary to define and relieve the forms, while the masses of color are mostly kept more or less grayed, and relieved by passages of intensity. It is in effect the principle of all good colorists, applied in its extreme of applicability to glass. This makes the difference between their glass and that of the ordinary manufacturers, that between the best art of England and the conventional work of routine workmen, as may be seen by contrasting windows of various manufacture in the Savoy Chapel, where are several windows, of which one is by Morris & Co.

In fact, in this branch of art they have done a great work for England, in the restoration of the early qualities of glass decoration with adaptation of design not less pure and yet more completely adapted to modern taste. The designs for the windows, generally by Morris or Madox Brown, are enlarged by the more intelligent of the subordinates to the size of the actual window, and pass in portions to the cutters of the glass, who cut from sheets of "pot glass" (glass which is colored throughout) or "flashed" (that which is coated with a film of colored glass only) the pieces into which the design is divided. These pieces, of all tints except yellow, then pass to the painter, who, cementing one to a plate of ground glass, which is reared between him and the light, draws the design on it in oxide of iron (the *crocus martis* of chemical phraseology), which burns on the glass in a transparent brown, deepening to black. When a yellow tint is wanted, it is got by a stain of silver and antimony, which gives from a pale primrose to deep orange, according to its strength.

In this as in all the branches of their manufacture, Morris & Co. avail themselves of the products of ordinary fabrication, the glass employed being furnished by the glass-houses, their only care being to stamp the artistic value on what they find ready to their hands.

The separate portions of the design, having left the hands of the painter and stainer, pass into the furnace, where the tints are fused into the glass, and then go to be leaded together. For this purpose, little bars of lead, drawn out like tiny H railway rails, are used, and thus, when the window is complete, each portion of the work is surrounded with a black line, a condition which seriously influences the nature of the original design, as both for facility of handling and firing, and for inexpensiveness of repairs in case of breaking, the pieces must preserve a certain limit of size, and the lines must interfere as little as possible with the effect.

Amongst the most important works in glass of Morris & Co., are the windows in a little church near Stroude, entirely by them; a St. Cecilia for St. Peter's-in-the-East; and the Savoy Chapel window already mentioned.

The cost of these windows ranges from ten to twenty-five dollars per square foot, according to the size and nature of the design. The most costly are the small windows for private houses, of which many are made. The rule of the house is never to enter into competition, or go to seek the work—in short, being artists and not mere manufacturers, their ethics are those of the craft, and their corporate practice the same as their individual.

They had at one time a business in domestic glassware, ornamental in form or color, or both, but this they have been obliged to renounce from their inability to get their designs executed by the workmen of the glass-houses in England. Before the late war, they had sent samples of models to France, whence they hope to receive their work put into shape by the superior operative skill and taste of the French workmen.

Their most important business at present, after the stained glass, is in ornamental tiles for fireplace or wall decoration. These are of all degrees of artistic dignity, from a simple design of leaf-work to figures which have all the value of original ideal work which can be given to a faithful copy. The tiles are imported with a glaze, and the designs of the company painted (by hand always) on them, after which they are re-baked. There is the plain blue emulation of the old Dutch tile, with quaint histories on each tile complete; others which require several tiles, and are accompanied by ornamental borders; others in colors, and of importance as works of art. Of these some classic designs by Burne Jones are very beautiful, and carry art as far as it can go consistently with its function as ornament. Another series of classical figures by Morris, in two tiles, each in blue monochrome, are exceedingly interesting examples of his designs.

The paper-hangings of the establishment are entirely fabricated at other manufactories, the paper being made for them by one, and the printing, after the company's designs, by another; but, in every step of the latter process, the taste of the direction is employed. These papers develop a new series of applications of ornament, in which the principle adopted seems to be that no part of the design, mechanically reproduced in such extensive iteration as must be the case here, shall be salient or *prononcé* enough to weary the eye in its perpetual recurrence, while the use of good, harmoniously-related color is especially insisted on, as well as the general rule of good ornament, that all form shall be natural, yet none imitative. The senseless and, to a good taste, irritating contrivance of scroll-work and arabesque—which modern designers consider the perfection of ornament, simply, it would seem, because it can by no possibility be anything else—bizarre and ultimately wearisome effects, are utterly avoided as well. The same rules apply to their chintzes, in which, however, as they occupy in use less space, and so repeat themselves less frequently, a greater degree of brilliancy is permitted, as the colors which in a sofa-covering only refresh the eye, when extended over the walls of a saloon weary it to disgust.

The success of Morris & Co. in employing the artistically undeveloped materials which English manufacture afforded them, availing themselves of the actually existing intelligence, and filling up the void by educating a set of workmen who can be faithfully depended on to carry out or copy an artistic conception, is certainly one of the most noteworthy instances of manufacturing enterprise of which we have any note. To have the art of the best English designers and painters all over one's house—a perpetual education of the taste—is something which, under any other shape, would be unattainable to anything less than colossal fortunes; it is now attainable by the most moderate competence.

And whatever deficiencies English art may have in other respects—in schooling and classic refinement, in method and artistic science—in design it has the greatest living masters. Amidst masses of senseless triviality and purposelessness occur instances of the most thoughtful purpose and earnest self-development; and in general, one might say that it is as superior to all other national art in its purposes and intention as inferior to any in its methods.

OUR "UPRIGHT JUDICIARY."

The Albany *Law Journal*, commenting on our recent article on "Forensic Ethics," says of our appeal to the Bar Association to try the question whether the counsel of the Erie Railroad have or have not unnecessarily and improperly dragged litigants before judges whom they have reason to believe are in corrupt relations with the Erie Ring, that "the difficulty is, it apprehends, that the *Nation*, like other newspapers, does not rest its charges and conclusions on 'facts.' It rests them on common report, which itself helped to create and circulate, and which is very apt to justify the old adage." If this be not so, it calls on the editors of the *Nation* to impeach any judge they suspect of corruption; and is pleased to add that they, the editors, "are guilty of gross dereliction of their duty in not taking measures to secure his impeachment." Now, our reply to this is, that we are taking all the measures an editor can or ought to take to secure impeachment, by trying to bring about such a state of public opinion as will prevent the trial of an impeachment by the legislature from being a farce, and by trying to rouse the lawyers, who are the only persons competent to conduct such a process as the trial of a judge for corruption, into doing their duty. It is not our business to go up to Albany and impeach a judge. Nor is it our business to supply the facts on which an impeachment should be based. It is our business to convince those whom it concerns that fair cause for enquiry exists; or, in other words, that the bench of the Supreme Court of this District has so completely lost the confidence of the public, and is the subject of such grave suspicion, that failure to investigate is a great scandal, and a great injury to morals and property. This we do to the best of our small ability.

As to the foundation of our charges and conclusions, it will be time enough to give it when the correctness of those "charges and conclusions" is seriously challenged with a view to their refutation. But if the *Law*

Journal does not know that their correctness is acknowledged by three-fourths of the bar of this district, it must have neglected one important portion of its own duties as a legal paper. Our own reasons for believing in the dishonesty of the judge whose relations with the Erie Ring have of late been the subject of most suspicion, are of a nature which raises them far above the rank of "common report," and which, if we were to publish them, would make the article on which the *Law Journal* comments wear a look of singular moderation. We shall give them whenever the proper occasion arrives; that is, when anybody who feels himself personally aggrieved by them calls for them.

We may add that it is tolerably discreditable for a professional paper to find no better work than pretending to doubt whether the charges fairly made against the New York judiciary have any foundation. Anybody who really believes they have no foundation must possess so little familiarity with what is passing in legal circles, as well as with the exact condition of the administration of justice in this district, as to make him unfit to conduct a "law journal;" anybody who does not believe it, and yet says it, lays himself open, of course, to a still graver imputation. Anybody who, in view of what has frequently passed in open court, in the presence of the bar, in this city, alleges there is no good ground for impeaching any judge now on the bench, either does not know what he is talking about, or, if he does know, deserves himself whatever punishment is due to those who encourage and connive at judicial villany.

The reproach of the *Law Journal*, that we have "turned the matter over to the Bar Association," has a silly side, on which we shall not dwell. It is about as fatuous as a sneer at a man for turning a case of theft over to the District Attorney and the Grand Jury.

THE TERMS OF PEACE.

BERLIN, February 8.

THE proclamation of the Empire and the capitulation of Paris have been received here with comparatively little enthusiasm. While the former is more a matter of sentiment, the great military achievement passed off rather quietly, for the reason that it was long anticipated, and that the news of the armistice reached Berlin, as it were, in instalments. People were angry that our victorious soldiers should not enter the conquered capital of the enemy triumphantly, and that the information, instead of coming directly, was forwarded by way of England. As to the former complaint, it is said that after the peace, in order to satisfy the troops, a great parade will be held on the Champ de Mars. But even if that were not the case, the Government could not be blamed. The condition of Paris and the spirit of its population are not yet such as to justify its occupation by our troops. If only a dozen soldiers were killed on their entry or at their quarters, the pageant of a solemn entry would have been bought at too dear a price. As regards the transmission of news, on the other hand, the dealings, or rather non-dealings, of the Government with the German press cannot be approved. Count Bismarck is a statesman who fully appreciates the power of newspapers when his interests are at stake; but, while treating foreign correspondents and editors with the greatest courtesy and distinction, he studiously shows the greatest indifference, if not contempt, for the press of his own country. In the present case, it is quite immaterial whether the foreign press is generally better informed, or whether the German newspapers have no influence on the affairs of this country. The Government should have considered that at least 100,000 families are deeply concerned in the momentous questions now pending at Versailles, and that the least it could do to show its gratitude for the valor and self-sacrificing spirit of the people should have been to spread the glad tidings of approaching peace all over the land as soon as possible. The Government press make a very lame excuse in saying that, while the negotiations were pending, they could not divulge what was a secret at that time. No intelligent man asked for anything of the kind, but only for that information which first became known here through the English papers. This want of regard has been keenly felt by all classes of this city; consequently, there was no public festivity, no illumination, no procession, nor any demonstration. Here and there a house had illuminated, the flags waved lonesome in the cold air, and the glorious end of the war passed off with less notice than the news of the smallest battle. In other German cities celebrations took place on a tolerably large scale, as at Munich, Stuttgart, Frankfort, and the Hanse towns, which already on former occasions had outdone Berlin.

Much has been said about the terms of peace which are to be imposed upon France; but the statements have all been exaggerated. I can tell you, upon good authority, that Germany neither wants a single French man-of-war nor any French colony. Our navy is to be increased by degrees and for our own wants, and we have the more time to do so as we get a large amount of money to invest in this direction. The news that Bismarck had demanded Saigon or Pondicherry has arisen from the fact that the Hanseatic merchants had petitioned the Chancellor for the first-named place as a proper coaling station and rendezvous. You are aware that the German ships almost monopolize the freight business and carrying trade between East India and the Australasian Archipelago on one side, and China and Japan on the other. It is, therefore, of great importance to our mercantile marine to have some protection in these far-off waters, which abound in pirates. But the preposterous idea of acquiring a colony on the other side of the globe never seriously occupied the minds of the leading German statesmen. In general, the time for colonies has passed, and the proposed ends can better be reached by a squadron of two or three ships stationed in the Indian or Chinese Ocean. Germany is not, and never can or will be, a naval power. Our only interest is to protect our commerce, and for that purpose our means are quite sufficient; but acquiring colonies would divide our strength and divert us from our legitimate tasks.

Bismarck has asked eight milliards of francs as indemnity from the French, but it is understood that he will not be too stiff on this point, and will eventually throw off one-half of his demand. The retention of Metz, which has been doubted by some otherwise well-informed correspondents, is a settled fact. It is even contemplated, instead of running the boundary line due north from Metz to Thionville, to run it a little to the northwest, and include the French fortress of Longwy. In this way, the southwestern boundary of Luxemburg would be protected by Germany as well as the southeastern, and thus any future attempt of France at breaking the neutrality of the Grand-Duchy would be frustrated. It is expected that Luxemburg, under Prince Henry of the Netherlands, or some other prince of the House of Nassau-Orange, will in future form an independent state of Germany. She will not be suffered to remain politically out of the Empire and to enjoy, at the same time, the commercial benefits of the Zollverein; if she wants the latter, she must come inside. All that has been said about Bismarck's designs against the old German duchy dwindles down to this alternative.

Another condition makes France comply with the German doctrine touching the immunity of private property on sea in time of war. Both powers bind themselves to co-operate in future in exempting merchant vessels from capture by the men-of-war of the belligerents in all cases where neutral ships are not liable to seizure, and in trying their best to have this reform adopted by the other powers as the fifth and supplementary article of the Paris declaration of April 16, 1856. It was first proposed to include the blockade provision (Article X. of that instrument), and have it more particularly defined; but for the sake of not endangering the first clause, Germany has for the present dropped the latter. It will be easy to effect an agreement of all European powers except England; but this agreement will be of only limited value without the assent of the greatest naval power. It remains to be seen whether the Continental statesmen will be in a condition to overcome England's opposition and to secure her acquiescence in this doctrine. As long as the *Alabama* claims are not settled, she will, of course, plead the chance of a war with the United States, and will, for this reason, if for no other, decline to become a party to the new compact. But even if England should stay outside, all European liberals will greet this much-needed improvement of the international code with delight, as marking an important progress in naval warfare.

On the whole, the conditions of the peace are moderate and mild. To spare the feelings of the French, even the word *capitulation* has been left out in the preliminaries, and all things are couched in the most considerate terms. It is quite uncommon for Prussia to be *suaviter in modo;* but in this instance she has found her interest to lie in making it agree with the *fortiter in re*. Peace, of course, is looked for as the certain result of the armistice. After the defeat of Bourbaki and the retreat of his army into Switzerland, even the most sanguine and enthusiastic admirers of Gambetta are giving up the hope of being able to renew their resistance; the more so, as their chief has lately resigned. France requires years of quiet to recover from the blows inflicted on her; and if, in the immediate future, she should lose faith in her destiny, and by degrees fall a prey to priests and usurpers, she may thank Gambetta for it.

I will conclude this letter with an historical fact, which has just been made public by M. Giskra, the former Austrian Minister of the Interior, at present a member of the Vienna Diet. In July, 1866, immediately after

the defeat of the Austrians at Königgrätz, Bismarck had his headquarters for a time at Brünn, of which city Giskra was then mayor. Bismarck proposed to him to send a trustworthy person to Vienna to facilitate the conclusion of the peace, and, for that purpose, to put the following terms: Territorial *status quo*, the boundary of the Main River for Prussia, *no* payment of indemnity for war expenses, but exclusion of French mediation from the peace negotiations. Giskra at once sent to Vienna a gentleman who enjoyed Bismarck's and his own confidence, who had, however, to wait sixteen hours at the capital before he was admitted, and was even then coolly sent off with an evasive answer. Having returned to Brünn, he hastened at once to Nikolsburg (the famous castle in its neighborhood), and found the French minister Benedetti, who had just arrived, with Bismarck. "You have come one hour too late," was the answer given to Giskra's confidant. Thus, Austria had afterwards to pay thirty millions of florins indemnity for having sought the French mediation.

This story, which bears all the evidence of truth, has created a deep sensation all over Austria, and is especially welcomed by her German population. They wish for nothing better than for a close alliance with the new German Empire. "We want to secure peace for ourselves, and to pay off our debt," they say; "and can best effect this by entering into friendly relations with our powerful neighbor. If Austria and Germany be united, there will no longer be any need of manufacturing new arms or increasing the strength of the standing armies; and even if, at some future day, Russia and France should ally themselves against us, they will then not be strong enough to defeat the German powers." If the signs of the times do not fail, the sympathies already existing between Austria and Germany will soon ripen into an alliance, which the leading men of both countries are trying to bring about.

In a few weeks, if not days, you will hear of a new crisis in the Danubian Principalities; but it will pass without any danger to the tranquillity of Europe. Prince Charles of Hohenzollern will take to flight from Bucharest, as he cannot master his unruly, semi-civilized, or entirely barbarous Boyards. In a letter addressed to Berthold Auerbach, the well-known author and poet, he has announced his intention of leaving the country. It is quite unusual for princes to make literary men their confidants and publishers of state secrets, and a still more novel occurrence for them to give timely notice of the plans which they will carry out if their ungrateful subjects do not hold them back. From what I know of the populations near the mouth of the Danube, Prince Charles of Roumania is too good and honest for them, and, on the other hand, is not strong and energetic enough for ruling and domineering over them. A man with an iron rod—a *sabreur*—would be of much greater use in those regions. It is, however, a sign of the times that the King of Prussia, evidently to please Austria, is going to drop his namesake. You will remember that in 1866 Bismarck exported the Prince to Bucharest for the express purpose of eventually troubling and harassing the Austrian Empire from the rear. Now, poor Charles's occupation is gone; but it is at times a great blessing and advantage for the head of a royal family to have a full assortment of second-hand cousins on the shelf. If they did not exist, they would have to be invented.

Correspondence.

WEST POINT AND ITS WANTS.

To the Editor of the Nation:

Sir: I have read in Thursday's (Feb. 16) *Nation* the letter headed "West Point," signed "B.," with your short comment.

The "root of the evil" at West Point, as it is the root of nearly all our public evils, is the interference of the nation's legislators with the nation's Executive. This is the tap-root, and until it is eradicated the plant that is nourished from it, and now, like the deadly upas, has overshadowed the land, and is poisoning all within the reach of its infection, must grow and grow until the nation, in its despair, rises up against its intolerable burthen as one man.

No competitive examinations, as "B." proposes, for admission into this national school, however well devised; no care in the selection of its pupils, however guarded, will have a feather's weight of good, until members of Congress will consent to forego a custom to which they have no legal right—that of virtually appointing to cadet vacancies happening in their districts. Here is the source of bad appointments, made, in most cases, as payment for local political services. Here is the source of the disgraceful selling of these appointments for money. Here is the temptation to which some have, it is said, yielded, of keeping these appointments in abeyance, to the latest moment, before making them, when on the eve of a re-election, as a bait to many expectant voters. Here is the source from which flows back upon the school its rejected, unworthy members, whatever their causes of rejection, want of brains, lying, thieving, or conduct however otherwise prejudicial to the usefulness of the school. Here is the source from which flows the unmeasured vituperation which was poured out but a few days ago in the House upon one of the most distinguished officers, conscientious man and honorable gentleman, by a member of that body, who added to his indecent attack the grossest ignorance upon what he was speaking about, and all because the cadet from his district had been dismissed for gross deficiency in his studies.

Supposing the reform your correspondent "B." proposes, or any other one that it might be well to make at West Point, was adopted, *cui bono?* Would it abate one whit this overshadowing abuse? No; and for the reason that, so long as the discipline can be interfered with by members of Congress, just so long will those who have by misconduct become amenable to its requirements snap their fingers in the face of authority, knowing that there is a power behind the throne greater than the throne itself.

No law even can be passed affording some check to this evil which will not be abrogated. Such a check was tried in a law passed in 1861, by which a cadet declared deficient in his studies, and therefore discharged from the school, should not be restored except upon the recommendation of the faculty. What was the result? But a few years back, the law was repealed at the instance of the chairman of the Military Committee of the House. During the discussion of the motion, the question was asked of the mover, by the then leading member, the late Thaddeus Stevens, whether, if the law were repealed, he could send back to the school one of his constituents who had been dismissed from it. On the answer that he could, he replied: "Then I will vote for its repeal."

Of two of our war secretaries, one personally opposed the passage of this law; another practically ignored it, and, when he found he could not get round it, favored its repeal. The reason for such action was patent. It took from them one source of little favors to political friends.

What can be done in such a state of things? There is but one remedy for this, as for the abuses in the appointments in our civil service. Let the people say to their representatives: This is *our* Government, instituted for our benefit, and not for *your* individual interests; these are *our* employees to look after our affairs, and not *your* pensioners for services rendered in electing you to legislate in our behalf. On a certain occasion, Mr. A. T. Stewart, whom to name is to call up the thought of the true principles of business personified, enquired of a person acquainted with the school at West Point how a youth there, for whom he had procured his appointment, was doing. The reply was to the effect that he was rather negligent of his duties. "Why don't they discharge him, then?" was his prompt rejoinder; "I keep no man in my employment who neglects his business." It is needless to ask why this was Mr. Stewart's rule. Where would he, or any business man, find himself who adopts any other?

No; "the root of the evil" at West Point is not to be cured by competitive examinations, nor by any such expedients as "B." proposes. These are very good things in their way; but West Point, in the future, can get along very well without them, as it has in the past. The record of her graduates is proof of this. In every walk of life for which its peculiar training has fitted them, they have filled their places, as a rule, more than creditably. She has given a Totten and Thayer to the country, than whom, as military engineers, no other country can produce their superiors. She has given to it her Dallas Bache, the late superintendent of the Coast Survey, who had not his superior in his special walk. She gave a Whistler and Brown to the Russian Government, from 1842 to 1854, who were the pioneers of her system of railroads. She has given a Grant, a Sherman, a Sheridan, a Meade, and a George H. Thomas, whom to name is to call up the grateful feelings of every loyal heart. She has given to our civil colleges many of their best scientific teachers. She has been the pioneer of the exact sciences and of their applications in our civil colleges and in the prosecution of our public civil works. These are but some of her services to the country, done without the aid of any special examinations or selections, and in spite of the abuses fostered by our legislators.

Would I then proscribe such expedients as "B." proposes? Not at all. I only would not present them as a panacea, for they will not go to the root of the evil. Our great evil is the parcelling out of appointments by districts, and virtually giving members of Congress the control of these for electioneering purposes. Break up this unconstitutional custom, keep

our legislators to their duties under the Constitution, and the Executive to his; apportion the cadet appointments, if you choose, among the States, according to their Congressional representation; leave the selection of the candidates to each State, and throw upon each one the responsibility of selecting its best men, and then, I think, with a wise provision of law for the requirements of admission to West Point, we may hope to reach a result, both as to economy and as to the average ability of West Point graduates, which will leave but little to be desired.

What these requirements may be made, under a sound state of public opinion, I will state in the words of an abler pen than mine: "Give your young men a sound education in the best schools of the country till the age of seventeen or eighteen; at that age let them compete for entrance into a military college, where they will be educated for two, three, or four years, according to the requirements of the service which they are to enter; once entered into the school, the State will assist them in their education, and will enable them to commence a career." This extract gives the germ of what ought to be. It is less Procrustean than the present West Point system, which attempts to educate all of its pupils up to the same standard.

But, it may be asked, where are our schools in which this sound education can be had? To this I reply, in the words of one of the ablest of the French *savants*, himself a graduate of the famous Polytechnic School, and an army officer. He says: "The Polytechnic School, and its high standard for admission, have greatly raised the standard of education in France. Youths desirous of preparing themselves to compete for admission into the Polytechnic say to their instructors: 'The Polytechnic demands this; teach me this.'"

But some one will object, what will poor boys do? The sufficient answer to that ought to be, that the purpose for which the school at West Point was founded was not to educate poor boys, but to train competent men for the military service of the country; men who come to her, and say: You want such-and-such qualifications for those entering the military service; I offer myself; examine and try me. But such requirements as are here alluded to need never be beyond the reach of any poor boy who has the real grit in him. Look at the *personnel* of all our so-termed learned professions; look at that of every business and industrial walk in life; look at our legislators and many of our statesmen. Did their being poor boys keep them from reaching the goal they earnestly strived for?

A great school, like that of West Point, our only national school, should be kept up on a sound basis. Make it what it ought to be, a thing which, like the Polytechnic School of France, the man in the lowliest condition in life will point to with pride, as reflecting honor on his country; and thus we, the American people, sovereigns all, shall be able to say of it, as Napoleon was wont to speak of the Polytechnic: "This is the hen that lays my golden eggs." Like the man in the fable, there are those who would eviscerate our hen. Whether the result of such an experiment would be the same in this case as in the fable, we should have to wait for another big war to find out. M.

Notes.

THE principal publications of the late Wm. V. Spencer have been secured by Messrs. Lee & Shepard, Boston, and to them purchasers will go for fine editions of Mill's Works ("Dissertations and Discussions," "Examination of the Philosophy of Sir William Hamilton," and "The Positive Philosophy of Auguste Comte"), of James Martineau's "Essays," of Frances Power Cobbe's "Studies, New and Old, of Ethical and Social Subjects," and "Religious Duty," etc., etc.——A Complete Historical Account of Essenism, after Dr. Ginsburg, with editorial comments "on the particular indebtedness of primitive Christianity, and on the relation of Jesus, to this remarkable Jewish sect," will be contained in the April number of Mr. Towne's *Examiner* (Chicago).——The Quarterly *Record* of the New York Genealogical and Biographical Society began in January its second volume, and is increased in size to forty-eight pages, indicative of a healthy support. It contains much interesting matter, and a very full index of names for the last volume. We take from it the announcement of a new "Dictionary of American Biography," by Francis S. Drake, whose opportunities for the work are perhaps unsurpassed. The manuscript is complete, and will make a volume of 1,000 large octavo pages, to be sold to subscribers for $6. Lee & Shepard are the publishers.——We gave last year a list of libraries in this country possessing the photozincographic reproduction of Domesday Book. The Boston Athenæum may now be added.——Among English books lately published, republication of the following is announced—by Messrs. Appleton: A. B. Mitford's "Tales of Old Japan," and Buckle's "Miscellaneous and Posthumous Works;" by Messrs. Harper: "Memoirs of the Life and Times of Henry, Lord Brougham;" by Messrs. Lippincott & Co.: Emanuel Deutsch's "Talmud," and Hübner's "Pope Sixtus V."——Messrs. Little, Brown & Co. complete with Vol. XI. their edition of the "House of Lords Cases," and begin with Vol. I. "Macnaghten and Gordon's Reports (English Chancery)." It is of general interest to know that Ray's "Medical Jurisprudence of Insanity" has reached a fifth edition.——Harper & Brothers announce the "Apple Culturist," by S. E. Todd; "Bred in the Bone," by the author of "Gwendoline's Harvest;" and "Daisy Nichol," a novel by Lady Hardy.——After an absence in Grand Street of nearly three years, Messrs. D. Appleton & Co. reappear on Broadway, at Nos. 549 and 551, which is still a down-town location, though higher up than has yet been reached by this firm, which seems loath to follow the general course of business towards the upper end of the island. Their new premises are very commodious, and conspicuous among the other buildings on the street.——Messrs. Porter & Coates assume with the March number the publication of the *Penn Monthly*, a magazine of scarcely more than local reputation as yet, and which perhaps has not merited a purely literary distinction, but has, nevertheless, in the field of political and social science, served the useful purpose of a quarterly, in publishing articles of positive and permanent value which could not have found a place in the leading monthlies. The same house will publish immediately "Heavenward Led; or, The Two Bequests," a novel by Jane R. Sommers.——Messrs. Lindsay & Blakiston, Philadelphia, announce a number of medical works, of which the following may have some value for laymen: Marshall's "Physiological Diagrams" (nine maps), and "Dental Pathology and Therapeutics."——Messrs. Hurd & Houghton have in press: "Wake Robin," by John Burroughs, well known and deservedly esteemed for his articles on the feathered tribe in the *Atlantic Monthly*; "Admetus, and Other Poems," by Emma Lazarus, a second venture by this lady; "Fireside Science," popular scientific essays by Dr. James R. Nichols, editor of the Boston *Journal of Chemistry*; and two juveniles: "The Judge's Pets," by E. Johnson; and "Four and What they Did," by Mrs. Helen C. Weeks. They will also republish in this country "Culture and Religion in Some of their Relations," by J. C. Shairp.——The Proceedings of the American Philological Association, at Rochester, last July, have been published in pamphlet form, and we find there the announcement that the third annual meeting of this association will be held in New Haven, on Tuesday, July 25, 1871. Persons intending to be present are requested to notify (not later than July 1) Mr. A. Van Name, the secretary of the local committee at New Haven, and those meaning to read papers to send as early a notice as convenient to the secretary of the association, Prof. G. F. Comfort, care of Harper & Brothers, New York City.——Messrs. E. H. Butler & Co. will have completed in April "Mitchell's New Outline Maps," large series (55 by 63). For the set of seven, with key, the price will be $20.

—The *Academy*, which has hitherto been a monthly "record of literature, learning, science, and art," has become since Jan. 15 a fortnightly publication, and is to be enlarged by the following new departments: Painting, in charge of Mr. W. B. Scott; Architecture, Mr. William Morris, the poet; Music, Mr. John Hullah and Dr. Franz Hüffer; Travels, Mr. Alfred R. Wallace; Old English, etc., Rev. W. W. Skeat and Mr. Henry Sweet; Works of Fiction, Mr. H. Lawrenny. Messrs. B. Westermann & Co., 471 Broadway, are the American agents for the *Academy*, of which the subscription price is $4 per annum. As its contributors invariably sign their names to their productions, it is unnecessary to praise this journal to any one who has been in the habit of seeing it. In attempting to embrace the whole circle of knowledge—or perhaps we should say, of literature—it has exposed itself to the criticism of being too brief in its principal articles, and some of its reviews have certainly been noticeable for rather grazing a subject than going to the bottom of it, especially when the subject was a book. Latterly, however, so far as our observation has gone, long articles have not been wanting, and the extent of some has even led us to criticise the editorial perspective from a different point of view. All this, it must be said, applies to the first and necessarily experimental year of the *Academy*, which has meantime displayed a very high order of scholarship, and given great promise for the future. More nearly resembling the *Athenæum* than any other of the English weeklies, it surpasses it in authority, and can say for itself as probably no other publication of the kind can: "Readers are reminded that the men-

tion of new books, articles, etc., in our lists is intended as a guarantee of their importance." And it has also the merit of perfect impartiality in its surveys of whatever branch of knowledge or speculation. For having, indeed, applied this rule to religion—offering "no opinion as to the truth or falsehood of religious belief, or of any form of it"—the *Academy* was relinquished by Mr. John Murray, the original publisher, to Messrs. Williams & Norgate, who now issue it. Finally, a distinctive feature of this journal is the summary which follows the contributed articles in each department, and embraces news, references to and abstracts of important articles in periodicals, contents of the same, with brief comments, etc., etc., and lists of new books pertaining to the subject in question.

—Every one who has consulted the war-maps of the past eight months must frequently have wished for a simple and accurate method of ascertaining distances by river, highway, or railroad. The compass answers tolerably for the measure of straight lines, but is tedious and untrustworthy for curvilinear measurements. More than a year ago, however, there was patented in this country a little instrument of great value in the making as well as the studying of maps, and for a variety of other purposes. The inventor is Hermann von Schlagintweit-Sakünlünski, the celebrated traveller in High Asia, where, in fact, he tested to his great satisfaction the contrivance in question. This is called a "Scalenrädchen" (*molette métrique*, or revolving scale), and consists of a little wheel whose circumference equals three centimetres, and is divided off by raised points into half-centimetres. This revolves at the end of a short metal standard, and every complete revolution is signalled by the click of a steel point on the disk coming in contact with a watch-spring conveniently situated. The effect of rolling this forward is to make on paper a line whose extension is ascertained either by counting the number of clicks or the number of points which subdivides it—any fraction being measured by a half-centimetre scale inserted in the upper end of the standard. In ascertaining distances on a map, it is only necessary to compare the scale on which it is drawn with the circumference of the wheel to calculate without difficulty the space overrun. This, as already intimated, may be either straight or crooked; the wheel will follow it. Other applications will probably suggest themselves to architects and draughtsmen generally. Mathematicians and geometers might also employ the "Revolving Scale" to advantage, and travellers and explorers must find it well-nigh indispensable. The instrument is beautifully made, and, scarcely exceeding a pipe-stem in thickness, can be carried in the pocket or even on the watch-guard.

—The interest taken in the Roman question is marked by the appearance of a new edition of Story's "Roba di Roma," and of two new books—one by Robt. Burn, "Rome and the Campagna," a work of much pretension; and another by A. J. C. Hare, "Walks in Rome," a hand-book for the city and immediate vicinity, compact and complete in its information, and by far the most valuable of its class. There is in the latter no claim to originality in research; and, if any one should make such at this date, he might be, without much question, put down as merely a pretender. But it is to be hoped that the freedom of Rome will permit researches which have never been allowed by the ecclesiastical government. Years ago, enormous sums were offered and refused for permission to excavate that curious excrescence, the Monte dei Testacci, the depository of broken pots of Rome since the rape of the Sabine women; but the erection of the cross at the top saved it from the desecration of archæology. The bed of the Tiber, too, is known to have been at great crises the depository of the treasures of the city, and great efforts have been made to obtain the dredging of it, with the same ill luck. The treasures, pecuniary and historical, hidden there, may be incalculable, but the *non possumus* of Roman sleep keeps them in their bed too. Should the new régime decide to deepen the Tiber, a measure indicated as desirable by the recent flood, we may hope that Rome will become anew the centre of archæological interest.

—Sir Edwin Landseer has been dangerously ill, but is reported better. His death would be a financial event in England, from the quantity of his pictures and the consequent rise in their prices; for the death of a painter of position in England is the signal for the apotheosis of his pictures. So it will prove with the late Zamacoïs, most of whose pictures are probably now in the hands of dealers. His death, however, does not entail on art the loss of a future. He had a line whose limitations are soon reached. The purchase of the Esterhazy collection by the Hungarian Government may be regarded as an example of the conscious *noblesse oblige* in matters of art; for art, or enthusiasm for art, in Hungary can hardly be said to exist. It looks as if Pesth hoped to be a capital city. Dante Rossetti is about finishing a picture which, from its size and importance, will mark an epoch in English art. It is the most important work yet produced by any of the school of which Rossetti is chief, and from his favorite field, the Vita Nuova, and represents the vision of Dante on the night of Beatrice's death. Rossetti is now forty-two, and in the prime of his powers; and this picture, which will probably be the first exhibited work of his since the first two years of his Pre-Raphaelite reform, will certainly produce a great effect, and, in the opinion of those who have seen it (very few, as yet), prove him the first painter of England—his admirers believe, of the age.

—The production of a successful comedy at Athens, by an Athenian, looks like a movement in Greek literature; but it remains to be seen if anything Greek is in it but the language. The Athenians are quick, and know good work from bad; but the national tendencies to dramatic productions have hitherto been mostly in the way of melodramatic incidents of the War of Independence, and for lighter matter—mere stories—the inexhaustible mines of translation have been worked. There is an utter want, to this day, of literature for the common comprehension; and not a single book exists in the Greek language which can be comprehended by a child, or by a countryman who can merely read and write. Yet schools are abundant and well supported.

—In Baron Joseph Eötvös, who died in Pesth in the first week of last month, at the age of fifty-seven, Hungary has not only lost the greatest prose writer she ever had, but also one of her noblest statesmen and parliamentary leaders. As an author, he is one of the few Hungarians whose works have become widely known beyond the limits of their country. His masterpiece, "A Falu Jegyzője" ("The Village Notary"), a novel in which charming pictures of real life and most touching scenes alternate with pages of the keenest satire directed against political abuses, and which greatly contributed to the almost complete overthrow of the feudal institutions of his country in 1848, is alone sufficient to secure him immortality. The "Carthausi" ("Carthusian"), however, his earliest production in the same field, and the historical novel, "Magyarország 1514-ben" ("Hungary in 1514"), are hardly inferior in merit; while his great study, "Der Einfluss der Ideen des neunzehnten Jahrhunderts auf Staat und Gesellschaft," published simultaneously in German and Hungarian, and a number of minor works on special reform questions, place him in the foremost rank of political writers. Nor was he less successful as a journalist and orator. Vieing with Count Louis Batthyanyi in the leadership of the liberal opposition in the Upper House of the Hungarian Diet before the revolution of 1848, he at the same time, as a publicist, both defended and opposed Louis Kossuth, and subsequently became the colleague of both, as Minister of Public Instruction, in the Cabinet of which they were the leading members. Shortly after the outbreak of the war, however, he resigned his position, and withdrew to Munich, where he was engaged in literary labors. After his return to his country, he was active in promoting its literary revival, aided by two distinguished friends, the historian Szalay and the publicist Csengery. On the final restoration of the Hungarian constitution, early in 1867, he became, in his former capacity of Minister of Public Instruction, a member of the Andrássy Cabinet, remaining till his death its strongest support, after Deák.

—How near we are to unbroken telegraphic communication with all the northern hemisphere and even with the southern, is hardly realized by the public. The 31st of December, 1870, saw the successful completion of a telegraphic line 2,400 miles in length, connecting with Europe and this country three of the principal ports in Southern Asia, Penang, Singapore, and Batavia. The last section, which connected the first-named port with Madras, was commenced on the 17th of December, and the last splice which "consummated the marriage of the two ports," as a local journal phrases it, was committed to the deep at sunset on New Year's eve—just six hours within the contract time. This extension is, however, but a small part of the project, now in course of accomplishment, to connect Shanghai on the one hand, and Australia on the other, with Singapore, and so with London and New York. The first section of the cable to be laid between Singapore and Hongkong (whether *via* Saigon or not is to be determined at the former port according to the results of the pending struggle between France and Prussia) has already been despatched, and will probably arrive out about May next. Of the section between Hongkong and Shanghai, 250 miles had, by the latest advices, been submerged, and the steamer *Celia* was *en route* for the terminal buoy to splice and continue laying the cable. The two leading ports of China, Shanghai, and, through Hongkong, Canton, will thus by June next be in-

cluded within the vast system whose ramifications are now spread over a lineal distance of more than thirty thousand miles. Should no accident intervene, the close of 1871 will probably witness the accomplishment of daily communication between China and New York. Other undertakings, subsidiary to the main lines just referred to, are, we learn by the India and China journals, being strongly advocated by the more far-sighted of the foreign communities in those countries. Prominent among them is that of a company representing both American and British interests, to carry a land line across Burmah and Cochin China to Saigon, and thence by submarine cable to Hongkong. Even the sluggish Philippines are waking up, and some resident of Manila who is evidently in advance of his age is warmly advocating the formation of a local company to bring that flourishing but out-of-the-way capital into connection with Singapore. The Dutch, who have heartily seconded the Australian cable scheme, are busily carrying out their portion of the undertaking by connecting Batavia with the northern terminus of the Carpentaria line. Asia is, in fact, at this moment the great theatre of practical telegraphic enterprise; and we venture to remind the "American and East India Telegraph Company" and the "American and Pacific Telegraph Company" that they are in danger of being anticipated by their rivals, who have already forestalled them on the Asiatic coast. If a Pacific cable is to be laid (and those best qualified to judge are emphatic in their assurances of the certain profits, commercial and political, to be derived from it), it is a pity that American enterprise should not have the laying of it.

HOLMES'S MECHANISM IN THOUGHT.*

Dr. Holmes presents himself, at the outset of his address, as one who undertakes a purely technical task—as the grave man, with lantern and hammer, who goes round when the cars stop, clinking the wheels to try if they are sound. So he, with the lantern of truth and the hammer of positive science, is going to clink some of the wheels of our intellectual machinery. It is needless to say that this severity of demeanor is in part pretence. Our brilliant poet-anatomist is not the man to pin his audience, at a literary festival, down to the tedious demonstration of dry bones. He only uses the skeleton of scientific fact to give support and expression to the wrappings of anecdote and imagery wherewith the rigid outline is rounded and softened. All this, and the literary skill with which it is done, will be readily conceived and allowed for by our readers, even without seeing the book. It may, therefore, be permissible to use it for our own purposes in a way which could be hardly justifiable in the case of the new production of a writer less universally known and appreciated, viz., to take the Doctor at his word, and, leaving out of view the literary artist and his work, to consider merely the anatomical framework of his reasoning.

Reduced to its simplest terms, the argument is this: Thought, viewed as an intellectual function, is essentially mechanical and necessary, and goes on, independently of our volition, as long as we live, just as breathing does—though we can modify it to a greater or less extent, as we can our breathing, by conscious effort. By thoughts we usually understand those ideas of which we are conscious. But our thoughts only emerge in consciousness—they do not originate there, but have their roots beneath, in the soil of nature. In this underground workshop is evolved the force which impels us, by an automatic and unperceived action, from one of our definite ideas to another. This part of the process belongs to the category of the physical forces, and has its mechanical coefficient in a molecular movement in the nervous centres, attended with waste of material, constantly repaired by the vast amount of blood sent to the brain. This is the domain of nature. We cannot directly meddle with it, and we are not accountable for it. The intellectual product, to be sure, does not belong to the category of physical force, as at present defined; nor does a given amount of molecular action in two brains represent an equivalent of thought. There may be a difference of quality imparted by a brain through which certain nutritious currents have flowed, a *vis Platonica* or a *vis Baconica* in addition to that accounted for by the series of molecular changes in the thinking organ. And there is an influence given by the will, in mental labor, as distinguished from the passive flow of thought. But mental labor, too, is attended by a greatly increased waste of material. All our thoughts, probably, take up room—certainly take up time. It is not improbable that memory is a material record, that the brain is scarred and seamed with infinitesimal hieroglyphics inscribed by the caravans of thought as they passed through year after year—thus, that memory is subject to the limitations and vicissitudes of the organ whereon they are traced. The mechanism of consciousness is certainly subject to a time-rate, and a comparatively slow one, calculated by some observers at not above forty feet in a second. "The connection between thought and the structure and condition of the brain is evidently so close that all we have to do is to study it. It is not in this direction that materialism is to be feared."

In short, the engineer, as he hits the intellectual wheel, shakes his head. There is a flaw here. It would not do to risk the burden of selfhood upon it. Fortunately there is no need, nor is there any use in alarming the passengers by pointing out the insecurity. It is upon the *moral* wheel, the power of intelligent choice between right and wrong, that our fortunes rest; and here the sound is reassuring. In our perceptions and ideas we are the slaves of fate, of outside influences; but that our will is a primary initiating cause or force we cannot, in spite of all arguments, help believing. The strongest-motive argument seems exhaustive, yet the sense that we are, to a limited extent, self-determining, although open to the accusation of fallacy, leaves a certain undischarged balance in most minds. We invoke the strong arm of the *Deus ex machinâ*, and when the doctrine of necessity is proved in terms, our reply is, *Nego quia probatum est.*

Thus Dr. Holmes's position is substantially Huxley's, that man is a machine—only a machine which is partly self-regulated; or Du Bois-Reymond's, that, were it not for the difficulties of dissection, all the processes that go on in living beings, *up to the problem of personal freedom*, would be a matter of analytical mechanics. This reservation in favor of free-will is an important one; the question is whether it can be maintained. If we have the power to determine our own conduct and character, and thereby become invested with responsibilities and rights which even the Creator is bound to respect, it must be because we have the power of raising ourselves *above* nature—not merely of combating, but of superseding and nullifying, or else of adopting and making our own, the natural impulses which would otherwise govern us. If the mind has this supernatural freedom in its practical functions, why not in its theoretical functions? Why should my ideas, any more than my actions, be the slaves of chance impressions made upon my nervous system? It is said, the freedom of the will is an experimental fact; we feel that the will must have this supernatural power of absolutely originating or creating, because without it the will cannot be what it is, but must be a mere illusion. But so knowledge, if it be really knowledge, must acquaint us with things as they really are and necessarily seem to all intelligences which are capable of comprehending them. Knowledge which is only relative to us, is not knowledge, but illusion. Knowledge, if it be a reality, goes as far beyond the dints on the brain as will goes beyond physiological reaction. The two stand or fall together, with the possibility in man of raising himself above his ordinary self and the haps and mishaps that befall it. If we deny this possibility to the intellect, there seems to be no ground for granting it to the will. The experimental fact in either case is the same, viz., self-consciousness; and it is as hard to give a mechanical explanation of self-conscious perception as it is of self-conscious action. If the brain is a physical apparatus, only of extraordinary complexity and delicacy, and if knowledge means only sensations somehow agreed upon, it will be natural to consider the will as a name for impulses which have somehow become habitual. That either should be accompanied by a sensation of personal effort, which we feel called upon to make, and which seems efficacious, is a psychological fact, which may or may not be capable of explanation, but at any rate cannot affect the scientific conclusion.

On the other hand, if we throw overboard our logic rather than admit that moral truths and principles are merely relative to us, and that to another order of intelligences justice and mercy may mean something quite different, we may as well make the same sacrifice in behalf of intellectual truth. In both directions the difficulty which victorious analysis encounters is the same, viz., that when her work is done, and she has the parts, the constituent materials and forces in her hand, they do not make a *whole*, and yet it is just this *wholeness* that is implied in anything deserving the name of action or of knowledge. But if we start with assuming that it does not exist, we shall never find it.

* "Mechanism in Thought and Morals. An Address delivered before the Phi Beta Kappa Society of Harvard University, June 29, 1870. With Notes and Afterthoughts. By Oliver Wendell Holmes." Boston: James R. Osgood & Co. 1871.

PROCTOR'S OTHER WORLDS THAN OURS.*

In this interesting little book, the latest discoveries in astronomy and physics are applied to the partial solution of a question which is neither so hopelessly insoluble nor so unimportant to science as some writers affect to consider it. That we should ever become enabled to pronounce upon the habitability of worlds other than our own may indeed seem incredible to persons unacquainted with the actual state of our knowledge of the solar system, just as uneducated persons find it difficult to realize that we can measure and weigh the heavenly bodies, and even ascertain to some extent the chemical elements which exist upon their surfaces. Indeed, so long as we knew nothing at all about the physical condition of our neighbor planets, and were reduced to the vague guesses that God might have peopled this or that world with creatures very different from those which inhabit the earth—salamanders able to support furnace-heat, and ice-maidens capable of dwelling amid frozen carbonic acid—so long as our knowledge was in this chaotic state, the question of the plurality of worlds might well have been condemned as lying quite outside the pale of science.

Now, however, we are somewhat better off. The question lies no longer on the plane of pure guess-work: it has been raised to the level of legitimate hypothesis. Now that the spectroscope has shown that the planets are all members of a common family, and composed, so far as observation has gone, of the same materials, it becomes perfectly legitimate to enquire whether the rearrangement of materials has gone on in all the planets in such a way as to admit of the existence of organisms upon their surface. When we see, for example, that our next outer neighbor, Mars, possesses continents undulating with mountain-chains and valleys, oceans made of water, polar ice-masses which increase and diminish with the changes of the seasons, and an atmosphere in which aqueous clouds are collected and dispersed; when we recollect, besides, that the inclination of his axis is such as to cause seasons like our own, and that the ellipticity of his orbit is but little greater than that of the earth's in very recent geologic epochs, we are justified in accepting, provisionally, the hypothesis that the surface of Mars is adapted to the support of organic life.

In the case of the moon, a very different conclusion may be more dogmatically maintained. The question of the present habitability of the moon's surface by anything like terrestrial organisms is at once settled by the proved fact that neither air nor water exists in any appreciable quantity upon that surface. But it is by no means a necessary inference that the moon never possessed air and water, or that air and water do not now exist there, either frozen or sunk out of sight in vast abysms. The lunar surface is now covered by extinct volcanoes, a clear proof that forces were once at work in the moon's interior which have long since been dissipated. Let us consider what would happen if the earth were by-and-by to lose by radiation so much of its proper heat as to put an end for ever to all volcanic and seismic activity. Obviously, so extensive a cooling would cause an enormous shrinkage of the earth's crust upon its retreating nucleus; and abysms would be formed large enough to contain all the air and water now resting upon the surface of our planet. Besides which, the cold would be so great as to freeze the oceans, and freeze or liquefy the atmosphere; and no matter how fierce might be the solar heat received each summer, the sun's rays would be powerless to thaw the frozen mass, from lack of a vaporous atmosphere to absorb and retain them. Such, according to Mr. Proctor, is now the condition of the moon. Its heat is clean gone—radiated off into space; and it has arrived at a state of almost complete solidity.

In Jupiter and Saturn, we find just the reverse state of affairs. On those great planets the most stupendous convulsions are going on before our eyes. The sudden changes of appearance in Jupiter's belts bear witness to the occurrence of cyclones like those observed on the surface of the sun. And the curious phenomenon known as the "square-shouldered" aspect of Saturn is a fact with like implications. Besides which, recent calculations have rendered it almost certain that both planets shine partly by light of their own. If this be the case, it follows that their atmospheres must contain substances in a state of incandescence; so that they are no better fitted than the moon for the support of anything which can, by any legitimate use of language, be brought within the category of organic life.

The moon, Mars, Jupiter, and Saturn are the only foreign planets about whose physical condition we have any satisfactory knowledge derived from direct observation. Yet, according to Mr. Proctor's results, we have here three classes of planets. There are planets, like the earth and probably Mars, which are fitted for the support of organic life; while others, as the moon, are too cold, and the third class, of which Jupiter and Saturn are examples, are too hot for life to exist upon their surfaces.

These results are just what might be expected, if we accept the theory of the nebular origin of our planetary system. If all the planets were originally gaseous, and have been for long ages losing heat by radiation, it follows that the smallest ones must now be the coldest. As a drop of tea cools more rapidly than a pint, we may expect to find small bodies, like the moon, frozen solid, while great bodies, like Saturn and Jupiter, are still boiling hot—the enormous sun being immeasurably hotter than any of his attendant planets. But why, it may be asked, is not Mars very much colder than the earth?—since it is much smaller; since, on the nebular theory, it is much older; and since it receives but four-ninths as much heat from the sun. To this we may answer, first, that Mars may be much colder than the earth, and still be warm enough to support life, so long as its summer heat is able partially to melt its polar ice-caps and keep its oceans liquid. And, secondly, we may note that, on the nebular theory, the older a planet, the hotter it must have been at the outset. When the sun's mass filled the orbit of Mars, it was necessarily much hotter than after it had shrunk to the dimensions of the earth's orbit; and the detached planet must have partaken of this higher temperature. So that Mars may be, after all, not very much colder than the earth. And, by a similar inference, we may suspect that even the distant Uranus and Neptune may not be the arctic planets which they are usually assumed to be. The old writers on this subject, who took it for granted that a planet remote from the sun must of course be colder than one near the sun, were very wide of the mark.

Among the satellites of the planets, it is quite likely that some are less inhospitable places than our own moon. The third satellite of Jupiter, and the eighth of Saturn, are as large as Mercury, and the sixth of Saturn is larger than Mars. These secondary planets have started with a vast supply of heat, and having been constantly warmed by their gigantic primaries, may possibly be still fitted for the support of life. On the sky of his third satellite, Jupiter would show an apparent disc 200 times the size of our moon's; while to any possible inhabitants of the satellite Titan, the central planet, with his great disc thirteen times as large as our moon's, and his encircling rings, must present a magnificent spectacle.

Those who have ever read the favorite speculations of theologians concerning the "plurality of worlds," will doubtless remember how strikingly the divine goodness is illustrated in the law that the remotest planets have the greatest number of satellites. This law is explicable by the nebular theory; but here, as in many cases, observes Mr. Proctor, "the scheme of the Creator is not so obvious to human reasoning as some have complacently supposed." The contrivances for lighting Saturn are by no means what they should be, according to the hypothesis. The lighting power of our moon is sixteen times greater than that of all the eight moons of Saturn combined; while if that planet were habitable, his rings would prove a terrible nuisance. In latitudes corresponding to that of New York, they cause total eclipses of the sun, which last seven years at a time. We ought to be truly thankful that our own cosy little planet has no such troublesome appendages.

The War Correspondence of the [London] *Daily News*, 1870; edited, with Notes and Comments, forming a Continuous Narrative of the War between Germany and France. With Maps. (London and New York: Macmillan & Co. 1871.)—"The special value of letters from camps and battle-fields," the preface justly states, "consists in the vividness with which they reproduce the life and spirit of the scenes and transactions in the midst of which they are written." And no less true is the further remark: "In the letters which have appeared in the *Daily News* since the Franco-Prussian war, the public has recognized this quality as present in an eminent degree." "In a most eminent degree," we are inclined to substitute for the last words, after having perused this collection of correspondences in a quiet, retrospective way, different from the eager news-hunting and result-scrutinizing perusal which we bestowed on most of them when they were first received in this country. Their intrinsic value, too, as a trustworthy record of the events of the most memorable war of the century, we can now more fully appreciate than we could as long as the accuracy of the single statements and the candor of the writers in general could naturally be doubted. Of course, the collection consists only of those contributions to the London *Daily News* which the editors' subsequent better knowledge of events did not find unworthy of republication in book-form; but, as far as our recollection allows us to judge,

* "Othe Worlds than Ours. The Plurality of Worlds Studied under the Light of Recent Scientific Researches. By Richard A. Proctor, B.A., F.R.A.S." New York: D. Appleton & Co. 1871.

comparatively few of the larger reports originally presented to the readers of that paper have been condemned as either incorrect or otherwise poor.

Be this as it may, the volume before us, consisting of letters from various unnamed correspondents with both contending armies, and of introductory and completing notices by an able but equally anonymous editor, presents a most graphic and varied, and at the same time astonishingly correct, sketch of the war, from its first mutterings in July to the simultaneous issues of the great sortie from Paris and the protracted battle before Orléans, in the first days of December. It is, it is true, neither a military nor, in any other sense, a complete history of the great struggle, but it is a comprehensive and striking picture of it, the product of keen observation, artistic delineation, and excellent grouping. The main effort of the correspondents obviously consisted in vividly and fully reproducing impressions which could not fail to be both varied and powerful, though most of them evidently lacked neither the necessary military information nor decision of judgment—witness the following from Paris (Sept. 4):

"In my opinion, the change in the form of government from an Empire to a Republic will not enable the French nation, after having lost the flower of its army, to resist the disciplined and hitherto victorious invaders. . . . I am afraid that rivers of blood must yet flow before the impulsive French people become alive to this truth. . . . They have intense belief in 'France rising in its might,' and fancy that the thousands of civilians now walking about the streets with guns in their hands will do better than the trained soldiers who have been beaten under the best generals that France could produce. And yet, when these men, whose trade is war, and who, from training and *esprit de corps*, will run risks of life which are to civilians incomprehensible, yield to stern necessity, and surrender rather than die, the deluded citizens of Paris imagine that men having no military qualities or habits at all will die to the last man on the Paris fortifications, rather than allow the serried legions of the Red Prince to parade the streets of Paris. . . ."

This is, however, a poor specimen of the style in which most of the letters are written, a style full of color and animation. Many of the letters equal in descriptive execution the finest delineations of a similar character in novels, or, say, in Carlyle's "Frederick the Great." Thus we read of the Prussian march through Lorraine:

"More than a hundred and fifty thousand men, full of confidence, flushed with victory, and splendidly organized, are about to beat up the quarters of the French. Three or four columns are marching abreast on some of the roads. Two go by the road itself, and in some cases two more move through the fields to right and left. . . . Great are the 'blocks' and crushes, tremendous the swearing at critical corners. . . . Wheels are rumbling and whips are cracking along many a road. Columns are halted to rest in some places, and there may be seen the bright bivouac fire twinkling in the fields, or long lines of horses standing silently at supper. Though many columns are halted, others are moving on. The road is still alive with military preparation. . . . It is a pretty sight to see the Lancers or Dragoons who lead the invasion trotting over hill and dale, with every nerve strained to detect the possible foe. There is an impressive force about the advance of the dusty and tired infantry—the murmur of many voices, and tramp of many feet, passing forward like a storm sighing in the woods. Even the weight and slowness of the guns has its own peculiar dignity. They are deadly weapons in charge of determined fighting men. But the innumerable columns of supply, the baggage and ammunition, the food and provender, are very prosaic, though very necessary. There are miles of hay wagons—a good omen for cavalry horses. Farther on are other miles of bread wagons, of bacon and beef wagons. Horned cattle are led along by the score to become beef in due time; clothes and equipments, medicines and blankets, are brought rumbling on into France. If the people were astonished at the earlier stages of the journey, they are now simply bewildered, beyond all power of recovery. An avalanche has fallen upon them."

The accounts of the siege of Metz, which are the fullest, particularly abound in what we might call war-sketches after nature. The description of the battle of Sedan is a masterpiece, probably well known to most of our readers. It is to be regretted that the book has received no better revision than that generally bestowed upon collections of a merely ephemeral value. Thus we find "600,000 troops" for 80,000 (p. viii.); "Seventh Corps" for Second Corps (p. 337); "Voigths" (p. 272), "Voigts Rhetz" (277), and "Voight Rhetz" (p. 413), for Voigt-Rhetz; "Mars-le Tours" for Mars-la-Tour (p. 62); "Franseyks" for Fransecky (p. 420); "Fourmichon;" "Podbrelski;" and such barbarous German as the following: *militaire zug; gefangenzug; du wunderschön stadt; Frederick Carl; in himmel.*

Love and Life in Norway. Translated from the Norwegian of Björnstjerne Björnsen, by the Hon. Augusta Bethell and Augusta Plesner. With illustrations. (New York: Cassell, Petter & Galpin. 1870.)—*The Flying Mail.* By M. Goldschmidt.—*Old Olaf.* By Magdalene Thoresen.—*The Railroad and the Churchyard.* By Björnstjerne Björnsen. Translated by Carl Larsen. (Boston: Sever, Francis & Co. 1870.)—Readers whose admiration for Björnsen, kindled by the charming story of "Arne," was perhaps a little cooled by what seemed the inferior merit of the "Fisher-Maiden," will be glad to find in "Love and Life in Norway" a work which is nearly as delightful as "Arne" itself. Of its two translators, one shared with Mr. Power in the labor of rendering "Arne" into English. That translation was an almost perfect piece of literary workmanship, in which the English-speaking reader lost none of the meaning, and wonderfully little of the beauty and vigor, of the original. Apparently Miss Plesner has not been so fortunate this time in the choice of her co-worker. The story of "Synnöre Solbakken," or, as the translators for some incomprehensible reason have renamed it, "Love and Life in Norway," is in itself so charming that nothing but the clumsiest manipulation could have made it less than attractive, and to such a charge this translation is by no means open. It lacks, however, the delicacy and finish which distinguished the joint work of Mr. Power and Miss Plesner; the poems are by no means so well rendered, and there are here and there errors in translation which look like carelessness. Passing over that on page 15, by which the word "kvaern," or mill, is translated "queen" (perhaps a proof-reader's error for "quern"), so that we read of a *queen* who grinds salt at the bottom of the sea, we have on page 48 "syglinge," saplings, translated by *weaklings*, and one rather absurd blunder is perpetrated on page 114, where Ingrid tells Synnöre that Thorbjörn lies on his back in bed, continually turning his eyes to "the little picture of St. John you once gave him," which hangs in the window. The original says that he lies with his eyes turned to the window, where "the little toy you once gave him on St. Hans's day" (midsummer-day) "hangs turning round and round." As a whole, however, the translation must be called a good one, and the story itself, for beauty and picturesqueness, hardly suffers by comparison with "Arne." Synnöre is perhaps hardly so charming as Eli Baardsdatter, and there is no scene in this book that makes so unique an impression as that in which Arne's mother displays to Eli her son's hidden treasures, and with timid maternal cunning tries to secure for him a prize that is already his without his knowing it. In this story the interest centres on the hero, Thorbjörn, whose impetuous temper, a little aggravated by the mistaken harshness of a father who still loves him passionately, is finally brought under control by the great influence which his love for Synnöre has over him. It is the way in which the story is told, and the beauty of isolated scenes, such as that in which Thorbjörn and his father come to Synnöre's parents to beg for her hand, or that in which the pair of lovers first acknowledge their passion, which make the book so charming. In the first chapter, too, the passage which describes Thorbjörn's state of mind while he is expecting his father to punish him for breaking a window, is worth quoting for its felicitous fidelity to nature:

"But Thorbjörn felt considerably smaller when Aslak was gone. He felt frightfully bad in his stomach, and his hands were so clammy, that they stuck to the book when he touched it. Oh! if only mother would not tell father when he came home! but as for begging her not to tell, that he could not bring himself to do. Everything around him looked strange, and the house-clock said 'stick, stick—stick, stick!' He must get up at the window and look over at Solbakken. This alone was unchanged, as it lay there, calm as ever, covered with snow sparkling in the sunshine, and laughing with all its windows—and certainly there was not one of them broken. The smoke curled up from the chimney-pots pertly and merrily, and he felt sure that there, too, they were cooking for the church-goers. And Synnöre? ah! she, no doubt, was looking out for her father too, and for her there would be no thrashing. He did not know what to do with himself, and suddenly became so loving to his sisters that there seemed no end to it. To Ingrid he was so kind that he gave her the shining button which Aslak had given him. She threw her arms round his neck, and he threw his arms round hers.

"'Dear, darling Ingrid, art thou angry with me?'

"'No, Thorbjörn, dear; you may throw the snow at me just as much as you like.'

"But now somebody was heard in the porch, knocking and stamping the snow off his feet. It was the father, sure enough, and he seemed gentle and kind, which made it all the worse.

"'Well!' he said, looking round, and it was wonderful that the clock did not come rattling down. The mother set out the dinner.

"'How are you getting on here?' he asked, sitting down and taking up a spoon. Thorbjörn looked at his mother till the tears came into his eyes.

"'Oh! pretty well,' she answered, but oh! so slowly! and she had a mind to say more, that he could plainly see. 'I gave Aslak leave to go out,' she added.

"'That's all well so far,' thought Thorbjörn, and took to playing with Ingrid as if he had no thought for anything else in the whole world. Surely, never before had his father been so long at dinner. Thorbjörn began at last to count every mouthful, but when he came to the fourth, he wished to see how much he could reckon up between that and the fifth mouthful, and so the account broke. At length the father

rose and went out. 'The panes! the panes!' tinkled in h ɛ ears, and he looked up to see if those in the room were unbroken. Yes, they were all whole. And now the mother also left the room. Thorbjörn took little Ingrid in his arms, and said in a voice so soft that she stared at him in amazement:

"'We two will play Gold Queen in the meadow, won't we?'

"That she would willingly do, and he began to sing, his legs trembling under him the while. . . . The play was at its height when the father came in, and fixed his eyes on the boy, who pressed Ingrid closer in his arms, and did not tumble off the chair. The father turned away and said nothing; half an hour passed, and he had still said nothing. Thorbjörn was half-inclined, and yet did not dare, to feel easy. He did not at all know what to think when at bedtime father himself helped to undress him, and again he began to tremble a little. Then the father patted his head and stroked his cheek; he had not done such a thing for ever so long; and the boy grew so warm at heart and all over him that his fears melted away like ice before the sunbeams. He got into bed—he hardly knew how—and since he could not give vent to his joy by singing and shouting, he crossed his hands quietly on his breast, said the Lord's Prayer backwards and forwards six times softly to himself, and felt, as he dropped asleep, that after all there was no one on God's green earth he loved so dearly as that father of his."

In the collection of stories translated by Mr. Larsen, there are two or three by Björnsen which are all pleasant and characteristic, but not specially noticeable. "The Flying Mail," by M. Goldschmidt, is a story marked by the imaginative Scandinavian sentimentality, but gives no adequate impression of its author's real power. Mrs. Thoresen's "Old Olaf" might be readily mistaken for a story by Björnsen himself. Its author has won a good deal of reputation in Scandinavian literary circles as a writer of dramatic criticisms. The drama holds an extremely high place in Sweden, Denmark, and Norway, and much of the current literature attaches itself in one way or another to the stage. It is for this reason, probably, that the "Fisher-Maiden" has been more highly rated at home than abroad. The long discussion about the theatre, which in the opinion of Björnsen's foreign critics rather marred the book, was felt at home to increase its value greatly.

JUST PUBLISHED.

THE PROSE WRITERS OF AMERICA. With a Survey of the Intellectual History, Condition, and Prospects of the Country. By Rufus W. Griswold, D.D. New and revised edition, with a supplementary Essay on the Present Intellectual Condition and Prospects of the Country, by Prof. John H. Dillingham, A.M. With seven portraits on steel and vignette title. Imperial 8vo, cloth, extra, gilt top, bevelled boards, $5.

Wm. Cullen Bryant says of the original edition:

"We are glad to possess, in this form, portions of many authors whose entire works we should never own, and, if we did, should probably never find time to read. We confess our obligations to the author for the personal information concerning them which he has collected in the memoirs prefixed to their writings. These are written in a manner creditable to the research, ability, and kindness of the author."

Edgar A. Poe, in his Literati, says of it:

"This is a book of which any critic in the country might well be proud, without reference to the mere industry and research manifested in its compilation. These are truly remarkable; but the vigor of comment and force of style are not less so; while more independence and self-reliance are manifested than in any of the series. There is not a weak paper in the book, and some of the articles are able in all respects."

The present edition has been thoroughly revised, every page has been gone over, and notices of authors who have passed away since the previous editions were published, have been revised and continued to the period of their decease, and long and critical articles on the authors of the present day have been added, making the work complete in every respect to the present time. It should occupy a prominent place in the library of every cultivated American. With Prof. Hedge's "Prose Writers of Germany," Prof. Longfellow's "Poets of Europe," and this volume, the purchaser will obtain a most excellent survey of the literature of America and Europe, a condensed library in three portable volumes.

"The supplement now furnished stones for some of the original omissions. . . . It is a book of more than ordinary value, and one, we are happy to find, reproduced in so attractive a style."—*North American and U. S. Gazette, Phila.*

"A book that can be cordially recommended for its sterling qualities and the handsome style in which it has been gotten up. It will be cordially welcomed by a multitude of readers."—*Evening Telegraph, Phila.*

Manual of Ancient History. By G. Rawlinson, M.A. $3.

POLITICAL ECONOMY.

A Manual of Political Economy. By Prof. Rogers. $1 25.

CHEMISTRY.

Chemistry for Students. By Prof. A. W. Williamson. $2 50.

MACMILLAN & CO., 63 Bleecker Street, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 9, 1871.

The Week.

THERE was tacked on to the Civil Service Appropriation Bill, in the very last hour of the Forty-first Congress, a section which authorizes the President to make rules prescribing the qualifications of Government employees, and providing the means of testing the fitness of candidates and regulating the nature and length of their tenure of office. This imposes on the President a serious responsibility, which he is bound not to shirk, and which he can use to purify the service to a considerable extent. Mr. Jenckes, who has worked so hard in this cause, may be cordially congratulated on having witnessed this triumph of his ideas at the close of his Congressional term.

The report of the Congressional Committee appointed to investigate the affairs of the New York Custom-house has been published during the week. It is impossible to enumerate here the various abuses discovered, or the special remedies proposed for them. Collector Murphy managed to deny that he made many appointments in obedience to the applications of senators or representatives, but this he has never been charged with. What he is charged with is having undertaken the management of the Custom-house, not mainly with a view to the efficient, economical collection of the public revenue, but to the bolstering up of the Republican party in this city, and with having made appointments and dismissals with reference to men's political activity rather than to their honesty and ability; and this he will hardly venture to deny. The committee say "they have discovered some pernicious practices affecting the integrity of employees. There are chronic evils which have come down through many years, and are so thoroughly intrenched in the practice of the Custom-house as to impress the committee with the belief that though they may be partially removed by an able and honest Administration, they cannot be wholly eradicated until public offices shall cease to be administered in the interests of politics, and men shall be appointed to office on account of their integrity and capacity to fulfil the duties devolving upon them in public business. In the view of the committee, the Custom-house of New York, as well as all other departments of the Government, should be administered on the same principles upon which private business is conducted."

To conduct public business on the same principles on which private business is conducted is, however, just the thing politicians do not want to do. Mr. Boutwell wishes to use the Government offices in the Treasury to help young men to get an education for the ministry, or for medicine, or for the bar, and others wish to use them to reward faithful electioneering service; others, again, to nourish "enthusiasm" for the party in power. Nearly all Congressmen want to use them to help them in retaining their own seats, and a considerable portion of the public, which takes no interest in politics, would fain treat Government offices as charitable institutions to furnish refuges to the old or infirm or unsuccessful. The hopeless view which the politicians are disposed to take of fraud and incompetency in the public service is very amusing to those who have seen the same persons pouring out their souls on the stump about the grand destiny of man on this continent. Mr. Boutwell thinks examinations would be of no use, because they would not prevent young men from giving way to the temptation offered by the chance of sudden wealth. Mr. Murphy, being asked what he thought as to the remedy for certain frauds in the Custom-house, answered vaguely and sadly, "that we should have to go back to Adam and make man perfect to prevent them altogether." Nothing that will not make a clean sweep of sin will satisfy these purists. But Mr. Grinnell testified that "the only true and economical way to prosecute the public business" was to prosecute it "on the same principles as private business." Mr. Palmer, the appraiser, thought the same thing, and acknowledged that removing employees on account of their political opinions was injurious to the service—was "not in keeping with the genius of our institutions," as being a species of persecution "tending to destroy liberty of political action." It ought to be mentioned that all attempts made in the course of the investigation, even in the Leet case, to connect the President either with corrupt practices or the use of his influence to have anybody employed in the Custom-house who was accused of corrupt practices, failed.

The murderer of a negro was recently taken from jail in Kentucky by an armed band, and set at liberty. So Judge Pryor, in charging the Grand Jury of Frankfort County, in which the outrage took place, took occasion to explain the matter. There is a Kentucky statute which prohibits the reception of negro testimony, but when negro testimony is refused by the State courts, the Federal courts take hold of the case; and it was to prevent the trial of this murderer by the Federal courts after the State Grand Jury had thrown out the bill against him, that the rescue took place. Judge Pryor, while strongly condemning the State legislation which excludes negro testimony, lays down some curious doctrine as to the political character of the act of giving evidence. He says it is no right at all, but a duty or obligation imposed by the State; and if the State does not ask him to perform it, or refuses to let him, he has no more reason to complain than, we suppose, if it refused to let him pay his taxes. So that if a man punches your head, and you offer to bear witness against him, nobody else having been by, the District-Attorney releases you from a burden by not letting you appear. The only person in this case, Judge Pryor says, who is deprived of any right, or threatened with the deprival of any right, is the murderer, inasmuch as he is entitled to be tried by the State courts; so that the mob, in carrying him off, were defending the State constitution from Federal encroachments.

Indeed, the Kentucky mind seems to be a good deal confused just now on the whole subject of rights and duties, inasmuch as the State is overrun by bodies of Ku-klux, who apparently suppose themselves to be engaged in the administration of an improved system of jurisprudence, which, however, must differ widely from that of the rest of the civilized world, as it permits robbery and murder and the stoppage of the mails. Indeed, the right or duty, whichever it is, of the mail-carrier to carry the mails, is so seriously questioned by these jurists that the Postmaster-General has been obliged to suspend the line between Louisville and Lexington, and the people along this route are now dependent on expresses for their means of communication. Of course the Governor is not likely to call for Federal assistance in keeping the peace, but we presume that when the mails are stopped, the President can see to it that order is restored without asking the Governor's leave. If things do not soon change for the better in some of the Southern States, we fear that the Spanish-American type will begin to show itself among their politicians, and that is one degree worse than even the New York City type.

The financial markets have witnessed an eventful week. The Treasury debt statement, showing a decrease for the month of over seven millions of dollars, promptly followed the announcement of the intended heavy bond purchases and sales of gold. The evident desire of the Secretary to keep money easy, and to advance the price of bonds, in order to aid his funding schemes, was taken advantage of by the speculative fraternity to run up the prices of stocks of every description, and even the outside public was induced by it to become heavy buyers, at a great and rapid advance in values. The Secretary's gigantic funding machinery has, however, as far as American markets are concerned, proved a failure. The rise in the Bank of England rate, though probably more due to uneasiness concerning cotton

speculations, is said to be partly intended to frustrate the scheme for the European markets as well. The Alabama railroad interest, in spite of a great flourish, has not been paid as yet; and the State of Missouri seems bound to follow Louisiana and all the other reckless States, by issuing fresh loans of seven or eight millions to new railroad enterprises.

Trade, during the week, has been quiet, steady, and small, the prominent feature of all business being indisposition to buy more than required by immediate needs. The receipts of cotton, although necessarily declining, continue large, and the exports for the week reach the high figure of 140,000 bales, worth about ten millions of dollars. But under the pressure of heavy stocks, and owing to the failure of the speculation based upon peace, prices have again sharply declined, and are now lower than at any time since 1861. Breadstuffs continue firm, both abroad and here, and with the opening of the canals we may witness an active revival of shipments, since we have, what has not occurred for years, a surplus of both wheat and corn for export. Cured meats are lower, and fresh meat again considerably lower—in fact, much below prices of any time since 1863, and lower in spite of comparatively small stock, a very significant indication of the condition of general prosperity. The knowledge of this great decline does not, however, appear to have reached the ears of the retailers. Sugar has been lower, but other groceries continue firm. Real estate is feverish, and weak holders are anxious, but there is no visible pressure to sell.

We have given elsewhere the principal points of a letter touching the professional conduct of the Erie counsel which General F. C. Barlow has addressed to the New York *Tribune*, in advance of the action of the Bar Association, of which he is a prominent member. We commend it to the careful perusal of all men and women in this State who own any property, even if they care nothing for public morals and for the credit of the bench and bar. We hope, too, all ministers and teachers will read it, and explain to everybody under their influence what a shameful story it is, and what a disgrace to the community is the state of things it reveals." We trust they will also thank General Barlow for taking on himself a duty from which so many of his brethren shrink, and which is in its very nature disagreeable to the last degree. There is a strong disposition at the bar to wait for judicial corruption to be put down by a windmill, or hydraulic ram, or some other self-acting machine; and we are, therefore, all under deep obligations to any man who offers "to pay with his person." General Barlow has done this before now on bloodier, but, we say it in all sincerity, hardly more important, fields.

In South Carolina things grow no better. Governor Scott, in asking for assistance, says the Ku-klux have a regular organization, with staff and line officers and gradations of rank, and act as a regular military force; and he declares that the legislature had to have the roads to the capital picketed, while they were sitting recently, to prevent themselves from being "gobbled up." This is all horrible, but we have no hesitation in saying that it is the not unnatural consequence of the caricature on government which has been kept up in that State for the last four years. Nothing can well justify mob law, but when a civilized community finds itself subjected to the rule of its most ignorant members, aided or managed by knavish adventurers, all rational men know that mob law is not unlikely to result. Society in the South is in an unnatural state, and it is kept in an unnatural state by a policy of proscription which has long ceased to have any excuse. The proper men to legislate for the South are those in whom the community has most confidence, and as long as they are prevented we shall have trouble. The weak point of the complaints which come from some of the States about the Ku-klux is that those who make them have all along declared that proscription was necessary to their protection. It now appears, however, that it is no protection at all.

The territories ceded by France to Germany, as specified in a special despatch to the London *Telegraph* purporting to give the text of the preliminaries of peace signed at Versailles, are, with the only important exception of Belfort and its environs, the same which the conquerors, months ago, marked out to form the "Gouvernement" of Alsace, and have since separately governed. The line of demarcation begins on the southern border of Luxemburg, west of the Moselle, and runs to the vicinity of Briey; thence, with considerable windings, to Gorze; skirts the southern boundary of the Department of Moselle; divides the Department of Meurthe into two unequal parts, running southeast to the neighborhood of Schirmeck, on the borders of Meurthe, Vosges, Haut-Rhin, and Bas-Rhin; follows the Vosges Mountains and the western boundary of Alsace until it reaches the Canton of Belfort, whence it passes diagonally to the Canton of Delle, and terminates south of Delle, reaching the Swiss frontier. This line gives to Germany the whole of Alsace—the Departments of Haut-Rhin and Bas-Rhin—with the exception of Belfort in the southwestern corner of it; three out of the four arrondissements of the Lotharingian Department of Moselle—Thionville, Metz, and Sarreguemines, France retaining Briey with the fortress of Longwy; and two out of the five arrondissements of the Lotharingian Department of Meurthe—Château-Salins and Sarrebourg, France retaining Lunéville, Nancy, and Toul. The ceded territory embraces about six thousand English square miles—that is, about one-thirty-fifth of the area of France, not including Algeria—and contains about one million six hundred thousand inhabitants—that is, about one-twenty-fifth of her population.

Immediately after the ratification of the preliminaries by the French National Assembly, and in conformity with the stipulations of the treaty, the Germans began the evacuation of the Departments of Calvados, Orne, Sarthe, Indre-et-Loire, Loir-et-Cher, Eure-et-Loir, Loiret, and Yonne, and of all portions of Eure, Seine-et-Oise, Seine-et-Marne, and Aube lying south of the Seine. They also surrender the Paris forts on the north bank of the Seine, and the French capital, thus entirely freed of the presence of the invaders, is to be garrisoned by forty thousand French, the remainder of the French forces retiring south of the Loire, or holding the northern fortresses, until the definitive declaration of peace. The Germans are gradually to abandon the territories occupied north of the Seine, on the payment by France of at least five hundred million francs of the indemnity. After the payment of $400,000,000, their temporary occupation is to be restricted to the Departments of Marne, Ardennes, Meuse, Meurthe, and Vosges, in Champagne and French Lorraine, and after the payment of another $400,000,000, their army in France is not to exceed fifty thousand men. The whole indemnity of $1,000,000,000 is to be paid within three years. The army of occupation is to be supported by the French Government. The departments occupied will be governed by French officials, under the control of the German commanders. The inhabitants of the ceded territories are to enjoy the benefit of favorable arrangements, if determined to emigrate into France. Measures are taken for the speedy return of the French prisoners and interned soldiers from Germany, Belgium, and Switzerland.

The conditions of the German entry into Paris formed an incidental part of the peace stipulations agreed upon at Versailles, and took place in perfect conformity with them. The Germans entered Paris early on the morning of Wednesday, March 1, in two columns, numbering together thirty thousand men, and advancing in converging lines from the Porte de Neuilly and Point du Jour, respectively, to the Place de la Concorde—the one marching through the Avenue de la Grande Armée, the Place de l'Étoile, and the Avenue des Champs Elysées, and the other along the northern banks of the Seine. The triangle formed by these two lines and that portion of the *enceinte* extending from the Porte de Neuilly to Point du Jour was all that was allotted by the terms of the convention to be occupied by the triumphant forces. All approaches to it from the rest of Paris were guarded by French troops, and partly barricaded, in order to prevent a collision between the less cautious portions of the populace and of the invaders. The appearance and the discipline of the Germans were such as might be expected on so grand an occasion, and the Parisians, exhorted to be calm and dig-

nified, by proclamations from Thiers and Vinoy, as well as by the journals of all shades, submitted to the humiliation with good grace. The Emperor William, Moltke, and Bismarck shone by their absence on one side, and the journals of Paris by their non-appearance on the other. The speedy ratification of the preliminaries of peace by the Bordeaux Assembly fortunately soon delivered both the conquerors and the conquered of the annoyance and tedium of the strained position in which they were placed by the strange fortunes of war. Copies of the ratified treaty having been signed and exchanged on Friday, the 3d, the evacuation of Paris by the Germans was begun on the evening of that day, and completed on the morning of the following.

Whether intended to have that effect or not, the occupation of Paris undoubtedly hastened the ratification of the preliminaries in Bordeaux. Thiers laid the treaty before the Assembly on the last of February, declaring that himself and his colleagues had gone to the limit of their responsibility, and that the representatives of the people must be accountable for the rest; none of them should abstain from voting; nor should there be any delay, for delay might be disastrous to Paris and the country. The vote on the treaty took place on the following day, after the hearing of a report by the Consultative Committee, recommending the adoption, and after a stormy debate, during which a resolution decreeing the fall of the Empire, and stigmatizing Napoleon III. as the author of the calamities of France, was adopted by enthusiastic acclamation. The result, as reported by the Cable, was: five hundred and forty-six votes for, and one hundred and seven against, the ratification. The aggregate of these votes, however, being short by exactly one hundred of the whole number of the members of the Assembly, it remains to be seen whether the difference is owing to so many absences and abstentions from voting, or to the dropping by error of a hundred yeas or nays. During the debate, the Assembly was guarded by troops. In a subsequent sitting, Rochefort and some other representatives resigned their seats, protesting against the cession of Alsace and East Lorraine as illegal, while Félix Pyat declared that he did not resign, but that he would never enter the Assembly until the cession was rescinded. Soon after, we hear, several Radical members left for Paris, probably to receive the ovation due to self-imposed martyrdom, and to prepare a different kind of reception for their ratifying colleagues, should they dare to transfer the seat of the Assembly to the Radical capital, which is a question under debâte.

England is occupied thoroughly with the discussion of the Army Reform Bill, but the renewal of the disturbances in Ireland, in spite of the admirable working of the Land Act, is driving the Ministry into asking Parliament for fresh powers of repression. Hitherto it has been only jurors who had anything to fear from malcontents, now the lives of the judges going the circuit are threatened. The disease is somewhat similar in character to that by which another branch of the same family of politicians is afflicted in Paris. When deputies resign their seats in the French Assembly, as some of them have done, because the majority decided contrary to their wishes, and the National Guard hoists the black flag, and retires gloriously to the heights of Montmartre with its mitrailleuses, after the treaty of peace is signed, and the Prussians, whom they never could be got to attack while the war was raging, are walking about the streets of the capital, they are afflicted with much the same malady as the Fenians—impracticability, which may be called the small-pox of politics.

It can hardly be said that the future is any more promising than it was a week ago. The Paris papers, even the most sensible, talk of "vengeance" as one of the great objects for which the French nation is now to live and labor, which means, of course, the continued devotion of the national mind to military preparations, and the continued exaltation of the military ideal. After the catastrophe of 1815, to "venger Waterloo" became the great object of French ambition; and forty years' talking, writing, and singing about this at last made possible the *coup d'état* of 1851. It is greatly to be feared that we are now about to witness a similar process with a similar result. A nation which lives for "vengeance" cannot wreak it. To be able to take its revenge, it has to give up all thoughts of it, and turn its mind to industry and peace, for it is through industry and peace that strength comes. The free-traders are probably about to suffer the consequences of accepting a free-trade policy from an arbitrary imperial decree, Thiers, who is a rabid protectionist, having appointed his old ally in the Corps Législatif, Pouyer-Quertier, Minister of Finance, and they will probably make short work of the treaty with England.

The full reports by mail of the debates in the Italian Chamber of Deputies indicate a great division of sentiment, and a singular weakness on the part of the Ministry in regard to the settlement to be made with the Pope. There was first the Government bill indicating the general policy which the Government had marked out for itself. This was referred to a committee, which reported another bill as an amendment, and on the latter the debates were conducted, the Government yielding on minor points of principle, and generally on the phraseology, and resisting where they saw proper. The difference in the two measures was on the whole considerable, the Government feeling hampered by its international obligations and pledges, and conceding the extreme of immunity and independence to the Pope, while the committee has sought to mitigate the anomaly of a double sovereignty in a constitutional state. Navigation under these conditions among bigoted Papists, enlightened Catholics, Protestants, and free-thinkers of all shades, has naturally not been of the easiest. The majority favored the committee's plan rather than the Ministers', but was not to be counted upon by either. It turned on both when it declined, as the committee proposed, making an open question of the ownership of the Vatican and Lateran, with their art-galleries and library, and declared them national property outright; and it was immediately arrayed against the committee, and in favor of the right of asylum for the Pope's quarters, when the Ministers, who had equally shared the previous discomfiture, determined to make a Cabinet question of this article. We are yet without the details of the Senate's amendments to the patchwork of the Deputies, and only know that the Pope scornfully rejects the guarantees *in toto*, as well he may, considering that the next Parliament may undo what this one has done.

A striking illustration of the wide ramifications of all great commercial and political movements is furnished at this moment by the condition of the bullion markets of the world. The war of secession deprived England of her usual supply of American cotton, and induced her to foster and force the production of this staple in India, the only other important source of supply. The first requisite for its production was capital, which was sent principally in the shape of gold and silver coin and bullion, and this coin and bullion was drawn chiefly from the United States, the only country at that time able to spare it, in consequence of having suspended specie payments. In the first years of the war a large amount of gold and silver was sent from New York to England, and then transshipped to the East; later on, the bulk was sent from San Francisco direct by the Pacific mail steamers. But our two last cotton crops have again become large enough to supply England's wants the same as in former years, and her importation of Eastern cotton is diminishing. As a natural consequence, the flow of bullion is likewise changed. Little, if any, is being sent to India from San Francisco, while large amounts are returning to England direct, both in silver and gold, and we should not be surprised to see at an early day the strange sight of California becoming the recipient of coin shipments *from* India and China, followed by fresh crises, panics, commercial and political disturbances throughout the East, where monetary derangements disorganize society with a rapidity, vehemence, and fatality of which we can scarcely form a conception. The derangement in the food supply, brought about by the increased area of land devoted to cotton, cost hundreds of thousands of lives—a famine whose horrors make those of Ireland of 1846 and '47 seem insignificant. A monetary derangement brought on by a drain of specie, might produce results even more widespread.

THE POLITICAL SITUATION.

We print elsewhere two letters from two different observers, looking on from different points of view, which, put together, give a tolerably accurate notion of the state of things at Washington. One of them deals more particularly with the prospects of the Republican party, which, it must be admitted, are not bright. Indeed, the peculiar control of affairs which the party has exercised ever since 1861 ceased on Saturday last with the loss of the two-thirds vote. Its majority, too, is so torn with dissensions that it may safely be said that the only questions on which it could be depended on with certainty are questions not likely to come up. The matters which now excite most interest are matters on which the party, as such, cannot be said to have any policy or any unity of sentiment, and first and foremost amongst these are the position and prospects of the Administration. Indeed, it would be difficult to point out a single question now occupying, or likely to occupy, the public mind which Congress is not likely to debate with reference mainly to its influence on the political fortunes of General Grant. This is true of the *Alabama* question; it is true of the San Domingo question and of the civil service question, and, though in a less degree, of the financial question. Of course, it may be said that this is a state of things which comes about towards the close of every Presidential term when the President is known to be a candidate for renomination, and to have some chance of getting it. But the peculiarity of General Grant's case is that he has managed to excite an amount of hostility among Congressmen for which there is nothing in the state of feeling about him out-of-doors to account. Indeed, none of the attacks made on him have seriously damaged him in the estimation of the country at large. The popular faith in his honesty is still very strong, and honesty, in the popular estimation, very naturally and very properly, is allowed to cover a multitude of sins. His mistakes have been of a kind which wear a trifling appearance at a distance, but which, to those who are in official contact with him, are exasperating; and hence it is that, since the first year of his Administration, he has not had any strong following in Congress.

The country expected from him, of all things, administrative reforms and indifference to "political" considerations, in the technical sense of the term. In the beginning, he set about satisfying these expectations; but, finding himself pertinaciously resisted, he lost heart, and, instead of appealing to the people for support, which would have been enthusiastically afforded him, he abandoned the *rôle* of a reformer and took up that of a regular politician, for which he was totally unfitted both by nature and experience. He got rid of such of his immediate adherents as the party managers found most obnoxious, and took into his confidence such men as Cameron and Forney and Butler. He had apparently given up all interest in the very thing for which the public looked to him with most confidence—civil service reform—but, being alarmed by the fuss made about Cox's resignation, threw a tub to the whale by a recommendation in its favor in his Message. How little meaning this had, however, was shown by "Tom Murphy's" appointment as collector of this port—Mr. Murphy being a man for whom no reformed service could possibly provide a place.

Finding the field of internal administration so very thorny, and his unpopularity seeming to gain ground, he turned his attention to foreign affairs. He is far too honest a man and too good a soldier to stir up a war wantonly to help him out of party difficulties. So he turned his attention first to the annexation of San Domingo, and, more recently, to the settlement of the *Alabama* question. We do not need to discuss the merits of the San Domingo scheme. Whether it be good or bad, it is safe to say that it is about the last thing the country expected the Administration to give its whole energies to. If, in 1868, the voters could have been asked what they expected Grant's Administration to do for the country, some would have said they expected him to get us back to specie payments; others, to fund the national debt at a lower rate of interest; others, to pacify the South; others, to reform the tariff and the internal taxes; and others, to reform the civil service; and others, again, to settle our disputes with England; but we venture to say that nobody would ever have guessed that the great work of the Administration was to be the annexation of one end of the island of San Domingo, and that to this everything else was to be subordinated; or, if he had, he would have been laughed at. The whole thing has been a perfect surprise to the country, and the sending out of the Commission, though it has helped to vindicate the President's motives, has done so at considerable cost to his reputation for good sense. The *Alabama* matter, too, he has not grappled with. The Administration contented itself for two years with repeating once more the arguments which Adams, Bemis, and Sumner had worn threadbare, but left the matter exactly where it was, declining to state what it wanted as satisfaction, and the approaches which have brought about the sitting of the Commission at Washington have come from England. Upon no point in that vast subject known as the financial question has the President taken any decided ground whatever, or, indeed, does he seem to have any strong opinions. On the income tax, he is said to differ completely from the Secretary of the Treasury, and his views on the nature of foreign trade, as revealed in his San Domingo messages, made it plain that to this field of knowledge he had given but little attention.

We shall probably have some decided action from the new Congress with regard to the tariff, but its action upon all other subjects is very likely to be influenced by the approach of a new Presidential term, which is the same thing as saying that the President is not likely to carry anything in which he shows a strong interest. We shall be only too thankful if this does not affect the result of the labors of the High Commission. A successful—that is, a satisfactory—settlement would be something for the Administration to carry into the canvass, and that it needs something is undeniable.

The great need of the country now is the appearance in the Executive chair of somebody able to give weight and dignity to, or, in short, to make an issue of, some one of the great reforms which are awaiting popular attention. Parties are evidently getting into a state of disorganization, and need remarshalling on new lines and for the work of *general* legislation. It is melancholy, but true, as a correspondent remarked in writing to us the other day, that the national legislature shows itself incapable or unwilling to deal thoroughly with a single great evil except slavery, and it was rather forced into dealing with that by the outrageous behavior of the slaveholders than by a settled conviction of its own that it had to be dealt with. Ever since slavery passed out of the political arena, Congress has been occupied in passing special acts or providing privileges for special interests. Not one of the great problems by which the public mind is vexed has it attempted to solve, and no serious attempt has been made by the Executive to push it up to its work; and this we hold to be one of the most important duties of the Executive in the present state of things. A commissioner having been appointed to supply information with regard to the industrial resources of the country, so as to furnish a basis for a new and revised system of taxation adapted to the wants of American society, the President dismissed him as soon as his reports began to excite interest, and has never given any sign of a desire to have a real *system* of taxation framed. The questions of the railroad monopolies, of the condition of the civil service, and of the currency have been put by with the same air of indifference, and in the meantime the confusion grows greater, and the uncertainty as to what position the party in power will eventually take up continues. We cannot help doubting whether, when people come to ask themselves why they re-elect General Grant, they will be completely satisfied with the answer that he means well and does not steal. This is a standpoint which every great nation speedily passes by. There is nothing more needed at Washington than the appearance of some influence strong enough to force a great reform on Congressional attention, and keep Congress pegging away at it till it is disposed of; and one great reform at a time is as much as the public is competent to deal with.

THE TRUE HISTORY OF THE COAL TROUBLE.

THE WAR BETWEEN THE COMPANIES.

For twenty years prior to 1862 the price of coal ruled with remarkable steadiness in the neighborhood of $3 60 per ton, the regular wholesale price of Schuylkill coal at the wharf of Philadelphia never, during that period—with the exception of parts of 1854, '55, and '56—averag-

ing above $3 90 nor below $3 20. During the whole of that period the mine-owners and mine-operators were never weary of assuring their friends and the public that their business was always unprofitable, and frequently disastrous. Nevertheless, strange as it may seem, fresh mines were being constantly opened, new companies being formed in rapid succession, additional railroad connections projected and built, and the production of coal increased year by year, *without one single interruption*, from one million tons in 1842 to five millions in 1852, and eight millions in 1862, while it is close upon seventeen millions in 1870. Lest some ingenuous person thoughtlessly accuse the coal-miners of those days of injudiciously sacrificing their interests to the public welfare, it will be necessary to explain how a large and important industry, although wretchedly unprofitable, can nevertheless be expanded and increased year by year.

All loose and reckless assertion to the contrary notwithstanding, the area of the anthracite coal-beds is so large that many years will elapse before they are fully taken up. Twenty years ago, mile after mile of the prettiest farms and wildest mountain forests in the United States covered the most important coal-mines, and were then worth from fifty cents to fifty dollars an acre. The gradual increase in the demand for coal would naturally have advanced the value of these lands, but not for many years to anything like their present prices. Indeed, the *bona-fide* owner of such property never received more than a very small portion of the price paid by the purchaser. Generally the property was nominally sold at a moderate advance over its farm value to some speculator, who, precisely as has been at all times the practice of gold and silver-mine speculators, got up a stock company in Philadelphia, New York, or elsewhere, and sold the property to the company at an enormous figure, frequently ten or twenty times the real cost. The profit thus realized by these speculators and their confederates was for years the main incentive to the creation of new companies and the opening of new mines, during the very time when older companies were earning nominal dividends, actually losing money, or in a state of chronic bankruptcy. Of course, each new company, in order to justify its directors in paying enormous prices for valuable mines, was obliged to work the mines and show how productive they were, and to turn out, if not large dividends to gladden the hearts of the stockholders, at least large piles of coal to blind their judgments; and thus, at the very time when the company should have been getting a high price for coal in order to earn dividends on the fictitious capital invested in the pockets of the projectors and confederate directors, it was necessarily ruining its own market and depressing the price by a steady production in excess of the wants of the community. Of course, coal-mining, though steadily increasing, was not over-profitable to the *bona-fide* stockholders, though rather more than profitable to the projectors and directors aforesaid.

It is evident that under these circumstances the hired laborers of these companies could not prosper greatly; they were truly crushed between the upper and nether millstone, and prior to 1863 they were about the worst-paid class of workmen in the United States. But as the companies themselves were not making money, but were continually becoming involved, and as besides the coal regions offered many other advantages of cheap sustenance and varied employment, the working miners were, though a rough lot, not specially nor permanently troublesome. The first serious trouble in the coal regions arose from an entirely different cause.

As soon as communication with the mining regions furnished a new opening for railroad enterprises, the railroad schemes were taken in hand by the same men, or the same class of men, who had acquired experience, skill, and money by their manipulations of the mining companies; and similar tactics were employed to make money out of new roads. Of course the value of the mines and the price of coal depended largely upon the means of getting it to market, so that every one interested in the mines became an eager promoter of the roads, and if the roads were only set running, no one enquired too scrupulously how the thing was done. Roads were thus built, costing in reality but one-half or three-quarters of the first mortgage bonds issued against them, and were then saddled with an additional stock capital equal to the bonds, making the nominal cost of the road three or four times as large as its real cost, the difference being but an indifferent reward for the self-sacrificing projectors and their confederates in the board of directors. Of course, the road was expected to earn dividends on the twenty-five dollars of real cost, as well as on the seventy-five dollars of fictitious cost—and the result necessarily was precisely the same as with the mines: more roads were built than were needed; there was not coal enough carried on any of them to pay dividends on real cost, much less on the fictitious cost; yet the roads must be kept running—reckless competition ensued, the companies at one time carrying freight very low, and then again desperately charging exorbitant rates, and entirely refusing to carry coal when the mine-owners were unwilling to submit. Hence incessant quarrels between the railroad companies and the mining companies, first the one striking, then the other striking; one suspending work at the mines to force down freights, the other stopping all trains to compel the mine-owners to come to terms. The result was inevitable. Coal companies broke down, and their property was gradually absorbed by rival companies. Railroad companies broke down, and their roads passed into the hands of large consolidated companies in New York and elsewhere.

The ruin of the railroads was naturally attributed to the quarrels with the mine-owners. To make the railroads independent of the mine-owners, it was decided that the roads must own their own coal-mines, must mine coal enough to be fully employed without carrying a ton for the old mine-owners, their long-time enemies. The great railroad companies became the chief buyers of coal-mines near their existing roads, and built new branches to every point at which they could secure desirable mines or lands. The relations between the two parties, however, did not improve in consequence. On the contrary, the struggle became more and more embittered, the railroads becoming more exacting as they became more independent of the old mine-owners, and the latter being almost ruined in their business by the obstacles thrown in their way by the carrying companies, through whom alone they could get their coal to market. The old mine-owners speedily became obliged, in the very struggle for existence, to open new outlets for their coal by becoming themselves builders and owners of railroads, independent of the original railroad companies. Thus, in the struggle to get possession of the carrying trade of the coal regions, the excessive competition for which had caused the ruin of the existing roads, fresh roads were built, necessarily doubling and trebling the ruinous competition for a traffic which was not large enough to keep even the old roads profitably employed. And since each fresh competition diminished the amount which each could get to carry, each road was necessarily forced to open up new mines and more mines, and to bring more coal to market to keep their roads employed. But before these quarrels and all their consequences had fully developed, the war broke out, and with the war came the first complication with the workingmen.

THE WAR BETWEEN THE COMPANIES AND MINERS.

During the general depression preceding the outbreak of the war, the price of coal sank to a lower point than ever before in thirty years; the monthly average for April and May of that year standing at $2 78 for the long ton (of 2,240 lbs.) for the best Schuylkill coal at the wharf in Philadelphia. At these prices even the most favorably situated mines could probably only work at a loss, and production fell off slightly—very slightly; indeed, it is noticeable that 1861 and 1862 are the only years in the entire history of the coal trade in which the production did not exceed that of their immediate predecessors—so steady and uninterrupted has been the growth of this important industry. But with the progress of the war, with the suddenly added demand for the United States navy, and the general increase in business activity everywhere, coming upon a diminished stock and insufficient means, owing to enlistments, etc., to increase the production, the price rapidly advanced. In less than six months it doubled; in fifteen months it quadrupled. From $2 78 in May, 1862, the price rose to $10 75 in August, 1864; and for once every operator, and mine-owner, and

carrying company made money to his heart's content; for once every company declared dividends even on imaginary capital, and such dividends, too, that they were almost ashamed to let them be known, but handed them to their stockholders in various disguises. Of course, the companies and mine-owners, taking into consideration the increased prices of the necessaries of life, and their own increased earnings, immediately raised, doubled, and quadrupled the wages of their workmen. Not exactly! They never once raised the wages of their own accord. In every instance they compelled the men to strike, or to threaten a strike, before they yielded the advance. How just and necessary some advance was no one need be told. Whether the miners exceeded justice in their demands is not now in issue. The fact is, that no advance was yielded to them, except upon compulsion. And from this time dates the present complication with the men. As each strike was made the basis of a fresh advance in the price, and as the mine-owners and operators were making enormous profits, they did not object so much to the rise in the wages as to what they called "the dictation" of the men; and this was especially felt by the great consolidated companies who are at one and the same time miners, carriers, and sellers of coal.

So long as the duty of nine dollars gold a ton on pig-iron put heavy profits into the pockets of the iron-smelters, and steadily increased the number of furnaces at work, the coal trade continued active and the smouldering fire of war between the men and the great companies was not allowed to break into open flames. But when all these powerful stimulants were no longer able to keep consumption up to the level of incessantly increasing production, the struggle recommenced. The markets became glutted, and in the spring of 1868 prices fell as low as they had ever been since 1844, with the sole exception of the temporary panic at the outbreak of the war. If at that time the coal-mining business had been, as it was ten years before, in the hands of a number of smaller operators, the result would have been perfectly simple and natural. The weakest operators, or those whose mines were least favorably situated, would have been obliged to stop producing. Their workmen would have sought other employments, as far as they could, and by a gradual process the trade would have regulated itself.

But among the great companies there were no weak operators. Their mines were all alike favorably situated as far as their traffic was concerned. They all had large capitals invested, large roads to be kept in repair, an immense amount of rolling-stock to be kept running. None of these great companies could or would suspend any part of their works. But meanwhile the wages of the miners must be reduced. In the first place, it was just and proper that they should bear their part of the burden of an unprofitable trade. In the second place, now was the time to show the working miners the hopelessness of their struggle against the great companies. The men argued that a reduction of their wages would not stop the glut of coal; that as long as all the companies continued to work all existing mines and continued to open new ones, there would be an incessant glut, and they would not be able to find a market for their coal, even if the workmen consented to work *without wages*. The workmen did twice submit to reductions, but each time urged the folly of continuing to overload the market, which must end in still further reducing wages to a point at which existence would be impossible. But the companies were determined, and the history of 1868 was a succession of strikes, suspensions, agreements, resumption, and again suspension, accompanied by violent fluctuations in price, and at one time an advance to the very highest figures of war times. The public was duly informed by the companies of all the wickedness of the working miners which had led to this advance. But the public was not informed that the great Pennsylvania companies were, at that time, charging more than double the freight at which the Ohio and Baltimore were carrying bituminous coal over their steep grades and costly bridges, and were daily urging the latter company to "put on at least another dollar a ton," so as to enable all the other companies to get that additional advance. On the twice and thrice watered capitals of these companies, even double freights might not suffice to pay dividends, and what was wanting must be wrung from the consumer at one end of the road or from the working miner at the other. The Baltimore and Ohio refused to accede, to become a party to the conspiracy, and, in the spring of 1860, production, in spite of the long and frequent suspensions in 1869, had again so far outrun consumption that coal had become almost unsalable at the lowest figures known; wages had got down—all the counter-assertions of the companies to the contrary notwithstanding—to an unreasonably low figure, and a complete deadlock was again in prospect.

After vain efforts of the companies to agree among themselves upon a *pro rata* reduction of their traffic, the miners, with great shrewdness, offered a voluntary suspension of thirty days, to enable the companies to work off their accumulated stocks. The offer was accepted, and, *under pretence of this so-called strike*, the companies increased the freight charges over their roads nearly one-half, ran up the price of coal to very high figures, and reaped small fortunes from the suspension. When the thirty days had expired, the companies expected the men to go to work at the old wages; but the men declared, not without an appearance of justice, that if the market price of coal was to depend upon their suspending and resuming work, they were certainly entitled to some portion of the advantages of their action, and they demanded that a price of wages should be fixed at the lowest price for coal, and that, if coal advanced beyond that price, their wages were to advance in proportion, on precisely the same principle on which the companies had invariably enforced a reduction of wages the moment the selling price of coal declined. This was called the "basis system," the supposed lowest price of coal being taken as the basis of wages.

It must be evident to every one that, as between laborer and employer, this basis system had great merit; but it became not only valueless but mischievous when it was to be employed as a regulator of production. The great companies indignantly rejected it. Some submitted after a long struggle. Some have never submitted to this day, preferring to pay the men higher wages rather than recognize the hated basis. But although, in consequence, the strike continued far beyond the original thirty days, averaging, probably, three months for the whole mining regions, the supply for the year was again in excess of the demand; and as soon as work started in the spring of 1870, prices again began to decline, and threatened to go lower than ever. The Reading Railroad Company, which controls the coal trade of the Schuylkill region, refused to abide by its agreement of the previous fall, and demanded that the wages should go lower than the lowest price agreed upon. The men refused at first, but after a four months' strike consented, and resumed work, having exhausted their means. In spite, however, of the four months' suspension of the region which furnishes nearly one-third of the total stock, the supply throughout the year 1870 again continued in excess of the demand, and the price continued to decline, until towards the close of the year the Delaware, Lackawanna, and Western, by a reduction of wages, brought about a complete strike throughout the coal regions, the men declaring that there is no hope of peace until all the regions work upon the same basis, and do not directly compete or conflict with one another. They again and again urged the necessity of diminished production as the sole remedy to the present evils, continued production at the present rate being an impossibility. But the companies were unwilling to diminish their production. Their first step, therefore, was to starve the miners into submission. They not only refused to commence work themselves, but in order to prevent all others from working who did not control complete railroad connection with the sea-shore, they repeated their tactics of 1869, *trebled the freights* over all their lines, and cut off from two or three millions of people all supply of coal, in the midst of winter, creating incalculable disturbance to industry, throwing thousands out of employment, and inflicting untold suffering upon tens of thousands of the helpless poor.

The true nature of the evil is this: The country needs to-day about fifteen million tons of anthracite coal per annum. Half-a-dozen companies own mines enough and railroad facilities enough to bring twenty-five million tons to market. In order to earn dividends on their watered railroad stocks and the fictitious values of their mines, they are each one trying to do the whole of the business.

CURIOUS LEGAL INFORMATION FOR THE "ALBANY LAW JOURNAL."

WE recommend that innocent paper, the Albany *Law Journal*—which makes a business of watching, discussing, and reporting the proceedings of the courts of this State, and has reached the conclusion that there is no better foundation for the charges of corruption and misconduct against New York judges than "common report" which the *Nation* has "helped to create and circulate"—to read a letter from General Barlow in the New York *Tribune* of March 7. That letter is the first of a series apparently, and probably before this reaches our readers will have been followed by others. General Barlow takes up the challenge which Mr. D. D. Field gave Mr. Bowles—and which Mr. Bowles, for want of professional acquaintance with the facts, was unable to take up—on the point whether he (Mr. Field) "was consulted beforehand about any transaction whatever of these gentlemen (Fisk, Gould & Co.) to which any exception had been taken." The *Law Journal* will be surprised to hear that General Barlow, taking for his authority the evidence and judgment in the Fisk and Ramsey suit, tried before Judge Smith at Rochester, in November, 1869, makes the following statements:

1. That on a complaint, of which the material allegations were not sworn to, Judge Barnard appointed Mr. W. J. A. Fuller, formerly a clerk in Mr. Field's office, receiver of 3,000 shares of Albany and Susquehanna Railroad stock, belonging to one Groesbeck and others, on the ground that they had been illegally issued by Ramsey, the president of the road, and were therefore invalid, and that on this stock, so declared invalid, the said Fuller went and voted, by direction of Mr. T. G. Shearman, Mr. Field's partner, at an election of directors, at which Fisk was trying to get possession of the road. That order Judge Smith pronounced "in clear conflict with the laws and the settled practice of the court."

2. That in another suit of a similar character, Judge Barnard, on the application of the same counsel, on a complaint of which the material allegations were again not sworn to, granted an *ex-parte* order, enjoining Ramsey from acting as an officer of the company.

3. That in another similar suit, also on a complaint of which the material allegations were not sworn to, the same judge, by another *ex-parte* order, on the application of the same counsel, removed Ramsey from the office of president of the road, and appointed Charles Courter and James Fisk, Jr., receivers—that is, sought to put Fisk, Jr., in possession of the stockholders' property.

4. That in order to grant this injunction, Barnard left his mother very sick at Poughkeepsie, and in response to a telegram came to New York on the evening of August 6, 1869, and, reaching the city at 10.20 P.M., signed the order at the house of a "Mrs. Mansfield Lawlor," in Twenty-third street, frequented by Fisk, within ten minutes afterwards, the order having been sent to him by Messrs. Field & Shearman, through one of their clerks.

5. That immediately after receiving this order, Mr. Fisk, Jr., Mr. T. G. Shearman, Mr. Field, and Mr. Courter started together in a carriage for the Hudson River station, Fisk and Courter going on to Albany to take possession of the road; that, on reaching Albany, they found Mr. Pruyn in possession as receiver appointed by the court at Albany; that Fisk, Jr., thereupon telegraphed to Mr. T. G. Shearman in New York, announcing the fact that Pruyn was in possession; and Mr. Shearman thereupon went before Judge Barnard, and on an affidavit alleging that he had received certain information by telegraph, *obtained from the Judge another injunction, forbidding Pruyn to act as receiver*, or to "make any application, petition, demand, or request about his alleged receivership, except to that court in that action"—that is, except to Barnard himself—the courts at Albany, be it remembered, having already jurisdiction of the case, and the judges being men of unblemished character.

6. That Mr. Shearman actually telegraphed this injunction and "a writ of assistance" to the sheriff at Albany, and the sheriff attempted to execute them *on the telegram*, hours before the documents themselves, with the judge's signature, reached the city—a proceeding which has probably had no parallel in civilized jurisprudence.

7. That the court at Albany granted a stay of the telegraphic proceedings, but Barnard again set aside the stay, or ordered the sheriff to go on and take possession, and there was every prospect of an armed and bloody conflict, when the Governor called out the militia and took possession of the road.

8. That Judge Barnard granted an order arresting Mr. Ramsey, the president, Mr. Phelps, the treasurer, and Mr. Smith, the counsel of the Susquehanna Road, which Judge Smith declares "was procured to be used and was used on the day of election of directors, in aid of the fraudulent purposes of Mr. Fisk and his associates"—namely, to remove these gentlemen from the room, so that they could not be present at the election at which Fisk and his associates were trying to get the Susquehanna road into their hands. They *were* arrested and removed a few minutes before the meeting, but were luckily able to get bail in time to be present.

9. That at this election, at which Fisk and his counsel were present the room was, immediately after their arrival, densely packed, fifty or sixty of those present being, to use Judge Smith's words, "roughs and fighting men" brought from New York by Fisk for the purpose, and furnished with proxies that they might vote and keep the regular stockholders out of the room. It was due to "the vigilance of the Albany police," according to Judge Smith, "that this meeting did not end in violence and bloodshed."

All this—we may mention for the guidance of the *Law Journal* in case it desires to make enquiries—in the State of New York, United States of America, and in the year of our Lord one thousand eight hundred and sixty-nine.

AFFAIRS IN WASHINGTON.

WASHINGTON, March 4, 1871.

THE inexorable Ides (or rather Kalends) of March roll on alike over successful schemes and disappointed hopes. The Forty-first Congress, having added its unit to history, it is natural to compare its weight with that of its predecessors. The impetus acquired during the war, and which has shot the Republican party over the six succeeding years, is manifestly slackening, and the party lines are getting very loose. Gen. Butler diagnosed the case accurately when he said that the party could not hold together on any internal question, because it was too thoroughly divided in itself upon all of them. His logical attempt to supply the defect by getting up a foreign war, collapsed with a shock rather more severe than its author perhaps anticipated. He has been coquetting with the female-suffrage movement, but apparently finds it an insufficient basis for a Presidential run, if there be truth in the report that this astute politician is about to seek solace and retirement in the Governorship of Massachusetts. It is a striking fact that legislation has been almost all special instead of general. There are a plenty of bills to establish railways, but none to regulate railways as a whole; bills authorizing the establishment of banks, but none to regulate the system of currency; bills to remove disabilities and afford relief to classes and individuals, but none treating these subjects in a general and comprehensive manner. This follows naturally from the fact that representation is wholly special, not general. Every man in Congress represents a local and distinct constituency, and there is nobody to represent the sentiment and interest of the nation. Even the most public-spirited members are obliged, when questions come up affecting their own localities, to support them, and are thus estopped from blaming others who do the same thing in their turn. This was well illustrated in the debate last night in the Senate on the Sundry Civil Service Bill. The chairman of the Committee on Appropriations urged senators not to make any amendments, or, if any were proposed, to vote them down. Mr. Buckingham, however, secured an appropriation for a building in Hartford, on the ground that the city was ready to donate a valuable lot for the purpose. In an instant a dozen senators were on their feet, and within fifteen minutes amendments were adopted giving nearly a million for buildings in all parts of the Union. It is true that these amendments were afterwards laid on the table in a body, but this only shows, what must be allowed to this Congress, a negative virtue. There has been a determined opposition to private schemes, but of actual progress on the great questions of finance, education, and the reform of the civil and diplomatic services, the record has been very small.

In finance, the country is looking on with some curiosity to see by what process Mr. Boutwell is going to sell five per cents at par, when he is offered every week twice as many six per cent. bonds at a discount as he can buy. The first note of financial trouble abroad has come in the advance of the Bank of England rate of interest to three per cent., while exchange here, in the height of the cotton season, is at the full shipping point for gold coin. France has to pay two hundred millions of dollars this year, and four hundred millions in each of the years 1872 and 1873. If Mr. Boutwell attempts to control the gold market by increasing his sales, he is likely to get some financial experience which will be altogether new to him.

In the civil service, Mr. Trumbull has secured an amendment to the

Omnibus Bill authorizing the President to institute an enquiry into an adequate method of reform. With the pressure, however, to which he is subjected by members of Congress, it is safe to say that any plan he may devise will be one of those "particular" ones which is not available. The ardor of the President for this reform expressed in his last Message is said by good authority to have been a sop thrown, after the Congressional manner, to the public wrath at the retirement of the late Secretary of the Interior. The latest instance of the way gangrene is eating into the body-politic is in the appointment of the Professor of French at West Point. The office of United States Marshal at Boston was wanted for another partisan, and so the incumbent was transferred to the other post. Perhaps the linguistic acquirements of the pupils are of minor importance, but what is to prevent the military professorships from going the same road, with consequences to be developed in the next war as similar ones have been lately in France?

The vote for the choice of Speaker stood at 126 against 93, an index of the threatened change. The Democrats are open in their manifestations of glee, but the country may fear whether it does not point to confusion worse confounded. The Speaker, in his brief address, dwelt on the advantages of opposition in a free government. He omitted, however, to notice the fact, that in ours the efforts of opposition are almost wholly neutralized. Mr. Bayard, in his speech against time on the Enforcement Bill, stated the point when he said that his party could not obtain any information from the Executive against the wishes of the majority. Provided the majority and the Executive are in accord, the latter is completely shielded from responsibility behind the phalanx of the former. For this protection, however, it must be admitted that the majority amply indemnifies itself against the Executive by absorbing the lion's share of its power. This preponderance of the majority is further eked out by the element of secrecy. No bill of importance is submitted to the Houses until it has passed through a committee—that is, a board—which deliberates in secret, and the seal of whose approval is the basis of votes in the main body. The gag upon debate of the previous question has been found necessary in the House on account of the vast amount of business which claims equal rights of consideration, but it tends to increase the objectionable element commented upon. In the Senate, the check upon debate has not been carried so far, but the interminable length to which discussion of private matters is carried has kept the Senate much in arrear as compared with the House, and threatens to close up this last gap. As the committees of the two bodies may not come to the same conclusions, the conference committee holds the final secret session—trades upon the differences, and smooths the way to a final passage. In all this there is a provision for reconciling the separate interests in Congress, but the interest of the public at large seems to be of minor consideration.

The House voted to-day to adjourn *sine die* on the 8th of March, if the Senate concur. By many this is regarded as a piece of bunkum, relying upon the non-concurrence of the Senate. It may, however, indicate a desire to escape the San Domingo question, which it is said the President intends to press immediately upon the return of the Commissioners; and this trepidation may be increased by the understood intention of Senator Sumner to make a furious onslaught upon the Administration, in this connection, at an early day. As you have well pointed out, it is a cardinal error of Mr. Sumner to transfer the question to the point whether annexation is desirable for the inhabitants of the island. The speech of Senator Schurz pointing out the effect upon the United States seems to have been much more statesmanlike as well as effective.

FROM ANOTHER CORRESPONDENT.

March 5, 1871.

CONGRESS remained in session from 11 A.M. on Friday till nearly daylight on Saturday. I left the Senate at midnight on Friday, unable to await so interesting a scene as the taking of the vote on the reduction of the coal duty, because of the weariness of listening to perpetual amendments to the Civil and Miscellaneous Appropriation Bill. Several senators absorbed the few remaining hours of the session in offering amendments donating petty sums to charities, and giving appropriations to victims of the war, which were as regularly tabled as offered. The last words I heard, on leaving the Senate Chamber at midnight, were eloquent pleadings for five thousand dollars to repair a bridge over the Potomac, and the first, on re-entering the chamber a quarter of an hour before the expiration of the session, were similar words from Senator Howe. "These Sisters of Charity," said the senator, "have passed their whole lives in doing good, which we have not, therefore I appeal to you to give them what they ask." But even an appeal based on so obvious a truth failed. As the hammer fell, Howard of Michigan was still setting forth the virtues of Sisters of Charity just as if the session and his career as a senator were not about to terminate. The Coal Bill was considered during the night, and although it was defeated by the filibustering of its opponents, the revenue reformers nevertheless won a handsome victory on the test motion to table the bill. The vote stood 35 against it to 15 for it. Only two New England senators voted with the protectionists—Hamlin and Sprague, while five voted with the revenue reformers—Edmunds, Buckingham, Wilson, Anthony, and Paterson. Sherman of Ohio proclaimed himself still a bigoted protectionist by voting for the motion to table the bill. This vote of 2 to 1 in the Senate for a practical measure of revenue reform, coming immediately after a similar vote of 3 to 1 in the House, will tend still further to increase the demoralization of the protectionists, already shown to be great by the action of the Ways and Means Committee in authorizing McCarthy to report a bill to reduce the duty on pig-iron to $5 per ton, that on lumber to 10 per cent., and to lower the tax on salt one-third. When the Forty-first Congress met, it was admitted on all sides to be more wedded to protection than any which had ever before assembled, and now, in its closing hours, the protectionists themselves voluntarily propose wholesale reductions of the tariff. It may safely be said that there has seldom been so rapid a change of opinion on any subject in any Congress. Next to the trial of strength on the Coal Bill, the most exciting topic under discussion is the constitution of the Ways and Means Committee of the Forty-second Congress. There has been, within a few days, an influx of the leaders of both revenue reformers and protectionists—the editors of the Chicago *Tribune*, New York *Post*, Springfield (Mass.) *Republican*, and the officers of the Free Trade League appearing for the former, while Horace Greeley alone abundantly represents the latter. The protectionists have abandoned all hope of controlling the committee, and are ready to compromise upon Dawes for chairman; but the revenue reformers claim that their strength in the House entitles them both to the chairman and a majority of the members. Their candidate will probably be Garfield, while they expect to see such advanced reformers as Finkelnburg of Missouri, and Burchard of Illinois, put upon the committee, together with three radical free-trade Democrats like Brooks, Kerr, and Eldridge. It is understood that Speaker Blaine intends to satisfy the revenue reformers; indeed, he could not well do otherwise in view of their strength when acting with the Democrats. Competent judges estimate their united majority at forty votes, while their numbers are certain to be increased by defections from the ranks of the protectionists of those who have been deprived of protection to their special interests. It is thought that the freeing of coal would make ten votes for free lumber, and that free lumber would give at least a dozen voices for free iron. To the great surprise of most persons, the House voted yesterday to adjourn on the 8th. The Western men, who desire a reapportionment, are very angry. It is not certain that the Senate will concur, as the prospect of having to maintain Baez in power by the navy of the United States till next winter is somewhat alarming to Administration senators.

The latest reports are to the effect that Congress will not adjourn this week, the revenue reformers insisting upon the passage of the Coal Bill and Western men upon reapportionment. If the latter can be carried, there will probably be no appointment of committees till next winter. The chairmanship of the Ways and Means now lies between Garfield, Dawes, and Shellabarger. If reapportionment should be carried, Allison would return to Congress, and would then be the first choice of the revenue reformers for this important position. Speaker Blaine is anxious to postpone the naming of the committees till autumn, and thus relieve himself for a time of an embarrassing duty.

ENGLAND.

LONDON, February 17, 1871.

PARLIAMENT is now in full swing, and the Ministry appear to have begun work with creditable energy. Several important measures have already been proposed, and there seems to be a fair prospect for the session. The University Tests Bill has passed its second reading, and will speedily be sent up to the House of Lords, where I hope that it will reach some kind of settlement. A bill has been introduced for the regulation of trades-unions, which seems to be conceived in a fair spirit, and which will probably meet with general acceptance. I need not as yet speak at present of other promised measures. Last night witnessed the most exciting one which has hitherto taken place; and the entertainment may be said

to have consisted of a serious entertainment, followed by a farce. To deal with the last first, Mr. P. A. Taylor, an ardent democrat, redeemed the pledge which he had given to his constituents of opposing the Princess Louise's dowry. He made the regular comparison between the comparative cheapness of a queen and a president, and plodded through his task with little encouragement from an unsympathetic House. His motion was seconded by Sir C. W. Dilke, whose name may be familiar to some of your readers from his work on "Greater Britain." According to practice, the mover and seconder of the motion were tellers in the division which followed. The long procession of ayes filed into the lobby and back into the House during some twenty minutes, and men gazed with some curiosity for the appearance of the noes. At last, Mr. Taylor made his appearance, leading into the House his one faithful supporter, Professor Fawcett, and was welcomed by an inextinguishable outburst of merriment. The result of the division (in which "tellers" are not reckoned) was therefore 350 to 1; and the Princess has received her dowry with even more unanimity than had been anticipated. The three gallant members of the minority will perhaps receive the thanks of grateful constituents; but I fear the general sense was more nearly expressed by the growls of some of the majority, who muttered audibly: "You ought to be ashamed of yourselves." I am rather of that opinion myself, not because I am a particularly loyal supporter of the monarchy, but because I confess to thinking that such republican sentiment as exists in the country ought not to make itself ridiculous by taking up a paltry and rather personal question of this kind. In short, the whole affair was absurd, and does little credit to the judgment of its contrivers.

Meanwhile, another piece of business of more importance had been transacted. Mr. Cardwell had introduced the measure which will more than any other occupy the attention of Parliament during the coming session—that is, the bill for army reform. Mr. Cardwell is not a man of very imposing presence, and, as a general rule, is received rather with respect than enthusiasm. He is one of the last representatives of the Peelite school; he was distinguished at Oxford; and has developed into a steady official, with a little too much red-tape in his composition. Nobody expected any great eloquence in his exposition of the new measure, nor did he appear to be a fitting organ for the introduction of any sweeping reform. On the whole, however, he did his duty well, and even ended amidst something that might be called enthusiasm. Without dragging you into complex details, which, to say the truth, I do not for the present understand very perfectly myself, I will endeavor to indicate the main points of the scheme to be introduced. The first question concerned the adoption of some form of conscription. Government, however, has shrunk from so strong a proposal; and indeed, rightly or wrongly, our English prejudices are so unequivocally opposed to any compulsion in the matter, that the imitation of Continental policy in this respect is simply out of the question. We shall continue, as heretofore, to depend upon voluntary recruiting. The next point concerns the system of appointment of officers. As you know, the officers in the regular army are allowed, as a general rule, to purchase their commissions. In what are called the scientific services—that is, in the engineers and artillery—commissions are gained by competitive examinations. The officers of the militia and volunteers are appointed by the lord-lieutenants of counties. It will require no proof in writing to any one whose mind has not been reconciled to such an anomaly by long custom, that the purchase of commissions is an utter absurdity. Like all old-established abuses, however, which have worked themselves thoroughly into the constitution of the country, it has no want of ardent defenders. It was a question till lately whether Government would venture to deal with it boldly and finally. I am glad to say that they have had the courage requisite for the task, and that purchase is to be abolished. The main difficulty was the expense; and you will probably be surprised to hear that it will cost no less than forty million dollars to extinguish the vested interests of officers. This large sum will not be paid at once; but as officers retire, their commissions will be bought by the country instead of their successors. This reform will undoubtedly remove the main obstacle to all serious reform. The question remains, What is to be put in its place? In order to secure a due flow of promotion, commissions will be granted for five years only, and subsequent promotion will be made by selection; officers, therefore, who do not give satisfaction will be quietly extinguished when they find that they are not wanted. The first appointment to commissions in the regular army will be made by competitive examination, as a general rule, though certain other paths into the service will also be open, as, for example, the men who have held commissions in the militia, or have deserved promotion from the ranks. This change, too, will be accepted as a great step in advance by the main body of reformers. I am not at all disposed to deny that it is an improvement on the previous system of patronage.

I may venture, however, to make one remark upon this head which may not be quite irrelevant. I see that your reformers in America are advocating the introduction, on a large scale, of the principle of competitive examination; and there, too, I have no doubt that such a system is infinitely preferable to allowing public officers to be used as means of political influence. From another point of view, however, the result cannot be regarded with unqualified satisfaction. We, in England, seem to be pushing the system of competition to an extreme; and it exerts a questionable influence in two ways. In the first place, there can be no doubt that an honest official could apply far better tests than an examination. No merchant or lawyer, for example, would select his clerks by such means when he could have the choice of putting them through a short probationary course. In short, you limit a man to choose by a certain definite mechanical process, in order to prevent him from making a corrupt choice. Examination is better than bribery; but it is not so good as the free personal discussion of an intelligent and honest man. Choice by merit is the ideal, and that is by no means the same thing as choice by results of answering a few questions on paper. But the other defect is more marked and deleterious. The abundance of competitive examinations exercises a most unhealthy effect upon our educational system. The proper theory of education is, as I take it, to develop all a man's faculties, and to apply as much labor to raising the average standard as to cultivating the talents of a few. The marked tendency of the present day is for schoolmasters to select a few promising pupils, and to cram them with those special kinds of knowledge which are most likely to win prizes. The effect at Cambridge, where the system has been carried out for years, is the narrowing of the whole education of the university, and forcing a few prodigies of special, and often useless, knowledge at the expense of the great mass, who are left to pick up dry fragments of information from an inferior class of men. The system of appointments to the Indian Civil Service and to the open branches of the army in England, has generated a whole profession of "crammers"—men who are the very antithesis of good teachers, whose efforts are steadily and successfully directed to the invention of contrivances for defeating the skill of examiners. These are very serious evils, and, I fear, they will receive an additional stimulus from the proposed change, though I believe that, on the whole, the new order of things will contrast favorably with the old.

To return, however, to Mr. Cardwell's measure: the next great object is to bring about a closer connection between the regular army and the reserve forces. To effect this, it is proposed, in the first place, to "localize" the various regiments. Every regiment, that is to say, will be attached to a particular district; it will be recruited from a fixed point; and the officer in command of the regiment will also have the command of the various reserve forces in the same place. Various subordinate measures are proposed for bringing the regular army and the reserves into closer connection, and for enforcing severer tests of efficiency upon the militia and volunteers. The recruits for the militia, for example, will be trained with those of the regular army, and the volunteers will be subject to the Mutiny Act when on service. Moreover, short periods of service will be adopted, so that a considerable reserve may ultimately be formed from men who have passed through the ranks of the army. The result of the whole system will be, according to Mr. Cardwell, that we shall have available for home defence an army of 470,000 men. Of these, however, it must be observed that the regular army will be a small minority. The volunteers, for example, count for 170,000 in the total, and the militia for about 140,000. The regular army would only amount to about 100,000 men. The value, therefore, of the measures now proposed will depend materially upon the degree of reliance which we are disposed to place upon the militia and volunteers. Upon that point I am not competent to express an opinion. The great and palpable defect of both forces is the absence of any adequate supply of trained officers; nor can I see that any sufficient means have been provided for remedying this serious defect. On the whole, however, I suppose that we ought to be satisfied when we consider the slow and tentative process by which reforms are always effected in England. We shall have got rid of the one gross and palpable abuse of the sale of commissions, and we may hope that other reforms will gradually follow, as the presence of new blood begins to make itself felt. That evil stopped the way so long to any serious reform that its mere removal must give a great impetus to improvement in other directions. I don't know whether I shall live long enough to see the day, but I cer-

tainly expect that, in course of time, England will have enough trained soldiers under arms to feel tolerably secure from invasion in the event of a foreign war, even though our great line of defence—the navy—were to be broken by some unforeseen catastrophe. But there are many steps to be taken, and many weary discussions to be plodded through, before any decisive change will have been brought about.

Notes.

WE have received the prospectus of an *American Archæological Review and Historical Register*, to be devoted to archæology, anthropology, and history, with especial reference to this country. The editor offers as a guarantee of his ability for the task his "thorough and systematic researches in the vast mound-field of the Mississippi Valley," and promises "besides original contributions, a comprehensive résumé of the latest foreign enquiries and research, a condensed sketch of the progress of discovery in all parts of the globe," together with "critical reviews and bibliographical notices of new publications on archæology, ethnology," etc. There can be no doubt that such a publication is needed in the United States. The *Review* will appear quarterly or monthly, according to the support it receives, and the subscription price is fixed at five dollars. Mr. Wills de Hass, editor and proprietor, may be addressed at Box 2759, N. Y. P. O.——Messrs. Robert Clarke & Co., Cincinnati, have in press "Fisher's Patent Reports," the author being Mr. W. H. Fisher, law partner of the late Commissioner of Patents, and the reports those of cases which have been decided in the United States Supreme and Circuit Courts since 1850. The price will be $15 per volume for two or more, of a limited edition to match Hon. S. S. Fisher's "Patent Cases," published by the same house. They have also in preparation Saunders's "Law of Negligence," with Notes by Samuel R. Matthews.——Messrs. Hurd & Houghton, having undertaken to publish the works of the American Social Science Association, are about issuing the third number of that Society's *Journal*, which will compare favorably in value with the two that have preceded it; and a pamphlet whose title explains its object, which is a strictly practical one: "Free Public Libraries: Suggestions on their Foundation and Management." The "Handbook for Immigrants to the United States" is well advanced towards completion. On its own account, the firm will publish "The Lost Knight," translated from the German of Anastasius Grün.——The March announcements of Messrs. Roberts Bros. are: "Swinburne's Songs before Sunrise," more of Mme. Sand's novels, and "The Forest House and Catharine's Lovers" of MM. Erckmann-Chatrian.——The fourth series of verbatim reports of Mr. Beecher's sermons, from March to September, 1870, will be published immediately by Messrs. J. B. Ford & Co.——A memorial window has been thought a suitable monument for the late Alice Cary, to be placed in the Church of the Strangers in this city, which she was in the habit of attending, and from which she was buried. Contributions, however small (and the more numerous, the richer the window), may be sent to the leading booksellers in New York, Boston, and Philadelphia, or to the pastor, Rev. Dr. Deems, 4 Winthrop Place.——Messrs. J. B. Lippincott & Co. have in press Bunsen's "God in History;" "The Coast of Norway," scenes among its fjords and islands, from Christiania to Hammerfest, by Elijah Walton, whose "Flowers from the Upper Alps" was a very charming work; and "The History of Florida," by G. R. Fairbanks.

—The Young Men's Christian Association of this city proposes to contribute $10,000 towards purchasing the library of the late Mr. Thomas P. Barton, if it can obtain $40,000 additional for that purpose, with the understanding that the 16,000 volumes thus secured shall be added to the 3,000 now constituting the library of the Association, and the whole be thrown open freely to the public, both day and evening. There will still remain shelf-room for 20,000 volumes, with ample accommodations for readers, and the directors hope in this way to found a public library comparable with those of Boston and Philadelphia. The valuation set upon the Barton library appears to be below its market value. It is strong in works upon natural history, philology and criticism, bibliography, literary history, and belles-lettres; has a fair collection of the best French, Italian, and Spanish authors, and in Shakesperiana "is unsurpassed in this country, and only equalled in some of the public libraries of Europe." The Association announces that a gift of $1,000 will entitle the giver to an honorary membership of the Association in perpetuity, and of $500 to a life-membership.

—The activity manifested just now, as our readers are well aware, in building up the libraries of the country by accessions from all quarters, is one of the healthiest symptoms of the times. As it is displayed almost entirely at the North, we are perhaps in danger of forgetting in what a slough of ignorance the South still lies, and how prompt should be our sympathy and aid in raising her out of it, both by creating the means of education where they do not exist, and by encouraging those already established but lacking in vigor. We lately called attention to the deserts of the College of William and Mary, in Virginia, and we are incited to say something for the University of North Carolina, after having read a very forlorn account of the condition of its library. Of the general prosperity of this institution we are not informed. It was chartered in 1789, but first opened to students in 1795, and its library is said to be still, in all probability, what it has been, the largest in the State. In one sense this "speaks volumes" for the State; in another, quite the reverse. The total number of volumes in the University library is about seven thousand. Two thousand of these were added in 1859, being the first purchases made by the trustees since 1824. A large part of the remainder consists of State and United States documents—say another 2,000; and "furthermore," says the document before us, "the library has been enlarged by the deposit of some disused college text-books." This will suffice to give an idea of the state of learning in North Carolina, and as it is a disgrace not to that community alone but to the country, we trust the benevolent will remember in their gifts the library of the University, which, by the way, is situated at Chapel Hill.

— Dr. Seguin, in a very suggestive communication to the *Medical Record* of this city for March 1, brings to the life insurance discussion a criticism which may not have all the weight he would assign to it, but, nevertheless, has weight, and deserves consideration. Before all else, he attributes the insecurity of the companies to the mismanagement of the medical department, "due to a profound ignorance of the resources offered them by the recent progress of vital diagnosis." To illustrate his meaning, he cites two cases that recently came under his observation:

"A man of sixty-five, after an attack of apoplexy, followed by a slight paraplegia, had his life insured, and died within a year. The other, not over forty, but completely exhausted and worn out, came to me boasting that a company had insured his life, notwithstanding that I had told him that I would not give two cents for it; within six months, he had a pneumonia that he had not the vitality to carry to the seventh day. . . . In the former case, the sphygmographic traces would have been blunted by senile calcification, and otherwise distorted by the irregularity of the waves of the circulation. In the latter case, thermometry would have shown evening rises of temperature of more than two degrees—both pathological signs forbidding or invalidating any contract of insurance."

The so-called conjectural, rational, or physical diagnosis (by inspection, auscultation, percussion, etc.) is well adapted to detect actual or acute disease, which naturally, however, seldom presents itself for examination; but the conclusions derived from it can never be stated precisely, nor in the same terms by different examiners. "Positive" diagnosis, on the contrary, enables the physician to forecast the probable vitality, by means of indications absolutely correct and uniformly intelligible. Dr. Seguin urges elevating the medical officers of insurance companies to the highest rank, and abolishing fees and even salaries for them, securing the best talent by giving it an interest in the profits of the company; requiring them to possess and to know how to use all the instruments necessary for modern pathological investigations; and finally (when thus prepared), refusing no application for a policy, but insuring "not only upon a graduated scale of age, but mostly upon categories of probable vitality founded on physical and positive diagnosis."

—It is not a question that it is necessary to settle, or indeed possible to settle, which of the discoverers and inventors in which our time has been so fruitful has conferred upon his fellow-creatures the greatest benefits; but perhaps that one of their company to whom the rest would most willingly concede the highest place is the man who first introduced into medicine and surgery the use of ether. When we think for a moment and in the most general way of the enormous mass of suffering and extreme misery which ether has alleviated, and the enormous mass that has been prevented; and when we think particularly and in our own cases of the thankfulness that we have all at some time or another felt, to know that some life dear to us has been wholly preserved, or has been disburdened of useless torture, by means of this most blessed of medicines, we readily perceive that we should begrudge its discoverer almost no degree of gratitude and honor. We are sorry to say that it is at the present moment very desirable that this gratitude which every one must feel should find expression in benefactions to the widow and children of one of the claimants to the distinction in question; and we are glad to say that the necessity is recognized by certain gentlemen of Boston, who are acting as

a committee to collect a sum of money which shall raise the family to a modest distance above want. As our readers know, there has been a violent controversy as to which of two medical men should have the credit of being "the discoverer of ether," to put it roughly. This is not the time or place in which to reopen the discussion, even were we sufficiently acquainted with the facts and arguments, which we are not; and we refer to it only because it is necessary to say—what we think we hazard nothing in saying—that whether Dr. Jackson or Dr. Morton first discovered the value of ether as an anæsthetic medicine, we all owe very much to Dr. Morton for the energy and persistency with which he urged the use of the new agent upon the medical profession, and the courage with which he administered it despite the opposition of so many of his brethren. There can be no doubt, we take it, that the following letter of the late Dr. John C. Warren's establishes Dr. Morton's claim on the gratitude of the country, and indeed of the civilized world at large. Dr. Warren was the first physician to employ ether in a capital operation, and some two months after having done so—namely, in January, 1847—he speaks as follows: "I hereby declare and certify to the best of my knowledge and recollection that I never heard of the use of sulphuric ether by inhalation, as a means of preventing the pain of surgical operations, until it was suggested by Dr. William T. G. Morton, in the latter part of October, 1846." In this instance, Dr. Morton, being firmly convinced of its value, took all the responsibility of administering the ether, and did administer it in this case, and other cases, at first in spite of the protests of physicians in various other cities as well as Boston. We are of opinion that this, at all events, may be truly said of him, that we owe to Morton the first great proof of the safety and utility of etherization in surgical operations; and, further, that he was the chief and most enthusiastic advocate of etherization, and was such in spite of an opposition which might have daunted a more cautious man. Mrs. Morton and her children are, as we have said, now in narrow circumstances, and a certain number of Bostonians have set on foot a movement for their relief. Among the names on this committee are those of Dr. Jacob Bigelow, Dr. J. Ingersoll Bowditch, Dr. C. G. Putnam, Hon. William Whiting, J. J. May, Samuel Kneeland, Dr. Luther Parks, Dr. Henry I. Bowditch, Dr. R. M. Hodges, Dr. George Hayward, Dr. J. C. Warren, and Dr. Francis Minot. Dr. Minot, whose address is "No. 7 Charles street, Boston," will receive subscriptions. A national testimonial the committee would like to make it, and they ask for small sums as well as large; the least offering will be gladly received, from the poorest man or woman to whom relief has been brought by "the medicine before whose advent"—to quote, with a difference, the words of the committee—"in all time, surgery was agony; by which pain in surgery is averted and annulled; since whose advent science has controlled pain." As the committee suggest, Massachusetts might well ameliorate the "straitened circumstances" of the widow of a man whose labors have reflected honor on the State; and the testimonial might properly be national as being a reward bestowed by the national legislature for a discovery which was greatly to the honor of the whole country.

— Mr. G. P. Marsh, in his articles in the last volume of the *Nation* on the proposed revision of the English version of the Bible, pointed out some glaring defects in the means proposed for the attainment of the desired end. In the first place, the movement originated with, and has thus far been confined to, the Anglican Church—or, in other words, a single sect of the English-speaking Protestant community. In the second place, it is not supported by even the whole of that church. The province of York has refused to have anything to do with it, and it is wholly in the hands of the province of Canterbury. Worse, however, remains. The two "companies" charged with the revision of the Old and New Testaments respectively were directed to call in the aid of other scholars, no matter to what nation or denomination they belonged. But, in spite of the fact that America contains some thirty millions of Bible-reading Protestants, they called in no American; in spite of the fact that the greatest Hebraists of the day are Germans and Jews, they called in neither German nor Jew. But in a moment of liberality, they did call in a Unitarian, a scholar of high and well-earned repute, Mr. Vance Smith, and he is so little of a rationalist that at the first meeting he took the communion with them. Now, however, they have grown sorry for letting even him in, and at the late meeting of the convocation of the province of Canterbury a resolution was passed in the Upper House which declared it expedient that nobody should take part in the revision of the Scriptures who "denied the Godhead of the Lord Jesus Christ," and directed Mr. Vance Smith's expulsion. This resolution was carried by ten to four. Dean Stanley in the Lower House gave them a severe castigation, charging them with trying "to honor the Saviour's name by a distinct breach of faith." The Bishop of St. David's, perhaps the ablest man in the Upper House, has resigned his place in the companies of revision in sheer disgust. The new version would have had but slender authority as matters stood; now it will have hardly any.

—Mr. Hain Friswell's "Modern Men of Letters Honestly Criticised" has just cost his publishers the sum of $2,500, which it is difficult to imagine they can ever recover from the sale of the wretched book itself. The author, among other stupid, ungrammatical, and more or less malignant "criticisms," had exposed Mr. Sala to public contumely as a Bohemian, "a driveller of tipsy, high-flown nonsense," a genius in the hands of the Jews, "often drunken, always in debt, sometimes in prison, and totally disreputable," with much amplification of these charges. The *Daily Telegraph*, with which Mr. Sala has been connected for fifteen years, also came under Mr. Friswell's tomahawk, and the result of Mr. Sala's taking counsel with the proprietors was a suit for libel with the result just mentioned, the defence calling no witnesses, and making a very lame appearance in court. This is not, however, the first time that Mr. Friswell has been arraigned and convicted, though in a different forum. Many of our readers will recall his "honest" appropriation of Mr. Bartlett's "Familiar Quotations," and that the magnitude of the theft was only matched by the clumsiness of it on the one hand, and the impudence on the other; for (see the *Nation* of Feb. 7, 1867), in his preface to the first edition, he stated: "It is believed that no other work exists in the English language at once so copious and exact," and to the second: "Its merit is recognized as being the work of a man of letters, as distinguished from that of a mere book-maker." From piracy to libel is, for such a character, but a step.

—Most noticeable among recent English publications and announcements are the following. In history: "Robert Emmet: the Cause of his Rebellion;" "Notices of the Jews by Classic Writers of Antiquity," by John Gill; "The Dawn of the Second Reformation in Spain" (*i. e.*, from 1852), by Robert Peddie; "Records of the Reformation—the Divorce 1527–1533," collected and arranged by Nicholas Pocock from MSS. in the British Museum, the Public Record Office, the Venetian Archives, and other libraries; "The Fall of Metz," by G. T. Robinson; "The Siege of Paris," by Professor Nathan Sheppard, who has been the constant and very able correspondent "par ballon monté" of the Cincinnati *Gazette* and (less fully) of the *Examiner and Chronicle* of this city. With the foregoing may be classified: "The Church and the Churches in Southern India," being a review of the Portuguese missions thither in the sixteenth century, by Joseph Albert Lobley: "Keshub Chunder Sen's English Visit," edited by Sophia Dobson Collet; and "The Dictionary of Biographical Reference," by Lawrence B. Phillips—a work which contains over 100,000 names, filling 1,000 pages medium octavo (Sampson Low & Co.) In travels, we note only Mrs. W. A. Tollemache's "Spanish Towns and Spanish Pictures," though an old traveller turns up in "England Rendered Impregnable," by the Old Shekarry, who, if heaps of slain are all that is needed, is certainly qualified to render England or any other country impregnable. "The Great Duel, its True Meaning and Uses," is by W. R. Greg, who has been a very staunch defender of Germany in the late war. The three works which follow complete our list: Dante's "Divina Commedia" translated into English verse and *terza rima* by James Ford, and not the least worthy attempt of the kind; "On the Eve," a rather imperfect translation of a novel by Turgeneff; and "Shakespeare's Hard Words," by Professor Baynes, of St. Andrews—originally printed in the *Edinburgh Review*.

—In the course of some operations at the workhouse of St. Martin's recently, the laborers opened one of the "plague pits" of the Great Plague in London. The bones have been removed (*vasta moles*) to consecrated ground. At the bottom were found remains which had been buried in coffins—one of lead, the others of wood; but as the plague progressed no time was given for boxing the bodies in any manner, and the deposits of the later date were a medley of skulls of all growths and of inarticulated bones. The discovery has been kept secret, owing to the prevailing small-pox panic, and to a general belief that on a former occasion, when one of these pits was opened, the severity of the cholera then raging was in a great degree due to this cause.

—Mr. Frederick May's "London Press Dictionary and Advertisers' Handbook (1871)" is a very complete source of information in regard to the publications of the metropolis—their times of issue, office address, price, opinions, specialties, etc.; and a guide also to the organs of "each interest, profession, trade, religious denomination, science, etc., represented in the British and Irish press." It is a compact and handy volume of

some 60 pages, that sells on the other side for a shilling. From the statistics in the preface it appears that 316 newspapers are published in London, of which 21 are dailies. New York, according to the last Directory, publishes 255, and we reckon nearly or quite as many dailies as in London, which has three times the resident population of this island. In periodical publications, magazines, reviews, and the like, we naturally fall far short of London, which, intellectually considered, is Great Britain much as Paris is France. Here the total number is 473, against 109 in New York. We lack the data for a more detailed comparison, but the following table establishes the curious fact that New York is the more cosmopolitan city of the two:

	London.	New York.
Newspapers published in French	5	4
German	2	21
Spanish	1	2
Portuguese	1	1
Italian	0	2
Scandinavian	0	1
Total	9	31

The most striking disparity is in the number of German papers, and we have even left out of count some Hebrew journals, which are printed partly in German and partly in English.

—A correspondent sends us a timely extract from the "Agreable Companion," a rare book published in France in 1745, which runs thus:

"The French Tyrant [Louis XIV.], in a vain glorious Boast, caused the following Verses to be inscribed on a Marble pillar at Versailles, to tell the Greatness of his Actions to future Ages, viz.:

"*Una Dies* Lotheros, Burgundos *Hebdomas una*,
Una domat Batavos *Luna; Quid Annus agat?*"

In English thus:

"Lorain *a Day, a Week* Burgundy *won*,
Flanders *a Month; what wou'd a Year have done?*

Which being seen by the Lord Wilmot, the late ingenious Earl of Rochester, he presently writ underneath:

"Lorain *you stole;* by *Fraud you got* Burgundy;
Flanders *you bought; but Gad you'll pay for't one Day.*"

—This is good for prophecy. Now for a parallel between the besieged capitals of the ancient and modern Cæsars. In a lecture on the Roman Catacombs, delivered by Mommsen before the Berlin Unionsverein in January, the historian, dating the disuse of the catacombs from the Gothic capture of Rome, "thought fit," as the *Academy* remarks, "to point his narrative with a series of allusions, thus":

"In spite of the enormous circumference of the walls, the twelve gates were all beset, commerce on the Tiber was stopped; the pressure of hunger began, they began to ration out the bread. . . . . The government resided far away in Ravenna, inaccessible and impregnable among its swamps; it sent armies to raise the siege, but they never reached, and were separately crushed. The Goth did his best to bring about a peace: his demand was for contributions in money and kind, and the cession of Venetia, Noricum, and Dalmatia. They offered him gold and silver as much as he would, but beyond that nothing was to be got," etc.

—In support of the view entertained by M. Erckmann, the novelist, of the dangers which threaten France from the hostility of the North and South, Dr. Edward Boehmer, in his "Provenzalische Poesie der Gegenwart," brings out the fact that the revival of Provençal poetry in our day has a political significance, so far as it asserts the distinct race and language of the Provençals and seeks to resuscitate the latter, and to cherish the pride of origin in those who speak it in its modern and mutilated form. The number of these non-French-speaking Frenchmen (since Provençal cannot be admitted to be a patois) is estimated at ten million; and if to these be added a million and a half Basques and Celts, and as many Germans in Alsace and Lorraine, more than a third of the population of France before the war had no *national* unity with the rest. The war has not, however, if the poets may be trusted, strengthened the separatist feeling in Provençal; and the anti-northern feeling of poems like "The Countess," which Professor Boehmer has collected, yields in the present crisis to the patriotic sentiment. The latter is strongly manifested in the *Almana provencau* for 1871.

—The rumor that negotiations are on foot to transfer the seat of the Papacy from Italy to Belgium are doubtless as baseless as most of the reports so industriously flashed across the Cable, and yet they serve to remind us of the extreme ultramontanism of a powerful party in modern Flanders—the enduring work of Alva and of Philip II. The historical battle-ground of Europe is still the scene of a stubborn fight between mediævalism and modern thought, and the champions of the latter some two years ago established an "organ" which deserves a more cordial recognition than it has hitherto received on this side of the Atlantic. The *Revue de Belgique* is a monthly magazine, in which politics, history, and belles-lettres are cleverly mingled. The writing is good, and the spirit which pervades the whole is one of thoughtful progress, and those who desire to watch the development of a struggle which is sure to come in Belgium might do worse than add it to their list of periodicals. In two recent numbers now before us, we have been particularly pleased with a biographical essay by Charles Rahlenbeek, displaying much original research, on Cassiodoro de Reyna, one of the Spanish reformers who were driven out by Philip II., and who spent their weary but useful lives in wandering between England and Switzerland. It is a curious chapter of the unwritten history of that tumultuous time, which will probably never be fully brought to light for lack of materials. Some verses by Charles Potvin are not without point:

"Peuples, quand un César détale,
Ne craignez point de mauvais jours:
Une couronne impériale
Cela se ramasse toujours,"

—a prophecy already fulfilled, though when it was written the fallen Napoleonic diadem had not been replaced as yet by the Germanic.

——Das also war des Pudels Kern!
Ein fahrender Scolast?

A quaint document, bearing date 20th October, 1540, "Geben und gescheen zu Heydelberg uff mitwoch nach Galli, anno funffzehenhundert unnd viertzig," has just been unearthed from the Baden archives, and printed by Dr. Maurice Gmelin. It is a decision of Louis V., Elector Palatine, in a dispute between the Burgomaster and Council of the city of Spires on the one part, and the ecclesiastical authorities of the "Dhumb"—*i.e.*, the Dom or Cathedral—the churches of St. Germanus's, St. Guy's ("sant Guidon," also called in the same paper "Quidon"), All Saints', and the clergy of Spires at large, on the other part. The matter at issue is a *res parua dictu*, but magnified by party spirit into an exceeding great strife, and the document is not without interest as throwing a gleam of light on a very dark subject, the "*Currende.*" It has always been known that from remote times "poure scolers" had the prescriptive right in many towns of Germany of going about the streets singing and asking alms. But what the exact nature and organization of the Currende was, and its relation to the university, to the charity funds, and to the general system of education, is not at all clearly known. The literature on the subject is wonderfully scanty. While the history of education as a whole has been pretty thoroughly worked out in Germany, the humble Currende has been overlooked. It is rather doubtful whether the work of Schaarschmidt, "Geschichte der Currende," said to have been published—Leipsic, 1807—ever saw the light. At any rate, a work published in 1807 would not be of much value in 1871. The encyclopædias generally dodge the word. Even the peerless dictionary of the Grimms gives a definition not only meagre and unsatisfactory, but—if the words are pressed—positively wrong: "Currende: *das laufchor, pueri cantando per plateas stipem erogantes*"—unsatisfactory, because it leaves out the scholastic feature of the Currende; wrong, because "*stipem erogantes*" means not *asking* but *distributing* alms. Still, the Grimms' meaning is plain enough, though their Latin is bad. At Spires, it seems, a great many well-conditioned, able-bodied men (vill vermöglicher starcker leut) regularly abused this charitable provision. They decked their children out as scholars (hingen innen schulsecklin und schreybzeuglin an), and sent them round the town crying "Bread, a Goddes name, *panem propter deum.*" Two evils ensued from this: the bread was taken out of the mouth of the real scholars, and it became quite hard to get laborers in Spires. To put a stop to such impositions, it was ordained by the city authorities that no scholar call for almesse (umb das almusen), by song or otherwise, unless furnished with a token to show that he was what he claimed to be. Hereat Dean and Chapter waxed wroth. The question of privilege came up, and the united clergy blazed out with an indignant protest. "It was an infringement on their liberties, contrary to usage; in short, an innovation." This troubles the good Landesvater sorely; he is afraid that further ill-will and "onpleasantness" (weytter widerwill und onfreuntlich nachpurschafft) may follow. After looking the matter over carefully, he decides, and rather, it would seem, on the side of the Burgomaster: Namely and imprimis (nemblich und zuerst), that the Burgomaster and Council are to provide a certain number of tokens or badges "die nit uber eins batzen grosz sein, mit sant Katherinen bildnus," no bigger than a groat, and stamped with the head of St. Catharine; said badges are to be turned over to the ecclesiastical dignitaries, who are to distribute them to the scholars. The scholars, when crying alms, are always to wear or bear

the badges, but they are not required to have them about their person at any other time. How the decision of the Elector was relished by the clergy we are not informed.

—An unquestionable vestige of the Currende still exists at Tübingen. Regularly, on a Thursday morning, the *pauperes*, led off by a lively sort of Mayor of Garrat, with his voice turning again toward childish treble, go about the town, singing the old, old songs. Every window flies open, and the tattered choir is greeted with a perfect storm of bravoes, and pelted with morsels of food by the gay-hearted *ciues academici*. It is to be hoped that the publication of this document may provoke some inquisitive German to write a thick book on the Currende. To do it as it should be done is not an easy thing. It requires an intimate familiarity with school and university usages, with church history, with out-of-the-way folk-lore; some acquaintance with the manners and customs of Street Bands, though perhaps not that exhaustive knowledge which a life-long study of this specialty has given the venerable Charles Babbage; and a mind illuminated with a poetic mediæval fervor, quick to catch and cunning to delineate the subtle humor and pathos in the lot of these obscure strugglers. Neither can it be well done without a minute knowledge of local German history. Very little help, as we have already said, could be got from printed books. But surely, in the vast piles of archives amassed by those methodical and easy-writing Germans, there must be material enough to enable a duly qualified mouser to make a very entertaining and withal a very instructive work. Where are all the Learned Societies? What Royal Academy steps out first with a prize of a hundred thalers in gold for the best "Kurzgefaszte Geschichte der Currende, nach den Quellen bearbeitet," no dissertation to exceed a thousand pages in length? For the present the "poure scolers," with their plaintive *panem propter deum*, have vanished—no token left—"nit uber eins batzen grosz, mit sant Katherinen bildnus"—to show what manner of men they once were. And the Currende seems to have drifted out into some of Mr. Carlyle's favorite Limbos.

—We had something to say a month or two ago about the considerations by which we should be governed in the matter of publishing to the world such works and words of great men as they themselves had for one reason or another seen fit to leave unpublished. What we said was said in contemplation of the fact that the *Williams Review* was then on the point of publishing some old Commencement Parts by Hawthorne, the late Senator Fessenden, and others—exercises done in college while these men, who afterwards reached distinction, were still boys, and unthoughtful of the public which afterward they strove to please and instruct. We expressed ourselves as inclined to think the publication unjustifiable, or at least in but doubtful taste. Upon this we were asked by the managers of the *Review* to tell them why we thought this action of theirs one of doubtful propriety; and, further, to lay down any rule on the subject which had it been adhered to would not have worked injury to the world by depriving it of truer views of its great men and taking from it much valuable literature. We cannot say that we have been able, after pondering the matter some time, to see our way clear to framing any such rule; though, certainly, we have not changed our mind as to the special case which called out our remark, nor come to any other than our former conclusion as to our own unwillingness to take the responsibility of doing what the *Review* did. It would seem, on the one hand, to be for the general good that everything possible should be known of the men who stand out above their fellow-men conspicuous in the intellectual history of the race; well for our future progress that, so far from cultivating the habit of looking on the wonders of literature and life as mere miracles to be stared at, we should seek from all sources all kinds of information, however distasteful to us or however trivial, that may assist us to discover their true nature and other genesis; well, in short, for man, and in the end for each of us individually, that the driest light of truth should be thrown on everything. Pope's brilliant wit and his literary skill are among the intellectual glories of his age, and a part of the inheritance which ours gratefully receives; but need "Atticus," for example, or Mr. Cibber, or Lady Mary feel that human nature is degraded and the world made worse because Mr. Elwin comes forward and proves that the immortal to whom we are so much indebted was one of the most unscrupulous and pitiful of falsifiers and maligners? Was no service done when Sheridan's biographer published the manuscript *variæ lectiones* of the impromptu jokes of that wit? Lady Mary and "Atticus" and the Anne-Augustan dunces and some of the Georgian believers in solid work and sound morals, discredited by the shining parts of the brilliant orator, might feel themselves justified in praising the fullest truth as the only justice, the only thing always profitable to all. Or, again, how shall a rule be laid down and accepted that would have deprived us of the Johnson of Boswell, or any part of him, though we can imagine what the expurgating pen of the Doctor would have done had his young friend's manuscript once been submitted to it; and though, too, none of us who are fondest of the matchless biography could have blamed the Doctor had he made tremendous slashes in the portrait as we see it drawn.

—But, on the other hand, does it not peculiarly become us, as having been made partakers in the free benefactions of great men, to accord them the privacy which we demand as our right? Should they not be permitted to give what they choose and withhold what of theirs they choose to withhold? Are we not losers rather than gainers when in our eagerness searching everywhere, we learn, whatever else we learn, be it much or little worth, that our idol's feet are clay, and that our sometime demigod is no more than man? Apparently we must take sides against our former position; so far, at any rate, as to concede that probably this sort of offences needs must come; and that we all find it pleasant enough to have them come. But one has a feeling, too, that one would hardly like to be the man by whom very many of them do come; and that the rule, that it is well everything that is known about personages in whom the world has an interest should be told, is a rule which, practically, is often not binding upon us without many limitations—indeed, is a rule upon which, not seldom, it is unpermissible to act. Taste must often settle the matter; often it must be settled by considerations of justice and right feeling, considerations so impalpable as to be near akin to considerations of taste. Perhaps the intending collector of *ana* could do no better for himself—however he might for the world—than to bear constantly in mind Swift's remark about certain books: that there are books which we read with a lively pleasure, while at the same time we conceive for their authors a sincere contempt. Trelawney told us about Byron something that it was well enough to know when he told us that on the death of the poet he stripped his lower limbs of their covering and found that their deformity was caused by their being withered from the knee downward; but also he told us at the same time something worse of another person.

AN ENGLISH GOVERNESS IN SIAM.*

Mrs. Leonowens was fortunate in her opportunity of authorship. For several reasons, which it is not difficult to discover, the people of the Western world have known much less about Siam than about other oriental countries not more important nor more interesting. It lies somewhat on one side from the great highway of commerce; and the great gulf on which it borders, and through which it must be approached by the commerce of the outer world, is liable to sudden and perilous squalls, which make navigation unpleasant, if not difficult. Moreover, the anchorage at the head of the gulf is nothing but an open roadstead, with a dangerous bar obstructing the river, except for vessels of small tonnage. Any one who has ever tossed for three days in a gale of wind in this exposed position, waiting for a chance to cross the bar even in a small boat, will not wonder that commerce has busied itself with other fields which, though not in all respects richer, are more easily and directly accessible; and that Siam has had to wait its turn till India and China had been first explored. Within a few years a carrying trade in foreign vessels has been created between Siam and China; and a rice famine in the latter country was on one occasion averted, or greatly alleviated, by the surplus of the crop from the rich valleys of Siam.

Concerning some of the neighboring countries, a good deal of popular information has been given to the Christian world by reason of the great success which has attended the efforts of missionaries—notably the efforts of American missionaries in Birmah, of whom Judson was chief. But in Siam, although intelligent and zealous missionaries have been at work for years, they have hardly been able to show any success of the sort that appears in statistics of missionary societies. They have, indeed, been very useful in introducing a knowledge of the arts and sciences of Christian civilization; and in this part of their work, which is both a considerable and a legitimate part, they have received an almost unexampled patronage from the Government—a patronage intelligent and liberal. But, though we see to-day, as the result of their labors, the strange spectacle of Christian science and art flourishing in the palaces of Buddhist kings and princes; though we find that one of the American missions has for years

* "The English Governess at the Siamese Court. Being Recollections of Six Years in the Royal Palace at Bangkok. By Anna Harriette Leonowens." With illustrations from photographs presented to the author by the King of Siam. Boston: Fields, Osgood & Co. 1870.

been self-sustaining, chiefly through its printing-press, yet there has always been, on the part of the Government, a jealousy of religious proselytism, and an opposition to the introduction of Christian doctrine, against which the missionaries have found it impossible to make much headway; so that the Siamese missions have not been popular at home, and popular information concerning the country in which they are planted has not been called for, as it has been in regard to countries where the converts are numerous and the churches flourishing. If we except the work of Bishop Pallegoix, for years the esteemed head of the Roman Catholic mission, and the two volumes of Sir John Bowring, who negotiated the existing treaty with Great Britain, there has been nothing to awaken or to satisfy popular interest in Siam, except occasional sketches in magazines, missionary reports, and stories of voyages; so that Mrs. Leonowens had the fairest possible field and the best of opportunities for book-making.

The letter from the supreme King of Siam, which is given in her preface, and which was her commission as governess to the royal children, whose name is Legion, is very interesting, as illustrating what we have said concerning the attitude of the Government toward Christian nations. It is an autograph letter, such as his Majesty was fond of writing on the smallest provocation, and in his funniest style. The governess is warned (we quote) "that, in doing your education on us and on our children (whom English call inhabitants of benighted land), you will do your best endeavor for knowledge of English language, science, and literature, and not for conversion to Christianity, as the followers of Buddha are mostly aware of the powerfulness of truth and virtue, as well as the followers of Christ, and are desirous to have facility of English language and literature more than new religions." The eager desire for learning, the jealousy of religious influence, the sensitiveness to the opinions of the outside world, the patriotic self-respect, and the affectation of dignity thus oddly combined and expressed, are very characteristic of the King. And it must have begun to be apparent to Mrs. Leonowens, from the very terms of her commission, that to "do her education" on a royal family, with such a touchy and dictatorial pupil at its head, was to be a task of no small difficulty.

So, indeed, it proved. If the King would have let her alone, she would have had little trouble with his wives and children, who were docile and manageable enough. Indeed, the little children of her charge won her heart at once by their characteristic beauty and amiableness—qualities upon which other travellers and writers have also remarked. But this mature pupil of sixty, to whom the new governess was expected to make herself generally useful (as she discovered, to her great dismay), presently made her life a burden to her. This is from the description of her first introduction to the palace:

"'I have sixty-seven children,' said his Majesty, when we had returned to the audience-hall. 'You shall educate them, and as many of my wives, likewise, as may wish to learn English; and I have much correspondence in which you must assist me. And, moreover, I have much difficulty for reading and translating French letters; for French are fond of using gloomily deceiving terms. You must undertake; and you shall make all their murky sentences and gloomily-deceiving propositions clear to me. And, furthermore, I have by every mail foreign letters whose writing is not easily read by me. You shall copy on round-hand, for my readily perusal thereof.'"

To this general programme his Majesty adhered with great fidelity, and the unhappy governess had a hard time, compelled to yield to the most unreasonable caprices, and sometimes expected to assist in correspondence which went against her conscience by its untruthfulness. Probably, however, she was at no time in peril of her life or liberty, as she imagines herself to have been; for the King and all his court were too mindful of the good opinion of the foreign powers, and too well aware of the prompt energy with which any ill-treatment of a British subject would be resented, to venture on any violence or injustice. The work which Mrs. Leonowens had undertaken must often have proved disagreeable enough; but it was probably never dangerous, and the excitement of terror and distress into which she seems to have fallen not infrequently was scarcely justified.

Whenever the author is occupied with the story of her intercourse with the royal family, she is very lively and every way admirable. Her first interview with the King (from which we have quoted), bears evident marks of accuracy, as minute and perfect as if it had been reported at the moment by a stenographer. And she appreciates keenly enough the humor—sometimes unconscious and sometimes intentional—which marked his Majesty's conversation and correspondence. On the whole, her estimate of his character is not unfair, and when we remember how often and how seriously she must have been provoked by his caprice and shocked by his cruelty to the various members of his household (very seldom to his children, let it be remembered in his favor), she leans rather to the side of charity in her judgment. Her sketch of the Second King, with whom she seems to have had no personal acquaintance, is excellent. So is her estimate of the Prime Minister. And she has a kindly mention of that most jovial, most corpulent, and most hospitable of princes (whom every visitor to Siam must think of with esteem), Krom Luang Wongse, the King's half-brother.

No doubt, Mrs. Leonowens has done well to occupy herself chiefly with what occurred behind the scenes, and in the domestic life which no writer but herself has been permitted to observe. What she has told about the King, and what she saw in the process of "doing her education" on his household, is so interesting that we cannot help wishing she had recorded it more in detail. But one whose employments were so various, and from whom such unreasonable duties were exacted, may be excused for having left undone much which she would otherwise have gladly done. As it is, the book is half-filled up with geographical, historical, and other padding, not very skilfully inserted, and very disorderly in its arrangement. Indeed, when the author comes outside of the palace gates, and away from the immediate care of her pupils, she grows uninteresting. Her description of Bangkok is very incomplete, and nothing can well be more unsatisfactory than the account of her visit to the Naghkon Watt. The illustrations are good so far as they go, but are not the most characteristic that might have been chosen. Apparently, the writing of this book was an afterthought; and when at last it was undertaken, the author was obliged to use what material she had, and not what she might have had if she had been making notes and collecting material from the beginning. It is a book of recollections simply, or rather of recollections and padding.

But when we have said this, we have still left room to say that it is one of the most entertaining of recent books of travel, and that it will serve to introduce multitudes of readers to a country of wonderful wealth and beauty; to a court in some respects the most interesting in the world, and to a people with whom an increasing commercial intercourse, and the introduction among them of a Christian civilization, must make us more and more familiar.

THE MAGAZINES FOR MARCH.

READING Mr. Thurlow Weed's recollections of Winfield Scott, published in *Harper's* for March, one recalls the depth of veneration with which the boys who had rejoiced over Lundy's Lane and Chippewa and the geography-books' pictures of Perry's victory on Lake Erie, used to regard our old-time American heroes. It is curious to see that it never occurred to Mr. Weed, when he was honored by being a passenger on the same steamer which carried the Lieutenant-General across, that he was in all ways quite as worthy of respect as the rather pompous officer in whose presence he was anxiously respectful. The main business of the essay is to tell how Mr. Dayton, Mr. John Bigelow, Mr. Weed, and Archbishop Hughes met at Mr. Dayton's house in Paris, and decided that in order to allay the storm of excitement caused in France and England by Wilkes's seizure of Mason and Slidell, a letter from the Lieutenant-General ought forthwith to appear in the London and Paris journals. But the General's right hand was known to be swollen with gout, so that he was physically incapable of writing; yet, as he was "fastidiously careful of his literary reputation," how to get his name appended to a letter containing not only the phraseology of another man, but another man's punctuation also—"in regard to which he was particularly tenacious and sensitive"—was something that puzzled the counsellors extremely. However, Mr. Weed went to him and begged for a letter; the General agreed that such a letter was eminently necessary, and did not deny that he was the man to write it, but pointed to his swollen hand and said nothing could be done. Thereupon Mr. Weed remarked that if the General would only talk to him and give him his views, they should be embodied in words by somebody outside, and afterwards submitted to the author for revision. The General gave consent, and Mr. Weed went back to the Legation and astonished them by the story of his success. Meantime, Mr. John Bigelow had been at work for three hours preparing a letter in his well-known style, and this Mr. Weed shortly afterwards presented to its putative author, who "expressed his warm approval of every sentiment, and his admiration of its style and tone, and attached his large bold autograph" to it without altering a word or erasing so much as a comma.

Mr. Curtis's remarks about Jefferson's Rip Van Winkle and the chat about the trials of lecturers in far-off towns is in his more successful vein. For the rest, there is nothing out of the usual course in this month's *Har-*

per's, except, perhaps, a more than usually feeble sensational story called "Wed in the Morning, Dead at Night," which is far below the level of the love stories in which this magazine is so prolific. Persons desirous of reading about Florida may find in this number of *Harper's* a not very bad though not at all good account of the everglades and their fish, fowl, and beasts.

The *Atlantic* contains nothing particularly noticeable unless it be the beginning of Mr. Henry James's story of "A Passionate Pilgrim," which bids fair to develop several kinds of passion, but which in this instalment is largely devoted to the passion of affection, to call it so, which is inspired in many American hearts by the charm of the old country—the England of the literature of poetry and fiction and history which has been dreamed over for many years, and is now seen as the England whose meadows, and green lanes, and ancient castles and cathedrals, and farm-houses perhaps as ancient could alone without the poet or the romancer charm the heart as well as delight the eye.

"Ups and Downs of the Bourbons and Bonapartes," by a writer old enough to remember having paid civil attentions to Charles the Tenth when he fled from France, will be found pleasant enough reading; and still more so will be found the discursive notice of Miss Julia Wedgwood's recent biography of John Wesley. The book is not an adequate treatment of the subject of it; nor is the essay so good as, considering its subject, it ought to be, but both may be commended for perusal. The latter is worth looking at if only for the sake of this picture of the state of discipline among the Wesley children. As soon as they were "turned of a year" "they were taught to fear the rod, *and to cry softly*." Or if only for the sake of this hint of the condition of the English country clergyman of small means only a hundred and fifty years ago: a certain clergyman being in a house where, as in many houses, the chaplain was expected to retire from the board before the second course came on, was one day so temerarious as to help himself to a jelly. He himself is the narrator of the story, and he remarks that "the lady of the house, *though otherwise a devout woman*, told me that it did not become a man of my cloth to delight in such frivolous food."

"Shoddy" is a printed lecture of the somewhat rhetorical sort by Mr. E. P. Whipple, and has for its contents some of the things which the title will suggest to the lecture-goer, and some writing of the kind which also is known to the lecture-goer. "Kate Beaumont" has been a rather vulgar story from the beginning, but it has throughout had some clever surface sketches of the Southerner as he used to be, and perhaps will be when made into a book worth the attention of most readers who are still interested in that field of fiction. "Woman's Rights in Ancient Athens" is some account of a couple of the comedies of Aristophanes, in which the author is bold enough to present the argument that when men become entirely useless in war and likewise in debate, women if properly led may surpass them.

The poetry of the number is at its best in "Marguerite," by Mr. Whittier. It is a love story—in metre of bad example by the way—about a girl whom he describes rather queerly in the third verse:

> "Sick in an alien household the poor French neutral lay"

—as if she had been a brigantine or schooner. But it is a touching little story, full of feeling and affection. Mr. Longfellow we believe it is who writes out a Jewish legend which will command wide approval; Mr. Taylor gives us a translation of the prelude to "Helena"; and Mr. Howells some pleasing stanzas, done some years ago perhaps, called "The Mulberries."

The *Galaxy* has nothing more noticeable than a much-heralded article on the San Domingo question—an article understood to be, if not inspired from high quarters in Washington, at least written by some one conversant with the plans of the Administration, and well supplied with such information as the Administration has to give. We wish it joy of its advocate. A Congressional committee reporting on a contested election case could not be more feebly and obviously one-sided and committed to a foregone conclusion. There is a specimen of the author's style which may be taken also as evidence of his mental calibre, for we have not space to go into remarks on his statements of fact and his inferences. He is talking about Mr. Sumner's opposition to the passage of a resolution which authorized the sending out of a commission—an opposition characterized by more than the usual degree of overbearing rashness and insulting laxness of speech which have so often neutralized the good effects of Mr. Sumner's hardest and best-intentioned work. After he had finished a certain speech, says our author, "as suddenly as rose the warriors of Clan Alpine an army of giants in debate sprang to the defence of an insulted chief. That chamber has seen many a bitter strife, but it has generally been between man and man, or the encounter of opposing parties. Now it witnessed the sight of nearly all the speaking talent of the party drawn up against one who professed the same political faith. One after the other swords were drawn by men trained to cut and thrust, and who had tierce and carte at their fingers' ends. There was Morton with his clear logic and ready powers of debate; Nye with his keen satire; Chandler with his sledge-hammer blows and 'pungent but not unparliamentary' speech; Conkling with his towering eloquence and crushing invective, whose friends thought he had 'struck his best gait that night.'" Better even than this last touch is the conception of Mr. Chandler as dealing death-blows or using language more pungent than handfuls of mud.

An article not so bad as the one just mentioned, but about equally unworthy of a place in a magazine of the *Galaxy's* pretensions, is that entitled "The Higher Education in America," a matter which would seem to form just now the care of people who would have done better to get what education this country affords before dealing so roundly with us as to our American lack of such universities as Germany got when she was ready for them, and as we shall have in due time, and, indeed, are now nearer having than the writer before us knows. Not that he has not some sensible things to say, or that his article is not worth the attention of such as have not listened to the current arguments on this much-discussed topic. But the presumption is not strong in favor of any higher education in a man who comes to us to reason with us as to our need of culture, and begins by referring us to "that matchless book," "The Reveries of a Bachelor."

Old and New has some more about the "Porter-Humphreys-Hardin" swindler, and a historical review, not ill-done, from the standpoint of a Unitarian, of the last few decades of the English "church as by law established"—a form of words that ought to strike somewhat strangely on the ears of people who have another conception of "the church" than that it is the state as engaged in the function of teaching ninety-nine different doctrines as to the relations of man to God, Christ, heaven, and hell. From a Unitarian point of view, too, is written the article which talks of the two hundred and fiftieth anniversary of the landing of the Pilgrims, and of its being celebrated by the delivery of an oration in a Unitarian church, the auditors being people of all shades of religious belief and of no religious belief in particular, and the orator being a sound Episcopalian—as some Episcopalians count soundness. Yet still, as the writer well quotes, the Rev. John Robinson's parting words to the Pilgrims were such as these: "The Lord hath more truth yet to break forth out of his Holy Word. I cannot sufficiently bewail the condition of the reformed churches who are come to a period in religion, and will at present go no further than the instruments of their reformation. Luther and Calvin were great and shining lights in their times; yet they penetrated not the whole counsel of God. I beseech you remember it." For the rest, *Old and New* has some more of Mrs. Stowe's story of "Pink and White Tyranny," which offers direct encouragement to plain girls, and has brought the pretty girl of the story to reading French novels, which the husband, however, gently but firmly takes away from her; the beginning of a Dickens-like story by Mrs. A. D. T. Whitney; some inferior poetry; some book-notices, none of which is successful; and certain other matter.

Story-readers will be pleased with "The Blood-Seedling," by Mr. John Hay, which appears in this month's *Lippincott's*. It will not bear reading twice, for there is not much of it except the surprise at the end of it; but that is well managed. Better than anything else in the magazine—which has a story by "Ouida," and an unpractical essay by Mr. Amasa Walker, on "The Moral of the Franco-Prussian War"—is some account of Mr. Robert Walsh's mission to San Domingo and Hayti just twenty years ago. He was sent out by Fillmore and Webster to act in conjunction with commissioners from France and England, who were to try if they could not prevail on the Haytians and Dominicans to refrain from cutting each other's throats as soon as the rainy season had so far passed as to give them a chance at each other. We advise any one who thinks he has a good reason for annexing these gentlemen to us to turn to Mr. Walsh's account of them. Mr. Chandler's plea, or whosesoever it was, that by the annexation of an island with the climate of San Domingo we should raise the average temperature of the United States, and thus benefit the poor man, and break down the coal monopoly, is the only reason upon which to fall back that we see remaining.

Of the *Catholic World* not much is to be said. There, too, "The

Higher Education" gets some attention, and the writer states clearly his belief and that of the church as regards any and all education—namely, that the church it is which shall say what is to be taught and who is to teach it. The writer of the articles on Mr. S. Baring-Gould's "Origin and Development of Religious Belief" appears to be still bothered to make out what Mr. Gould's point of view is, and talks of him as if he were some sort of lost metaphysician. He has his excuse for being in a confused state of mind as to Mr. Gould, for that gentleman has been "in pretty tall grass," as they say in New England, ever since he undertook philosophizing on religion; but as he is an out-and-out Ritualist Episcopalian, who, in writing this last book of his, was attempting, or pretending to put himself in the attitude of, free enquiry, whence he was to proceed to put Christianity on a basis of philosophy, the shortest way for our reviewer, and the least wearisome to all concerned, would be to employ the usual method which Roman Catholics adopt in the case of people who believe in the earlier church, and do not believe exclusively in the Roman one of the three fragments into which the earlier church has been split. There is nothing to prevent his being told that it is illogical in him to stay where he is, and that he must eventually come over to Rome.

"Early Missions in Acadia" will be found interesting, and any one who wishes to see a bad form of the historical novel mixed with the religious novel, in one of its more disagreeable forms, may see it in these chapters before us of "Dion and the Sibyls." Though, for that matter, to be sure, one might say that there is so little of the novel about the performance that one is at liberty to look upon it as a sort of historical study of certain personages, and an attempt, like Becker's, say, to reproduce for us certain details of a daily life of classical times. Perhaps the worst of the matter is that, except very reverent or very sceptical persons, almost everybody not very coarse in taste will be more or less disgusted by the introduction of Jesus into the story.

Life and Nature under the Tropics; or, Sketches of Travels among the Andes, and on the Orinoco, Rio Negro, and Amazons. By H. M. and P. V. N. Myers. (New York: D. Appleton & Co. 1871. 12mo, pp. 330, with several full-page illustrations and a map.)—The expedition to tropical America, of which this little volume is an account, was sent out by the Lyceum of Natural History of Williams College. This most successful of all our college natural-history societies, and which, we may say in passing, has had no inconsiderable influence in promoting science in this country, has already sent exploring parties to Florida, Labrador, and Greenland, besides regions nearer home. The spirit of adventure and discovery seems to have culminated in the expedition to South America, which has resulted in two of perhaps as readable and useful accounts of foreign travel as our literature has produced for several years.

The party divided at New York, one party sailing by way of Panama to Guayaquil, the other taking passage in a trading vessel to Caracas, or rather its seaport town, La Guaira. With the doings of the latter division of the expedition we shall chiefly concern ourselves. Professor Orton has already given us an account of the expedition from Quito over the Andes, down the Napo River to the mouth of the Amazons, a second account of which occupies the last half of the present volume, and which is mainly a repetition of Orton's narrative. The line of travel of the Caracas and Orinoco party was from that city southward to the Orinoco, up a portion of that river to San Francisco, thence southward still up the Atabapo River, down the Rio Negro, and homewards by way of the Amazons. The route from San Francisco to the Rio Negro had not previously been traversed by Americans, and the whole trip, with its dangers and difficulties, both from the physical obstacles of the route and the delays occasioned in procuring guides and boats, called for an unusual amount of pluck and perseverance in the three young men that composed the small party. Moreover, the story of their hardships and dangers is told in a "boyish way" that is certainly very attractive. Much good judgment has been exercised in the treatment of the different topics, and the whole book is a compact, well-balanced narrative, leaving on the mind vivid and clear views of the physical features of the vast region passed over, with the more salient points in its natural history, geology, and ethnography.

The authors are not *savants*, or they would not have called "fossil specimens of the marine fauna" what were simply fossil marine animals. They would not have called the maniti, or sea-cow, a cetacean, for "this herbivorous cetacea" is no cetacean at all, but a true ruminant, with a whale's physiognomy; hence no wonder that its fat is "void of that odor peculiar to cetaceous oil generally." Neither is a shark, though monstrous enough morally, a "cetaceous monster," as certainly as a whale is not a fish. "It seems strange to speak of grasses as forming forest," but hardly less so than to refer to the Bambusa as "that arboreal gramina," when arboreal grass is meant.

This book gives us, however, the only account we have in our own language of the country about the head-waters of the Orinoco, except the "Travels" of Humboldt. In physical geography, we have here presented a fresh account of the *terra calienta* of the coast; the cool and beautiful Valley of Caracas, that would be a paradise were it not for the memories of the terrific earthquake of 1812; with fresh descriptions of the vast internal seas that cover the llanos during the rainy season, when broad rivers are obliterated, and the canoesmen steer by the sun across river basins and over forests, while floating caimans fill the place of sharks in these illimitable fresh-water seas, which, like the mid-Atlantic, have their regions of perpetual calm. In matters of more human interest, we have sketches of the honest, simple, indolent Indians, as harmless as they are degraded. Reference is made to the tribe which live like monkeys in trees, as described by Humboldt, but our travellers do not seem to have met with them. The Amazonians evidently never penetrated into the highlands of Venezuela, if we may credit our authors' statements that "for the first and only time while in the country we saw a woman seat herself at the table in company with men. Among the better class of Venezuelans it is customary for ladies to take their meals in their rooms, having them brought by servants; while among the middle and lower classes the women wait until their lords have eaten, when they take possession of the table with what may be left, or, as is more commonly the case, they crouch with the children upon the ground in the corner, where, from the iron pots, they take their food."

In geological matters, brief reference is made to the gold regions of Venezuelan Guiana—the veritable "El Dorado"—which "embrace the broken mountain-ranges lying about one hundred miles south of the Orinoco, in the eastern portion of Venezuela, between the rivers Essequibo and Caroni." But these rich and promising gold-fields are two hundred miles from the Atlantic coast, and far out of the line of travel of our party, though at the time of their temporary sojourn at Urbana" on the Orinoco, the inhabitants were suffering from an attack of the gold-fever. Any information concerning the subject of the former existence of an Amazonian glacier is acceptable, but no additional facts of importance seem to have been observed either for or against the theory, though both sides of the case are presented with fairness. The authors lean to the opinion that there was an intertropical winter—at least, such a reduction of the temperature as to cause a lowering of the snow-line upon the Andes, and the formation of local glaciers among the serras of Brazil. This most geologists are probably willing to admit, but it is quite a different thing from a continental glacier, filling the Amazons valley one or more thousand feet in thickness, and loading the Atlantic with icebergs, such as Agassiz has suggested in his remarkable theory.

Nomina Geographica. Versuch einer allgemeinen geographischen Onomatologie. Von Dr. J. J. Egli. Erste Lieferung. (Leipzig: Fr. Brandstetter; New York: B. Westermann & Co. 1871.)—This dictionary of "Geographical Names," which is also, as we remarked the other day, to embrace a treatise on the principles underlying geographical onomatology, promises to add one more to the many shining monuments of German erudition. The lexicon proper, of which we have the letter A and the beginning of B before us, is to contain seventeen thousand names—belonging to all divisions of the globe and all languages, as well as to all classes of geographical objects—lexicographically arranged, and accompanied by etymological explanations showing not only the meaning, but also the natural or historical reason, of every appellation. Names bestowed upon localities by discoverers, concerning which the original reports of travel give authentic information, will form more than half of the collective matter, while those for which there is no plausible derivation will be ignored. The authorities which serve the author as guides in this vast and checkered work are—as the introductory list of them and almost every page of the text show—not only correspondingly rich and varied, but of the highest critical value. The following notices—taken from one page—which we translate in a somewhat abridged form, may serve as specimens of the work:

"ALMADEN, the mine, Arabic name of a Spanish town renowned for the rich quicksilver mines in its vicinity. The same word, properly *el-Ma'aden*, appears in the name of Fort Almada, opposite Lisbon, 'ainsi nommé parce qu'en effet la mer jette des paillettes d'or pur sur le rivage.

Durant l'hiver les habitants de la contrée vont auprès du fort â la recherche de ce métal . .' Edrisi, translated by Jaubert, ii. 26."

"ALMADEN, NEW, name of an important quicksilver mining locality in California, called after the Spanish Almaden. *Zeitschrift für Allgemeine Erdkunde*, 1856, p. 9."

"ALMALY—Turkish—apple-place, a village southwest of Sivas, in Asia Minor. Tchihatcheff, 'Reisen in Kleinasien und Armenien,' p. 13."

"ALMANNAGJA, all men's chasm—from *al*, many or all, *manna*, gen. plur. of *madur*, man, and *gjà*, chasm—name of a grand mountain gorge in Iceland, in which, during and after the time of the Icelandic Republic, 927–1800, the Althing, the people's court or general assembly, was held. Preyer and Zirkel, 'Reise nach Island,' p. 80."

"ALMATCHINSKIY, from the Kirghizian *almat*, apple, the name of a Russian fort in the Kirghiz country, signifying the Almataian, that is, situated on the river Almatâ. Old Chinese maps have at this place Gurban Almatu, meaning: three rivers with apple-trees, three apple-rivers. Humboldt, 'Asie Centrale,' iii. 226; Petermann's *Mittheilungen*, 1858, xvi. 497."

"ALMEJAS, GOLFO DE LAS, shell-fish bay, name of a bay on the west coast of the Californian peninsula. Duflos de Mofras, 'Exploration du territoire de l'Orégon, des Californies, etc.,' i. 231."

"'ALMON—Hebrew—seclusion, a place belonging to the tribe of Benjamin. Josh. xxi. 18. Gesenius, 'Hebrew Lexicon.' Present name 'Almith. Robinson, 'Neuere biblische Forschungen,' 376."

"ALMÓRA, from *almóri*, a kind of sorrel—*Rumex hastatus*—abounding in the vicinity, Hindí name of a place in Kamáon, Hindostan. Schlagintweit, 'Geographical Glossary,' p. 169."

The unusual correctness of the numerous quotations contained in the work, from the original of books written in a large number of languages both ancient and modern, may be considered a guaranty of the trustworthiness of the references, which so considerably enhance the value of this dictionary. In Hebrew characters alone we discover here and there a slight oversight. Thus we find *Adillam*, for *Adullam* (p. 6), *Ay Khappe tor*, for *Iy Caphtor* (p. 7); and *Anakh*, for *Anab*—a mistake which has led the author to the erroneous substitution of an article "Anak" for "Anab." We are also surprised to find the Semitic "Ammon" omitted, while the Egyptian and its derivatives are given. In the same way we find "Arabah," but no article explanatory of "Arabia;" and Mount "Araxos," but no river "Araxes"—though the derivations given of the names Arabah and Araxos are perfectly applicable to the names omitted. A graver omission is that of both "Babel" and "Babylon." "Ægates" is wrongly referred to "Gader," instead of to "Ægades," as the latter article shows; and the explanation of "Argos" can be found only under "Argon Pedion." Some notices omitted at their proper place are given in a brief supplement to the letter A, and we hope the author will add a general list of corrections at the end of the whole work. He calls his production a *Versuch*, and as such it is certainly excellent, in spite of its defects.

Lectures and Essays. By J. R. Seeley, M. A., Professor of Modern History in the University of Cambridge. (New York: Macmillan & Co. 1870.)—Perhaps the most striking characteristic of this volume, containing ten papers on almost as many subjects, is that it should be the production of a Cambridge professor, and especially of a professor of history there. In contrast with the labored and solemn lucubrations of Sir James Stephen on French history, and in still stronger contrast with the spasmodic sentimentalism of Mr. Kingsley, the plain, straightforward, sturdy English in which Mr. Seeley speaks to Cambridge men of their political duties, to English teachers of theirs, to clergymen of theirs, is in wholesome evidence of the great advance made by the best class of English talkers in the art of talking to the purpose, and in the business of having a purpose in their talk. Mr. Seeley represents at Cambridge very much the direction taken by Goldwin Smith at Oxford, and by Matthew Arnold in even a wider field—that of all English-reading scholars. All three are masters of style, in a way that at times tempts them, Arnold most of all, into phrases that really outrun their meaning, but at least they never begin to speak or to write until they have a set purpose, and their plain intention is to bring others, and particularly younger persons, to their way of thinking, or at best to such a consideration of their thoughts as shall not give hearers or readers the excuse of never having been asked to think about the matter in hand. It is this plain earnestness of speech that makes the writings of such Englishmen as Mr. Seeley so attractive and so useful, both in themselves and as examples of what the modern English standard of scholastic style is, or ought to be, in the foremost masters of it both abroad and at home.

If we had a hand in securing an American reprint of this volume, we would put first and foremost the lecture which is the last in the English edition, that on "The Teaching of Politics," as much for the vigorous, simple phrases of the introductory remarks as for the sound sense which pervades it. Next to it should come the lecture on "English in Schools," for if our schoolboys get less Latin and Greek than their English fellows, they get quite as little English, and that little very bad, whereas a decent discipline in their native language would give us men with sounder thoughts and more precision in the expression of them than we now find in most of our public writers and talkers. Next in interest, originality, and value are the papers on Milton's political opinions and on his poetry, and, taken together, they form a capital commentary on the place now assigned him in modern English literature—a far safer one than that claimed for him by his extravagant eulogists, and more likely, too, to win him readers.

Of the articles specially technical, such as those on "Liberal Education in Universities" and "The Church as a Teacher of Morality," the interest is mainly English, though the thoughts are often of more than local application. For instance, Mr. Seeley's advice to clergymen to preach politics might well be heeded in our American pulpits. The business of an English university is so different from that of our colleges, that the paper on that subject, and the frequent recurrence to it in almost all the studies on cognate topics, commend themselves rather to those in search of information than to the general reader. The lectures on "Roman Imperialism" were reprinted, at least in part, in *Littell*, and have thus already made a large circle of readers in this country familiar with a capital example of Mr. Seeley at his best in the matter of style, while investing an old and familiar subject with new phrases even where there was little room for original ideas. The paper on "Elementary Principles in Art" is rather a mild specimen of padding. Altogether, however, the series has a value and importance beyond that of the immediate subjects under treatment, as showing how broad a field is cultivated by the men who are acknowledged leaders in current or rather contemporary English literature; and we cannot but reget that similar essays by American scholars whom we certainly should not rate below Professor Seeley, require, or are thought by publishers to require, a fanciful title to propitiate readers among their countrymen.

The Middle Kingdom. By S. Wells Williams. Fourth edition. 2 vols. (New York: John Wiley & Son. 1871.)—The reissue of this standard work evinces the interest felt by Americans in all matters pertaining to China and the Chinese. Few publications of a similar nature have achieved a more merited and widespread popularity than "The Middle Kingdom," it being accepted, both in this country and in Europe, as the best authority upon Chinese matters extant. The copy before us presents a marked improvement over previous editions in mechanical finish, both as regards letterpress and illustrations. We must, however, enter a protest against the words "fourth edition" on the title-page, as, however technically correct, they are calculated to mislead the public. The words "new edition" so generally imply a revision and emendation of previous issues, that one feels inclined to resent their application to a bare reprint, as is the case in this instance. How literally the old text has been adhered to may be easily seen. Thus (vol. ii., p. 594) we read: "From the close of the year 1844 to the present period, nothing has occurred to disturb the amicable relations existing, in general, between China and other nations except the opposition of the citizens of Canton, etc." And again, p. 599: "They (the Chinese) are afraid to act against the opium vessels on the coast, most of which sail under English colors, lest the Governor of Hong Kong demand reparation, etc." Nothing is said of the disturbances which have so lamentably signalized the history of foreign intercourse with China during the past decade, or of the treaties which legalized the opium traffic, and thereby added considerably to the income of the Chinese exchequer. We have taken these examples at random from pages which, accurate enough when first written, stand grievously in need of revision now that twenty-seven years have elapsed since their original publication. Had the retention of these pages been accompanied by an explanatory note, but little need have been said in the way of criticism. But the "preface to a new edition" only brings matters up to 1860, with the very briefest mention at that; leading the uninformed reader to infer that no event worth recording in the history of foreign intercourse had occurred since the signing of the Tientsing treaty.

It is to be hoped that Dr. Williams will, before long, undertake the revision of his second volume, and thus render the work under notice not merely our best authority on all that relates to Chinese geography, ethnology, manners, and customs, etc., but complete also as a history of foreign intercourse with that remarkable people. Meanwhile, despite the grave omission we deem it a duty to point out, "The Middle Kingdom" remains the most perfect compilation relating to China yet published in any European language.

Tertullian. Vols. II. and III. Ante-Nicene Christian Library. Edited by the Rev. A. Roberts, D.D., and Jas. Donaldson, LL.D. (Edinburgh: T. & T. Clark. New York: Chas. Scribner & Co.)—In noticing the first volume of "Tertullian," against "Marcion," a general estimate was given of the value of this father, and the characteristics of his style were indicated, especially in contrast with the Apostolic writings. Vol. II. contains other controversial essays and theological disquisitions, chiefly upon the humanity of Christ, the resurrection of the flesh—which is pressed to a bald literalness—and the nature and destiny of the soul. Vol. III. contains essays singularly adapted to these times, upon such topics as monogamy, chastity, modesty, and the veiling of virgins. The counsels to the virgins would be specially distasteful to a class of advocates of the publicity of women; and it must be admitted that some of Tertullian's phraseology is hardly more modest than the demonstrations at which his satire is aimed. Clearly enough, the contest between feminine forwardness and womanly reserve is not a fruit of the light and progress of the nineteenth century. Even Paul and Peter had an inkling of it, and, in Tertullian's time, it had assumed formidable proportions. "Put on," said he, "the panoply of modesty, surround yourself with the stockade of bashfulness, rear a rampart for your sex which must neither allow your own eyes egress nor ingress to other people's."

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Art, January and February—Nos. 7 and 8, swd	(G. P. Putnam & Sons) $1 25

Yeaman (G. H.), The Study of Government	(Little, Brown & Co.)

JUST PUBLISHED.

THE PROSE WRITERS OF AMERICA. With a Survey of the Intellectual History, Condition, and Prospects of the Country. By Rufus W. Griswold, D.D. New and revised edition, with a supplementary Essay on the Present Intellectual Condition and Prospects of the Country, by Prof. John H. Dillingham, A.M. With seven portraits on steel and vignette title. Imperial 8vo, cloth, extra, gilt top, bevelled boards, $5.

Wm. Cullen Bryant says of the original edition: "We are glad to possess, in this form, portions of many authors whose entire works we should never own, and, if we did, should probably never find time to read. We confess our obligations to the author for the personal information concerning them which he has collected in the memoirs prefixed to their writings. These are written in a manner creditable to the research, ability, and kindness of the author."

Edgar A. Poe, in his Literati, says of it: "This is a book of which any critic in the country might well be proud, without reference to the mere industry and research manifested in its compilation. These are truly remarkable; but the vigor of comment and force of style are not less so; while more independence and self-reliance are manifested than in any of the series. There is not a weak paper in the book, and some of the articles are able in all respects."

The present edition has been thoroughly revised, every page has been gone over, and notices of authors who have passed away since the previous editions were published, have been revised and continued to the period of their decease, and long and critical articles on the authors of the present day have been added, making the work complete in every respect to the present time. It should occupy a prominent place in the library of every cultivated American. With Prof. Hedge's "Prose Writers of Germany," Prof. Longfellow's "Poets of Europe," and this volume, the purchaser will obtain a most excellent survey of the literature of America and Europe, a condensed library in three portable volumes.

"The supplement now furnished atones for some of the original omissions. . . . It is a book of more than ordinary value, and one, we are happy to find, reproduced in so attractive a style."—*North American and U. S. Gazette, Phila.*

"A book that can be cordially recommended for its sterling qualities and the handsome style in which it has been gotten up. It will be cordially welcomed by a multitude of readers."—*Evening Telegraph, Phila.*

The Nation.

NEW YORK, THURSDAY, MARCH 16, 1871.

The Week.

THE great event of the week in politics has been the removal of Mr. Sumner from the chairmanship of the Committee on Foreign Affairs, which was carried by a large majority—many of the Republican members who were opposed to it abstaining from voting, being unwilling to act in opposition to the decision of the caucus, and yet being determined not to aid actively in carrying it out. We have discussed the matter elsewhere. The general impression, as indicated by the newspapers at all events, seems to be that it is, as regards the fortunes of the Administration, a fatal blunder, and it has drawn forth a great many flattering expressions of feeling about Mr. Sumner. His friends, who are just now engaged in praising him, and claiming indulgence for his faults of temper and his mistakes, on account of his past services to the country, would do well to remember that General Grant has some claims of the same nature to indulgence and forbearance. It may be that he owes his place in the White House in some degree to Mr. Sumner's fidelity to the principles of the Republican party; but it is equally safe to say that Mr. Sumner owes his place in the Senate in some degree to General Grant. The question whether there should be any Senate for Mr. Sumner to sit in was very hotly debated about six years ago, and we believe the stout manner in which General Grant maintained the affirmative had much to do with the result. We are as fully alive to Grant's official faults as anybody, but when his claims to national gratitude come to be compared with those of any other man, we honestly confess we are rather overpowered by the display he makes. As our Washington correspondent points out, the orators have just now the advantage of him, but he has stood in places where he was worth more to the country than ten thousand orators.

There can be little doubt that the quarrel will give a fatal blow to the San Domingo scheme, no matter what the report of the Commissioners may be. It has never taken any firm hold of public opinion, and would have needed under ordinary circumstances all the Commission could say in favor of it to give it a chance of success. Having furnished its opponents with a distinguished martyr, the President may as well give up the struggle. This result has indeed been so apparent from the beginning, that it is difficult to believe that the President did not foresee it, and that his desire to have Mr. Sumner removed is not due to other things than the Senator's hostility to the San Domingo scheme. The report that a desire for his removal from the chairmanship had been expressed by the English members of the High Commission was always a silly one, but it has now been formally contradicted by Mr. Fish.

Four, three, and even two years ago, when the protectionists had everything their own way in the House, they were warned again and again, even by those who had no great partiality for free-trade, that their performances were more than any community would long submit to; and that, if they wished the aid they were getting from the country to be permanent, they should be moderate in their demands, and learn to let well enough alone; that is, stop tinkering the tariff, and calling attention every winter to the amount of their requirements, and, above all, stop asking incessantly for more; or, in other words, to consider themselves lucky dogs, and keep still. They scorned this ignoble *rôle*, however, and persisted in acting as apostles of a new gospel, and openly proclaimed their belief that, if they could shut out all foreign goods, they would consider it a good thing, and would do it. Nearly a year ago (April 14, 1870), we pointed out in the *Nation* the impossibility of trying the protectionist system thoroughly under a popular government, or any government controlled by public opinion. We said that "the trial of an experiment requiring an indefinite period of time for its completion, and inflicting on the community during the whole time a present and perceptible loss, as the price of a remote and invisible good, it was useless to expect from a large popular assembly like the American Congress, the composition of which almost completely changes in the course of eight or ten years, and which every two years receives from its constituents a fresh set of mental and moral impressions."

All this was an easy deduction from the history of the American tariff; but we now have a fresh proof of its soundness in what is passing at this moment in Congress. The protectionist forces in the House have apparently dwindled down to about fifty votes all told. Mr. Kelley, who during the last ten years has been loud, truculent, implacable, and insatiable, is wailing like a beggar; or, as Mr. Cox says, is talking like Jeremiah where he so lately talked like Isaiah. The revenue reformers are in such a majority as to be positively reckless, and have gone to work at the tariff, even in advance of the organization of the committees, in a style that seems to make its total abolition a possibility. They swept away the salt duty on Monday; they then swept away the duty on bituminous coal; and then the Pennsylvania protectionists, in the bitterness of despair, proposed attacking the duties on tea and coffee also, and a general rush followed, overthrowing these also by 141 to 49. There is nothing on the list less objectionable than the duties on tea and coffee, and nothing which brings more for the revenue at less cost of collection, and there is some danger that the reformers will be led in their enthusiasm into doing more than the revenue will stand. It is desirable now to pull up and wait for the forming of some programme. This mode of cutting down tariffs is nearly as objectionable as the protectionists' mode of putting them up, because it fills the land with uncertainty and anxiety. Let us now have a decent and even tolerably scientific system of taxation. There is a letter in the *Tribune* of Tuesday from a frightened "Republican" in Washington, evidently a protectionist, which is entertaining reading, calling for "a carefully revised tariff bill, so wisely drawn," and "so thoroughly sustained by facts and figures," that the party can go before the country with it in the Presidential canvass; otherwise he fears the tariff quarrel will split the party up. A little of this sort of talk from this quarter last year would have been serviceable, but none was heard, and anybody who supplied "facts and figures" which the high tariff men did not like was denounced as a knave.

The Senate Republican caucus has resolved, in spite of the general desire to go home, to prolong the session of Congress until some legislation can be effected for the protection of life and property at the South. Something to protect life and property at the South is sorely needed, but one cannot help wondering at the persistence with which the faith in coercive acts is kept up in Washington. It is not for want of laws that men are murdered and whipped, and their houses burned, at the South, but for want of the means of executing them. There are laws against murder, arson, and mayhem, and assault and battery, in every State in the South; the existing trouble arises out of the fact that in every State there are large bodies of persons who refuse to obey them. There are two ways of having laws obeyed: one is enlisting the majority of the community heartily and actively in their support; the other is providing force enough to compel people to obey them whether they like them or not. The first of these is not attainable by legislation; it is the result of religion, education, intelligence, industry, prosperity. Does Congress really mean to provide the other, or is it simply going to let Mr. Butler, or somebody like him, bring in a loud, resounding, penal enactment, which will throw dust in the eyes of the public, and leave things at the South precisely as they were before? It is time that this farce of "protecting life and property at the South" by mere threats came to an end. If Congress means to protect it really by force, it must provide the soldiers for the work, and the people must be prepared to pay the bills. If they are not ready to do this, the pacification must be left to time and education. But its present

condition of the South is terrible, and the disease from which it is suffering is moral, not political—if indeed there be any political disease which is not also moral.

The majority report of the Senate Committee to investigate Southern disorders relates exclusively to North Carolina. This State lay nearest to hand, and has been perhaps as conspicuous as any other for the outrages committed on blacks and whites by Ku-klux organizations. The fact that, by the impeachment of Gov. Holden, the State was in a sense itself trying the question of the reality of these outrages, and of the necessity of employing extra-judicial means to suppress them, might have suggested the propriety of examining first some other community. But the charge that the committee was purposely acting in the interest of Gov. Holden would not seem to be established by the arguments of the minority of the committee (Senators Bayard and Blair), or by the mode in which the investigation was conducted. Fifty-two witnesses were summoned, including all whose testimony was desired by the minority, and while twenty-nine of these were Republicans, twenty-one were Democrats or Conservatives, and six were confessedly members of the Ku-klux. The greatest latitude was allowed in questioning, and the whole policy of the State, financial as well as political, appears to have been freely explored. It was proved beyond question that the Ku-klux is a secret political order of white men, all Democrats, and many of them ex-Confederate soldiers, and that in certain districts in North Carolina they have perpetrated such and so numerous atrocities as o make life and property there totally insecure for a certain class of the population: further, that no conviction in any court has ever followed upon any one of them, while colored marauders who have occasionally adopted the Ku-klux disguise have been, on discovery, apprehended, and made to pay the penalty of the law. The minority report is very irrelevant, and makes no point of any weight, except that the alleged disorders have occurred in less than one in ten of the eighty-seven counties into which North Carolina is divided.

Senator Fenton has made a speech in support of his bill for the reform of the Custom-house, describing the abuses of the institution at considerable length, and they are due, in the last analysis, we need hardly say, to the incompetency and dishonesty of the officers. Mr. Fenton said "that the whole matter points towards civil-service reform;" that the use of the Government patronage for party purposes was highly injurious to the country; that this patronage has become too vast, and the offices to be filled too numerous, to permit the application of the maxim, "To the victors belong the spoils," any longer; and he has accordingly added a section to his bill, providing that all officers of the customs whose appointment needs the confirmation of the Senate shall hold office for four years, and not be removable except for cause, and after a fair trial. Coming from such a quarter, this proposition is enough to fill one with amazement; and it shows what rapid progress the cause of civil-service reform is making, though we have our doubts "whether this particular measure is just what is needed," etc., etc.

New Hampshire has gone Democratic by a vote which completely reverses the political character of the State, and takes from the heretofore dominant party the entire Congressional delegation. The event is one which may well give concern to the Republican leaders, and it renders still more evident the reaction which has already cost the protectionists their control of the national revenues.

We have given elsewhere a summary of Mr. D. D. Field's letter in reply to General Barlow. There is one passage in it which deserves, however, a separate mention, and that is Mr. Field's report of what he was told of the origin of the Church and Ramsey suits. He says: "The Board of Directors of the Susquehanna Company was divided into two parties, one of which supported Ramsey, the then President, making six in all, while the other consisted of the Vice-President Herrick and seven other directors, making eight in all, who disapproved of the management of Ramsey as injurious to the road, *extravagant*, and *corrupt*. These eight directors, for the purpose of securing a majority of the stock at the approaching election to be held on the 7th of September, had sought the aid of Gould and Fisk in the purchase of the stock." We think this is the one comic passage in the controversy, and it is made all the more so by Mr. Field's feeling, which he shows throughout, that in pursuing Ramsey he was pursuing the villain of the drama, and owed him no mercy. Railroad reformers who are so disgusted with "the extravagance and corruption" of the president of a road that they call in the aid of Fisk and Gould to oust him, and appoint Fisk receiver the very first thing, could certainly not be matched as impudent wags, or could only be matched by a congregation who, being disgusted by the immoralities of their pastor, should send to the penitentiary in search of a "stated supply." Mr. Field's indignation at the tricks by which Ramsey sought to hide the books from these worthies may be justifiable, but on the surface, and to a benighted public, it seems as if it might be better expended. We are bound to say that, on any ordinary view of human affairs, Ramsey was entitled, even when stowing away his books in a graveyard, to the sympathy of honest men.

The upright Fisk, who was called on by "the Church party" to help them to purify the administration of the affairs of the Susquehanna Railroad, seems to be at last getting into a corner where Barnard cannot help him. The English stockholders sent an agent over here last winter to represent them, who endeavored to get their stock transferred on the books of the company, so as to enable their representatives here to vote on it. The scrip—60,055 shares—was accordingly sent up to the office, to enable the transfer to be effected; but Fisk, hearing what was going on, seized the stock, and got Judge Barnard to appoint one of his confederates, James H. Coleman, "receiver" of it. In other words, he stole the shares, and set the stockholders at defiance, and commenced a sham suit against them before Barnard. This suit has, however, been moved into the United States District Court, and as soon as the confederates found there was no escape, they discontinued it, and tried to make off with the spoil. But Judge Blatchford appointed another receiver, and ordered Coleman to hand the property over to him. Whereupon the confederates have now got another order from Barnard, directing Coleman to hand the stock over to a new receiver, one Charles Robinson, who now holds it. How long this little game can be carried on remains to be seen. But can there be a greater disgrace to a civilized community than having to sit still helplessly while two scoundrels like Fisk and Barnard perform these thimblerigging operations before its eyes?

The Woman Question seems to acquire additional complexity every month, and the increasing difficulty of dealing with it, we are afraid, will cause many men to give in their adhesion to the sentiments of that "noble old Roman," Metellus Macedonicus, who, haranguing the senate, exhorted his colleagues to bear with their wives "manfully," as they could not "get rid of the infliction," and "it was their duty to look more to the permanent conservation of the state than to their own transient satisfaction." The world is vexing itself almost to distraction over woman's health, woman's education, woman's rights, woman's work; and now the news is going the round of the papers that drinking among women of the better classes is becoming fearfully common. This assertion was started the other day by the *Saturday Review* of English women; the medical journals took it up and said it was "too true;" now it has made its way over to this country, and the *Tribune* says it is "too true" of American women also. The female upper classes are, it appears, all going astray in the matter of stimulants. Some take opium; others champagne; others fancy drinks; deaths from delirium tremens, we are informed, "have occurred this winter among young, generous, and lovable girls," and there are ever so many female lunatics in asylums, brought there by "alcoholism," which is the new name for drunkenness. Then we have the well-known explanations about love of excitement, jaded nerves, feeling of "goneness," low tone, lack of stamina, late hours, wicked physicians, little brandy, more brandy, secret brandy in restaurants, mania-à-potu, insane retreat, ruined home, awful warning, afflicted husband, poor little children, hereditary tendency, and-so-on.

To the best of our belief, this story has gone abroad about the women of England and America regularly once every four or five years since the temperance movement first began. We neither admit nor deny its truth. But we do say, that, if true, it amazes us that there should be a really sober woman in either country, or in fact, to speak plainly, any woman who is not the drunken daughter of a drunken mother. We are glad to say that this is one of the subjects connected with women on which a certain class of writers love to exaggerate; and on which exaggeration is easy, because of course the story-teller is always bound to "suppress names." He can't decently tell who the ladies were he saw last week reeling about their own drawing-rooms, and you can't urge him to do it; so he shakes his head and goes off with a dismal, mysterious look, leaving you with awful suspicions about all "the generous, lovable girls" of your acquaintance. The writer who has treated the subject in the *Tribune* has apparently had a horrible social experience, for he talks of "the belle of the ball-room whirling half-naked in an immodest dance; her face unnaturally red, and the smell of liquor on her breath—pah!" We must say "pah" strikes us as a very mild form of condemnation of such a spectacle. If we saw a belle behaving in that way in a ball-room, we should censure her much more severely.

Most decent people supposed the proposal to erect a statue to Tweed was a huge joke, got up by ward politicians, till the publication of the names of the promoters of the movement, the other day, revealed the fact that amongst them were serious and even respectable men, and that it really was likely to result in setting up, in some public place in this great commercial city, a monument to the most notorious rogue of the day. Tweed himself, in a manly and sensible letter, which, it is to be hoped, will make some of those who signed the address to him wish themselves dead and, for the sake of their relatives, buried in some obscure graveyard, repudiates the whole thing, and declines the honor, and says significantly that, "though much abused, he is not wanting in common sense."

Mercantile business has been fairly active, but with transactions on a moderate scale. Imports continue large, but buyers act with caution. There have been several heavy failures, but none of any special significance. The cotton receipts continue on an extraordinary scale, and all accounts agree that there is a large portion of the crop yet to come. Prices have again declined, but the export continues heavy, and the English markets, though lower, show no signs of panic. Breadstuffs are firm, and the exports continue on a fair scale. The statistics of trade from the Custom-house appear to have now fallen into hopeless confusion, but nothing less was to be expected. Real estate has been dull and discouraging; even the most persevering believers in higher prices appear now to have given up hope; rents show strong signs of weakening, but the landlords, as a general thing, keep firm, not recognizing as yet the positive inability of people to pay the prevailing rates. There is nothing new from the coal regions. Matters there are drifting into a very dangerous condition indeed, but on this, as on all other subjects, the public seems incapable of alarm, anxiety, or even indignation.

The report comes that the London Conference has agreed on a treaty of peace, the terms of which are very much what was anticipated. The neutrality of the Black Sea is abolished, so that Russia may keep as many ships-of-war in it as she pleases; but the Porte is, on the other hand, allowed to exercise its discretion as to the admission of armed vessels through the Dardanelles. That is, in case the Sultan thinks things look threatening in the Black Sea, he can call up assistance without waiting for an actual outbreak of hostilities. The present treaty provides for the "solidarity" of the co-signataries. No one can withdraw without the consent of all the others.

The information forwarded to us by the Cable concerning the deliberations of the French National Assembly is distressingly meagre. It is possible that the doings of that Assembly, pending the definitive conclusion of peace and the first-stage evacuation of French territory by the Germans, are of insignificant proportions. As to its collective character, however, it has so far revealed itself that we may designate it as decidedly conservative and equally hostile both to red republicanism and Bonapartism. But both the republican and Bonapartist elements are represented in it, with the main difference that the former is boisterous and threatening and the latter quiet and almost hidden, as if ashamed of its color. The proportion of Legitimists to Orleanists is not as vastly disadvantageous to the former as the earliest communications made it appear. That the Orleanists are in every way the strongest group—whether we consider their numbers, their connection with the executive, or their central position, which enables them to find support among the more moderate and peace-loving portions of both Legitimists and Republicans—admits no doubt. But, as far as our knowledge goes, they have as yet shown no disposition broadly to unfurl their distinctive flag; and, if they feel strong enough to make France accept their favorite form of government with its dynastic representatives, they will probably wait for the moment when a partial restoration of order, public force, and prosperity, through the agency of Thiers and other men of their party, will have given them the necessary prestige, and the excesses of the unruly portions of the Radicals will have sufficiently disposed the large centres of the country to support a throne even at a considerable expense to liberty.

The members of the Assembly whom Paris marked as its favorites by its heaviest votes meet with little sympathy on the part of the majority. Gambetta is eminently silent; Garibaldi, on withdrawing, was not allowed to address his colleagues; Rochefort left in disgust after a short attendance; Delescluze found hardly an echo in demanding the impeachment of Trochu, Favre, and their associates for high treason; Louis Blanc and Quinet were not more fortunate in bringing forward a similar demand; and Victor Hugo, who vainly supported them, was, on a subsequent occasion, driven by a storm of hisses to announce his immediate resignation, and abruptly to quit the Assembly. Under these circumstances, the majority of the Assembly could naturally have little desire to exchange their seat in Bordeaux for one in Paris. A Committee on Removal reported in favor of Fontainebleau, but Thiers, in the name of the Government, expressed a decided preference for Versailles. On the 11th, the question was finally put to vote, after the rejection, by 407 nays against 104 yeas, of an amendment demanding the immediate removal to Paris; and the Government proposition was carried against precisely the same minority, which probably represents the strength of the uncompromising Republicans, the number of nays differing only by three from that of the votes cast against the ratification of the treaty of peace. The first public sitting at Versailles is to be held on the 20th. This city has, in the meanwhile, been evacuated by the Germans, and occupied by a French garrison.

Paris has had a week or so of very foolish quasi-revolutionary excitement, which may, however, have been much less alarming than mortifying to its sensible and sincerely patriotic inhabitants. A portion of the National Guard protested against the appointment of General D'Aurelles de Paladines to the command over them, and gave vent to their indignation in a rather bellicose way. The suburban districts of Belleville and Montmartre were the principal seats of the agitation, the malcontents, excited by Red demagogues and the fear of being disbanded and losing their franc-and-a-half daily salary, refusing to give up their cannon, and intrenching themselves in threatening positions. The Government tried both conciliation and menaces, having on its side the regular forces, the great majority of the Guard, the maires of all the arrondissements, and the unanimous voice of the respectable press. A review of the forty thousand troops—of the former Army of the Loire—now forming the garrison of the capital was held, not without effect, by General Vinoy, the Military Governor of Paris. The suspension, by order of the same General, of the publication of the revolutionary journals *Le Vengeur*, *Le Mot d'Ordre*, *Le Cri du Peuple*, *La Caricature*, *Le Père Duchesne*, and *La Bouche de Fer*, followed, accompanied by the publication of the sentences pronounced by court-martial against the leading rioters of December. Of these, Blanqui and Flourens are reported to have been "condemned to death for contumacy"—a statement the correctness of which may be doubted. At last accounts, the would-be insurrectionists of Belleville and Montmartre had finally yielded to the authorities, "Red" placards exhorting the army not to fight the people having produced no effect.

THE WASHINGTON IMBROGLIO.

We believe there are very few careful observers of the course of the Administration during the last nine months who have been much surprised by what is now happening at Washington. The dismissal of Mr. Wells was the first step in a progress which has certainly not been upward. It revealed General Grant's indifference to things to which his warmest supporters supposed him to be anything but indifferent, and, notably, to the importance of surrounding himself with skilled and honest agents. When he dismissed Mr. Wells in obedience to the clamor of a few barefaced monopolists, and to the prejudices (to use a mild term) of the Secretary of the Treasury, he virtually admitted that he did not care whether the most serious portion of the work before the Republican party—the reform of the taxation—was well or ill done, or done at all. In other words, he relegated the whole financial question to the jobbery of the committee-rooms, and left the public to guess blindly at the amount of burdens the country ought to bear, and at the manner in which it should shoulder them; and this great error was appropriately followed six months later by a frank declaration in his Message that he did not know what revenue reform meant, but that if it meant repudiation he was opposed to it.

The dismissal of Mr. Wells was followed by the dismissal of Mr. Cox. We say "dismissal" because, though Mr. Cox resigned, he was as clearly forced out of his place as if he had received formal notice to quit. His post was made untenable by the admission to the President's confidence of the very set of politicians who are now figuring most prominently in the movement against Mr. Sumner. We stigmatized this at the time, in strong terms, as an open breach of the pledges by which the President had won the popular confidence, and warned the public that it was but the beginning of great evil. We were told, in reply, and told, too, by large numbers of those who are now most bitter in their denunciations of the movement against Mr. Sumner, that we were over-censorious; that the President was a wise and good man, and was as fond of civil-service reform as anybody; and that, in trying to make a martyr of Cox, we were working with very poor materials. We were then treated in the Message, as a sort of soothing application, to a mild recommendation of civil-service reform, but without mention of "any particular measure;" and General Grant's critics were advised to look at this and blush over their fault-finding. Unfortunately, however, there was no improvement in the class of men of whom the President took counsel; and as long as this was the case there was no reason to expect any marked improvement in the general conduct of the Administration. Men of character and standing and ability and culture ceased more and more to go to the White House; "old Romans," like Butler and Chandler and Cameron, and sages like Wendell Phillips, continued to put themselves forward more and more prominently as the exponents of the President's wishes, or to become louder and louder in their laudation of him.

We must, therefore, confess that the uproar about Mr. Sumner's case strikes us as a little childish. There is reason enough in it for indignation; but it hardly justifies the surprise and alarm which many good people are manifesting. Those who saw Wells, Hoar, and Cox driven out of office, without anything but faint expressions of disapproval, or without any disapproval at all, are bound, in common decency, to take the present crisis more calmly. We concede freely that, although the Senate has a perfect right to make up its committees as it pleases, and although, with all respect for some of our contemporaries, we think the duty of choosing the chairmen of its committees likely to be more efficiently performed by a majority of that body than by public meetings of excited citizens in various parts of the country, the interference of the Administration, through its partisans, gives a serious, if not fatal, blow to General Grant's prospects of renomination.

But we confess our inability to see why it should greatly damage the prospects of the Republican party. We certainly had never heard until last Friday that the existence of the party or its safety depended on Mr. Sumner's remaining Chairman of the Senate Committee on Foreign Affairs. We always understood that he was put and kept there because he was supposed to be the best man for the place, and not because the retention of power by the party depended on it. There is certainly one way of making his removal as great a blow to the party as it is very likely to prove to the President, and that is, to wail over it as an awful calamity. If this is done often enough and loudly enough, and a sufficient number of indignation meetings are held to denounce it as "the greatest crime of the age," we dare say enough Republicans will be furnished with an excuse for quitting the party to make its defeat at the next election certain; and it is worth considering whether, in order to get a better man for Grant's successor, it is necessary to throw away our arms and run off the field in disorder, yelling "Treason! treason!" There is a constant tendency in the party's ranks to these panics. The great body of it are intelligent and sober men; but it also contains a large number of people who carry their brains in their breasts, and are constantly ready for a sensation, and pass their time either on the topmost pinnacles of hope or in the lowest depths of despair. The pitch of frantic absurdity to which they are sometimes able to carry the organization was well illustrated by the agitation caused by the impeachment trial.

Mr. Sumner is apparently, as far as regards knowledge, experience, and ability, the fittest man in the Senate to occupy the chairmanship of the Committee on Foreign Affairs. Indeed, he may be said to have been the only man in the Senate during the last twelve years who professed to know anything about foreign affairs at all; and it may also be said that his manner of filling the place has been, on the whole, creditable to himself and useful to the country. But then the proper comprehension of foreign affairs is not the only qualification necessary for the occupant of this place. Nay, it is not even the chief. It seems to be forgotten by some people that, although the President's management of the relations of the country with foreign powers has to have the approval of the Senate, nevertheless it is to his hands the management of foreign affairs is committed by the Constitution. It is his Secretary of State who, under his supervision, does the work. The main business of the Chairman of the Senate Committee is not to negotiate treaties, but to discuss with the Executive such treaties as have been negotiated, and receive from it explanations about them. His first business, therefore, is to be a good organ of communication on this particular class of subjects between the President and Senate, and nobody can be said to be well fitted for this duty whose personal relations with the President are of an unpleasant nature. In fact, we go so far as to say that a proper sense of his duty, and of the fitness of things, and a proper appreciation of the delicacy of the machinery of such a Government as ours, might have suggested to Mr. Sumner the expediency of resigning the chairmanship as soon as he found himself arrayed in open and bitter hostility to General Grant. It must be remembered that his resigning the chairmanship would not deprive the Senate of the benefit of his counsels. It would enable no act of the Administration to escape his supervision. He would still be a senator; the only change that would take place in his position would be that he would no longer be charged with the duty of hearing from the President, whom he dislikes and despises, for communication to the Senate, an account of the considerations which had governed the Executive in taking this or that step in its foreign policy.

We might, and, we suppose, we ought to say something of another objection of a more general nature to Mr. Sumner's occupying such a position. We allude to his want of judgment and want of sense of responsibility in the use of language. He talks sometimes in the wildest way, and apparently without being fully conscious of the force or bearing of what he says. This was not of much consequence as long as he was assailing slavery; it is of considerable consequence when he is mixed up in the transaction of some of the most serious business of this life. He has approached some of the most delicate questions now pending between this country and foreign powers in the spirit and language of a frantic popular orator, thus causing great loss of property, and seriously increasing the difficulty of the negotiations. It would not be unnatural that, in view of all these facts, and on the eve of an attempt to settle a most important controversy with England, in which he has taken a most excited part, and has given utterance to most extraordinary views of international law and morality, the Administration should wish for some friendlier, calmer, and more accurate organ of communication with the body which is to ratify any treaty it may enter into.

We mention all these things with the view not of excusing the Administration or of passing condemnation on Mr. Sumner, but of showing that the crisis is not so dreadful as it seems; that human freedom is not in peril and the Republic going to be rent to its foundations, and that there is no need of drawing preambles or resolutions, or throwing off our cravats, or tearing open our shirts and rushing to Washington. We have no doubt whatever that Mr. Sumner's removal is by no means altogether due to the considerations we have enumerated above as just and reasonable. His opposition to the San Domingo scheme has no doubt the larger share in it, and it furnishes, therefore, a fresh illustration of the extraordinary nature of the craze which has taken possession of the President's mind. A greater mistake he could hardly have made, and it is aggravated by the character of the men whom he has made the exponents of his policy, and by the attempt of his partisans to put a notorious corruptionist, who enjoys nobody's confidence, in the place of one whose purity even his enemies have never doubted, and whose services in domestic affairs have given him a hold on popular affection at the North which no number of mistakes or absurdities in dealing in foreign affairs could shake. But it is a mistake which will injure nobody but General Grant himself. To try to elevate it to the rank of a national or even a great party calamity is ridiculous. The stress laid on the impropriety of the Presidential interference with the organization of the Senate must surely come from innocent people. The exercise of pressure by the Executive on both the House and Senate to procure legislation, get money voted, get treaties ratified and nominations confirmed, by all sorts of means, legitimate and illegitimate, has for years been one of the most objectionable and notorious phenomena of Congressional life. There is nothing novel about this last exhibition of it except that it consists in an assault on an eminent man, in aid, as people are inclined to believe, of a scheme of more than usual absurdity and corruption.

COTTON AND SPECIE PAYMENTS.

Although the raising of cotton concerns more directly the Southern States of this Union, it is, nevertheless, an industry in which the whole community—indeed, the whole civilized and uncivilized world—is more or less actively interested. Although northern peoples use large amounts of woollen clothing, yet, taking the entire population of the globe, cotton is far more largely worn than any other material, and may fairly be considered as, next to food, the most widely and generally used product of human industry. The price of this important article is mainly regulated by the production of our Southern States, which prior to the war of secession furnished four-fifths of all the cotton entering into the commerce of the world. The cotton culture of the South might, therefore, on these grounds alone be considered a matter of national interest. But, besides these general considerations, there are many special reasons why the cotton culture should be interesting to the whole country, and why it should be particularly interesting at this particular time.

Cotton-raising in the United States began with the century, increased gradually to a product of 400,000 bales in 1820, and has since steadily and rapidly developed in the following progression: the average for ten years, from 1820–30, was 700,000 bales; from 1830–40, it was 1,400,000 bales; from 1840–50, over 2,100,000 bales; and from 1850–60, the ten years preceding the outbreak of war, the average reached nearly 3,300,000 bales; while in the years 1859 and 1861 the production did not fall far short of the extraordinary figure of five millions of bales. The price, in the meantime, rapidly declined from fifty cents to ten cents a pound, which latter was about the average price for some years prior to 1861; so that the value of the average crop of those years was not much less than 150 millions of dollars in gold, and for the large-crop years more nearly 200 millions. These figures give a clear and distinct form to the very vague ideas which generally prevail on the great value of our cotton crop; but they do not in themselves account for the fact that a far greater general importance is attached to cotton than to some other crops, such as that of wheat, or corn, or hay, each of which has frequently largely exceeded the cotton crop in actual money value.

The main cause of the special importance of the cotton crop is to be sought in the fact that so small a portion of it is consumed at home, and so large a portion is available for export, the largest amount used in domestic manufactures never having reached one million of bales in any one year, or about one-fourth of the crop, leaving three-fourths for export; and the importance of this fact again is due to the much neglected or entirely ignored axiom, that while our imports from foreign countries are regulated by *our* wishes and wants, our exports are regulated by the wishes and wants of *others*, and that, if we do not produce for other nations what *they* want, we shall be obliged to pay for our imports in specie, the only article that all nations are at all times willing to receive in payment for all debts due them. Now, the only article of which we have never yet produced more than the world wanted—the only article of which we have always been able to sell all that we had to spare—is cotton; and it is no exaggeration to say that our ability to resume specie payments within a reasonable time depends more directly upon our production of cotton than upon any half-a-dozen other influences combined. It is for this reason that the cotton culture is so specially important at this moment, and that the prospects of the cotton-planters acquire national importance.

The cotton crop begins to be gathered about the 1st of September, and, like most other crops, occupies the greater part of the year in being marketed. But the first half of the cotton year generally sees more than two-thirds of the crop disposed of, and by the 1st of March, when preparations for the new crop are in active progress, the planters are generally pretty well able to tell the result of their last year's labors. In March, 1870, when the cotton-growers were getting ready for the crop now in the market, the price of cotton was, in round figures, twenty-five cents a pound. The previous crop had fallen short of the extravagant estimates indulged in, the supply from India had not responded to anticipations, peace and prosperity throughout the world had sustained the active demand for cotton manufactures, and the price had not fallen back to the old ante-war figures, as so many had predicted. Although the planters had labored under many difficulties, there is scarcely any doubt that their crop of that year, from 1869–70, was highly profitable. Under the stimulus of that profit, the acreage planted in cotton last spring was materially increased, greater care was bestowed upon the fields than ever before, for the first time in the history of the cotton culture subsoiling and the use of artificial fertilizers was general, and, as a result, the crop, in spite of weather by no means favorable, far exceeds that of the previous year. Up to this time, the receipts are already nearly 700,000 bales in advance of last year, and there is every prospect now that the extreme estimates of the total yield will be realized, and the crop largely exceed four millions of bales, becoming the third largest crop ever raised in the United States. But, in the meantime, the circumstances under which this crop is marketed have become very different from those under which it was planted. Two great nations have, for more than six months, almost suspended their civil pursuits to devote themselves to war; two great consumers of cotton have been temporarily excluded from our calculations; great, though quiet and almost unnoticed, commercial disturbance in the markets of Asia has materially affected a third customer, and the entire civilized community has suffered more or less seriously from the remoter effects of the war in France. These influences would have sufficed to depress the price of cotton without the increased supply; added to the large increase, they naturally depressed the price very much. A year ago, cotton was selling at twenty-five cents a pound; to-day, the price is less than *fifteen*—a decline of forty per cent., or nearly one-half. The disappointed planters, many of whom are receiving much less money for a double crop than they received last year for a single one, and some of whom are actually losers by their year's business, are naturally somewhat discouraged. Some are not able to pay their debts promptly; all are obliged to economize; they try to depress the wages of their laborers; merchants sell no goods; and a general cry of "bad business, no money, and plenty of failures" comes up from the cotton districts, furnishing one more illustration of the truth of the assertion that, however beneficial large crops prove in the end, their *first* effect, contrary to all general belief, is not favorable to business prosperity.

It is at this point that the position of the planters becomes one of general interest. The press throughout the country, North and South, are naturally disposed to advise the planters what they ought to do, not only to benefit themselves, but to benefit all the rest of the community. And generally the advice takes this form: Plant less cotton, and you will get more money for your smaller crop. Notably are the protectionist journals active and prominent in advocating this course, and in urging the planters, upon the ground of the advantages to be derived from what they call a diversified industry, to devote a larger share of their land, time, labor, and capital to raising food in preference to cotton. Now, while the individual farmer, aided by common sense sharpened by experience, may be safely trusted to know what is beneficial to him, and is more likely to understand his business than any number of Northern editors, whose chief knowledge of such subjects is derived from text-books and cyclopædias, it may, nevertheless, be worth while to explain how, from a national point of view, the advice so unselfishly tendered is decidedly mischievous.

In the first place, the object of every producer must naturally be to produce something which he can sell. Even if his original object be to produce something for his own use, he will unquestionably prefer to produce that which, in case he should not want it himself, he will be able to sell. With regard to cotton, we have already seen that we have never yet produced as much as we were able to sell. The number of people depending upon our cotton supply has very largely increased since we produced five millions of bales, and there is no reason for supposing that if we produced this year five millions and a half, or over a million more bales than last year, we should not find buyers for the whole. Unless, therefore, it should be very evident that in place of cotton the Southern planters could produce something quite as certainly salable and otherwise as advantageous, it would be downright folly for them to change their production. Now, what they are advised to cultivate instead is principally corn and food for cattle, so as to produce their own meat. Yet, when cotton was selling for only eight or ten cents a pound, when the West was not nearly as well developed as it is now, when there were not half as many means of communication between West and South as there are at present, it was more profitable for cotton-planters to buy their meat and bread at the West than to raise it themselves. Why should it not, under all these more advantageous circumstances, be just as profitable now?

We have never yet been able to produce more cotton than the world was willing to buy. But we have frequently produced more food than we ourselves or all the rest of the world united were able to consume. Not that even in the years of our most abundant crops there were not many people suffering from insufficient food, but that they were beyond the distance to which the transportation of food is practically possible. This transportation question is one of which the glib advisers of the Southern planter entirely lose sight. Food is bulky and cheap. When corn sells at one dollar a bushel and cotton at fifteen cents a pound, one pound of cotton will pay for its own transportation over a distance nine times as great as a pound of corn could carry itself. In other words, the field over which our cotton product could compete with other cotton producers is nine times as large as the field over which our corn can compete with other corn producers. Our planters are asked to abandon the production of an article whose market is practically unlimited, for the production of an article which is by the mere cost of transportation alone confined within very narrow limits.

Whether the South can produce corn and meat as cheaply as the West can is not the question. The issue is, whether the labor devoted at the South to cotton is more profitable to the planter than if devoted to wheat; and on this issue there can scarcely be a doubt. But supposing, even, the planter might to-day be able to raise corn and beef as cheaply as the Western farmer, and were to do so to some extent, what is the Western farmer to do with the corn and beef which he has heretofore been in the habit of raising, and for which the South has heretofore been his principal customer? Is he to devote himself to cotton planting? Is he to be entirely idle? Is he to continue to raise corn and beef when he has no buyers for it? Is it expected that the Western farmer can send his corn and beef to Europe in place of the Southern planter's cotton? That will depend, not upon us, but upon Europe. Whether Europe will buy beef and corn from us, or how much she will buy, is always a doubtful question. At this very moment good judges assert that the product of these articles in the West alone is beyond the ability of our accessible markets to consume, and that with the opening of navigation prices will fall lower than last year. What would be the effect of an additional production of these articles at the South? In fact, our planters are invited and urged to diminish the production of an article for which they have a most extensive and very certain market, and to substitute for it an article the profitable production of which is doubtful, and the markets for which are at all times limited and uncertain.

There is little danger of the advice being followed to any great extent. It is more likely that many planters, discouraged by the unprofitable result of this crop, will devote less care to the coming crop, and will be less able to spend as much for labor and for fertilizers as last year, and that the next yield may, therefore, not be fully equal to the present one. Should, however, the reverse prove true, and the planters be stimulated to additional effort, we shall probably have this fall a larger crop of cotton than ever before known. Business now throughout the country is very much depressed. Although our importations continue extremely large, the sales of imported goods are not proportioned to the anticipations of the owners, and there is a reasonable probability that the summer and fall will witness a decrease in our importations, and, consequently, a diminution in the amount of floating debt due abroad. If at that time we should come into possession of a cotton crop equal to or exceeding that of last year, our commercial position would, for the first time since the close of the war, be such as to justify the expectation that we might resume specie payments without financial disaster. It is evident that cotton, if no longer king, continues to be a subject of paramount importance to all citizens of the United States.

MR. FIELD'S REPLY TO THE TRIBUNE.

Mr. D. D. Field has replied in the *Tribune* to the summing up made by that paper of Barlow's charges, and alleges in substance as follows:

1. That in so far as the charges against him rest on the judgment of Judge Smith, that judgment has been pronounced erroneous in law and fact by three eminent counsel, and appealed from, and that the Judge does not mention Mr. D. D. Field as censurable.

2. That Mr. Field was not counsel in all of the proceedings which the Judge denounced as fraudulent, and as regards those which he did so denounce it is to be expected that the court above will pronounce them legal and proper.

3. That as regards the appointment of Mr. Fuller to the receivership of the three thousand shares of stock, he was so appointed without Mr. D. D. Field's knowledge, and, although he voted on the invalid stock, he did so because the opposite party, the "Ramsey party," had just before the election obtained an extraordinary *ex-parte* injunction, forbidding the Church party to vote unless Groesbeck (whose stock Fuller held) "or other holders of the three thousand shares" should first have an opportunity to vote free from injunction. In order to give the other stockholders, therefore, a chance of voting, Fuller voted, although his votes were not necessary to the success of the Church party, who had a majority without them.

4. That he had nothing to do with the bringing of Barnard from his mother's deathbed to New York on the 6th of August, to grant an order appointing Fisk receiver of the Susquehanna road, he (Mr. Field) being at that time at Stockbridge; that in the evidence which represented him as having driven to the station in a carriage, "Field" was by a misprint substituted for "Fisk;" and that Barnard did not sign the order at Mrs. Mansfield Lawlor's. [Where did he sign it?]

5. That the service of the injunction on the Ramsey inspectors of election just before the election was purely the act of the sheriff, who had been looking for these gentlemen the previous day, but had been unable to find them, and served the papers when he did on his own responsibility and without the connivance or suggestion of the lawyers; that in this matter, however, the Ramsey party did just the same thing, and have therefore no right to complain. To the charge of arresting Ramsey under similar circumstances—same answer.

6. That he had nothing to do with the filling of the election room at

Albany "with roughs and fighting men," and that the Ramsey party had "roughs" near by also.

7. That as to the charge of tieing up Ramsey's hands so as to prevent his preparing for trial by injunction and then forcing him to trial, and, he not being ready, taking a default against him, Ramsey's conduct had been "flagitious to the last degree," and that whatever was done that seemed unusual was done in good faith and seemed necessary to frustrate his nefarious designs; and that he, Mr. D. D. Field, never personally got an *ex-parte* injunction from Judge Barnard in his life, and never got any order of any kind from him except in open court, and "never asked in person or by partners or agents for any order" that he, Mr. Field, "did not think proper to be granted upon the law and the fact."

We have presented this summary as an act of fairness to Mr. Field. But we are bound to call attention to the fact that his letter is not a reply to General Barlow's charges, but to the *Tribune's* necessarily rough digest of them; that he passes over some of General Barlow's strongest points without notice, and gets rid of some of the most discreditable portions of the Erie litigation by drawing a distinction between himself and his partners. He, however, announces his intention of answering General Barlow in detail "in another form." As the case stands, Judge Smith's severe characterization of the litigation conducted by Field and Shearman is met by the fact that an appeal has been taken from his decision; the blame of the undeniably improper proceedings before Barnard is thrown by implication on Mr. Field's partners; and the high-handed way in which Ramsey was pursued is justified by the assertion that he was very unscrupulous himself. It ought to be remarked on this point that the "Ramsey suits" arose out of a quarrel between the directors of the Susquehanna Railroad, of which Ramsey was president, and that his opponents called in the aid of Fisk, Gould, and Lane to enable them to get possession of the road. Mr. Field's indignation over Ramsey as a bad man, who deserved no "courtesy" or "indulgence," is rendered somewhat singular by the character and aims of his own client Fisk, and by the ridicule he heaps on such considerations in the Bowles correspondence. The restraining Ramsey by injunction from carrying on an equity suit in another court, on which General Barlow comments severely, was a proceeding which, as he points out in a precisely similar case, was pronounced by Barnard "void," and by Cardozo "a monster in jurisprudence," one year previous. This Mr. Field does not meet at all. We may say the same of the whole of General Barlow's account of the way in which the Ramsey case was kept before Barnard in this city for months, in defiance of usage if not of law.

MR. SUMNER'S REMOVAL.

WASHINGTON, March 11, 1871.

THE ripples made by throwing a stone in the water decrease rapidly as they recede from the centre, and it is hardly to be expected that the excitement which has stirred this city so deeply in the last few days will have an equal effect throughout the country. It is not, however, the interest of a merely personal quarrel, but the fact of a fresh shock being given to the Republican party, and the necessity of a new point of departure, if the election of 1872 is to be anything but a "scrub" race. The hostility between the President and Senator Sumner has been for some time but thinly disguised. It seems to be well authenticated that the President had intimated to some of his supporters that it was absolutely essential that there should be a change in the chairmanship of the Committee of Foreign Affairs. It may not be wholly unnecessary to remark that the Senate committees, instead of being nominated as in the House by the presiding officer, are a matter of election. Accordingly, the Nominating Committee proposed, in caucus, to transfer Mr. Sumner from the Foreign Affairs to the Election Committee, and to substitute on the former (of all men in the world) Mr. Cameron, of Pennsylvania. It is not unjust to say that all the best men of the party protested against this unprecedented affront to a senator of twenty years' standing, who, whatever may be his faults of manner, is admitted to have shown at all times the highest integrity and devotion to what he believed to be the interest of his country. In two caucuses, however, the decision was adhered to, and on Friday was reported to the Senate. Mr. Sumner's friends declared that sooner than submit to it they would place the matter before the country in open debate. For five hours yesterday afternoon was held the most excited conflict of the session, not between different parties, for no Democrat uttered a word till towards the close, but between members of one side of the House. Mr. Schurz began calmly, almost timidly, dwelling upon Mr. Sumner's long services, and the unfairness of such treatment. Mr. Edmunds followed, pooh-poohing the whole matter as a small affair, and stating that the Senate had the right and the duty of adjusting its committees at the commencement of each Congress. Mr. Schurz's tone was several degrees bolder, as he replied that it was not a small affair, and that such an affront as the deposition of Mr. Sumner from the most important post in the Senate could not be inflicted without sufficient reasons; he would ask the chairman of the Nominating Committee (Mr. Howe) to state those reasons. A whisper ran round the keener managers of the other side: "Don't answer him!" But Mr. Howe, who appeared throughout like a gentleman engaged in a dirty piece of work, said that a civil question deserved a civil answer. It was manly, but fatal. He said that Mr. Sumner had declined intercourse with the President and the Secretary of State—not official intercourse, he admitted, in reply to Mr. Schurz's question, but social; that Mr. Sumner had once declined to answer a question addressed to him by the Secretary of State. Then Mr. Schurz rose and threw away the scabbard. He read a passage in a despatch from Mr. Fish to Mr. Motley, in which (he said) Mr. Sumner was charged with having betrayed the President's confidence under the guise of friendship, and added that such a charge was enough to interrupt social intercourse between gentlemen. He declared that, if true, it was disgraceful that the Executive should use the plea of social relations to disgrace a senator. But it was not true. The pretext was too shallow. Why did not gentlemen state the true reason? The President desired the annexation of San Domingo, opposition to which was the senator's grand offence; and, though he did not say, he implied pretty strongly, that the place was to be filled with a much more pliable character. He had never expected to see the senator in the same chair in which he had been struck down by an infuriated slaveholder again struck down by his own party; by the hands of men who had attained to power as much through his agency as that of any individual. Mr. Wilson also rose to defend his colleague. It was hard for the trained politician to kick against the pricks, and his first remarks turned upon his personal respect and affection for Mr. Sumner, the length of the latter's services, and his fidelity to the interests committed to his charge, which deserved a better fate. Mr. Tipton made an excited speech, denouncing the action of the caucus, and scandalizing his colleagues by revelations which he defended on the ground that the papers had already reported the doings of the caucus. Mr. Logan made his début in the Senate in a manner which agreeably disappointed those who had heard his performances in the House. He said that Mr. Sumner's displacement was an impolitic concession to Great Britain just as the High Commission were commencing their labors. Mr. Sherman appeared in an attitude very unusual, very embarrassing to him: that of halting between two opinions. He admitted that the action appeared to him unjust and impolitic; but he thought his duty as a member of a party obliged him to submit to the decision of the majority. Mr. Wilson, as the debate grew warmer, followed the example of Mr. Schurz. He charged that San Domingo was at the bottom of it all. He appealed to the Senate against the packing of committees by Executive influence. As to party, he knew one duty that was higher than that of party: the duty of doing right. He referred to instances in which he had left party conventions with which he did not agree, and he had never repented of it. As a lover of his country, he felt that his action was justified, and would be supported by nine-tenths of the thinking men who constituted the Republican party. Mr. Trumbull made one of the most impressive speeches of the day. He referred to the long time during which he had served with the two senators from Massachusetts, as chairmen of their respective committees, and though he had differed seriously from Mr. Sumner, he had too much respect for his character and ability to regard the proposed change with equanimity. He, too, applied the lash to the promoters of the San Domingo scheme. During this debate, the ringleaders of the movement had kept silence. But now Mr. Morton took up the party whip, and its echo resounded through the hall. Whether the action were right or wrong, he said, it had been decided upon by the majority, and all Republicans were bound to acquiesce. Upon his honor as a senator, he did not know that the President had interfered, and he did not believe that San Domingo had anything to do with it.

The frame of mind in which the Democrats had witnessed this scene was illustrated by an amendment which Mr. Bayard sent to the Chair; That Mr. Sumner should be reinstated, but that the committee, instead of that on Foreign Relations, should be called that on Personal Relations. The final vote on sustaining the caucus nomination stood 33 to 9, Mr. Sumner's friends having mostly left the hall when they found their efforts would be in vain. Meanwhile, the reporters' gallery was, almost to a man,

on the side of Mr. Sumner's friends. Every hit was followed by a murmur of suppressed applause, and every point of their adversaries by one of disapproval. This morning, the malcontents are in high spirits, while many of the successful party confess that such another victory would be their ruin. It shows how little the President understands the situation that he is said to be much pleased with the result, and to regard it as a decided victory. He may be undeceived when the San Domingo question comes up.

And yet, the President's position is a hard one. He has no voice which can reach the country. Once a year he can give, in a general way, his views upon political matters; but in all the exciting conflicts of the session he must be dumb. His actions, motives, and thoughts are discussed and bandied about, while his tongue is tied. He is attacked by men with the full stimulus of their own interest. He is defended by those who cling to him just as long as his interest agrees with theirs and that of others whom they represent. It was urged by his friends that the chairman of the Foreign Relations Committee, being the President's organ of communication with the Senate, should be in accord with him and with the Secretary of State. The President certainly should have a spokesman in the Senate, but it does not follow that it should be a senator. How much circumlocution and uncertainty would have been avoided in the last five years, if the Secretary of State had stood in the Senate to speak for and answer for the President.

THE SIEGE OF METZ.*

II.

THE INVESTMENT.

WHILE these events were occurring, several of the generals conjured the Emperor to quit the army, observing that it might possibly come to pass that the communications with Paris would be cut off, and that, shut up in Metz, separated from the rest of France, the chief of the state might be placed in the condition of being unable to conduct the affairs of the country, or to give them a useful direction, and that revolutionary agitations might result from this situation. These considerations had such an incontestable value for the Emperor that he decided to leave for Châlons, and accordingly, on the morning of the 16th, he left Gravelotte and passed through Conflans and Etain without having encountered a single enemy on the route. He escaped to play his part in the drama at Sedan, and only hastened the catastrophe that would have befallen him if he had remained to share the fate of the flower of his army.

On the morning of the 16th it was still possible for Bazaine to retreat undisturbed with all his train to Verdun; the Germans, whose progress was impeded by the woods and defiles about Gorze, were unable to press him very hard, and he had simply to retire before them. After the battle, however, his part was not so simple. It was impossible for him to march off by either of the two southernmost roads, for one was actually obstructed by the Germans, and the other was too close to them to admit of a flank march. Even to use the third, and northernmost, was now not without danger if the intention to march to Verdun were maintained. From the position of the army, it would be a detour of twelve miles, and gave little or no hope of leading to Verdun and reaching the Meuse without a new battle, as the Germans, even if they remained inactive on the 17th, would certainly be able to come up with him on the 18th or 19th this side of Verdun.

But there was one road open for his escape unmolested—that from Metz over Longuion to Sedan, which, at right angles behind his position, with the Orne to protect his rear, invited him to avail himself of this means of rescue. His failure to do so makes him responsible in no inconsiderable degree for the calamity at Sedan. Abundance of time was allowed him to form a junction with the army of MacMahon, and the force the Germans would have been obliged to leave behind for the investment of Metz would have rendered the proportion of reinforcements which the army attacking MacMahon thereby received much less than that of MacMahon's reinforcements. After the investment of Metz was completed, the army of the Crown Prince of Saxony, which included at least two corps (the Guard and the Twelfth Corps) of the army that had defeated the French before Metz—and the two that had been most instrumental in that defeat—were withdrawn from the besieging army, and, at Sedan, turned the scale in favor of the Germans. Why did not Bazaine retire via Briey on the night of the 16th to the 17th, or even on the 17th? He intimates in his despatch to the Emperor, written on the 17th, that he remained in the neighborhood of Metz to replenish his stock of ammunition; but could he have known that he was endangering the existence of his army in order to have an abundant supply? It is clear from his despatch that he was provided with a sufficiency for at least two days, and he was losing valuable time to encumber himself with baggage, when the emergency was such that he might be required to sacrifice the greater part of his train. In his official report, he alleges that the Germans had occupied the road to Verdun as the reason for not continuing his retreat; but that fact itself should have aroused him to the necessity of escaping as speedily as possible by the only road open to him before that, too, should be closed.

The French commander formed the determination to resume the offensive as soon as his supplies should arrive, and force a passage to Verdun. He gave orders to the army to fortify itself in a new position, and the whole of the 17th was occupied in this movement. This position was a remarkably strong one. The left wing rested on the road from Gravelotte to Metz, before Rozérieulles, on the heights bordering the valley of the Moselle, which was commanded by Forts St. Quentin and St. Privat; then the line followed the edge of the mountain over the hamlets Point du Jour, Moscou, Leipzig, Montigny-la-Grange, to the village Amanvillers; it then crossed the Briey turnpike road, and its right rested at St. Privat-la-Montagne. From the crest of the mountain, the ground regularly declines to a distance of three thousand feet, where, along most of the line in front of Gravelotte, a sharply-cut brook, having its source in the heights of Amanvillers and the Bois de la Cusse, flows through the Bois de Genivaux and Bois de Vaux to the Moselle, and confines every approach of large close columns to the first two woods through the village Verneville. Only the right wing of the French was more accessible, but even here the approach was rendered difficult by a brook flowing into the Orne, behind which lies the villages Habonville, St. Ail, and Ste. Marie aux-Chênes. The line was about seven miles in length. For its occupation, after deducting the cavalry, which served as an escort for the Emperor in his flight, and the detachments to protect the train, which, on the 16th and 17th, had been sent out via Briey, Bazaine had over a hundred and sixty thousand men, with at least five hundred cannon and a hundred and fifty mitrailleuses. The woods, as well as the hamlet St. Hubert, and the villages Verneville, Habonville, St. Ail, but especially Ste. Marie, in front of this position, were occupied as a first line by tolerably strong advanced guards. But this formidable position had two great disadvantages. Behind it were dense woods, frequently on the steep sides of the mountain, so that movements in that direction were almost impossible, and consequently, after an attack, in case of necessity, it would be impossible to strengthen certain points by reinforcements; every part of the line must be defended by the troops placed there in the beginning of the contest. The second disadvantage was that there was no line of retreat but to Metz. If the French wished to avoid being thrown back into Metz, they must, by a decisive victory, reopen the communications with Paris which they had voluntarily relinquished.

Bazaine risked everything on this battle. The reasons for his doing so are to be found in a new system of tactics introduced into the French army by the mitrailleuse and the chassepot: this was to wait in trenches and behind other breastworks which permitted a free, wide range, until the enemy came within sight, and then to throw a rapid fire into their ranks before they could advance so far as to bring the French within range of their own arms—in this way to throw them into confusion—and then rush on to the attack. On this occasion very elaborate preparations were made to carry out these tactics. Loopholes were pierced in the walls of the hamlets and villages in the neighborhood, between which trenches were dug, and, where the ground permitted it, one above another. In some places there were three trenches on the side of a hill. The woods which might intercept their fire were cut down; and even the ground in front of the main position—St. Hubert, Verneville, and Ste. Marie for example—was put in a condition of defence. Knowing that a surprise was impossible, and believing that the superiority of the Germans was not very great, Bazaine determined to give battle in this position, and was satisfied of his ability, under such circumstances, to gain a signal victory.

On the part of the Germans, the battle of the 16th was by no means regarded as decisive; and, first of all, every available soldier was to be brought to hand. The Guard and the Twelfth Corps reached Mars-la-Tour, and were stationed, on the evening of the 17th, south of that place. The whole of the Seventh and Eighth Corps were brought over the river, and concentrated in and north of the Bois des Ognons, and formed the right of the German line; the Second Corps, which, on the 15th, was at Forbach, had, by forced marches, been brought as far as Pont-à-Mousson, and could be counted upon on the evening of the 18th; with them

* See the *Nation* of Feb. 16 (No. 294).

the German force was eight corps, which, with the cavalry, amounted to two hundred and forty thousand men, of which three corps were entirely fresh. The Eighth Corps, on the morning of the 18th, was posted in the Bois de Genivaux, in front and to the left of Gravelotte, and the Ninth Corps occupied Verneville, on the left of the Eighth Corps. According to the order of battle, the whole army was to turn the right wing of the French, and force them back into Metz. The difficult task of turning the French flank was assigned to the two entirely fresh corps—the Guard and the Saxon or Twelfth; and, as they had a long march before them, from Mars-la-Tour to the French, orders were given that the centre and right wing of the Germans should confine their attack to a well-directed artillery fire until those two corps should come up against the right of the French. The Third and Tenth Corps, which had suffered so heavily on the 16th, were to be in reserve. The manœuvring of this great army the whole day was most creditable—possibly with one exception. The Seventh and Eighth Corps, belonging to the army of Steinmetz, on the German right, commenced the assault at about twelve o'clock, notwithstanding the Guard and the Saxons had not yet come up, and at that time drew upon them the French fire. The ground where these two corps were attempting to make their way was the most difficult of all; the French position on that side was impregnable, as they soon found out. If the assault had been successful, the French would simply have been forced to the road to Briey, which would be open for their retreat; and thus a plan which the French commander was not wise enough to adopt would have been forced upon him by the folly of his enemies. The premature attack on the right involved an attack by the Ninth Corps at Verneville; and the Guard, arriving shortly afterwards, advanced beyond Ste. Marie to an unprepared attack against St. Privat.

In this engagement the superiority of the chassepot over the needle-gun was incontestably proved. No sooner had the Guard debouched from Ste. Marie, the Ninth Corps from Verneville, and the Seventh and Eighth Corps in front of Gravelotte, than they received a terrible mitrailleuse, but especially small arm, fire, from St. Privat, Amanvillers, and the road in front of Rozérieulles, at a distance of from seven hundred to nine hundred yards; and so terribly did the Germans suffer that they were obliged to suspend their assault until the artillery could throw confusion into the French lines; the Guard even was beaten back upon Ste. Marie with great loss. It is a remarkable evidence of the distance to which the chassepot carries that an artillery officer received a slight wound in the arm while directing his battery at a distance of over eleven hundred yards from the French lines. This weapon can safely be said to carry a thousand yards, making it possible for those bearing it to enter into an engagement at eight hundred and fifty to nine hundred yards. For the Germans, the most difficult task was to come within two hundred to three hundred yards of the enemy, that being the most favorable distance for their infantry fire. When, however, they reached that distance, their regular fire and steady aim almost invariably put the French to flight. Bazaine had, however, placed too much reliance upon the chassepot. If the needle-gun was inferior to it, the German artillery was vastly superior to that of the French. In the Prussian army, the proportion of artillery is very great, usually every corps having ninety pieces. So skilful are the Prussian artillerists that, after three trials, they succeed in bringing their guns to bear. The artillery fire is usually opened at a distance of 1,300 or 1,400 yards, and frequently the artillery advances to a distance of 900 yards; in case the enemy is in retreat it even goes to within 300 or 250 yards, doing terrible execution. On this day the Germans had a hundred and fifty cannon more than the French. It was the artillery that gained for the Germans the day at Gravelotte. The Seventh and Eighth Corps were almost demoralized when the artillery on the heights to the right of Gravelotte commenced an effective fire against Point du Jour and Moscou, and prevented the French from immediately availing themselves of the advantage offered them by the exhaustion of their assailants.

Those who were at Gravelotte that day recall with a feeling of something like horror an ominous silence that prevailed at seven o'clock in the evening, succeeded by a terrible fire of mitrailleuse and chassepot. The French had made an assault against the worn-out troops of the Eighth Corps; had put them to rout, and thrown almost unprecedented confusion into the German lines. Fortunately for the Germans, the Second Corps at last arrived at this critical moment on the ground, and, with fixed bayonets and beating drums, went forward in battalion columns without firing a gun; and no sooner had these new troops appeared than the French turned and even retired from the strong position that they had held all day. Thus the Germans gained the heights of Point du Jour and Moscou, which it had been impossible for them to carry by assault.

Meantime, the artillery of the Tenth Corps, posted on the road about three thousand feet from St. Privat, had held the French in check after they had beaten back the Guard. Finally, at five o'clock, the Twelfth Corps, which had had the longest march before it, had advanced as far as Boncourt, and its artillery could be brought to bear upon the French right wing. Encouraged by these reinforcements, and supported by this heavy artillery fire, the Guard once more assaulted St. Privat, and at last, at about eight o'clock, together with the twentieth division of the Tenth Corps, carried the village, and gained this bulwark of the right wing of the French—and the battle was won. During the night Bazaine withdrew his army into Metz, and the Germans lost no time in destroying the bridges of the Orne and closing the passage to Thionville, and the investment was completed. J. L. H.

BERLIN, January 17, 1871.

Correspondence.

THE TAX COMMISSIONERS' REPORT.

TO THE EDITOR OF THE NATION:

SIR: I am not altogether satisfied with the exposition made in the *Nation* of the 2d, of the new system of taxation proposed by the New York Commissioners in their recent report to the Legislature; and as I am somewhat covetous of the support and endorsement of your readers in this new reform movement, I ask the privilege of your columns for the purpose of making a restatement of the points involved—especially as no progress in this or any other reform can be anticipated, unless the public are able to understand clearly from the outset both what it is desired to accomplish, and the agencies which it is proposed to employ.

All are agreed that this system of local taxation, as it exists to-day in New York and most of the other States, is unjust, ineffective, and antagonistic to rapid material development; real estate being valued for assessment according to no common and uniform standard, but rather at the caprice or favor of the assessors; while personal property which *now* evades taxation in a very great degree is likely *hereafter*, through recent laws, court decisions, and the use of United States bonds, to escape altogether. To remedy these defects was the problem presented to the Commissioners, and they have endeavored to solve it; how satisfactorily, experience and the judgment of the public must decide.

In respect to real estate, the difficulty lies wholly in the lack of a uniform and equitable valuation, and may be remedied mainly, as has been proved by the recent experience of the cities of Philadelphia, Boston, and Chicago, by a reform in administration. Such a reform the Commissioners have proposed, but for further explanations concerning it, I would refer to the report itself.

The points of interest and of difficulty, therefore, centre in the proposed treatment of personal property as representing one of the two great sources from which the State by taxation is able to obtain its necessary revenues. Direct taxation of this species of property has in all places and at all times proved impracticable. It was so in old Rome, when the assessors were empowered to administer torture, and it has also equally failed in all the monarchical or despotic countries of Europe, and under the popular governments of the United States; and every nation, with the exception of the United States, profiting by its own experience, or the experience of others, has long ago swept all laws authorizing the direct taxation of such property from its statute-books. But it does not necessarily follow, that because direct taxation of personal property has proved impracticable, that indirect taxation will prove equally so. On the contrary, all the nations which have abolished direct taxes on personal property have, without exception, and successfully, adopted some measures for arriving at an equivalent result indirectly; and if it is right, as Adam Smith lays down, that every man should pay according to his ability, and it is perfectly practicable to equitably and effectively tax such ability, then the proposed method of indirect taxation on personal property is not only right and expedient, but it can be defended according to the most enlightened principles of modern political economy. Thus, for example: England taxes personal property indirectly, through her income tax and the taxes levied by her on rentals, carriages, plate, servants, etc.; while France arrives at the same result by taxes on rentals, doors, and windows, and by what are termed occupiers' licenses.

The Commissioners, therefore, do not propose to abandon taxation on

personal property, and they do not favor—certainly at present—the exclusive taxation of real estate, as has been stated, but the system they offer is substantially as follows:

Tax all corporations created by the State which are in the nature of a monopoly; the gas company, which has practically no competition in the sale of its products in its particular district, being taken as the type of such corporations, or associations of capital. Banks, savings-banks (at least to the extent of their surplus, which is practically no one's property); railroads—steam and horse; insurance, omnibus, ferry, and bridge companies; and private banking capital, are also included under this proposition; but capital invested in mining, shipping, and manufacturing would not be thus included, and would be entirely exempt from direct taxation, the interests of the State, the legislation of other States, and the necessity for reducing to a minimum the cost of production, rendering such exemption in the opinion of the Commissioners absolutely imperative.

It is obvious, therefore, in the outset, that under this section a very large proportion of the personal property of the State would be made subject to taxation; not, as now, to the annoyance and inquisition of the individual owner or shareholder, but, at one time and at one place, through the agent or treasurer of the corporation itself; the securities of the company, or its evidences of indebtedness, wherever and however held, being made free and exempt from return and assessment. It is not proposed to discuss or defend here the expediency of imposing taxes upon property or franchises of this description. A person interested in a work of reform, whose heart is earnestly intent upon his charge, does not so much ask himself what is theoretically desirable as what is practically possible; and when he has determined what is practicable, he bends his energies to that point, and lets the theoretical future take care of itself. I, for one, have no patience with that class of reformers who will take nothing, unless all; who discountenance tariff reform unless absolute free-trade is to be substituted; or reform in local taxation, unless some plan is to be recommended which is known to be in entire opposition to the public sentiment. I believe in half a loaf rather than in no bread; and am firmly convinced that with one half in hand it is a great deal easier to get the other half, rather than, starting empty-handed, to get the whole at once. Therefore, my answer to those who may allege that my practice is in opposition to my principles will be, that I recognize the drift of public sentiment, and do not propose to forfeit all measure of success by putting such sentiment at defiance. When the people of New York have fully come to appreciate the principle that the productiveness of a tax is not its first consideration to favor, and that the direct gains which accrue from some taxes are far more than compensated for by indirect losses, it will be time to take another step forward in the cause of progress. But that time has not yet come.

2. The second proposition of the new system is, to tax land and buildings—real estate—on the uniform basis of their fair marketable valuation. It is difficult to see why the case of unoccupied lands is not here fully provided for. There can be no other equitable standard for valuing, and there can be no possible error in assessment except by undervaluing; and an improved administration of law and Sec. 13 of outline Code No. 2, submitted by the Commissioners, provide against undervaluing as fully as is possible. If it is proposed that unoccupied land shall be assessed on a proportionately greater value than contiguous occupied and improved territory, the Commissioners respectfully dissent. The latter is worth more, and reimburses the owner for taxes and interest, or it is used unprofitably; while the former returns the owner nothing for the time being. If the former rises in value, so does the latter; and if each is taxed on its fair market value, they are taxed equitably.

3. With the third proposition the difficulties and points of disagreement commence; for it is here that the taxation of personal property indirectly and by substitute is proposed. The reasoning of the Commissioners is as follows: All experience and reasoning show that as a general rule, whoever possesses personal property necessarily puts out some sign or indication of the fact and amount of such possession; and that the rent or rental value of the building or premises occupied constitutes the most permanent and certain of such signs or indications. The Commissioners, therefore, propose, in the place of all taxation on personal property, other than that provided for in their first proposition, to tax *each occupier, be he owner or tenant,* who is in the possession of an amount of property beyond what the law exempts from execution, on a valuation indicated by *three* times his rent actually paid, or three times the rental value of the premises occupied, if he be the owner; and in consideration therefor make no further enquiry as to what personal property he possesses, where he keeps it, or how he uses it. If it is asked why *three* times the rent or rental value is taken, the answer is that the Commissioners find, from investigation, that no person, even the humblest, can rent and occupy any building, or part of a building, and pursue any occupation which will yield a livelihood including his rent, without being in possession of personal property equal to the amount specified, and on this point they challenge investigation. It will be seen by reference to the report that it is not proposed to commence assessing according to this system at the bottom level of society. The occupier must have personal property over and above what is liable to execution; and it is further provided that, in the case of the occupiers of tenement-houses paying a minimum rent ($150), the owner shall be regarded as occupier, and taxed accordingly. The Commissioners claim that this system is an equitable one, easily understood, and one that allows little to the discretion or caprice of assessors. If the occupier is of small means, and pays little rent, he is taxed lightly; if, on the contrary, he prefers to employ his wealth in owning or renting costly structures, his taxation is increased proportionately. If he possesses more of personal property than is represented by *three* times his rent or rental value of his dwelling, and such property is invested in corporate stocks enumerated under the first section of the proposed system, it would be returned for assessment. If such property, on the other hand, is invested in United States bonds, or property without the State, it is beyond the jurisdiction of the State; if invested in machinery, mining, and shipping, its taxation by the State is inexpedient, for such taxes directly increase the cost of production, and are not paid in the long run by the immediate representatives of the capital assessed.

But the criticism is made, in your review of the 2d, that such indirect taxation of personal property is, in fact, only another tax upon real estate; or, in other words, that the unit of measurement adopted, and the object measured, are one and the same. Upon this I take direct issue, and assert that there is no necessary connection whatever between the two; and that the personal tax is not in any sense a tax upon real estate, any more than it would be if, instead of rent or rental value, the buttons on the occupier's coat or the books in his library were taken as the standard of measurement. Or, to make the case clearer, suppose the occupier to be an individual who has no stocks or personal property investment whatever, but a large income derived from professional practice, and who rents the house or apartments he occupies. Such an individual probably now escapes direct taxation altogether; and yet, if ability to pay, as laid down by Adam Smith, is to be made the test and measure of taxation, the State has an equitable and just claim upon him; and in assessing him for personal property on a basis of three times his rental, he to a certain extent discharges such claim, and the payment of it in no ways falls upon the owner of the real estate he occupies; and the Commissioners claim that it constitutes one of the chief merits of the system they have proposed, that its provisions will so effectually and equitably bring into the range of assessment so large an amount of personal property now wholly evading taxation, that the rate on real estate, at present ranging in the cities of this State from 2.27 to 6.70 per cent., will never hereafter necessarily exceed two per cent. as a maximum.

I have thus sketched a brief outline of the reforms proposed by the Commissioners in their recent report. If sufficient space were available, illustration and argument might be further adduced in its support to almost any extent; but as I cannot expect to be allowed to fill up your columns with a discussion of this one subject, I would respectfully ask your readers to read and examine the report itself, and judge for themselves whether the system proposed is not wholly practicable, and at the same time as simple, equitable, and economic as the present condition of the body politic and public sentiment in reference to reform will allow.—I remain, yours most respectfully,

DAVID A. WELLS,
Chairman, Board of Commissioners.

March 6, 1871.

THE PROFESSOR OF FRENCH AT WEST POINT.

TO THE EDITOR OF THE NATION:

SIR: In the letter from Washington in your issue of this week appears the following sentence: "The latest instance of the way gangrene is eating into the body politic is in the appointment of the Professor of French at West Point. The office of United States Marshal at Boston was wanted for another partisan, and so the incumbent was transferred to the other post. Perhaps the linguistic acquirements of the pupils are of minor importance; but what is to prevent the military professorships from

going the same road, with consequences to be developed in the next war as similar ones have been lately in France?" The natural inference from the words quoted is that Gen. Andrews, the late marshal, is a mere political partisan, quite unfit to be entrusted with the duty of instructing the cadets at West Point either in French or in studies of a more purely military character. If your correspondent knows the man of whom he writes, he has been guilty of wilful injustice. If he does not, which I think is more probable, I will suggest for his information that Gen. Andrews is not only as far as possible from being a political partisan (if he had been, he would have kept his place as marshal), but that he is one of the best specimens of a West Point graduate. He was among the first, if not the first, in his class, and is a most conscientious, painstaking, and soldierly man, well versed in the literature of what was for many years his profession. If professors at the Military Academy are to be taken from the ranks of its graduates, your Washington correspondent may rest assured that, so long as men are selected of the same character as Gen. Andrews, there is no danger of the fulfilment of his gloomy forebodings of our national decay. P.

Boston, March 11, 1871.

SATURN'S ECLIPSES OF THE SUN.

To the Editor of the Nation:

Sir: In the notice of Proctor's "Other Worlds than Ours," printed in your issue of March 2, occurs the following, viz.: "If that planet (Saturn) were habitable, his rings would prove a terrible nuisance. In latitudes corresponding to New York, they cause total eclipses of the sun which last seven years at a time."

This is a great mistake. No such eclipse is possible to any part of Saturn's surface. I do not know who was the originator of the error. Walker's edition of Herschel's "Astronomy," 1838, says the eclipse will last fifteen years. Olmsted copied the assertion in his work. It is also in Mädler's "Astronomy," Berlin, 1852, and in others. The eclipse lasts about fifteen days at the equator of the planet; and different periods for various latitudes, but in no case exceeding a few days.

The error was very fully exposed a quarter of a century ago, by Lardner in the Transactions of the Royal Astronomical Society of London, an abstract of which will be found in Lardner's "Hand-book of Natural Philosophy," Vol. III., American edition of 1854. The later editions of Herschel in my possession omit the paragraph of the earlier editions, in which the error is found. Any one familiar with mathematics and astronomy can make the proof for himself. X.

Oxford, O., March 6, 1871.

[It seems strange that "X." should evidently not have read Proctor's "Saturn and its System," which appeared in 1865. On pages 179 *seq.* of that work, Proctor thoroughly examines Lardner's calculations, and shows that they are founded on erroneous data, and are hence wrong in result. Table XI. of the same book, in which the epochs and duration of eclipses in all Saturnian latitudes are given, as calculated by Proctor, shows that in latitude 40° the eclipse due to the rings begins nearly three years after each autumnal equinox, gradually becoming total. The period of totality is 6 years 236.4 days, or 5,543 Saturnian days. This is preceded and followed by a period of morning and evening eclipse; the *whole* period being 8 years 292.8 days.—Ed. Nation.]

Notes.

The "Story of my Life" of Hans Christian Andersen, as heretofore published, has contained but a part of the original biography, and neither, of course, gave any account of the author's experience during the past fourteen years. The new edition now about to be issued by Messrs. Hurd & Houghton will be a full translation from the Danish, with an addition covering this later and (for Andersen) very interesting period, written expressly for his American readers, and now for the first time translated.——It is hardly necessary to call attention to an obvious error in the second line of the second paragraph on page 160 of our last issue (No. 297). The rare book containing Lord Wilmot's retort to Louis XIV.'s boast of French aggrandizement was published, of course, in *London* and not in France. In recurring to the subject, we may appropriately relate the answer said to have been given by Gervinus to Thiers, when the latter enquired of him, after Sedan: "With whom are you Germans fighting now?" "With Louis XIV."——The *North British Review* has come to a sudden end, though finishing a volume, with the January number. It is the third publication which has died in the hands of its conductors—the liberal Roman Catholics who, after failing with the *Home and Foreign Review*, founded the *Chronicle*, which in less than a year was discontinued, after a career of great promise. The *North British Review* was one of the four reviews regularly reprinted in this country by the Leonard Scott Publication Company, who now inform their subscribers that they have substituted for it the *British Quarterly*; and in order to give a complete file of the latter, they will furnish gratuitously with the April number the January number also, which begins a volume. The *British Quarterly* and the *North British Review* were started almost simultaneously, in 1845, the one by the English Nonconformists, and the other by the Free Church of Scotland. The former, however, has been under the same management from the beginning, its founder, Dr. Vaughan, having edited it for twenty-one years.——The following books will be shortly issued by Messrs. Harper & Bros.: Barnes's "Notes on Romans," the fourth volume of the revised edition; Lady Belcher's "Mutineers of the Bounty," which does not appear to lack for interest in spite of all that has been written on the subject; a revised edition of Mr. Wells's report on "Local Taxation," that abundantly deserves to be taken out of the category of purely official documents; a copious and critical "English-Latin Dictionary," by Dr. William Smith and Theophilus D. Hall; "Science for the Young—Part I: Heat," by Jacob Abbott; several novels; and Volume II. of Brodhead's "History of New York."——Messrs. Roberts Bros. will republish "Episodes in an Obscure Life;" "Thoughts about Art," by Philip Gilbert Hamerton; and "A Visit to my Discontented Cousin."——A translation of Lucretius is announced by Messrs. De Witt C. Lent & Co.——Messrs. H. H. & T. W. Carter, Boston, reprint from the Tauchnitz edition of British novels "One Year," by Mrs. Peake.

—The directors of the social experiment known in Boston as the Horticultural School for Women, and which was opened in the latter part of May, 1870, publish a brief report of what has been accomplished in the past seven months. This, indeed, does not amount to much, though the result is by no means discouraging. The school has been obliged to rent instead of owning ground, and has had but six pupils, partly because of its late opening, and partly because the cost of board and tuition together (the latter being $100 a year) prevented a majority of the applicants from entering. Nevertheless, with the current expenses, including the rent, reaching $500 a month, the receipts from tuition and board and sales of produce were nearly half that amount. The directors hope in time to have a sufficient real-estate fund to enable them to purchase a place of their own, and also to be assisted by the benevolent in establishing free scholarships, when the school will probably become self-sustaining. The scheme of instruction is strictly practical, designed for those who mean to make horticulture a profession, and embraces, besides training in the garden and greenhouse, the study of botany, entomology, agricultural chemistry, drawing, etc. The effect of their out-door work on the students has been very gratifying; some were invalids, and all have improved in health.

—It is beyond a doubt that we Americans put up with all sorts of things in a way that often gives other people good colorable reason for blaming us as cowardly, or even for attacking us for obtuseness of the moral sense. It is comfortable to believe, however, that our toleration of the impudence of landlords, clerks, railroad-conductors, hack-drivers, pursers of steamboats, and other public servants who have made themselves our tyrants, is not a result of cowardice so much as of good-nature and of a self-reliance that takes the world as it comes; and that our morals are not so far gone in dry-rot as our long-suffering endurance and even partial enjoyment of Fisk, for example, would lead some to suppose. It is not only more comfortable to believe so, but there need be no doubt that one who so believes is nearer the truth than if he held the opinion of us that is commoner among our critics on the other side of the water. A rascal who carries "smartness" to its highest development, or who has in him anything else that is amusing, is sure to get from us, for a certain length of time, a certain sort of applause. But let Mr. Phineas T. Barnum try to go to Congress, and he finds it a difficult matter. Or let General Butler try to get us to repudiate the national debt, or declare war in the Fenian interest, and how soon he discovers that the comic element in his performances and his impudent unscrupulous sharpness—which make it impossible even for those who best know his character to entertain a perfectly serious hatred for him—how soon he discovers that at bottom his countrymen put no trust in him, and that he has no one's respect. Or

let Fisk, now that people have had enough of the sort of amusement which he is capable of affording, attempt to keep on for another two years as he has during the last two years, and how surely he will come to irremediable grief. The moral state of the people of this country is, no doubt, not everything that some of us moralists could wish; but after all it is to be called sound and wholesome. And were it not for the fact that everybody here is so busy as to have little time for thinking about enforcing the moral law, we should not be under any reproach of caring a bit less about morality than other communities care. Whenever it does happen that we get time to give some attention to the matter, the judgments that we render are not in the least doubtful, nor delivered with any lack of emphasis. Take, for instance, General Barlow's and Mr. Samuel Bowles's discussion of Mr. David Dudley Field's position as the coadjutor, with Barnard and Cardozo, of Gould and Fisk. It was a discussion that was slow in coming, for the affairs discussed were in so many ways highly interesting that the iniquity of the men engaged in them was not at first so clearly perceptible, or, rather, so staringly obvious, as it doubtless should have been. But however slow in coming, the discussion, now that it has come, cannot be found fault with on the score of thoroughness and fearlessness. There is to be more of it, too, we are glad to say, and we are glad to say that it is to come in part, at least, from a member of the New York bar—a body which in no long time will be prepared, so far as the possession of evidence goes, to take some decisive steps as regards its own purification. As we are informed, the next *North American Review* will contain two articles, strongly libellous in character, of which one treats very fully of the strategy and tactics of Fisk and Gould in their famous fight with the Albany and Susquehanna Railroad last summer was a year, while the other discusses the moral aspects of the services rendered Fisk by the lawyers in whose hands he placed himself; or who placed themselves in his hands—whichever it was. The author of the second article is Mr. Albert Stickney, of this city, a good lawyer in good standing, who, though he is not a practised writer, possesses a knowledge of some of the facts in the late history of the Erie Railway and its counsellors which will make whatever he has to say on the subject worth the attention of all interested persons. The other article, of which advance sheets have been shown us, is by Charles Francis Adams, Jr., and is a piece of narrative which will be very much enjoyed by all but a certain number of persons. The *Westminster Review's* article on the fight between Field, Shearman, Fisk, Vanderbilt, and Drew was lively enough; but it was rather a mild matter in comparison with this "Erie Raid."

—Old graduates of the Law School of Harvard College may find some pleasure in the perusal of a small pamphlet newly published by Messrs. Hurd & Houghton, of this city. It is from the hand of Judge Joel Parker, for many years Royall Professor in the School, and a man widely known in the profession and in the country at large, as well as among his old pupils, not only for his legal abilities and attainments, but also for his sincere enjoyment of a good fight. "So fight I," he says on the title-page before us, "not as one that beateth the air." And on the cover of his pamphlet he prints the following words—with an evident belief in the strict appropriateness of some of them to the mental and moral condition of his antagonists; and with no unjustifiable confidence in the accurate descriptiveness of others of them as applied to his own language, which is indeed quite plain. They are these words by "Truthful James:"

> "Which I wish to remark—
> And my language is plain—
> That for ways that are dark,
> And for tricks that are vain,
> The heathen Chinee is peculiar:
> Which the same I would rise to explain."

The Chinee—or Chinees, for there are two of them—who figure in this case are the new editors of the Boston *Law Review*, a pair of heathen who would seem to have come upon their "Melican man" at a discouragingly early stage in their career of editorship; and the dark ways and vain tricks which Judge Parker rises to explain were exhibited in the writing and publication of an article in their *Review*, in which were said these things:

"For a long time, the condition of the Harvard Law School has been almost a disgrace to the commonwealth of Massachusetts. We say 'almost a disgrace,' because, undoubtedly, some of its courses of lectures have been good, and no law school of which this can be said is hopelessly bad. Still, a school which undertook to confer degrees without any preliminary examination whatever, was doing something every year to injure the profession throughout the country and to discourage real students. So long as the possession of a degree signified nothing except a residence for a certain length of time in Cambridge or Boston, it was without value. The lapse of time secured its acquisition. Just as a certain number of dinners entitled a man in England to a call to the bar, so a certain number of months in Cambridge entitled him to a degree of Bachelor of Laws. So long as this state of things continued, it was evident that the school was not properly performing its function."

Upon this followed some remarks about the new system which compels candidates for a degree to pass an examination and makes some other changes, which no doubt are by no means undesirable. "Now," says Judge Parker, thinking his reputation bound up, in part, with that of the School, and thinking, further, that the editors had traduced the School, "had the author of this article been content to commend the new order of things without disparaging the old" (or had the words of censure appeared to be but carelessly used or unintentionally disparaging), "the matter might be passed without notice." But they were not used carelessly, and it is clear that it was intended to censure the School and some, at least, of its former instructors, as doing something every year to injure the profession. We have not space to follow the Judge through the interesting account of the rise and progress of the Harvard Law School and the other law schools of the country; nor to follow him as he shows that, whatever the School at Cambridge has done during the last half-century, it has done with the approval and under the direction of such Presidents as Kirkland, Quincy, Everett, Sparks, Walker, Felton, and Hill, and (among the Fellows) such lawyers as Charles Jackson, Joseph Story, Lemuel Shaw, C. G. Loring, E. R. Hoar, B. R. Curtis, H. G. Otis, and B. F. Crowninshield; nor to quote his proofs that the School has steadily widened its field, and yearly drawn to itself, anxious either for its degree or its instruction, greater and greater numbers of students from all parts of the Union, who have, as a rule, certainly not discredited the approval accorded their Alma Mater by the jurists and lawyers whose names we have cited, and have evidently not been of opinion that the condition of the School was a disgrace to anybody.

—The truth of the matter would seem to be that each party to this dispute—if indeed there is not here one of those quarrels which disprove the adage and are made by one person—has on his side some right, that each had plenty of good intentions, and that each may be well enough content to let the matter rest as it is. We should say that no one could read Judge Parker's pamphlet without admitting that the Harvard Law School has, ever since its foundation, done excellent work, highly creditable to its teachers and scholars; that it has been so far from being a disgrace to Massachusetts as to have been an honor to the State, and of service to the profession throughout the whole country; that its degrees, if they were given without examination, were nevertheless carried away by men who had on the whole studied well—as behooved students who have reached manhood, and who in nine cases out of ten had before them the immediate prospect of applying practically their knowledge of the law, and getting their bread and reputation by applying it well. On the other hand, it is true, too, that the School can do something and will, it is highly probable, do something under the changed system, not only to increase its efficiency, but help on the cause of sound education in the United States. It will be well, no doubt, when Harvard University shall give no degree the possession of which shall not be strong evidence that its possessor has a certain amount of ability, and has acquired a certain amount of knowledge of law or science or theology, or whatever else the university may have been trying to teach him. His perception of the fact that this is highly desirable in the case of the degree of Bachelor of Laws, and his strong hope that under the new system this significance may be given the Law School degrees as to others, apparently made the writer in the *Review* speak as he did—that is to say, with far too much of looseness of assertion, and in a tone of seeming disrespect to persons whom he no doubt considers worthy of a great deal of respect. However, Judge Parker had little need, one would think, to fancy himself glanced at. But the fact is, he had a crow to pick, not only with the offending editors, but with various committees and sub-committees of the Board of Overseers, who also may be safely referred to the pamphlet in question as affording means of amusement. The sarcasm of our author, as regards its delicacy, is something like a good two-handed stroke with a dull broad-axe; and as regards its effectiveness, it might be compared to a blow delivered with the helve of the same weapon just after the blade had flown off; but one pities the axeman's arms, and shivers sympathetically with them in the jar they must be feeling. He takes, however, a pleasure in wielding it which is so sincere and complacent that it cannot fail to give the reader much satisfaction, and, as we have said, the historical and argumentative parts of the book make it interesting and worth having.

—Our sober neighbors of Philadelphia, so long contented with the rectangular sameness of their streets, seem to have waked up at last to the consciousness that civic architecture may be rendered attractive as well as comfortable, and that the business avenues of a town may become the means of æsthetic education as well as of money-making. The gigantic park which they are laying out, and in which they take so much pride, seems to have fairly aroused them, and the quiet of the city of Penn is disturbed by a controversy raging on the use to be made of "Penn Square"—a plot of about ten acres, at the crossing of Broad and Market streets. One party, which seems to have legislative authority at its back, proposes the vandalism of closing up this open space by erecting in its centre a huge building, more than four hundred feet square, as a court-house and city hall, and in pursuance of this they have already cut down the handsome trees with which it was adorned. The other party is striving to convert the square into an open plaza, like the Place de la Concorde, under the impression that it will become a centre from which handsome architectural improvements will radiate, giving us the only example in this country of those imposing effects which are so eagerly sought after in the European capitals. This view of the matter is presented in a well-written pamphlet before us—"Broad Street, Penn Square, and the Park"—the work, apparently, of a professional hand familiar with the shortcomings and solecisms that so commonly disgrace our great cities. The author is desirous of reproducing in Philadelphia the effect which is so striking in Paris, of the Place de la Concorde, the Avenue de l'Impératrice, and the Bois de Boulogne; but we doubt whether Philadelphians are yet sufficiently educated in the beautiful to take advantage of the opportunity which is before them. One cheering indication, however, is the fact that a large sum has already been pledged by private citizens for the adornment of the square with fountains and monuments if the scheme can be carried out. By the way, could not the somewhat arid verdure of Union Square be advantageously replaced with a handsomely paved and flagged open plaza, appropriately ornamented?

—Two addresses by Judge Thayer of the District Court of Philadelphia have recently been printed in that city by Kay & Brothers, Law Booksellers. One of them, "The Law, considered as a Progressive Science," was delivered before the Law Academy of Philadelphia, and is well worthy of the series of papers read before that useful body in its active career of half a century. It is a learned, thoughtful, and exhaustive study of the gradual development of the Common Law, as it exists in this country, showing the influence of Roman, Civil, Canon, Feudal, and Federal Law, each in turn controlling for a time, and all leaving their impress on the body of law which now serves our daily needs. Judge Thayer speaks earnestly and eloquently of the vast influence of the legal profession in this country, and urges on the students the importance of fitting themselves for their places as well in public life as in the more strictly technical and private relations to their clients and to the courts. Himself an example of the good that is done by taking an active part in politics, he carefully enforces upon students and practitioners of the law the importance of never making their profession subsidiary to politics as a livelihood. Appreciating the influence and importance of lawyers as a class in the political as well as the social history of the country, he holds up for those who are yet to swell the ranks of the profession the standard of progress and reform as that under which they can best work their way forward to honorable position and reward. Judge Thayer has also printed his "Address delivered at the opening of the Library of Christian Hall," at Chestnut Hill, one of the suburbs of Philadelphia. Besides giving a modest mention of the liberality of Mr. Henry J. Williams, for many years one of the leading lawyers of Philadelphia, in thus founding a library for the use of his neighbors, Judge Thayer sketches for their benefit the history of libraries, showing how, from similar and even smaller benefactions, some of the greatest storehouses of learning have taken their start, and in time become the workshops for the most acute and the most active and useful intellects of their respective localities—at times, indeed, of the world. The scholarly tone of this brief address shows that its author has made effective use of the larger field opened to him in his varied career as lawyer and judge.

—Pastor Mann, the learned Rector of the ancient German Lutheran Congregation in Philadelphia, has recently published (through Köhler) his address on the war between France and Germany. It is a clear account of the historical changes in French and German territory, tracing the causes of the loss of successive German territories to France, and of their recent recapture by the Germans, to the vices, both political and social, of the controlling power. The lesson that he draws and the moral that he enforces are useful at all times, and the earnest moderation with which he speaks commends his pamphlet to all who can master German, and endure the small type and wretched paper with which his publisher has saved a little outlay, at the expense of a better sale. A well-printed translation would undoubtedly find many readers and do much good.

—Not the least amusing portion of the revelations made by the ransacking of the Imperial papers at the Tuileries are letters received by the Emperor asking for, or acknowledging, "presentation copies" of the "Life of Cæsar," and they certainly present certain well-known French literary men in no very favorable light. The ingenuity, mixed with solemnity, with which some of the recipients worked up their acknowledgments of the book is almost touching. M. Augier says that the effect produced on him by the preface, when the Emperor read it to him, was very deep; but it was nothing to the effect produced on him by reading the work itself. He says that, "as a work of art, it appeared to him to have the singular merit of giving liveliness to the narrative without the tricks of anecdote which, in these later days, are called 'local color.' He says it is, also, "the profound work of a thinker;" and that nobody could have written it who had not acted history himself. M. Ponsard goes still further, in acknowledgment of his copy. He says it will exercise "a salutary influence on letters," owing to its freedom from all affectation. "The style, in which Cæsar would recognize his own purity and precision, will bring us back to good taste, in showing that fine language flows from strong thinking." "The gift," he says, "makes him more eager than ever" to show himself worthy of the Emperor's "august benevolence," so he is working hard at a poetical piece for the Théâtre Français, which he hopes to read in the month of May. Octave Feuillet is very thankful for having been considered "worthy to be among the first to admire a work which will prove not only an honor to history and to letters, but will leave traces still deeper; for," he says, "to raise historic studies to that height, is to deliver the government of this world from chance, from accident, from mean passions, and hand it over to the providential inspirations of genius, the generous views and vast designs of great souls, and thus ennoble not only history, but humanity." Not bad for M. Feuillet. Arsène Houssaye begs humbly for a copy from his Majesty, as "the humblest of his critics and subjects." But nobody was as much overcome by the receipt of a copy as Jules Sandeau. He says "he was as much touched by it as if he was unworthy of it; but was as proud of it as if he deserved it. The work," he adds, "will give Julius Cæsar himself an unlooked-for greatness and a new lustre. As a man of letters, he cannot be too grateful to his Majesty. The Emperor Charles V. deserved well of the arts for having picked up Titian's brush. You, Sire, have done better; you have taken the pen of Montesquieu, and used it." One of the most fulsome acknowledgments is from Prince Charles of Roumania. The gem of the collection, however, is a letter from M. Louvet, a member of the Corps Législatif, and, incredible as it may seem, this creature was afterwards a member of the Ollivier Ministry. We shall translate this entire. Abridgment would spoil it. It is dated Dec. 17, 1855, shortly before the birth of the Prince Imperial:

"SIRE: The church of Puy-Notre-Dame, near Saumur, possesses one of the most precious of Christian relics. It is a sash of the Virgin Mary, given by William VI., Duke of Aquitaine, who had brought it back from the Crusades. The archives of the church, and numerous historical documents, attest the authenticity of this relic. The kings of France have at all times had great faith in this sash. Anne of Austria wore it at St. Germain in 1638, when she gave birth to a prince who was afterwards Louis XIV. If it seemed good to you, Sire, to place her Majesty the Empress under the protection of this relic during the great event which is going to crown your domestic happiness, and assure the repose of France, I have no doubt the curé and the bishop would eagerly accede to your wishes."

—One of the most sensible and forcible documents that the late war has produced is the joint address of Karl Blind, Ferdinand Freiligrath, and Dr. Eduard Bronner to the French people and its National Assembly, dated London, during the armistice. The eight pages of this little brochure contain a sober and sane judgment of the great conflict, in marked contrast with the incoherencies of Edouard Schuré, on the one hand, and of Karl Blind's republican associate in this country and fellow-exile, Mr. Karl Heinzen, on the other. The writers address the French republicans more in sorrow than in anger, reproaching them with their approval of the war begun by Napoleon, and reminding them that the revolutionary Assembly of 1789–92 had not refrained from forcibly annexing German territory as the fruit of victory. "Can you forget," they continue, "that not a voice was raised among us, during half a century, to reclaim provinces which, in the time of our weakness, had been torn from us by treacherous surprises?" And is it not true "that while the immense ma-

jority of all parties with you have preached the 'natural frontier' of the Rhine as your country's right, the German democracy have never raised as an offset the question of Alsace—have never spoken of that truly *natural* barrier, the Vosges, which coincides with nationality, language, and ancient history, and really separates the French and the German races?" "Unless France pretends," they say further, stating the whole case admirably in a few words—"unless France pretends to be always in the right, and reserves to herself the privilege of making conquests when victorious, but of offering no guaranties when beaten in a war unjustly begun by her, everybody must admit that the balance of right is this time on the side of Germany." On the question of annexation there is no difference between Bismarck and Blind. If the Alsatians unwillingly return to Germany, they were unwillingly attached to France; and there is good reason for believing that their nostalgia will not last long. "Have we not seen the people of the Bavarian palatinate, who had been annexed to France for over a century, become patriotically German again, after 1815, in the course of a few years?"

—In 1841, M. Eugène Pelletan was the editor of *Le XIXe Siècle*, a journal of commerce and of national interests. In one of the November numbers was an article on the European alliances and general European policy desirable for France, having in view particularly the Eastern question. At that time M. Rouher was a young advocate not yet thirty, and we infer from a foolscap manuscript found by the Prussians in his chateau, and which has come into our possession, that being struck with this article he made, or caused to be made, a fair copy of it, as also of part of an article from the issue for Nov. 30. The first article closes thus: "Such is the policy which we offer for the consideration of thoughtful men (*des hommes grâves*). We are not the inventors of it; it was Napoleon's at the conferences of Erfurth, as well as that of many distinguished minds. It only awaits the sanction of public opinion." One may judge what a contrast is presented between the tone and attitude then assumed in the name of France, and those which now become that unhappy country, towards the rest of Europe. The future to which, unless she prefers anarchy, she is now restricted, and which alone will restore her people to their right mind and repair the frightful waste of years of ambition, intermeddling, and warfare, is distinctly denounced as impossible by the journalist of 1841. The passage is worth transcribing:

"Doubtless, if France, which every twenty years adds a third to her population, is willing to live on a philosopher's competence in the limits of her own boundaries, without action beyond them, like Switzerland or Holland, content with her lot, indifferent to the world's destiny, poring over her budgets, year after year, satisfied and delighted with the spectacle of her tribune, her art and industrial expositions, her newspapers, her systems, her innovators, certainly in that case she has no need of alliances; she can be sufficient unto herself, and defend herself successfully against the neighbors who might seek to invade her."

—In the succeeding paragraph the cause of the French rottenness—inordinate conceit, cloaked with the glittering generalities of a pseudo-philanthropy—stands boldly out. "But as peoples," it begins, "have not, like individuals, the choice of their destiny; as they cannot render themselves stationary (*s'immobiliser*), or concentrate themselves within certain limits," etc., etc. And yet the examples of Holland and Switzerland, which could and did do all these things, had just been cited. "If France has at heart," is the next sentence, "the grand thought of giving her impress to the destinies prepared in heaven, and which are to be accomplished on earth," etc. The writer then proceeds to hand Turkey over to Russia, exacting as compensation for thus "ratifying the decree of heaven" and for this "inheritance in advance" (*l'avancement d'hoirie*) the Rhine frontier, the protectorate of Syria and of the north of Africa, and the pacification of Prussia and Austria by a share in the division of Turkey—Poland, by the way, having already been resuscitated under the protectorate of Prussia. Then the French modesty overcomes the writer: "As for ourselves, putting aside all feeling of nationality in presence of the accomplishment of so grand a work, we feel moved religiously at the thought of all that humanity would gain in this territorial transfer. Already we get a glimpse," etc. The barbarians are to be lifted up and taught the exact sciences. Meantime, France, with Russia's good-will, develops her industrial and military resources in Algeria, extends her border from Metz to Mayence, absorbs by commercial solidarity the rich territory of Belgium, and directs Spain in the management of her affairs.

—Miss Maria Rossetti, sister of Dante, Christina, and William has been engaged for some years on a study of the plan and scope of "The Divina Commedia," an exhaustive and unique commentary, and which is now ready for the press. The Rossetti family, Italian by blood, and inheritors from their father, an Italian poet, of an enthusiasm for Dante which, perhaps, no one not of Italian instincts can feel, have already in divers ways shown invaluable results of that enthusiasm and its labor, and those who are qualified to speak consider the forthcoming book one of remarkable interest. Dante Rossetti contemplates bringing out an album of photographs from his designs and drawings, somewhat in the style of the "Album of the Acropolis," published by Mr. Stillman. It will be, like that, restricted to a small edition (probably not above one hundred), and will be published by Ellis. Its appearance will be looked for with great interest by lovers of art. The number of photographs will be twelve, and the price probably about $60 (gold).

ALLIBONE'S DICTIONARY OF AUTHORS.*

At last Allibone's "Dictionary" is completed. More than twenty years ago, it was projected; twelve years ago, the first volume was published; and then, having learned its merits by constant use, we waited impatiently for the second volume. There were those who prophesied that it would never come, and others who simply complained of the delay. But Mr. Allibone was not to blame. The labor of such a compilation is enormous, and the years have been well spent in expanding the promised volume into two. Indeed, as we shall show, it would have been better had there been a still further delay in the appearance of the last.

It may seem ungracious to find fault with a book which has cost its author so much drudgery, which no other work had forestalled, and none is likely soon to supersede, yet we feel constrained, while praising the excellence of the First Part—the "Dictionary" proper—to point out the shortcomings of the Second Part—the "Indexes." Almost every one knows that the "Dictionary" is one of those works, like Worcester's or Webster's or Cowden Clarke's "Concordance to Shakespeare," which a literary man can hardly dispense with; that it comes down nearly fifty years later than Watt's "Bibliotheca," its only competitor, and contains biographical notices, which Watt hardly can be said to have given, and critical notices extracted from the most varied sources, which he did not give at all; that, besides the criticisms inserted, the number of references to others is really marvellous for the work of one man; that the work is impartial, comprehensive, minute, and as accurate as any one has a right to expect a book containing such a variety of details to be; and, finally, that it is as pleasant for desultory reading as it is useful for reference. Knowing this, and knowing Mr. Allibone's high appreciation of indexes and success in making them, it was natural to expect much of the "Forty Indexes," which were announced, with a little flourish, in the title and preface of Vol. I. The first look at Vol. III. was sufficient to show that the promises were unfulfilled. We had been told that "the enquirer could find at a glance all the authors of any note in the language, arranged under the subject or subjects upon which they had written;" "the clergyman would have only to turn to the class headed 'Divinity,' and the theological treasures of the English language would be laid open to his view;" "the article 'Law' would enable the lawyer to discover at once the title and date of, and frequently valuable critical opinions from the highest authorities upon, the legal treatise which is to enable him to study intelligently the important case, the management of which is, perhaps, to make or mar his professional reputation." This was the promise. Let us look at the fulfilment.

The twenty-second index, "Law," is a list of 3,175 names of authors—bare names, without the slightest indication what legal subjects, what branch of law even, is treated of. Our supposed lawyer, eager to commence the study of his important case, must, then, look up in the First Part—the "Dictionary"—every one of these 3,175 names, and read through the list of works given under each, to see if he can find anywhere a legal treatise to his purpose. This process, which would occupy—judging from an experiment that we have made—about seventeen hours, is what Mr. Allibone terms "finding *at once* the title and date of the legal treatise," etc. It is true that the lawyer may come across something that will serve his turn before he has examined a dozen names, but even then he could not feel sure that there was not something much more to his purpose further on. Most lawyers, we suspect, rather than undertake such a search, would trust to find the required treatise pointed out in some of the numerous legal bibliographies under a heading so specific that the book could be found really "at once." Or if one should

* "A Critical Dictionary of English Literature and British and American Authors, Living and Deceased, from the Earliest Accounts to the Latter Half of the Nineteenth Century. Containing over Forty-six Thousand Articles (Authors), with Forty Indexes of Subjects. By S. Austin Allibone." Vol. III. and last. Philadelphia: J. B. Lippincott & Co. 1871.

seriously attempt to use the index, his ardor would soon be damped by such entries as "Adair, W. James, author of several legal treatises," "Adams, Jonas, a writer on law," which are two of the first seven names referred to under "Law."

One can, with some difficulty, imagine cases in which lists like these would be of use; but a list occupying five times the room, and costing, perhaps, twenty times as much labor to make it, would have been at least a hundred times as valuable. To make these indexes in any way correspond with the promises quoted above—and similar promises were made with regard to agriculture, medicine, commerce, art—they should have been very much subdivided, or else, if the so-called "dictionary system" was preferred, each book worth referring to should have been entered under the most specific subject.

In long and frequent use of Vol. I., we have found it much more accurate than Watt's "Bibliotheca." The new volumes appear to be as good as the first in this and other respects. We find, of course, an occasional misprint, as "Tavish" for "Tainsh," page 2,375; an occasional fault of arrangement, as the reference to Taylor's "Thackerayana" under Tennyson, which belongs higher up in connection with the mention of Thackeray's "Snob;" an occasional waste of room, as where the list of Mrs. Tuthill's "Juvenile Library," which need not have taken more than five or six lines, fills fourteen; an occasional omission, as that of T. H. Safford, noted for his mathematical precocity, and now director of the Dearborn Observatory, whose writings are as worthy of mention as those of his companions, the two Tuttles; occasionally a superfluous remark; and, in general, a less frequent reference to foreign critics on English writers than might be desirable in a country where the French and German languages are now so much read. Not that Mr. Allibone makes no such references. On the contrary, he notes reviews of Thackeray and Tennyson in the *Revue des Deux Mondes;* but he has not noted all the articles on either author in that periodical, and, as far as we have observed, other foreign reviews are unexplored by him. The *Archiv für das Studium der neueren Sprachen*, for instance, has articles on Thomson and Wordsworth; the *Revue des Deux Mondes*, on Trollope and Walpole; Gosche's *Jahrbuch für Literatur*, on Swift; the *Jahrbuch für romanische und englische Literatur*, on Wace, which are apparently unknown to our author. Nor would it be difficult to extend the list. But we feel almost ashamed to speak of such omissions, in view of the vast number of references which Mr. Allibone has given us. He has accomplished a work for which every American scholar owes him hearty thanks, and of which Philadelphia especially may be justly proud.

The Statesman's Year-Book: A Statistical and Historical Account of the States of the Civilized World. Manual for Politicians and Merchants for the Year 1871. By Frederick Martin. Eighth annual publication, revised after official returns. (London and New York: Macmillan & Co. 1871.)—This compilation may not be sufficiently elaborate and exhaustive to deserve its prime title, "The Statesman's Year-Book," but we can safely recommend it as a very useful "Manual for Politicians and Merchants" of the higher sort—those, namely, who, while engaged in law-making, President-making, or money-making, have time left to enquire, in their own interest or in that of others, how the world is governed. This our "Year-Book" proposes to show chiefly by statistical figures, following the wise adage of Goethe which it has selected for its motto: "Man sagt oft: Zahlen regieren die Welt. Das aber ist gewiss, Zahlen zeigen *wie* sie regiert wird. (It is often said that figures govern the world. This, however, is certain: figures show *how* the world is governed.)" It is, however, far from being a dry collection of tables showing the revenues and expenditures, debts and sinking funds, armies and navies, areas and populations, trade and industry, money, weights and measures, of the various states of the civilized world. Besides these and kindred things, it contains sketches of constitutions and governments, brief chronological retrospects, biographical notices of monarchs, presidents, and ministers, and lists of books of reference for further information. A considerable portion of the book is, in fact, quite readable. The freshness of the whole is decidedly commendable. We not only find notices of Amadeo I. and his queen at the head of "Spain," but Germany entered as "Deutsches Reich," Wilhelm I. noticed as Emperor, Augusta as Empress, Count Bismarck as Imperial Chancellor, and the constitution of the new Empire fully detailed.

On the other hand, it is deficient both as to completeness and correctness. There is, for instance, no notice to be discovered in it of either Guatemala, Honduras, Nicaragua, or St. Salvador—while "Costa Rica" is given—or of Hayti and San Domingo—while so much less important governments as Liberia and Natal are rather fully noticed. Under "Paraguay" we look in vain for a mention of the race or nationality to which the inhabitants of that country belong. The statistical figures are often given without the necessary sifting, and sometimes contradict each other. Thus, Bucharest, according to the comparative statement of the chief towns of "Turkey in Europe," contains 80,000 inhabitants, while, under "Roumania," we are told that it "had, in 1860, a population of 124,734," and in the list of "The Great Centres of Population of Europe and America" we find it credited with "142,735." Under "Turkey," Belgrade has a population of 50,000, but according to "Servia" of only "14,600, exclusive of the garrison within the fortress," which is quite insignificant, the whole army of the Principality consisting "of about 4,000 men actually under arms." Among the tributary states of Turkey, in Africa, we find "Fez" for Fezzan, and among the fortresses of Austria, "Arrat, Canove" for Arad and Castelnuovo, while Cattaro is omitted. The Russian geographical names are given with the carelessness and inconsistency which disfigure so many publications in the English language, but which are the less pardonable in a book which has gone through eight annual editions. "Ural" and "Oural," "Poltava" and "Pultawa," "Kharkof," "Kharkoff," and "Charkow," "Voronezh," "Voroneje," and "Woronesch," and similar correct and incorrect spellings—in English, French, and German forms—alternate with each other in the motliest disorder, while a few lists show some consistency in bad spelling. Such is the list of towns which contains "*Kischinew*," "*Nikolajew*," "*Berditschew*," and "*Charkow*." West European names are generally correctly given, the French with their accents, but now and then the reviser seems to have slumbered, as, for instance, when reading page 59, which is disfigured by the omission of no less than twenty accents.

Some carelessness is also displayed in the historical, and here and there in the biographical, notices. The list of the Emperors of Germany places Otho IV., the Guelph, among the Hohenstaufens; Adolphus (of Nassau) and Charles VII. (of Bavaria) among the Hapsburgs; and Louis IV. (of Bavaria), Rupert (of the Palatinate), and Jodocus (of Moravia) among the Luxembergers. Francis, the first Emperor of Austria, is stated to have assumed this title "*after* having been compelled by Napoleon to renounce the imperial crown of Germany," though the assumption took place in 1804 and the renunciation in 1806. The Emperor Charles V. is made to reign over Austria from 1519 to 1556, to the exclusion of his brother Ferdinand I., who reigned over it from 1521. The Grand-Duke Constantine is quite unnecessarily reckoned among the Czars of Russia, one of whom he *might* have been had he not resigned his right to the succession in favor of his younger brother Nicholas. More decidedly incorrect is the statement, under "Prussia," that "the early extinction of Albrecht's line brought the province of Prussia to the Electors of Brandenburg, whose own territories meanwhile had been greatly enlarged by the valor and wisdom of Friedrich Wilhelm, 'the great Elector,'" for this prince ascended the throne of Brandenburg more than twenty years after the extinction of Albrecht's line and the annexation of Prussia to the Electorate. Among minor errors, we notice "Dec. 27, 1862" for March, 1864, as the date of General Grant's appointment as "Lieutenant-General and Commander-in-Chief of the Armies of the United States," and "1814" for 1813 as the date of Bismarck's birth. The "Chronicle" of the year is very loosely composed. In it the army of D'Aurelles de Paladines is badly treated. There is no mention of that general's victory at Coulmiers, November 9, over Von der Tann, but, instead of that, under "November 14," a fictitious "defeat of the French Army of the Loire at Toury by German forces under the Grand-Duke of Mecklenburg-Schwerin," and a "defeat of the French Army of the Loire at Dreux," "November 17," where and when some French troops were actually defeated, but not those of the Army of the Loire.

Verses. By H. H. (Boston: Fields, Osgood & Co. 1870.)—The title of this little volume is so modest as to be a misnomer—that is to say, a misnomer as books of so-called poems go. Indeed, it is far from being a volume of mere verses, as distinguished from poetry, whether we try it by comparison with the regular yearly crop of poetical writing or by a much higher standard—one that has respect to absolute values. It is full of evidences of poetical feeling, and of considerable poetical powers, and on various defensible grounds it may justly be praised by lovers of good poetry.

The merely pretty things that may be found in it are very few, for, in truth, H. H. appears to be not only too ready to use—perhaps as seeming

more intellectual—somewhat involved and harsh modes of expressing her thoughts and feelings, but also—and perhaps this is of more importance—what she has to express is, as a general thing, an intenseness of feeling, or rather a tension of feeling, which is incompatible with prettiness. It is, for that matter, incompatible with better things than prettiness. Perhaps it is in this dedicatory sonnet that she is as far from her usual walk as she ever is, and this has in it something of the languor of overstrained feeling at length relaxed :

> "When children in the summer weather play,
> Flitting like birds through sun and wind and rain,
> From road to field, from field to road again,
> Pathetic reckoning of each mile they stray
> They leave in flowers forgotten by the way;
> Forgotten, dying, but not all in vain,
> Since, finding them, with tender smiles, half pain,
> Half joy, we sigh, 'Some child passed here to-day.'
> Dear one—whose name I name not lest some tongue
> Pronounce it roughly—like a little child
> Tired out at noon, I left my flowers among
> The wayside things. I know that thou hast smiled,
> And that the thought of them will always be
> One more sweet secret thing 'twixt thee and me."

But in general the tension of the feeling is so great that while two or three of the pieces—all are short—may be read at one time, the reading of a greater number is really fatiguing, or else the feeling is clothed in a somewhat enigmatic form, and one finds it almost laborious to unclothe it and discover it.

In the old story, Imlac, when he begins "to feel the enthusiastic fit," and to state at length what are the true and necessary ingredients of poetry, is told by the Prince of Abyssinia to stop. "Enough," Rasselas says, "thou hast convinced me that no human being can be a poet." It will be with something of this complimentary regret that many readers of good poetry will lay aside H. H.'s poems. She has more thought than went to the making of many a poem that will outlive many generations of men; she has fancy; she has force of feeling and of natural feeling, though it too wholly and too strenuously possesses her; she has some imaginative insight, and apparently some spiritual insight; she has a cultivated mind, and apparently a wide experience of life. But, nevertheless, she was right, one feels as one tries to recollect some of the pieces that made one doubt if they were not ill described when called verses merely—the book is one of verses and not of poems, though the author is a verse-maker of an exceptionally high class, and occasionally strays into the region of poetry.

Westward by Rail: The New Route to the East. By W. F. Rae. (London: Longmans, Green & Co. New York: D. Appleton & Co.)—Sensational writing about the United States, a little truth and much distortion and exaggeration, had become a recognized business until Mr. Hepworth Dixon reaped the last harvest by the publication of his outrageously unjust "New America." Something of that sort was necessary to bring the business to an end, and Mr. Rae must not complain if one of the first books written about us by an Englishman in a spirit of fairness should not at once meet with that reception which it deserves. Such a book is not exciting and does not gratify anybody's prejudices. The author has evidently aimed to be just to our people, our manners, and our institutions; and, if he will not deem us ungrateful, we will express the fear that his partiality has sometimes prevented him from being just—justly severe, where he ought to be. We think it would not have hurt the book, nor wounded the just susceptibilities of civilized Americans, if he had dealt in proper terms with our amiable railroad conductors, our courtly and obliging hotel clerks, and had explained how it is that "first-class" hotels can charge eight dollars a day under a contract for five dollars. We could wish, too, that there were less in the book of the rails, the cars, the cards, the coaches, the meals, the ships, the passengers, etc. But then we have wished this of every book of travels we ever read, which seems to justify them by showing that such matter cannot be kept out. Moreover, Mr. Rae has shown both the willingness and the capacity to appreciate America; and for this reason, though his book is enriched with many luminous and enlightened thoughts about our people and our institutions, we could wish that he had spent more time in the great centres of thought, commerce, and production. California has received her well-deserved praise, and an equally well-deserved lecture, especially about drinking whiskey, and about *aristocratizing* the pioneers. This is our word and not the author's. Mormonism and the Mormons are discussed in a manner at once fearless and intelligent; but, for the American reader, too much space is given to them—an objection which the English reader will probably not make. We are inclined to think that "Pullman's cars" have quite enough said about them; and New York, after the recent exhibitions we have made to Europe and the world, ought to feel encouraged that a cultivated foreigner could find at least a flourishing future here for literature and art. If Bostonians are not flattered by the chapter given to their city and university, it is only because of their consciousness that all the good that can be said of the Hub is within the truth. It is a book which Englishmen should read as an antidote to the nonsense and ill-nature which they have so much delighted to buy and read in times past, and for the real information to be found. Mormonism and mining district manners and morals are not here held up as common and average specimens, as the legitimate and necessary fruits of American institutions. And Americans, if not so much instructed as a foreigner, may derive from this book the satisfaction of knowing that an English tourist can be just, if occasionally plain-spoken and severe.

The Elements of Natural Philosophy. By Sidney A. Norton, A.M, (Cincinnati: Wilson, Hinkle & Co.) *Lessons in Elementary Physics.* By Balfour Stewart, LL.D., F.R.S. (London: Macmillan & Co.)—Mr. Norton, in the preface to his work, informs us that it is the result of many years' experience in teaching the science of physics; also, "that its value must depend on its availability as a text-book;" and "that it is a selection of facts and principles best suited to the range of the pupil." He does not say, however, of what grade the pupil is supposed to be—whether he is a grammar-school boy, a high-school student, or a collegian. Nor is this made clear by the subsequent remark, that "it is to be hoped the student will find in this treatise all that is necessary for his purpose." The book throughout carefully excludes mathematical demonstrations, and the problems at the end of the work are said to be elementary. In the case of a higher class of students than those in the lower forms of a high school, this will be an objection. The system of French weights and measures is referred to in the opening chapters, but the advantages of the metric system are not dwelt upon. Especially is this omission felt in the chapter on Specific Gravity. On the whole, nevertheless, the book is better than the average of American text-books on physics, though the question still remains whether the class of treatises to which it belongs affords the best means of inculcating correct ideas of natural phenomena. They do not, in our judgment, compare with works like that whose title we have coupled with Mr. Norton's. It is rarely that a man of Professor Stewart's attainments devotes himself to the task of clearing up the misty notions which the majority of mankind entertain on the subjects of Force, Mass, Work, and Energy. This little treatise is a thoroughly logical production. The student who masters it cannot fail to have more correct and extended ideas of the laws of nature than can be obtained from many treatises containing isolated facts in Mechanics, Heat, Acoustics, and Electricity. The book is but one of many symptoms of a new era in the practice of teaching physics. With an elementary work like this, and with physical laboratories in our colleges, the subject may be acquitted of the well-deserved charge of repulsiveness to which the old methods of teaching are, no doubt, to a very great extent, obnoxious.

MACMILLAN & CO.'S

LIST OF

New & Popular Works.

Tales of Old Japan. By A. B. Mitford, Second Secretary to the British Legation in Japan. With upwards of thirty full-page Illustrations, drawn and cut on wood by Japanese artists. 2 vols., crown 8vo, handsomely bound, price $5.

The Scientific Question of the Day.

On the Genesis of Species. By St. George Mivart, F.R.S. Crown 8vo, with numerous Illustrations, $2.

The Saturday Review says: "In no work in the English language has this great controversy been treated at once with the same broad and vigorous grasp of facts and the same liberal and candid temper. The range and depth of Mr. Mivart's learning are as conspicuous as that unvarying courteousness of tone which we have by no means been used to meet with in most phases of the same strife."

The Sun describes it as being "A refutation of Darwinism. The most effective reply to Darwin that has yet appeared."

Contributions to the Theory of Natural Selection: A Series of Essays. By Alfred Russel Wallace. Second edition, crown 8vo, $2.

Prehistoric Man. Researches into the Origin of Civilization in the Old and the New World. By Daniel Wilson, LL.D. Second edition, 8vo, $5.

MACMILLAN'S COLLEGE TEXT-BOOKS.

As showing the value placed upon these admirable Text-Books, many are now in use in the chief United States Colleges.

Cicero. The Second Philippic Oration, with Introduction and Notes. Edited by John E. B. Mayor, M.A. Third edition, revised, $1 25.

"A very valuable edition from which the student may gather much, both in the way of information directly communicated, and directions to other sources of knowledge."—*Athenæum.*

Cicero. The Orations against Catilina. With Notes and an Introduction, and many additions, by A. S. Wilkins, M.A. $1 25.

Demosthenes on the Crown. The Greek text with English notes. By B. Drake, M.A. Third edition, to which is prefixed Doctrines against Ctesiphon. $1 25.

"A neat and useful edition."—*Athenæum.*

Mayor, John E. B. First Greek Reader. Edited after Karl Halm, with corrections and large additions by John E. B. Mayor, M.A. Second edition, $1 50.

"After a careful examination we are inclined to consider this volume unrivalled in the hold which its pithy sentences are likely to take on the memory, and for the amount of true scholarship embodied in the annotations."—*Educational Times.*

"It deserves the attention of all engaged in classical instruction."—*British Quarterly Review.*

Mayor, Joseph B. Greek for Beginners. By the Rev. J. B. Mayor, M.A. $1 50.

"We know of no book of the same scope so complete in itself, or so well calculated to make the study of Greek interesting at the very commencement."—*Standard.*

Tacitus' Agricola and Germania. A Revised Text, English Notes, and Maps. By Alfred J. Church, M.A., and W. J. Brodribb, M.A. $1 25.

"A model of careful editing, being at once compact, complete, and correct, as well as neatly printed and elegant in style."—*Athenæum.*

Tacitus' Agricola and Germania Translated into English by A. J. Church, M.A., and W. J. Brodribb. With Maps and Notes. $1.

"Every classical student will do well to purchase this excellent translation."—*Educational Times.*

Wright, J., M.A., Hellenica; or, A History of Greece in Greek, as related by Diodorus and Thucydides. Being a First Greek Reading-Book. Third edition. $1.

"Mr. Wright's 'Hellenica' is a good plan well executed."—*Guardian.*

Wright, J., M.A., Seven Kings of Rome. An Easy Narrative, abridged from the First Book of Livy by the omission of Difficult Passages. Being a First Latin Reading-Book. Fourth edition; $1.

"The Notes are abundant, explicit, and full of such grammatical and other information as boys require."—*Athenæum.*

SCIENTIFIC CLASS-BOOKS.

Airy, Prof. G. B., Popular Astronomy. With Illustrations. Sixth edition. $1 50.

Lockyer, J. Norman, Elementary Lessons on Astronomy. With numerous Illustrations. $1 75.

"The book is full, clear, sound, and worthy of attention."—*Athenæum.*

Huxley, Prof., Lessons in Elementary Physiology. With numerous Illustrations. $1 50.

"It is a very small book, but pure gold throughout."—*Guardian.*

Oliver, Prof., Lessons in Elementary Botany. With Illustrations. $1 50.

"We know of no work so well suited to direct the botanical pupil's efforts as that of Prof. Oliver's."—*Natural History Review.*

Roscoe, Prof., Lessons in Elementary Chemistry, Inorganic and Organic. With numerous Illustrations. New edition. $1 50.

Fawcett, Millicent G., Political Economy for Beginners. $1.

"We cannot conceive a book more fitted for popularizing this science than the clear, compact, and comprehensive treatise for which we are indebted to Mrs. Fawcett."—*Daily News.*

Jevons, Prof. W. Stanley, Elementary Lessons in Logic, Deductive and Inductive. $1 25.

"It brings before the reader in a concise and very intelligible manner the whole body of recognized logical doctrines. Refers them to the great principles or so-called laws of thought from which they appear to be derived, furnishes the student with a variety of examples, and indicates the sources where he may find a full discussion of the subject treated."—*Spectator.*

Stewart, Prof. Balfour, F.R.S., Elementary Lessons in Physics. With numerous Illustrations. $1 25.

DODD & MEAD'S NEW AND STANDARD PUBLICATIONS.

CRUDEN'S COMPLETE CONCORDANCE. A new edition at greatly reduced prices. A Dictionary and Alphabetical Index to the Bible. The Unabridged Edition. Price, in cloth, reduced from $4 to $2 75; sheep, from $5 to $3 50; half-morocco, from $6 50 to $4 50.

In issuing a new edition of Cruden's great work, the publishers have determined to put it upon the basis of large sales and small profits, and so bring it within the reach of all, including any who have been induced by difference in price to purchase either of the numerous abridgments of the complete work.

THE VICTORY OF THE VANQUISHED. A New Story, by the Author of the "Schönberg-Cotta Family." 1 vol. large 12mo, uniform with the "Cotta Books." $1 75.

"To step back nineteen centuries and find ourselves domesticated in Rome of the Cæsars is a feat which by the help of this beautiful story we have been able to accomplish. This book is written not only with regard to scenic and storied effect, but exhibits great historical truthfulness and rare biographical analysis."—Christian Union.

TWO CAPITAL HISTORICAL STORIES.

GEOFFRY THE LOLLARD. By Frances Eastwood. 16mo, uniform with "Marcella," $1 50.

This and its companion volume, "Marcella," were originally published in "Hours at Home," now "Scribner's Monthly," and as serials form received the highest praise as stories of unusual merit. In their present attractive form they will be appreciated by old acquaintances and new friends.

MARCELLA OF ROME. By Frances Eastwood, author of Geoffry the Lollard." 16mo, illustrated, fancy cloth, black and gold, $1 50.

"'Marcella' is a simple story, but told with a grace of diction and earnestness and pathos that must command attention. It is a graceful and touching story."—Albany Evening Journal.

By Jacob Abbott. Two New Volumes of

THE JUNO STORIES. By Jacob Abbott. Complete in 4 vols. 16mo, beautifully illustrated, and bound in fancy cloth, new style. Per vol., $1 25. "Juno on a Journey"—"Juno and Georgie"—"Hubert"—"Mary Osborne." The set, in a neat box, $5.

"We should be puzzled to suggest any book from whose perusal an average parent could derive a clearer perception of parental responsibilities or a conscientiously earnest one go about their discharge. To children, in a different way, they are calculated to be equally beneficial."—Christian Union.

Companion Volumes to the Juno Stories.

THE ROLLO AND LUCY BOOKS OF POETRY. Original and selected. By Jacob Abbott. Complete in 3 vols. 16mo, beautifully illustrated with eighteen fine Engravings, and bound in fancy cloth, black and gold, illuminated. Per vol., $1. The set of three volumes, in a neat box, $3.

"An admirable idea, admirably carried out."—Congregationalist.

From the German of Zschokke.

LABOR STANDS ON GOLDEN FEET. A Holiday Story. By Heinrich Zschokke. Translated by John Yeats, LL.D. 16mo, elegantly bound and illustrated, black and gold, $1 25.

"In this very interesting story the author makes an eloquent defence of the nobility of labor, and endeavors to impress on the juvenile mind lessons of thrift and industry. The volume is pleasantly written, and although intended for *young* people, will be found both entertaining and instructive by their elders."—Daily Evening Traveller.

STANDARD BOOKS.

LAMPS, PITCHERS, AND TRUMPETS. Lectures on the Vocation of the Preacher. Illustrated by Anecdotes, Biographical, Historical, and Elucidatory, of every order of Pulpit Eloquence from the great Preachers of all Ages. By E. Paxton Hood. First and Second Series. 1 vol. large 12mo, $1 75.

PEN PHOTOGRAPHS OF CHARLES DICKENS AND HIS READINGS.

By KATE FIELD.

Revised and enlarged edition. 1 vol. 12mo. Uniform with the Illustrated Library Edition of Dickens's Works. With Illustrations, $1 50.

In this volume Miss Field gives a graphic description of Mr. Dickens, his welcome at Boston and New York, and his various Readings. The book contains several illustrations, and cannot fail to be a very welcome souvenir of memorable evenings to those who were so fortunate as to hear Mr. Dickens interpret the most characteristic persons and scenes in his novels; while to those not so fortunate Miss Field's loving portraiture will be a pleasant and valued memorial of one to whose humane genius the whole world is debtor.

II.

TOPICS OF THE TIME.

By JAMES PARTON.

1 vol. 12mo..... ....$2.

CONTENTS:

Uncle Sam's Treatment of his Servants, The Yankees at Home, Congressional Peccadilloes, International Copyright, Our Roman Catholic Brethren, How Congress wastes its Time, The Clothes Mania, Log-Rolling at Washington, Our Israelitish Brethren, Correspondence of Napoleon Bonsparte, The Government of the City of New York.

Many of the papers in this volume relate to some of the most important questions now claiming public attention, while all of them are of timely interest, and are treated with the fulness of research and the pungent force of statement characteristic of Mr. Parton.

*** For sale by all booksellers. Sent, post-paid, on receipt of price, by the Publishers,

(Late TICKNOR & FIELDS and FIELDS, OSGOOD & CO.)

BOTANY. BOTANY.

THE GENTLE SCIENCE.

Botany is taught in our best schools from the manuals of its chief American exponent,

PROF. ALPHONSO WOOD,

who has recently completed an entirely new work, condensing the fruit of years of study and labor in one compact and cheap volume, viz.:

WOOD'S AMERICAN BOTANIST AND FLORIST.

It is confidently claimed that this is the most *practical* book every written on the subject. Though complete in itself, it is preceded for those who wish even a smaller manual, or an introduction to the subject, by

WOOD'S OBJECT LESSONS IN BOTANY,

with whose aid the learner may draw many sunny lessons from Nature's floral treasures. Then for the more patient and thorough student, who would penetrate the very arcana of the science, we have the almost cyclopedic treatise known as

WOOD'S NEW CLASS-BOOK OF BOTANY.

To accompany either the field, a neat case has been prepared, containing Trowel, Tweezers, Microscope, Drying-Press, etc. The whole is called

WOOD'S BOTANICAL APPARATUS.

The series thus enumerated may safely challenge all competition in point of merit or popularity, as indicated by *sales larger than those of all others combined.* The books will be sent to any address, post-paid, on receipt of price, or to teachers who will adopt, if approved, half price.

PRICES:—I. Object Lessons, $1 50; II. Botanist, $2 50; III. New Class Book, $3 50.

The Nation.

NEW YORK, THURSDAY, MARCH 23, 1871.

The Week.

THE country was very much surprised, on the arrival of the San Domingo mails on Friday, by the appearance of a letter from Captain Temple, of the *Tennessee*, to Mr. Wade, warning the members of his party from attempting to make a journey across the island from San Domingo to Hayti, as, if taken by Cabral's people they could be hung up by sentence of drum-head court-martial, "according to the rules of civilized warfare;" "for they belong," says Captain Temple, "to a nation that, through the orders of its Executive to naval vessels here, has chosen to take part in the internal conflicts of this country." This was the first intimation we had that American ships in Dominican waters had any other business than to watch over American interests, or that the Executive had, without the knowledge or consent of Congress, placed the Government in an attitude of open hostility to a foreign state, from which it had received no offence whatever, and with which we have no quarrel. It appears, according to Captain Temple, that we are actually in a state of war with Hayti. It is reported that Mr. Wade has at last found some documents throwing light on the amount of the debt, but the existence of which Baez very properly and very stoutly denied. The time for the production of documents about the debt, and especially about "claims," has not yet arrived. The Commissioners *guess* the amount of the debt to be about $3,000,000. The Commissioners, who are now on their way home, are said to be unanimously in favor of annexation. The closing paragraph of Mr. Wade's report, if correctly telegraphed, goes a good way to give one an idea of the character of the whole document, and confirm what we have said of the impropriety of sending "an old Roman" on a strictly judicial mission. He wants us "to embrace this opportunity to plant our republican institutions," and establish civil liberty and American civilization upon that beautiful and productive island, thus laying the groundwork of a great, free, and prosperous, etc., etc.

The most important business of Congress during the week has been the consideration of the best mode of dealing with the condition of the South, which is admitted on all hands to be puzzling. General Butler has prepared a bill which would, if enacted, virtually convert the President, as far as the South is concerned, into a military dictator, and even the most ardent reprobators of Southern outrages were naturally afraid to touch it. As a substitute for it, or rather as a preliminary to any legislation, it had been determined to appoint a select committee to investigate the condition of the South, and on this Mr. Speaker Blaine, well knowing his man, put Butler as chairman; whereupon Butler, infuriated by the ill-success of his bill, and by the appointment of the committee, declined the chairmanship, and gave his reasons in a long letter addressed to the Republican members of the House, in which he declared that the committee was forced upon the Republicans by the nearly unanimous vote of the Democratic party in the House, and against the decision of a majority of the Republicans in a "duly called caucus."

The appearance of the Butler circular and its statements as to the means by which the appointment of the committee had been obtained, brought about a fierce debate on Thursday, in which Butler permitted himself to use the word "trick," in describing these means, and made certain statements which led the Speaker to come down on the floor, and make him the object of a piece of criticism which for bitterness and sting has rarely been surpassed in debate, and which nearly everybody but Butler himself enjoyed. If "rebuking" Butler produced any effect on him, however, he would long ago have faded into nothingness. He is not responsible for himself, nor is anybody responsible for him but the Massachusetts Republicans.

In the meantime, but little progress has been made towards a solution of the Southern problem. Many good Republicans who feel deeply troubled by the state of things, shrink from the bestowal on the President of powers which, even supposing them to be constitutional, a change of administration might next lodge in the hands of a Hoffman or a Blair, and which, once converted into party weapons, would end in a total change in the form of government. Others, like the New York *Tribune*, profess to believe that the troubles are all due to the inability of the blacks to cast their votes at the elections, owing to the intimidation of their white neighbors; but, even if the Federal Government made voting perfectly safe, what is to prevent the Ku-klux killing the voter in his bed the night after he has voted? Then, too, no matter how we may extend the jurisdiction of the United States courts, we cannot abolish trial by jury, and where are we to find juries to convict Ku-kluxes (if this be the regular plural), or how are we to protect them after they have found a verdict of guilty? Moreover, where are the troops or police who are to arrest the malefactors? None of the proposed measures make any provision for increasing the force at the President's disposal, though all with amusing solemnity authorize him "to employ the army and navy" in suppressing the disturbances.

The calling out of the militia by the governors of the Southern States has proved a farce wherever attempted. The fighting men of the South are all on the Ku-klux side; the "militia" is composed of poor blacks and trembling whites, unused to arms-bearing, very fond of life, and already cowed and demoralized. In South Carolina, the militia are black, and come from the coast, and to have sent them up against the disorderly whites of the up country would have been to ensure their massacre. The Charleston *Republican*, a radical paper, discusses the question very soberly and with a full knowledge of the facts, but calls for the disarming of the militia, as its presence under arms is likely to lead to a war of races, and the proclamation of martial law, and the committal of the task of preserving order to the Federal troops. This is, of course, but a palliative. The *Republican* goes on to say, "Congress can largely aid South Carolina by removing all political disabilities." "Finally," it adds, "we come to the great remedy for existing evils, *and that is the school-house*." This is hitting the right nail on the head.

Affairs at the South, meantime, grow worse and worse. The latest news is that Governor Scott of South Carolina and some other high officers, including our old friend the Treasurer, Niles G. Parker, have been ordered by the Ku-klux to quit the State, and two have obeyed, and the shootings and "runnings off" of humbler persons still continue. The sheriff and county and school commissioners of Union County have resigned on a Ku klux order, and the success of the movement will doubtless lead to a general deposition of all officers, and we fear it will spread into other States. The real intent of it was perhaps revealed at a meeting of Democrats, convened by Governor Scott to find out their sentiments, when General Kershaw, an old Confederate officer, admitted that the only way, in his opinion, to restore peace was to drive out the "carpet baggers" and "scallawags," and that he highly approved of the Ku-klux operations to this end. The animosity of the Ku-klux towards teachers of colored schools, however, seems to be just as great as towards carpet-bag officers, and some have of late been severely whipped. General Kershaw also announced that if any commissioner came to his county under the Butler Bill they would provide for him and that he would have no successor, which we have no doubt is true. What had better be done it would take a very wise man to say, but we know of no better sign of the times than the hesitation of Congress to do anything before informing itself thoroughly. There has been enough blind legislation for the South already. Our own belief, as we have indicated elsewhere, is that the process of civilization must be begun at the South from the beginning; that we must go to work on the whites as well as on the blacks, and win them over to our ways

of living and thinking by kindness, patience, conciliation, discussion, and education.

One great difficulty in dealing with Southern affairs, is the difficulty of getting any trustworthy information about them. Whenever any startling incident occurs, we get two versions of it—one the Southern and the other the Unionist version, and they are sure to be diametrically opposed to each other, and to be written in terms of the fiercest excitement, with facts and fancies and inferences mixed up in a wild jumble. For instance, with regard to the late horrible outrage in Meridian, Mississippi, where a riot took place in the court-room, and the judge was shot dead while hearing the examination of a negro accused of making "incendiary speeches," we had first of all the Ku-klux version, which was plainly unreliable. But then comes Mr. Sturges, the mayor, a Northern man, who was expelled immediately after the outrage, and he leaves us in much the same perplexity; not that all that he says appears improbable, but his excitement shows itself so plainly, that we do not know where he is speaking from his feelings, and where from his memory. For instance, he did not see the shooting of Judge Bramlett, though in the court-room when it occurred, but he nevertheless says "that he has no doubt one or many of the Ku-klux, carrying out their design, shot him," though one of their own people. Is this likely, and is it not too bad that we cannot get evidence clear of suppositions of this kind?

The ways of accounting for the defeat in New Hampshire are of course various, and each politician and each editor naturally makes whatever he feels most strongly about figure most prominently among the probable causes. The best-informed local Republican papers ascribe a good deal of influence to the Sumner affair and the San Domingo scheme; and they all agree as to the large part played by "apathy"—as if apathy were not always a secondary cause. The decline of the Administration in credit and popularity has been going on steadily for some time, and the more General Grant pushes a scheme about which people care nothing, to the neglect of measures and questions about which they care a great deal, of course the more rapid the decline is; and when this is the state of things, defeat is of course always among the possibilities in States where parties are so nearly balanced that a few lukewarm people can turn the scale. All that is needed now to make a general smash-up at the Presidential election is that the party should rush blindly under the lead of some *à priori* man into high-handed legislation for the pacification of the South, and should fail in bringing about pacification, or should increase the disorder. This done, as M. Thiers said to the Imperialists, there would be no more blunders left for it to make.

Nothing new has been revealed about the Sumner trouble, but it is rapidly passing out of people's minds. A resolution has been passed by the Massachusetts Legislature, protesting against Mr. Sumner's removal from the chairmanship. We have as yet heard no proposition to have the chairmen of the Senate committees elected by popular vote on a general ticket, but that ought logically to come next. Whatever "outrages" the whole country, the whole country ought to have the means of preventing. The uproar over the alleged Presidential dictation to the Senate about the chairmanship is deprived, too, of much of its force by the recollection of the fact that Mr. Sumner formed one of the committee which had the impertinence, in 1862, to call on Mr. Lincoln to dismiss Messrs. Chase and Seward from his cabinet; and most people can recall the enjoyment with which the country chuckled over the quaint way in which Mr. Lincoln brought home to them the propriety of minding their own business.

Some fresh light has, however, been thrown on the causes of the great Sumner-Fish quarrel, by the new Washington paper, the *Capital*, whose account is said to be "semi-official." It appears to have arisen out of an ill-judged attempt of the foolish Fish to get Sumner to take the English mission and abandon his opposition to the San Domingo scheme. Sumner, of course, refused with a pitying smile. The unhappy Fish "left the house a baffled and disappointed man," and then went to work to "insult" Mr. Motley. After the appearance of his letter to Moran, however, the poor old coward did not dare to go near "the Old Bay State Lion" for some time, but at last mustered up courage to call at his den to meet Sir John Rose on official business. The evening passed quietly enough, and, we are glad to say, "intellectually and profitably," and the Fish doubtless thought he was forgiven and restored to favor. Far from it. After he had gone, Sumner sat down "after midnight in the quiet of his library" and considered his case afresh, and came to the conclusion that he ought still further to punish him. This cruel but we presume just decision reached, the house of Mr. Schenck was chosen for the execution of the sentence. The judge and culprit met there at dinner, and in the course of the meal poor Fish, little knowing what was in store for him, "made a frivolous remark about duck and partridge" across the table to the "Numidian Lion"—for as such it appears Mr. Sumner figured on this occasion, doubtless having ascertained that an "Old Bay State Lion" was, to say the least, an anomaly. "The Lion" merely looked at him and made no reply. "Fish's weak nature," says the chronicler, "felt the shock." Small blame to him, say we; whose nature wouldn't "feel the shock" if a Numidian Lion looked at him in silence across a small table? The effect on American securities of this dreadful business, we are glad to say, has not yet been perceptible, but mighty agencies work slowly.

The funding of the old six per cents in new five per cents progresses slowly—out of the first instalment of $200,000,000 offered by the Treasury, only about $15,000,000 having been taken thus far. From Europe the advices at present are not encouraging, the announcement of the new French loan to fund the war debt contracted by the Bordeaux government having at first interfered. The disturbances in Paris must now have destroyed all prospect of the Republic obtaining credit in England or Germany, and may to some extent direct new attention to our loan. But it must not be forgotten, that revolution and civil war in France are far more disturbing elements in European finance and commerce than even the Franco-Prussian war has proved. Foreign bankers here evidently put the worst interpretation upon events, and are indisposed to enter into important engagements of any kind. On the Stock Exchange, the upward speculation still continues, aided by a bank expansion in the direction of loans which is nothing less than reckless—the engagements of the banks, which in the extreme dulness of trade ought to be much lower than usual, exceeding the extreme figures known for several years past. Gold, of all things, remains the steadiest in price, a natural and healthy rise of a few per cent. being prevented by rumors of some new financial measures of Mr. Boutwell's, supposed to involve further sales of gold.

Two pamphlets have made their appearance within the week on the Northeastern Fisheries question which will well repay study by anybody who wants to familiarize himself with the exact nature of a very important portion of the work now before the High Commission. One is an article which is to appear in the American *Law Review* of April 1, and which maintains the view already propounded in the *Nation* as to the basis of American rights in the Fishery controversy. The other pamphlet, which has only just reached this country, consists of a report made on the question by a Sub-committee of the "Anglo-American Association," a body of which Mr. Thos. Hughes is chairman, and which has been organized in London "for the purpose of obtaining the best securities for a friendly understanding and the cultivation of more cordial relations between the United States and Great Britain." The Sub-committee which has drawn up the report was appointed in December last, and consists of Sheldon Amos, Professor of Jurisprudence in University College, London; W. A. Hunter, Professor of Roman Law in the same college; A. C. Humphreys, a barrister; and Lord Edmond Fitz-Maurice, M.P.

This English presentation of the case is in substance this: that the rights secured to American fishermen by the treaty of 1783 (to fish on the coast of Newfoundland, and all coasts, bays, harbors, and creeks of English colonies, and to dry and cure in unsettled

bays, etc., within certain limits) were abrogated by the war of 1812, and that the rights of American fishermen are now regulated by the treaty of 1818, which was entered into by way of settling the controversy which arose over the effect of the war on the former. It is the latter the operation of which, according to the Sub-Committee, the abrogation of the Reciprocity Treaty of 1854 restored. The treaty of 1818 gives the Colonial Government exclusive dominion within three miles of the coast, subject to the rights of Americans to fish on defined portions of the coast, irrespective of this limit. To the President's complaint that the American fishermen are denied the privilege of obtaining supplies and transshipping their fish in Canadian ports, the Sub-committee replies that this privilege has been withdrawn to prevent smuggling, and that it is the undoubted right of every nation (quoting Mr. Clay to Mr. Gallatin) "to prohibit or allow foreign commerce with any portion of its dominions." To his other complaint that Great Britain, in remitting the control and jurisdiction of the inshore fishing-grounds to the Colonial authority, has remitted "it to an independent but irresponsible agent," the Sub-committee replies that he is mistaken; that from the decisions in the Colonial Vice-Admiralty Courts, before which all fishery cases must come, an appeal lies to the Judicial Committee of the Privy Council, an imperial tribunal, and it questions whether any of the American fishing-vessels "seized without notice or warning," were so seized, "while ignorantly violating" the technical rights of Great Britain. The report is a very cold and naked legal statement, and confines itself mainly to the communication of information on questions of law and fact, and is chary in the expression of opinion.

The American view, or rather, we should say, the view which the article in the *Law Review* propounds, and which it is not improbable the American Commissioners will maintain, may be found in a compact form in the *Nation* of September 15, 1870. It is in substance, that the treaty of 1783 was, in so far as regarded the fishery rights, one of perpetual obligation; that the war of 1812 did not affect it; that the treaty of 1818, in so far as it differed from that of 1783, was not an abandonment of any liberties enjoyed under the treaty of 1783, but a simple renunciation or waiver of a portion of these liberties. For this renunciation or waiver, and for this only, the Reciprocity Treaty of 1854 was a substitute; this last treaty having been abrogated in 1866, the parties are thrown back for the definition of their rights, not on the treaty of 1818, which has been blotted out, but the treaty of 1783, and the fishing rights secured by that treaty are in the nature of a public servitude of a higher kind than an easement, or the Roman *servitus*, and closely approaching the character of absolute *dominium*. The points involved are nice, and will doubtless afford materials for long discussion.

The 18th of March, 1871, to speak with the *Journal des Débats* of the following morning, "will be considered as one of the gloomiest days in the history of France." After due and very earnest warning given the malcontents of Montmartre, the Government of M. Thiers proceeded, on the morning of that day, "to force peace at all hazards," which it could not escape doing if the country was to be governed at all. The preparations had been made in the night. General Vinoy had posted a cordon of troops around the hill of Montmartre, and planted mitrailleuses at the approaches. At an early hour, important positions were occupied, and the guns of the revolted suburban National Guards were about to be removed, when the soldiers began to yield to popular clamors and entreaties, and soon all bonds of discipline were loosened, the mitrailleuses abandoned by the artillerists, the officers deserted by their men, and the revolters, aided by National Guards from other quarters, became masters of the situation at Montmartre, as well as at Belleville and La Villette. General Vinoy was pelted by a mob, General Paturel was wounded, and Generals Clément Thomas and Lecomte, and subsequently also General Chanzy, were taken prisoners. General Faron was surrounded, but, his detachment of troops remaining faithful, succeeded in cutting his way through. Other detachments, refusing to fight, withdrew to the left bank of the Seine, and, after a short time, the Hôtel de Ville, the general headquarters of the National Guards of the capital, the ministries, the mayoralties, and the prefecture of police were in the hands of the insurgents, the bulk of the National Guards remaining passive; and all the members of the Government, with the undisbanded remnants of the public force, finally withdrawing to Versailles.

The headquarters of the insurrection before its triumph were in the Rue des Rosiers, Montmartre, where a "Central Revolutionary Committee," subsequently superseded by the "National Guards Committee," had established itself in a public garden. Before that revolutionary body, composed, as it seems, of men of little note, as no names are mentioned, the captive generals were brought. Two of these, Clément Thomas and Lecomte, were, after a brief trial worthy of the days of September, 1792, condemned to suffer death as traitors to the Republic, and "taken out and shot." "All accounts say they died bravely," which is the more likely to be correct, as they must, at that moment, have been disgusted with life among such fellow-citizens. The last word of the brave and liberal-minded Clément Thomas, who but a few weeks before commanded the largest body of the defenders of Paris, under Trochu, is reported to have been, "Cowards!" The fate of Chanzy, who had been terribly maltreated by the mob, was left undecided. Vinoy, contrary to the official report of Minister Washburne—who, with the whole diplomatic corps, followed the Government to Versailles—escaped the clutches of the executioners, and succeeded in reorganizing a portion of the forces under his command. Consternation and stupefaction reigned in Paris, and the revolutionists were left to do their work unchecked, although the press next morning mustered courage enough to brand the proceedings as atrocious and fatal to the republican liberty of France. Men of prominence fled the capital, various quarters of which were strongly barricaded. All approaches to it were ultimately closed, and some of the forts occupied by the Nationals.

Having taken possession of the Hôtel de Ville, the leaders of the "Nationals" issued a proclamation in which their deeds were extolled as done in the defence of "the arch of the liberties of the Republic—the only government that can close the era of invasion and civil war;" words penned, perhaps, by a hand still dripping with the blood of the defenders of their country, slain for obeying the orders of a republican government, issued from universal suffrage. In another proclamation the same men—thirty in number, forming the "Central Committee of the National Guard"—modestly declared to the people of Paris: "We have driven out the Government which betrayed us. Our mission is fulfilled, and we now report to you." But while doing this they decreed immediate elections for the Commune. What part the old knights of the Commune, Blanqui, Flourens, and the like, had in the whole affair, we do not know. Nor do we hear what was the attitude towards the insurrection of the majority of the Radicals lately elected to the Assembly by the city of Paris. One report, however, speaks of the "mayors and deputies" of Paris demanding the removal of Generals D'Aurelles de Paladines and Vinoy, and the substitution of Jules Ferry for M. Valentin as Prefect of Police. Louis Blanc and Schoelcher endeavor to act as mediators. The Revolutionists clamor for the dissolution of the National Assembly, and the convocation of another to sit in Paris. A "republican federation" is the last word. Cries of "On to Versailles"—which is in the meanwhile converted into a camp—resound through Paris, and Thiers, it is stated, contemplates removing the seat of Government to Tours. His resolutions, however, will probably be determined by the attitude of the other large cities of the Republic. Almost everything seems to turn on the response the doings of the Paris mob will meet with in Lyons, Marseilles, and Bordeaux. In the meanwhile the Ministry calls on "all who have regard for the honor and interest of France" to separate from "the men of the barricades," whose "crimes remove all excuse for support by their followers," and to "rally around the Republic and the Assembly." The contingency of a recall of the Germans is also hinted at by the journals. Others speak of proclaiming General Faidherbe generalissimo and dictator. A manifesto from Napoleon, who has arrived in England, may also be expected. The Assembly deliberates at Versailles, but the "Mountain" is absent.

THE PROBLEM AT THE SOUTH.

THERE is no doubt about the multiplicity and atrocity of the outrages committed by what are called the Ku-klux on the negroes and Unionists at the South. It appears to be equally certain that the persons who commit these outrages are not brought to justice. The sheriffs do not arrest them, or, if they do, juries do not convict them—in other words, through a great part of the South there is no security for either life or property. That some such state of things would come to pass was foreseen after the war. It was said that if legislation and the election of officers were left solely to the Southern whites, the Southern blacks would be left without adequate protection. Consequently, the suffrage was given to the blacks. But this was not felt to be sufficient. A great proportion of the more experienced and intelligent people at the South were excluded by the State constitutions, and by an amendment to the United States Constitution, from all share in the government. In this way not only were the negroes and Unionists guaranteed a voice in the Government, but they were secured in the exclusive control of it. That is, to speak plainly, for the purpose of securing the poor and ignorant against oppression, not only were they admitted to an equality of rights with the rich and educated, but they were put in possession of the whole administrative machinery. Considering that a large body of the voters—in some States a majority—had recently emerged from slavery in its most brutal form, it must be admitted the experiment was a bold one; in fact, it was the boldest ever known. No similar rearrangement of the social organization has ever been attempted anywhere else. We do not blame those who attempted it. They were hot from a civil war which had ended in a social revolution, and they found themselves charged with the duty of securing a large and helpless population of freedmen in possession of common civil rights, in the presence of their late masters, without having recourse to pure military coercion.

The experiment has, however, totally failed. The most influential portion of the Southern population, with whose support no government can in the long run dispense, as has been a thousand times proved, have not only given the new governments at the South no assistance, but have, naturally enough, been bitterly hostile to them. The new political system, indeed, was of a kind to rouse all their prejudices against it. The men who took part in and aided the rebellion, and who are therefore disfranchised, have within the last five years been reinforced by a powerful body of youths who were boys during the rebellion, and who have entered on manhood during a period of great disorder and uncertainty and poverty, in which few careers are open to them, and in which all the circumstances of their lives tend to exasperate and embitter them, and prepare them for turbulence and violence. They may therefore be said, without exaggeration, to have taken the field against the new régime. They have formed organizations somewhat similar to the Irish Whiteboys and Molly Maguires, the express object of which is to drive negroes and Union men out of the South, and make all government through their instrumentality impossible. For this purpose they murder, rob, and maltreat, and they are too powerful, too skilful, and too firmly bound together, and enjoy too much of the sympathy of the local population, to make it possible for the State officers to bring them to justice. More than this, and, if possible, worse than this, they have at the North a powerful political party, which, if it cannot be said to be at their back, is certainly not disposed to blame them or call them to account, and whose chances of accession to power seem to improve as the passions excited by the war die out.

On the other hand, the new governments have done nothing to atone for the theoretical defects of their origin. We owe it to human nature to say that worse governments have seldom been seen in a civilized country. They have been largely composed of trashy whites and ignorant blacks. Of course, there have been in them men of integrity and ability of both races; but the great majority of the officers and legislators have been either wanting in knowledge or in principle, or both. That of South Carolina is one of the worst specimens, and, as such, we have often commented on it.

What is to be done? Congress having set these governments up, and having emancipated the negroes, and the negroes being, it is safe to say, the only men at the South who are really devoted to the Union, it seems as if it was the duty of Congress to see to their protection. Moreover, the experiment which is now on trial at the South being of Republican devising, it seems to be necessary to the credit of the party that it should be made to succeed, and, at the same time, it seems as if the Ku-klux stories might be made to help the party by showing the necessity of such a prolongation of its power as would enable it to complete the work of Southern pacification. Accordingly, nearly every session of Congress there is a call either from philanthropists under the influence of feelings of humanity, or from mere politicians in search of "capital," for additional legislation "to protect life and property at the South." Of the sort of legislation demanded, the bill recently brought in by Butler is a fair specimen, and it consists simply in attempts to substitute for the state machinery, which is the only means of protecting life and property known to the Constitution of the United States, the machinery in use under the arbitrary and centralized governments of Europe—that is, the withdrawal of criminal cases from the jury, and their committal to single judges appointed by the central authority and armed with extraordinary powers, and the concession to mere official suspicion, and to legal presumptions, of a part in determining the question of guilt or innocence of a prominence hitherto unknown in Anglo-Saxon jurisprudence.

These are momentous changes to introduce into the administrative system of any free country; they are more momentous in this country than they would be in any other, because they not only increase the power of the central government, but they arm it with jurisdiction over a class of cases of which it has never hitherto had, and never pretended to have, any jurisdiction whatever. It would not simply furnish the Government at Washington with additional means of performing one of its well-known duties, such as the suspension of the *habeas corpus* in Ireland furnishes the British Government with, but it would impose upon it altogether new duties. But the separate States are, under the Constitution, as clearly charged with the duty of protecting life and property within their own borders, as the United States with the duty of making treaties with foreign powers. To impose the duty of protecting life and property on the Federal Government is, therefore, just as distinct and well-marked a novelty as, and a far more serious novelty than, the transfer of the power of negotiating treaties to the separate States would be.

Such legislation as Butler and his supporters propose can, however, only be justified in any country by its success. There is this to be said for the means to which European governments resort for the protection of life and property—they work. That is, when the French, or Prussian, or Russian, or British governments say they are going to "maintain order," they send as many troops into the disturbed districts as will police them thoroughly. If dealing with the South, they would occupy it with at least 100,000 men, they would patrol the roads with clouds of cavalry, and fill the streets with swarms of police—in short, would strike terror into evil-doers, and, though liberty might suffer, honest people would sleep in peace. The peculiarity of our attempts at pacification by force is, that after describing the condition of society over a vast extent of territory as frightful, and representing a large portion of the community as conniving at deeds of violence and bloodshed, and the magistrates as powerless, and declaring ourselves ready to restore order, even by the sacrifice of the Constitution, and erecting a terrible judicial apparatus of commissioners, presumptions, fines, imprisonments, and hangings, we vote a regiment of cavalry or two companies of infantry to put it in motion—that is, about enough men to make one county tolerably safe. It is difficult to suppose that this kind of legislation is anything but a campaign document.

We are frequently asked in solemn way, whether it be possible that a government which, like the United States Government, can call on its citizens to sacrifice their lives in its defence in the ranks of its armies, really owes them no protection for their lives and property? We reply that we know nothing of the United States Government except what we find in the Constitution and the judicial interpretations of it. There is no ideal or absolute United States Government. It is a convention, and the terms of that convention are that the political organization it set up shall have the right to draft citizens for its defence, and yet shall only render them in return certain services, of

which protection from violence at the hands of their neighbors, except on the demand of the local authorities, is not one. This may be a cruel arrangement, or an ill-judged one, or an unfortunate one, but it is what it is, and it is found in most cases to work well. So do not let us imitate Gambetta and Rochefort and deny its existence, and endeavor to substitute for it a deduction from our own ideas of abstract fitness.

If we once get into the habit of treating the Constitution as a mere expression of opinion, to be set aside whenever its observance seems inconvenient, we shall have substituted a Gallic Republic for an American one—the republic of Gambetta, and Louis Blanc, and Rochefort, and Phillips for the republic of Washington, and Hamilton, and Madison, and Marshall; or, in other words, a dream for a good working machine. As soon as we allow ideals to take the place of written agreements, we have sown the seeds of anarchy, because one man's ideal is as good as another's, and we shall pass our lives as the French do—witnessing the struggles of one party to substitute its ideal for that of the other party; one year we shall live under Phillips's, and cut off heads in the name of "humanity," and the next under Tweed's, and steal in the interest of "liberty," and the year after, under Archbishop McCloskey's, and vote taxes for the promotion of "the true religion," and all go down on our knees when the Host passes. Surely what is passing in France ought to warn men of the danger of tampering with people's political habits and overthrowing their respect for the forms of law.

Is there, then, no remedy for local disorder at the South? If the State government does not protect a man, can he look nowhere else for redress? We answer, that if there be any value whatever in the theory on which American polity is based, the remedy of Southern disorders must come from the Southern people, through their experience of the folly and suffering of disorder. If this be not true, the whole American system is a mistake, and is destined ere long to perish. Our business is now to leave every Southern State to its own people, first, because this is the only practicable course, and, secondly, because it is the only wise one. If they are so demoralized that they go on robbing, and murdering, and "Kukluxing" each other, we cannot interfere effectively, and had better not interfere at all. The American punishments for a State which permits these things are two—impoverishment and emigration. If a man cannot have freedom, security, and light taxation in New York, let him go to New Jersey; if he cannot have them in South Carolina, let him go to Virginia; if he cannot have them in either, let him go to Missouri. Those who stay behind, on seeing capital and population steadily leaving their State, and their property declining in value, will gradually mend their ways. This may be a slow remedy, but it is a sure one. It goes to the root of the disorder, while under coercion from the outside no state of things can grow up, or ever has grown up, in which coercion ceases to be necessary. Of course there is nothing in this theory to prevent the United States enforcing the Federal Constitution and laws. This ought to be done, *at whatever cost*—that is, by officers, and not by bill and resolution. If it be true that black men are kept from the polls by intimidation, we ought to see that going to the polls is made as safe as going to church; but to pass bills providing for this, without voting the men or the money to execute them, is a wretched mockery, of which the country and the blacks have had enough.

THE "RED" RISING IN PARIS.

The folly—if that be not too mild a term—of the "Government of National Defence" in not summoning a National Assembly as soon as possible after the disaster of Sedan and the overthrow of the Empire, is now fully apparent. Had they done so, the Assembly would either have made peace before the disorganization of French society and of the administrative system had gone very far, or it would have become secure in its authority and used to its work by the time Paris surrendered. Elected as it was when the struggle was just closing, and for the avowed purpose of making terms of peace, it not only excited the hostility of the Republicans, as a mere exponent of the cowardice of the Conservatives, but it entered on its duties just at the moment when the enemy was withdrawing his hand; and the salutary restraint exercised by his presence on the dangerous classes was thus lost before the new Government had time to get a fair hold of the machinery of administration, and organize a force sufficient for its own protection and the execution of its acts. This unhappy interval the Reds in Paris have promptly taken advantage of. They have expelled the constituted authorities from the city, seized the public offices, murdered some of the leading generals and hold the others in custody, and have armed the rabble, and, in short, begun a Reign of Terror which, be it long or short, will give a terrible blow to French industry, and greatly increase the difficulty of recovering from the disasters of the war, and, what is worse than all, greatly diminish the chance of a firm and stable government. Readers of the *Nation* will bear witness that we distinctly pointed out the probability of what is now occurring as long ago as last September, when a great many good people here were going into ecstasies over the establishment of the "French republic;" and the course of the Government during the succeeding six months only increased the chances of the explosion.

The body of persons known as "The Reds," in Paris, is made up of two elements. One is the vast body of workmen drawn from the provinces by the extensive public works set on foot by the Empire and by the extraordinary luxury which the Empire fostered in the capital. These men are grossly ignorant on leaving their villages; and on entering a city swarming with the wealthy pleasure-seekers of the civilized world, who deny themselves nothing, and parade their profligacy, the ouvriers' envy and dislike of the bourgeoisie, which are only too common in the country districts in France, become rapidly developed into a brutal communism, resting in the main on dislike of labor and a fondness for sensual indulgence. There is nothing in the French peasant's education, after he has got rid of his religious sentiment—as he does very rapidly after he reaches Paris—to prevent his thirsting savagely for a share in the good things of Parisian life, and making up his mind to get them by any means, fair or foul, whenever the chance offers.

The other element is a body of persons whom we have been in the habit of calling Sentimentalists in these columns, made up of labor reformers, socialists, republicans, peace advocates, broken-down lawyers, newspaper writers, and military and unsuccessful adventurers of all types: They may be divided about equally into schemers and visionaries; but they all agree in being Sentimentalists—that is, in wishing to base legislation on their own ideas of abstract justice and truth, and in contempt for considerations of expediency, or for remoter results, or for habit or tradition. The sincere humanitarians among them are satisfied that if they can get hold of the government, and keep the "traitors" (political opponents) from meddling with them, they will be able to put an end to poverty, and prostitution, and war, and to secure to all an equally good education, and an equal share of the products of labor. The adventurers are, of course, also strongly in favor of a general upturning, as they have nothing to lose, and can hardly help bettering themselves during a period of confusion. Both together do their utmost to keep up the spirit of revolt not only against the government, but against the existing social organization, among the working-classes; and as they possess all the education there is in the Red ranks, when they begin their revolutionary movement they have the places on the "committees" and other governing bodies by which it is directed. Curiously enough, although they are all frantic opponents of capital punishment when inflicted by a regular government, they always make a bloody use of power, and the killing of people in cold blood always occupies a prominent place among the means by which they endeavor to regenerate society. They are, too, nearly all peace men, and denounce standing armies bitterly; but they invariably maintain, even at the peace conventions they hold in quiet times, that before the general and everlasting peace is established, there will have to be one grand war, of which they are to have the direction. A curious illustration of the strong mental resemblance which runs through them all in every clime, was afforded by the fact that, a few days ago, when the Paris Reds were perfecting their plans on the heights of Montmartre, the head of the school in this country, an anti-capital-punishment man, was gravely recommending in his newspaper the shooting of Southern millionaires by drumhead court-martial as a remedy for Southern disorders.

The body is just now in a more favorable position for carrying out

its designs in Paris than it has ever been since the first Revolution. The bulk of the regular army is shut up in foreign prisons; what there was of it in Paris was disarmed by the Prussians; but, more important than all, the Reds are now all armed. The "National Guard," under the restoration of the Orleans dynasty, was composed almost entirely of the shopkeepers or bourgeoisie; under the Empire it could hardly be said to exist; but during the siege the whole population of the city was embodied in it—thus giving the socialists weapons and organization. The consciousness of the frightful danger to property and life within the city which this involved undoubtedly did much to give Trochu's operations the air of feebleness and indecision which characterized them, and accounted for the petting of the National Guard in which he indulged. The Guard did no fighting, and it was evident before the siege was over could not be got to fight, but to keep it in good humor it was highly complimented in general orders, to the disgust of the sailors and regulars, and was paid a franc and a-half a day per man, while its duties went very little beyond guard-mounting on the ramparts. It was the idleness, the pay, and the uniform which undoubtedly prevented the attempt to seize the Government being made on a greater scale during the siege, and one did not need the gift of prophecy to see that, peace restored, and the prospect of a return to hard labor fairly placed before them, the "Guard" would not lay down their arms.

To crown all, when the armistice was arranged, the French representatives had the weakness and stupidity to stipulate that while the regular troops surrendered their arms to the enemy, the Guard should be allowed to retain theirs, and should be charged with "the preservation of order." This placed the city at their mercy as soon as the Germans withdrew. Even during the German occupation they began their preparations by fortifying themselves on the heights of Montmartre, though at the time this was supposed to be a patriotic demonstration against the enemy; when the invaders retired, however, the true character of the movement was revealed, and the Thiers Government found itself face to face with the most serious problem any Government of France has had to face since the first Napoleon overthrew the Sections.

The theory on which the revolt will appeal to the country is, of course, that the National Assembly is a reactionary body, which "sold" the country to Bismarck, and is going to "betray the Republic;" and, though it will meet with no response from the peasantry, who hate the Republic, the peasants are not organized, and are timid and unenterprising; and even if they sent their Mobiles freely to the aid of the Government, it would take a long while to bring them in respectable condition to the gates of Paris; and in a conflict between city irregulars and country irregulars in the streets there would be little chance for the latter. What force of regulars the Thiers Government has at its disposal it is hard to say; and the danger is that, whatever it be, it is by this time demoralized and disorganized by the want of leaders and the spectacle of the growing ascendancy of the revolutionists. A government which has to fly from Paris is, in French eyes, a lost government, and if the Assembly can do this and yet retain its control of the popular allegiance and the allegiance of the troops, it will have opened up a new chapter in French history.

The latest news is that General Faidherbe, who showed himself, in the operations of the North, a cautious but able commander, has been appointed "generalissimo and dictator." He will probably at once go to work to organize an army, calling in the assistance of the fleet, and probably drawing on Bourbaki's force from Switzerland, and perhaps on the prisoners in Germany. But look at his task in any way we please, it is a very formidable one, and any unsteadiness on the part of his troops, or a severe repulse, would probably lead to socialist revolts in the other great cities, and prolonged anarchy or civil war. The Germans will hardly be induced to interfere, even if the Government dared to ask them. Of course, the disorders imperil the punctual payment of their indemnity, and, of course, nothing would please Prince Frederick Charles and the military party better than to give the Paris mob an awful castigation; but interference would involve the loss of many German lives, and might entail on Prussia the responsibility of governing the whole country for some time afterwards; besides which, the present situation is giving the Republic a death-blow, and warranting the contempt for French morals and manners and character by which the German public justifies to itself the hardness of the terms imposed on the vanquished.

About the immediate future it is difficult to predict anything with confidence; but it is quite certain that no real republic can survive the suppression of the present revolt by "a generalissimo and dictator." When the smoke and dust of the conquest clear away, "the man on horseback" will be there in the field, sword in hand, and the owners of property, the lovers of peace and quiet and industry will be found crouching around him, and begging him, if he can give them nothing else, to give them security in their homes. It is impossible not to believe, however, that the lessons of the crisis are sinking deep into French hearts. Foremost amongst them, as we have more than once said in these columns, is the danger of cutting a society loose from its political traditions and its political habits, and resolving it into a debating club for the examination of the bases of social order, and treating what Sentimentalists call "principle" as the only guide of political and social action. As long as the source from which "principle" is to be derived is not defined, of course the rule that you must act on principle in politics is about as great a help to legislation as the theologians' maxim—"in essentials, unity; in non-essentials, liberty; and in all things, charity"—is to religious union. This maxim might be adopted by all sects, and yet, as long as "essentials" were not defined, there would be as little chance of agreement as ever. In politics, if we throw every man back on "principle" as the only guide, and tell him not to trouble himself about consequences, and let him draw his "principle" from his own breast, of course we are not unlikely to find every hundred men working might and main for a different social ideal, and, in the absence of all means of deciding their comparative superiority, finally cutting each other's throats. If A. tells B. that he has looked into his own heart and finds that "eternal justice" requires that A.'s property should be divided between them, and B. replies that he has looked into *his* heart too, and finds that eternal justice requires him to keep it all for himself, and both of them disclaim all regard for the teachings of history, and for their experience of human nature, of course there is nothing for it but to go at each other with the knife and pistol; and to this pass, or something very like it, unhappy France has come. To this too, let us add, every nation is in danger of coming in which people learn to despise the forms of law, to treat habit as of no political value, to centralize government for the purpose of social experimentation, and to make social experimentation and not the faithful, punctual discharge of daily duties the great business of life, and, above all, the great business of "reformers."

ERIE AUDACITY.

In trying to give a brief summary for the information of the general reader of General Barlow's first long letter in the *Tribune*, entitled "Facts for Mr. Field," a fortnight ago, we fell into two or three errors, all of them trivial. We said the complaints in certain suits were not sworn to; they were sworn to. We said Judge Barnard reached the city on the night of the 6th of August at 10·20, and signed the famous order ten minutes afterwards, whereas we should have said, ten minutes after it was sent to him for signature by Mr. Shearman. We made one statement which wears the appearance of an error, but which we intended to be simply explanatory—that is, to the phrase in one of the Ramsey injunctions issued by Barnard, forbidding Ramsey to make any application about his receivership "except to this court in this action," we added the words, "that is, to Barnard himself," meaning simply, that this is what the prohibition would amount to in practice, and that this was what was intended by those who got it. Of Mr. Field's reply to the nine charges thus enumerated we gave a similar summary last week.

It seems scarcely credible, but is nevertheless true, that Mr. T. G. Shearman has written a letter to the Albany *Law Journal*, affecting to treat this summary of statements as the *Nation's* own, declaring that the nine charges made by us contain "twelve unqualified falsehoods," and making no mention of General Barlow's letter, and no attempt to answer it, or meet it in any way, thus following Mr. D. D. Field's bad example in replying to the *Tribune*. The point on which he lays most stress is our assertion, or repetition of General Barlow's assertion, that Mr. Fuller, hav-

ing been appointed receiver of 3,000 shares of Albany and Susquehanna stock belonging to one Groesbeck and others, on the ground that it had been illegally issued by Ramsey, and was therefore invalid, had on this stock so declared invalid voted by direction of Mr. Shearman. On this point Mr. Shearman says:

"As to the fact that Mr. Fuller voted upon this stock, that was a step taken in order to comply with the terms of an injunction obtained by the other side; and the propriety of the act depends upon considerations of a manifold character, concerning which the most upright of lawyers might take different sides. The only reason assigned by the *Nation* for objecting to this vote, or rather to the action of counsel in advising it, is that the receiver's appointment was based on the ground that the stock was void. But this was not the case. The stock *was valid stock in the hands of some one; but the title of the particular persons holding it was alleged to be void, and the receiver was appointed for the very purpose of holding the stock for whoever might prove to be its true owners.*"

To give an idea of the pitch of unscrupulousness to which everybody connected with this Erie ring seems to have attained, we shall now quote the words of Field and Shearman's complaint, on which this order was issued, and which now lies before us. The seventh allegation is—"That as the plaintiff is informed and believes, the issuing of the said stock in the manner and for the price aforesaid was *wholly unauthorized and void, and not warranted by any statute.*"

Judgment is then demanded—"That the issue of said several amounts of stock be declared unauthorized and void, *and set aside, and that the stock be given up to be cancelled.*"

We are saved by this from the necessity of noticing the rest of Mr. Shearman's statements, which are all equally discreditable, even his defence of telegraphing Barnard's injunction, which we confess we have rarely seen surpassed for evasiveness and boldness, especially as, by the time this reaches our readers, he will have received a severe but well-merited castigation from General Barlow in the *Tribune*. Mr. Shearman seems to be laboring under a cruel delusion as to his position before the public.

We shall take leave of the matter by asking how it happens that gentlemen whose professional character is assailed and has been as seriously damaged as his and Mr. Field's have been, do not demand an investigation at the hands of a body of competent lawyers, and put an end to this newspaper controversy? If they get three or four lawyers in good standing to say their proceedings have been proper, of course these attacks on them must cease. General Barlow has challenged them to do so. Time was, when, if a gentleman found his honor impugned, so far from evading enquiry, he insisted on it, and we trust that day is not wholly past. We can understand why Messrs. Field and Shearman should not sue their assailants, for libel suits are slow and inconclusive, but voluntary trial before a tribunal of lawyers is another thing, and this can be had any day.

THE ENGLISH WOMAN OF TO-DAY.

LONDON, March 1, 1871.

WHO is she? The well-known *materfamilias*, Hawthorne's dread and *Punch's* pride; the equally well-known English rosebud; the "Amelia" of Vanity Fair; or that hackneyed unfortunate, the girl of the period? No; the new woman is none of these. The new woman is to be born of education and the franchise, and her sponsors are Mill and Buckle and Spencer—an august trio who are not afraid to renounce in her name the frivolities of the past, and to promise for her great things in the future. Their prophetic eyes have seen the statue in the marble, and they say, Give the hammer and chisel full play, and a woman shall come forth. And, considering the material they have already found, these champions of the sex may well indulge in golden visions. If the ideal shall become a reality, with the power and physique of Miss Cobbe, the perseverance and acuteness of Miss Garrett, the sweetness of Lady Lyell, the grace and dignity of Mrs. Fawcett; then, gentlemen, fall back; *place aux dames* in good earnest. The reign of your bearded majorities will be over, you will have monopolized long enough the front rank, and may safely stand aside to let the eager brains and supple hands of the great reserve of women take their chance at the world's work. Soberly speaking, the women of England who have fallen into line on the question of female suffrage and equality are a formidable phalanx, and the spirit and manner of their progress are worthy the consideration of their American sisters whose faces are set in the same direction. While the average standard of feminine intellect is lower here, and there is a noticeable lack of the vivacious many-sidedness so common and so charming in America, I am especially struck by a type of woman unknown with us—a type which, setting aside patriotic prejudices, I believe to promise better for the future than any existing product of our high-pressure civilization. I ask your forgiveness, my countrywomen, for such a verdict, for it is from the depths of my faith in your latent possibilities that I speak; and with the most earnest desire that you may stand side by side with her in all noble work, I seek to introduce to you the English woman of to day; no ideal, no vision, but the actual, existing woman. Will you hear what she is, as I have found her, and believe my assurance that there is no exaggeration in this description of her imitable virtues?

First, material and unpoetic as it may seem, I would point, in speaking of this class of women, to the superiority of their physique. The dear old comfortable metaphor of oak and vine has got to be given up physically as well as mentally—a woman who can work only five hours a day can scarcely expect to compete on ground already his with a man who works ten; and the ability of an Englishwoman to walk twenty miles in a winter storm, and eat her dinner after it with a good appetite, is of more value to her than many speeches. *Bonbons* and *mayonnaise* and the like allurements must be forsworn, for beef and beer are powerful allies of the suffrage; the sweet tooth must be sacrificed along with low dresses and late hours and sensation novels; body and mind must be well fed and exercised, before either the one or the other can demonstrate its actual capacity. A woman forced at a temperature of 90° on an irrational, unregulated diet may be brilliant, interesting, morbidly poetical; she can never be self-reliant, cool, or persistent. The unanimity and organization of the women here who are working to establish their sex's equality I trace, therefore, in a measure, to their superior physical health. They are neither so nervous nor so enthusiastic as our women, and therefore look more carefully to results, and are not so much carried away by evanescent emotion. The national characteristics of obstinacy and self-satisfaction come also into play; for, though they can scarcely be classed as virtues, yet are they powerful adjuncts at certain crises of the battle. The form which the last-named quality takes among these women does not by any means imply the vanity and desire for notoriety which unfortunately actuate many who are prominent before the public in America. The leaders here have no intention of usurping masculine attire, take no especial delight in unfolding their experiences from platforms, and are by no means adepts in clever abuse of their adversaries. There is scarcely a woman in England who could have "used up" Dr. Todd as did Miss Dodge; but there are not a few who by steady, hard training have enabled themselves practically to give the lie to his assertions. Doubtless, well-put ridicule and cutting sarcasm are powerful weapons, but it scarcely seems worth while, in the present undetermined status of women, for them to indulge freely in the use of either till they have proved their ability to make good their claims and hold fast any advantage which their brilliant sallies may give them. At late meetings of the "National Society for Women's Suffrage," the women present, both speakers and audience, gave a large majority of real workers; for example, Miss Garrett, Miss Faithfull, Miss Cobbe, Dr. Blackwell, Mrs. Taylor, etc., all women who have actually done something, who can command a respectful hearing from the men against whom they have fairly matched themselves.

Of course, such women must look at the question from widely different standpoints, and base their arguments upon various foundations, but they are all immediately practical. In the speeches made on these occasions, we miss the peppery doctrines so frequently enunciated in America, and also, be it acknowledged, the enthusiastic eloquence which often carries us away in spite of sober judgment; but we get instead a quiet common-sense, a general grasp of the subject, a womanly vindication of woman's rights, which is less liable to misinterpretation and more convincing. Women have so long been trained to trust to their emotional nature rather than to their reason, that it is no easy matter for them to leave the flowery paths of false sentiment for an inflexible logical sequence which won't permit them to say clever, untrue things, or to appeal, as of old, to the assailable hearts of their masculine judges. The sober British intellect meets more readily the requirements of this present age of reason than does the excitable American, and the advantage is evident. English women are arriving at results while we are still tossing from one horn of the dilemma to the other. That is, women here are showing what they can do, while with us they are mostly occupied with what they can say. I hope that this is no injustice to my countrywomen; the question is so broad that one hesitates to express an opinion upon it, for, without doubt, the different external circumstances powerfully affect the feminine character, and the existence of a completely crystallized society gives opportunity for that thorough culture which goes so far

towards producing a well-balanced mind, and which with us can only be attained in exceptionally favored cases. Still, this much is certain, that the question of women's rights has, so far as its public treatment is concerned, been taken up here by a class of women widely different from the leaders in the American branch of the movement. And the effect of this, as I said in the beginning, is to show us the germ of the woman of the future; the woman who, we believe, is to be strong and tender, wise and grave, able to stand alone, but never disdainful of sympathy—man's true help-meet, not his rival. If this is to be in good earnest the goal for which American women are striving, they can reach it only by the path in which their English sisters are treading, and that path is as open to the one as to the other. A steady determination to fit herself for whatever work she undertakes, and an equal determination to undertake no work from motives of vanity or as a temporary diversion, must form the basis of each individual's effort, and organization and system must precede any successful public labor. I blush when I remember how American women, by their weak divisions, their meaningless, interminable resolutions, and, above all, by their illimitable "brag," have made themselves fair game for scurrilous tongues. It is a serious matter this, and one that presses every day more closely upon all thoughtful women. A late leader in the *Times*, in criticising the action of the National Suffrage Society, says: "The only right woman has is the right to a natural protector; give her that, and the rest will follow." A fair promise, but one that was never made by woman's Creator. In his law it is written that no protector can shield woman from the result of her own sin and folly, no protector can give her the security which is the reward only of honest endeavor or take from her the responsibilities which are hers—primarily as a member of the race, and, secondarily, in her character as woman.

We must in very shame put the ignorance and weakness of the past away from us. If there is any meaning in the story of the woman who ate first of the fruit of the Tree of Knowledge, and bequeathed to her daughters a double heritage of grief, may we not hope that the best good as well as the most evil is to come to us from that mysterious temptation of our mother? If from lack of liberal education, from an unbalanced social condition, or from a certain fluidity of the national character, the mass of our women are really unprepared to act on this particular political question, the general progress can still go on, and for the rest we must bide our time. Teach women to think independently; teach them that even where ignorance is bliss it is *not* folly to be wise; make them appreciate, what I fear few of them do, that they are responsible not only for the sin that they commit, but for the sin that they permit, and it will not be long before they will be willing and able to take any power that will assist them in overcoming vice, public or private.

English women are showing an ability for immediate practical action which I do not find in America. They are fighting vigorously and unitedly against certain social evils which come especially within their province; they are training themselves in a business-like manner for philanthropic work; they are not riding individual hobbies, nor airing clever, impracticable theories; in a word, they care much for the honest advancement of the sex in the line of its natural progress, and see clearly that women can attain the highest development, only as men attain it, by patient, hard work. It is, therefore, only as a means to an end that they are asking for the suffrage. They regard it as no panacea, no charm, but as a new and great responsibility, a two-edged sword which cuts both ways, and does good service only in strong, firm hands.

When they get this weighty weapon of political and social power (as they surely will), there will be no hesitation in wielding it, no desire to shirk the duties and dangers that its possession brings, because they know their ground and their goal, are clear-eyed, strong-armed, and pure-hearted. The question that American women should to-day ask themselves is this: If we gain our point this year or next, have we measured our capacity and our work? Are we asking for the ballot as children ask for a new toy or coquettes for a new flirtation, or are we looking through the dust of this present struggle up to fields of noble endeavor where this power and every other shall be used "for the glory of God"? Until we believe that we can do more for politics than politics can do for us; until we know what we want, and are willing to suffer and strive for its attainment, our clamorous demands are worse than useless. We have as yet much to learn from our English sisters, who are patiently preparing themselves for the test which they ask to have applied to them, the test of a fair field and no favor; and it will surely be a happy day for the sex in America when we all see that our best hope for the future lies in a wise, conscientious culture of our natural gifts.

An American Woman.

ENGLAND—THE BREAKDOWN OF THE MINISTRY.

London, March 3, 1871.

In writing to you shortly before the opening of Parliament, I pointed out some of the causes which appeared to have shaken the influence of Mr. Gladstone's Government. The session is now about three weeks old, and we have already witnessed some illustrations of the position in which ministers find themselves. Let me, in the first place, refer to an agitation which I fear must appear to you, as it certainly does to us, to be almost interminable. I mean the movement for the abolition of tests in the universities. The process of relaxing the stringency of the bonds by which Oxford and Cambridge are connected with the Church of England began something like twenty years ago; the door has been slowly and grudgingly opened, and Dissenters have forced their way into the vestibule of the sacred edifice. Its inner chambers, where the richest prizes are to be picked up, are still unprofaned; but the exclusion cannot be permanently maintained. Last year the House of Commons by a large majority passed a measure rendering Dissenters eligible to fellowships; which was shelved, though not directly negatived, by the House of Lords under the influence of Lord Salisbury. This year the same measure has been introduced by Mr. Gladstone, and has already passed the Commons. So far the Government showed a praiseworthy desire to redeem its pledges. But meanwhile another difficulty has arisen. The policy of liberals in general has been to raise their demands in proportion to the obstinacy of the resistance. They accordingly remembered that, even if the measure were passed in its present form, a great grievance would remain. The fellowships, it is true, would be in great measure opened to Dissenters; but there would remain a large number of fellowships which are only tenable by clergymen. The effect of the bill would therefore be to enable Dissenters to hold a considerable number (I think from a half to two-thirds) of the fellowships, but the remainder would be as now confined not only to the dominant sect, but to the clergy of that sect. They accordingly moved an amendment to the bill, providing that this final restriction should be removed. Mr. Gladstone refused to accept the amendment on two grounds. The first, which was, I think, perfectly reasonable, though I cannot trouble you with the necessary explanations, was that such a change would involve a number of other changes in the constitution of the colleges, which could only be dealt with satisfactorily in a more comprehensive manner. If he had pledged himself to deal with all the questions thus involved in the sense desired—namely, by enabling an executive commission to go into the whole question, his position would have been at any rate defensible. But he was vague upon this point, and relied chiefly upon his second reason. This was the untenable assertion that the House of Commons was under a certain obligation to the House of Lords not to raise its terms at present. Most people considered the obligation to be altogether imaginary, and thought that a decided policy was better than temporizing and indulging in refined scruples. Accordingly, Mr. Gladstone was put in an almost unprecedented position for a liberal minister. He carried his measure by a majority of only twenty-one votes, which was, in itself, strange enough for so powerful a government. But the result is still stranger when we examine into the constitution of the majority. Mr. Gladstone was supported only by his official dependents and by conservatives. The minority was composed exclusively of his natural supporters, the liberals. Indeed a friend of mine found a member of the Government walking into the wrong lobby, and following by a kind of instinct those with whom he was always accustomed to vote. A liberal leader has perhaps never before found himself in so completely false a position.

I come, however, to a more serious difficulty. An announcement recently made startled the House by its suddenness and unexpected nature. Government gave notice that a select committee was to be proposed to enquire into the state of Westmeath in Ireland. Agrarian outrages, it is stated, have lately been very infrequent throughout the greater part of the country. The coercive measures of last year appear to have been successful, and the general quietness of the Irish people was noticed with complacency in the Queen's speech. But it seems that in the county of Westmeath there have been four murders and four attempts to murder during the past year. They are attributed to the existence of a Ribbon conspiracy which keeps the district in a state of terrorism. Witnesses were afraid to come forward, and it was proposed that the committee should take evidence in secret. Lord Hartington, who has recently become Secretary for Ireland, and who is a commonplace young man who owes his position to his great Whig connections, moved for the committee in a feeble and hesitating speech. It immediately appeared that Govern-

ment had become frightened by the opposition raised to the proposed secrecy of the committee, and said that it was only to have the power of taking evidence in secret if it chose. The question, however, remained, Why have a committee at all? If part of Ireland is undergoing a reign of terror, energetic measures should be at once adopted. It seemed absurd to ask for a committee to find out what Government already knew, or to invent a policy which Government ought to discover for themselves. The proposal was merely another instance of a policy which has lately become too common. A Government boasting of an unparalleled majority is always trying to shuffle off responsibility upon the shoulders of the House of Commons, and instead of acting vigorously, to get somebody else to provide them with information, and then to tell them how to act upon it. In short, it was an exhibition of feebleness and vacillation, singularly discreditable in a case where firmness is specially needed. If we are to rule Ireland at all, we must show that we can stamp out outrages inexorably; to be shilly-shallying and hesitating and apologizing is the most infallible means of encouraging the spirit of disaffection.

Mr. Disraeli saw the blot and took advantage of it in his very best manner. His speech on Monday night was one of his most vigorous exhibitions. He was, of course, rather unfair—few political partisans are scrupulous in such matters, and he least of all. But he sparkled with epigrams; he was brilliant, cutting, and effective, he seemed to be taking revenge for many previous humiliations; and, to use the only appropriate language, felt that he had got Mr. Gladstone's head in chancery and pitched in with amazing energy. No more brilliant sparring performance has been lately seen in the political ring; and his supporters fairly shouted with an enthusiasm to which they have long been strangers when he declared that government had "legalized confiscation, consecrated sacrilege, and condoned treason." Mr. Gladstone replied last night in one of those elaborate harangues in which the sense has to be vaguely sought through a labyrinth of pompous phraseology. His explanation left matters darker than before, and nobody could precisely tell when he sat down amidst an unsympathetic audience, why a committee should be appointed, or how far it was to be secret, or how far the Government understood its own mind. A fine chance was open to those rather unsteady politicians who appear to regard mischief-making as the natural duty of an independent member, but whose assaults are rather ominous in so far as they like to catch applause by kicking a falling man. Sir. R. Peel and Mr. Osborne, who are both distinguished performers of this class, made energetic attacks upon Mr. Gladstone's proposal. Sir R. Peel described the committee in language borrowed from Sir Cornewall Lewis, as a piece of machinery constructed for the purpose "of smothering the truth and obstructing investigation and true enquiry." He said that Government admitted that they were working the Irish members to exercise a salutary check upon them. Mr. Osborne was equally facetious. The one cry which had been all-powerful at the hustings was "Gladstone for ever!" and now Mr. Gladstone's Government was in the position of the weak woman, who, when she hesitates, is lost. The committee was nothing more than a screen for ministerial debility and executive incapacity. And impugning the fitness of Government to deal with Irish matters, he declared that there was an inscription over the doors of the cabinet, "No Irish need apply." This and a good deal more badinage of the same kind derived no particular weight from the political reputation of the assailants. Mr. Osborne is a kind of licensed jester, whom every one likes to hear, but for whose opinions nobody cares a straw; and Sir R. Peel, though a man of considerable talent as a speaker, has pursued far too eccentric a course to be regarded as a serious politician. Like partisans in a guerilla warfare, they are of little account to powerful opponents, but may be exceedingly annoying on the flanks of a retreating force. They were listened to last night with a degree of sympathy which augured rather ill for the stability of Mr. Gladstone's Government. The committee was of course granted, though not without a division, which showed an unexpected strength of opposition. As the lists have not yet been published, I cannot speak as to the composition of the minority; but I suspect that, on this as on the other occasion I have mentioned, it will appear that a large number of Mr. Gladstone's natural supporters were arrayed against him.

I might give some further instances of a weakness which is becoming a general topic of remark. The measure for army reform is less liked the more it is examined; and though there is the great difficulty that nobody is prepared to take Mr. Gladstone's place, and therefore no sudden change is to be expected at present, I shall not be surprised if the session shows a still more remarkable falling off in the prestige of the cabinet.

The announcement of the joint commission for the settlement of our difficulties with the United States has given general satisfaction; though in the presence of the Continental war it has scarcely attracted so much notice as might have been expected. There are obvious difficulties upon which it is unnecessary for me to dwell as to its power of effecting a satisfactory settlement; but I may safely say that on this side of the water, at least, there will be a strong wish to accept any conclusion of its labors which could be accepted without dishonor. I feel it useless to speculate further on a topic of which you are at least as good judges as I can be, and on which no general expression of sentiment has been evoked.

Correspondence.

THE PROFESSOR OF FRENCH AT WEST POINT.

To the Editor of the Nation:

Sir: Permit me to add a few words to the information contained in the letter headed "The Professor of French at West Point," in Thursday's *Nation*, March 16, as I think your Washington correspondence, to which it refers, hardly does justice to the President or to the newly appointed Professor of French.

General George L. Andrews was graduated at the United States Military Academy in 1851. He stood at the head of his class, throughout his entire academic term, in every branch of study, except in French, in which he stood second, the head of this branch being the son of French parents.

General Andrews's scientific attainments are of the highest grade. Few, if any, graduates have been sent forth from the Military Academy of more thorough knowledge than he possesses. He is perfectly acquainted with the French language, which he speaks, and is moreover an accomplished teacher, having given proofs of this as an assistant professor at West Point.

The military services of General Andrews, during the rebellion, were of the most valuable character, he having served in several highly responsible staff positions in the face of the enemy. Indeed, the record he there made for himself was the determining feature in his selection by the President, from among many candidates, for the place he now fills—his appointment to which has been hailed with the greatest satisfaction by every graduate of West Point who knows him.

General Andrews was himself an applicant for this vacant professorship. It was a career he felt more suited to his talents and tastes than that one which called for a participation in partisan political life, which was abhorrent to him, and to which he never would lend himself. If the President and the members of his cabinet would always give to the public service such men as General Andrews, and place them as wisely for the public interests as he has been placed, the people might snap their fingers in the faces of the politicians. M.

West Point, March 20, 1871.

Notes.

Mr. W. J. Stillman, who is at present in London, is engaged on a history of the last Cretan insurrection, to be published, as soon as completed, in this country. The work is likely to contain some curious revelations in regard to this equally unnecessary and unfortunate struggle, which Mr. Stillman, then American Consul at Canéa, did his utmost to prevent. From his official position, we may expect an inside view of the diplomatic phases of the imbroglio that will be *piquant* reading, whether or not it will make the rôle of the United States appear particularly creditable. It is even possible that our Cretan sympathizers will not appear to the best advantage.——A correspondent points out an inaccuracy in our statement that the *North British Review* was first issued in 1845. The true date is May 1, 1844, the proprietor then being Thomas Constable, son of Archibald Constable, the original publisher and proprietor of the *Edinburgh Review*.——The alumni of Phillips Academy are taking measures to honor the memory of its late principal, Dr. Taylor, by erecting a monument at his grave, and providing a marble bust to be placed in the Academy. Contributions may be sent to Mr. A. H. Hardy, 181 State Street, Boston.——Mr. Ledyard Bill, author of "A Winter in Florida," which was a very agreeable and honest guide-book, has written a more general work, now in press, on the "Climates and Resorts for Invalids, Tourists, and Emigrants." It will include, say the publishers, Messrs. Wood & Hol-

brook, of this city, a carefully prepared estimate of Minnesota—its climate, air, water, soil, scenery, etc.—with notes on Florida, Nassau, Fayal, California, the Adirondacks, etc.——Messrs. Harper & Bros. will reprint from the English editions: "English Premiers from Sir Robert Walpole to Sir Robert Peel," by J. C. Earle; Professor Jowett's translation of the "Dialogues" of Plato; "The Natural History of the Strait of Magellan;" with numerous diaries and other works relating to the Franco-Prussian war.——Macmillan & Co. announce a "Narrative of the Red River Expedition," by Captain Huysh, the private secretary of the commander, Col. Sir Garret Wolseley.

—There being notoriously no lack of public spirit in this country, and the race of which Peabody is the type being in no danger of running out, the only desideratum would seem to be a certain enlightenment which should determine each benefaction in the wisest manner, with as little waste or superfluity as possible. Among all the guides to the thousand-and-one accomplishments by which life is adorned and character improved, no one has yet thought of preparing a manual of charity, or guide to those intending to benefit the public, who would often, doubtless, be glad enough to take counsel if they knew where to seek it. We do not mean a bare list of deserving organizations, or even of the chief wants of society; but such general considerations as shall fit the various intentions of the benevolent, whether religion, or education, or social or political reform be the object of their giving. For instance, we conceive that a rule might be framed which would be helpful to many, which might stand among the first in the supposed manual, and would read something like this: Before multiplying new foundations, observe whether those already existing cannot better be improved.

—Our remarks, however, have wandered from the immediate occasion of them, which was the brochure just issued by the American Social Science Association, entitled: "Free Public Libraries: Suggestions on their Foundation and Administration, with a Selected List of Books" (New York: Hurd & Houghton). This hand-book is only secondarily an aid to that class of Americans who, having made their wealth away from their native town, desire to perpetuate their derivation from it by bestowing on it a free public library; but we trust that it will be the means of prompting this wise benevolence in some who might otherwise have overlooked it. The "Suggestions" are rather for the townspeople, who are at once encouraged to establish a library, and instructed how to stock it and how to conduct it. As to the management, they will here find in a nutshell the results of the experience of the two foremost libraries in the United States—that of Congress and the Boston Public—embodied in practical directions for every part of the work of which it is essential to be informed. The selected list of books contains a few thousand titles "intended to provide amusement as well as instruction, and for readers of all ages and various degrees of education." It has evidently been prepared with great care, and while most persons would probably wish to add some work to it which it does not embrace, we have not observed one which we could wish to have struck out. We may say, moreover, that such a collection would meet all the requirements of general culture, and that it is so fresh in the several departments as to be more valuable than the contents of many a library numerically superior, whose shelves are laden with antiquated and outgrown knowledge. The Astor Library, as now conducted for the public disadvantage, is in our opinion considerably less useful than this proposed library is likely to be.

—The native American having failed signally in his attempts to establish a comic paper, it remains to be seen whether our adopted fellow-citizens are going to succeed any better. Besides the *New-Yorker Kladderadatsch*, which is rather a comic department than a paper by itself, and is not illustrated, nothing, so far as we know, has anticipated *Puck*, just launched in St. Louis by Messrs. Keppler, Herold & Co. Mr. Keppler is the principal, if not the sole, artist, his designs being lithographed, and, after a cursory examination of the text, we conclude that upon his shoulders will rest the fate of the enterprise, since the editorial humor does not rise above mediocrity. We have, for our part, always believed that a truly great draughtsman might sustain an American comic paper, however dull, just as the London *Vanity Fair* now lives by the weekly caricature of its inimitable Pellegrini. Mr. Nast was, *pace* Mr. Stephens's admirers, more nearly the required genius than any artist who has yet appeared, though in point of natural humor we should rank Mr. Bellew above either. The cartoon of the first number of *Puck* is a capital illustration of "Peace" in the European sense—an enormous cat, with a Prussian helmet, complacently holding in her jaws a rat in the French uniform, appropriately colored. Another design which may be praised for its humor represents the rejoicing of the domestic animals over the raising of the siege of Paris. A third shows President Grant distributing offices and commissions to a worshipping crowd of ex-members of the XLIst Congress.

—No board of commissioners with which we are acquainted has better justified its appointment than the Massachusetts State Board of Health, whose Second Annual Report we have just read with almost the interest that we should a work of fiction. To speak of it according to its deserts would require much more space than we can afford it, while to repeat the table of contents is to give a very inadequate idea of the wealth of useful information to be found in these 400 pages and upwards. Nevertheless, this is the plan we must adopt, in order not to deal wholly in generalities. The reader, then, will find exhaustive contributions on "Poisoning by Lead-pipe used for the Conveyance of Drinking-water;" "Trichina Disease" and "Charbon (or malignant vesicle)," in Massachusetts; the health of the several towns, or rather the prevailing diseases during the past year; "The Causes of Typhoid Fever:" "Analysis of the Mortality of the City of Boston;" "Use of Milk from Cows affected with 'Foot and Mouth Disease;'" "The Ventilation of School-houses;" "Health of Minors employed in Factories;" "Air and its Impurities," etc. To these topics are also added a very suggestive report from the chairman, Dr. Bowditch, of his observations last summer in England in regard to the Peabody and Coutts tenement-houses for the poor, Mr. Ruskin's and Miss Octavia Hill's landlord and tenant experiment, convalescent homes, and the sewage question; and the opinions of the Board's Massachusetts correspondents and of American ministers and consuls abroad as to the harm arising, or supposed to arise, from the use of alcoholic drinks. In nearly all these cases the Board simply collects the testimony of its regular correspondents, at most pointing out the weight and tendency of it, and leaving the reader to form his own judgment, and the legislator to provide the appropriate remedy. The editing of this large mass of correspondence and the summing up are the work of the secretary, Dr. George Derby, whose ability and clearness and attractiveness of style could, for such a purpose, scarcely be surpassed. We do not know what pains are taken to circulate these Health Reports, but as they are prepared for the popular understanding, it is to be hoped they are widely disseminated as tracts, either complete or in the separate divisions. Physicians everywhere might better afford to dispense with *Braithwaite* than with these documents, which perhaps can be had for the asking; and they will be less worthy of their humane calling than we take them to be if they are not stimulated to demand of every State government a Board of Health like that which Massachusetts has first had the honor of instituting.

—A work not unlike the "Nomina Geographica" of Dr. Egli, which we lately noticed, has been published in Milan with the following title: "Vocabolario Poliglotto di Geografia." The author is Charles Mensinger, a Bohemian, who, though he has made Italy his adopted country, and has more than once gone to the battle-field with her armies, is nevertheless devoted to the Panslavic idea, and is animated in his present work by the desire of giving due prominence to the Slavic tongues, and of contributing in this way to the Slavic revival. Possibly this fact may color some of his etymologies, his aim being to trace to their origin "the proper names of the empires, kingdoms, republics, principalities, duchies, provinces, departments, districts, cities, boroughs, and villages of Europe," and to re-establish the exact orthography whenever it has been disguised or distorted. If this essay succeeds, it is the author's intention to revise it thoroughly and enlarge it with the names of rivers, lakes, and mountains, associating with himself persons learned in ethnography and philology.

—A convenient hand-book of Italian history, and readable withal, is Prof. Giuseppe Riccardi's "Diario Storico-Biografico" (Milan, 1870). As the title indicates, it is a book of days—the literary and political fasti of modern Italy—in which the most distinguished men associated with her history from Charlemagne down have their lives briefly recorded. However complete such a survey may be, it has the disadvantage of being unchronological; and Professor Riccardi has accordingly prefixed a short but clear summary of Italian history, after reading which the student may easily, by means of the index, refer to the biographies of any given period.

—Quite a different diary is that imagined by the bookseller Lacroix, in Paris, who, considering that for five months no European news of less magnitude than the occupation of Rome or the piercing of the Mont Cenis tunnel could gain access to the beleaguered city, or at least reach the public in due order and connection, has begun publishing a complete historical summary for each day from the 15th of September to the 28th of January. The *Journal des Deux Mondes*, as he calls this publication, has

had a great success among the Parisians, and being skilfully done is even recommended to those who were not lost to the world's progress in that eventful period. In this "catching up," it is to be hoped the Parisians will not be deprived of the honest and wholesome criticism which Christendom has more or less liberally bestowed on them during confinement, unhappily without a hearing. Bismarck's sayings, which with less difficulty crossed the barriers, were too bitter for digestion then, but, if now remembered for their truthfulness, perhaps will be forgiven for their wit. This wit was not disarmed by the capitulation. "I have got what I deserve," said he to Jules Favre, during the negotiations for the armistice; "a man like me writing to a madman like Gambetta! I have blundered, and must expiate it. Do you know what his answer is? It is a paraphrase of Cambronne's *mot*." A *mot* which is known to readers of "Les Misérables." On hearing of the Paris nominations for the Assembly, Bismarck said, with a slight change of the old verdict against the Bourbons: "They have forgotten everything and learned nothing." And when, the question of entering Paris being raised, Picard remarked to him: "You ought to be aware of the significance of the city elections." "Perfectly," interrupted Bismarck; "they went against you." Still better is the dialogue between Favre and the Prussian Chancellor on the same subject: "Be it so," said the latter, "we will not enter; but on one condition—that every time a Paris journal shall say, 'They didn't dare to,' Paris shall pay a contribution of a million thalers." "The price would be too dear," responded Favre.

—Only in its last number (29) does the *Zeitschrift der Gesellschaft für Erdkunde zu Berlin* depart from its single-eyed devotion to scientific explorations, and give any indication that Germany has been at war with France. In its report of the meeting of the Geographical Society in October, we find a few remarks by the President, H. Bastian, on the worthlessness of the French claims to the Rhine country, from an ethnographical and historical point of view; with other remarks by H. Kiepert concerning his historical maps of Alsace and Lorraine (lately described in the *Nation*), in which he called attention to the very slight encroachments made by the French on the *Sprachgrenze*, or line of demarcation between the two languages, in the course of a century and a half of occupation. Attention is also called anew, in a patriotic review of the book, to Richard Böckh's standard work on the number and linguistic area of the Germans in Europe ("Der Deutschen Volkszahl und Sprachgebiet in den Europäischen Staaten—eine statistische Untersuchung." Berlin, 1869.) Böckh was the collaborateur of Kiepert's in making the maps just referred to. In that part of his book which relates to the Germans in France (chap. xi. pp. 151-194), it is estimated that the German-speaking domain (*Sprachgebiet*) embraced 140 geographical square miles and one million of inhabitants.

—In the same number of this admirable journal is an account of the latest contribution to the discussion of Xenophon's line of march to the sea with his Ten Thousand. While no part of this long journey can be said to be known with certainty, there is every probability that in time the most important points will be established. That upon which nearly all the rest hinges is the location of "the sacred mountain Theches," from which the Greeks first saw the sea. Whenever this height is identified, we may reasonably expect to find traces of the stone heap which the soldiers in their joy threw up as a monument. Col. Strecker, who, in the last volume of the *Zeitschrift* (see also vol. x., p. 194, of the *Nation*), mapped out the entire route, selected the Kolât Dagh as the sacred mountain, without, however, pretending to have found the trophy. Another engineer in the Turkish employ at Trebizond, P. Borit, has had the merit of exploring the parallel ranges south of the main range of Pontus, and which have heretofore been supposed to be shut out by it from any view of the sea. He actually found an unnamed peak with a practicable road from which, as he believes, he saw the sea through a gap in the more northern range, and close by were circular stone heaps, of no great height, to be sure—a middle one about thirty (German) feet in diameter, and several smaller ones surrounding it from four to six feet in diameter. An examination of one of these brought to view fragments of coarse red and black clay vessels such as are still in use in the region. All that can be said of this discovery at present is that it suggests further investigation in a quarter where no one had before thought of looking.

—Those who are interested in Aryan (Indo-Persian) studies know well what excellent service was done them, a score of years ago, by Professor R. Roth, of Tübingen. No scholar brought either to the Veda or the Avesta a more penetrating insight, a greater power of combination, or a sounder and more fruitful method. Since that time, he has been mainly absorbed in the great St. Petersburg Sanskrit-Lexicon—a most valuable work, indeed, yet one to which many students have grudged his so exclusive devotion. What he is capable of doing for the Veda when the Lexicon (now nearly completed) is off his hands, he showed a year since by a specimen or two of translation, published by way of criticism upon that great bundle of padding, Müller's so-called translation of the Rig-Veda. No one, we venture to say, who compares the two versions would hesitate as to which of them he would wish to see continued and completed. More recently, we learn, he is availing himself of his intervals of leisure to return to the Avesta; and he has begun a series of contributions upon it to the German Oriental Society's *Journal*, the first being on the point of appearing. In this he explains his method and the principles that underlie it, and translates and expounds the "Honover," or prayer *ahuna vairyo*, one of the most sacred formulas of the Zoroastrian faith, and a hymn from the Gâthâs, the oldest and most difficult part of the Avesta. The interpretation of the Avesta, since Burnouf's beginning, has been almost wholly in the hands of Spiegel and Haug, of whom the former rejects on principle the most valuable aid of the interpreter, comparison with the nearly-related Veda, while the latter is far from possessing the sound judgment and critical insight which should make his work, upon the whole, satisfactory. If the version of the one is set beside that of the other, one hardly sees that both have been at work upon the same material. And, what s much worse, both alike bring out a result that is little better than nonsense. Roth lays down the rule that nothing is to be accounted as understood and translated until a good and consistent meaning is wrought out of it; and he shows practically that sense can be found where it has been hitherto sought in vain. Of the sacred formula, which quite probably goes back to Zoroaster himself, he makes a verse, containing a profession of faith in the better world and in its just ruler, who bears sway also in the present world, and has established in it a guide and comforter for those who are in trouble (that is to say, doubtless, his prophet Zoroaster).

THE ORIGIN OF SPECIES.*

THE author of the "Origin of Species" is more widely known, more eagerly read, more cordially admired, and more emphatically denounced than any other scientific man of the day. The interest in him is in great measure due to the natural desire of humanity to penetrate that "mystery of mysteries"—its origin; the encomiums which even his warmest opponents (excepting those who are filled with the *odium theologicum*) have bestowed upon him are just tributes to his long and faithful labors, and to the modesty which has compelled others to award to him some of the credit he seemed loth to claim; but much, if not all, of the indignation which many good persons feel towards him arises from misconceptions of his ideas respecting the Creator, which have their origin not in his own works, but in those of certain advocates of his general views.

In truth, the candid reader of Darwin's own works can find little fault with his conceptions of the Creator so far as regards their sincerity, although it is evident that he regards the origin of species as a legitimate subject of scientific enquiry, and ignores, as well he may, the vain attempts to reconcile the conclusions to which he is led with the commonly received interpretation of Scripture. So does the author of the "Genesis of Species," who is, however, a professedly devout man, and gives many arguments and quotations, especially in the chapter on "Theology and Evolution," to show that neither "Darwinism" nor any other derivative theory necessarily conflicts in the least degree with the most orthodox religious convictions.

This leads to the needed correction of another grave misconception—that "Darwinism" is synonymous with "derivation" or "evolution," and that either of these terms is equivalent to "transmutation." This idea has not only crept into the book catalogues, where all works upon the origin of species are grouped together under the title "Darwinismus," as if they treated of merely local varieties of the same intellectual epidemic, but it has also caused many who feel that Darwin's particular theory is wrong to oppose all theories whatsoever involving the derivation of higher forms from lower.

A sketch of the views which preceded his own is prefixed, by Darwin, to the later editions of his work; but we have nowhere met with any grouping of these and subsequent theories which exhibits their relative

* "The Origin of Species by means of Natural Selection. By Charles Darwin, F.R.S." Fifth edition. (Am. reprint.) New York: D. Appleton & Co. 1871. Pp. 447. 8vo.
"The Genesis of Species. By St. George Mivart, F.R.S." London and New York: Macmillan & Co. 1871. Pp. 296 (with illustrations).

nature. Such a classification we venture to offer here, admitting the impossibility of more than indicating the salient points of each theory and the names of a few of its more zealous advocates. We have also thought it best to omit the hypothesis of "acceleration and retardation,"* recently proposed by Professor Cope, and spoken of by Principal Dawson as, in his view, "the most promising of all."

	Family.	Genus.	Species.	Supporters.
Creation	Independent	Production of adults		Milton.
		Production of eggs		Swedenborg.
	Derivative	Production of Varieties	Transmutation	Lamarck.
			Natural selection	Darwin.
				Wallace.
				"Vestiges."
		Production of Species	Ordinary Genesis	Parsons.
				Owen.
				Mivart.
			Parthenogenesis	Ferris.

The above will explain itself to those who are already familiar with the subject, but a few words may be added for others. If the species of animals and plants were created *independently* of all other species, then they must have been made as either perfect and fully formed individuals or as seeds and eggs. The former view is here ascribed to Milton rather than to Moses or to Scripture, because most intelligent people now admit that the earlier chapters of Genesis cannot reasonably be interpreted in their literal sense; so that for a distinct statement of this view we must look to the great English poet, who, however, was not a scientific man.† The idea that organisms were created as eggs, which have a simpler structure, is less difficult to comprehend than the foregoing, but it is not easy to see how this could occur with the higher animals whose young are born *alive*, and not in the form of eggs. A rather vague enunciation of this idea is contained in a little work by Swedenborg,‡ which is probably to be regarded as purely philosophical and not as one of his theological works.

The second and more numerous family of theories is called "Derivative," because they all involve the supposition that in some way the lower and earlier forms have served as the means of producing higher and later ones. But it will be seen that they differ essentially as to the *manner* of this derivation. Lamarck was impressed with the amount of variation in size and form which the parts of an animal may undergo in consequence of their use or disuse, and so indirectly from any desire or "appetency" which the animal experienced, *e. g.*, a fish might thus become a quadruped if forced to live upon the land, and an ape might become a man. The amount of change in any one generation might be very slight, but the next generation would inherit, increase, and perpetuate the transformation.

In the endeavor to give a concise statement of Darwin's own theory, we suffer from an "embarras de richesses;" for not only is his own work one long presentation of it in many different aspects, but each later writer upon the subject has given his particular version, and from a different standpoint. Summary expressions of the theory are given by our author on pages 40, 70, 178, 412, 437; but a more diagrammatic enunciation is that of Wallace, who not only presented publicly an independent theory of natural selection at the same time with Darwin (1858), but has since paid a warm tribute to the latter's work, while expressing a doubt respecting the sufficiency of that theory for the production of man. With a few unimportant changes, his presentation is as follows:§

"1. Tendency of individuals to increase in number, while yet the actual number remains stationary.

"2. A struggle for existence among those which compete for food and endeavor to escape death.

"3. Survival of the fittest; meaning that those die which are least fitted to maintain their existence.

"4. Hereditary transmission of general likeness.

"5. Individual differences among all.

"6. Change of external conditions universal and unceasing.

"7. Changes of organic forms to keep them in harmony with the changed conditions; and as the changes of condition are permanent, in the sense of not reverting back to identical previous conditions, the changes of organic forms must be in the same sense permanent, and thus originate species."

The following passages from the "Origin of Species" may aid the comprehension of what the author admits to be a complex hypothesis:

"There is a struggle for existence leading to the preservation of profitable deviations of structure and instincts" (p. 412). "Natural selection acts solely through the preservation of advantageous variation, and it acts with extreme slowness, at long intervals of time, and only on a few inhabitants of the same region" (p. 108). "It is not probable that variability is an inherent and necessary contingent under all circumstances; variability is governed by many unknown laws" (p. 50). "We are profoundly ignorant of the cause of each slight variation or individual difference" (p. 192). "Nature gives successive variations; *man* adds them up in certain directions useful to him" (p. 40).

We italicize *man* because we are convinced that the grand fallacy in Darwin's theory lies just here, in the assumption that the selection and propagation of useful variations by *man* is in any way comparable to what takes places in nature. What is proved by all his works is this: that, so far as experience goes, no two created things are identical; that in many cases naturalists differ in their estimate of the value of the distinctions existing between individuals, so that what some call varieties others regards as species (a mighty question, which can only be decided by comparing great numbers of individuals of an undoubted species, and especially the progeny of a single pair); that by constant attention, by saving such as meet his wants and rejecting the rest, man has produced very strongly marked varieties, which continue "permanent" so long as this care is given, but which, the instant it is relaxed and a free crossing with other breeds is allowed, show that they are only varieties and not true species by reverting to the original stock. It may also be admitted that in nature a somewhat similar selection takes place, especially under the form of "sexual selection," but there is as yet no evidence whatever that natural species can be compared to the breeds of domesticated animals; and to ascribe to "selection" of any kind the power of originating *species* merely because it can preserve useful individual *varieties*, is as illogical as—if so homely a simile is allowable—to suppose that the man who is able to manage his own house is, therefore, competent to "keep a hotel." Natural selection may be a *true* cause, but it is not shown to be a *sufficient* cause.

It may here be noted that *reversion* is not mentioned in any of the statements of the theory of natural selection by either Darwin or Wallace. Yet the former treats of the subject at length, and even depends upon its agency, after the lapse of thousands of years, to account for the sudden reappearance of otherwise inexplicable structures; so that, if we give to reversion the weight which Darwin himself allows it when it favors his views, his arguments against its action (pages 28 and 160) do not remove what is really a very serious objection to the theory of natural selection as applied to the production of specific forms in nature.

This whole subject is well presented by Mivart in the chapter on "Specific Stability;" and we have alluded to it here because it has always seemed to us to involve a fundamental fallacy which the author of "Natural Selection" is bound to remove.

The object of the "Genesis of Species" is "to maintain the position that natural selection acts, and, indeed, must act; but that, still, in order that we may be able to account for the production of known kinds of animals and plants, it requires to be supplemented by the action of some other natural law or laws, as yet undiscovered" (page 5). This is, we may remark, but one of the numerous evidences that, while the general theory of "derivation" has been steadily gaining adherents even from among its original opponents, yet "natural selection"—Darwinism "pure and simple"—has been, and is still, losing ground even with those who were inclined to adopt it. Huxley "adopts it only provisionally."* McCosh† admits that "it contains much truth, but not all, and overlooks more than it perceives." Lesley‡ says, "All agree that it is true if kept within the regions of *variety*, but it is disputed whether it be true for actual *specific* differences." Wallace denies its sufficiency in the case of man, and Darwin himself has modified his views somewhat in this last edition of the "Origin of Species;" furthermore, he admits "the existence of difficulties so serious that he can hardly reflect on them without being staggered" (p. 167); and that "scarcely a single point is discussed on which facts cannot be adduced often apparently leading to conclusions opposite to mine" (p. 18). Indeed, with characteristic candor, he specifies certain ideas which, if proved, would be fatal: "If it could be proved that any part of the structure of one species had been formed for the exclusive good of another species, it would annihilate my theory" (p. 196). We may, for example, yet learn the use which the "rattle" and the expanding hood have for the rattlesnake and the cobra, but Mivart is inclined to believe they are rather injurious, since they warn the prey (p. 50). Another such "fatal idea" is the doctrine

that "many structures have been created for beauty in the eye of man or for mere variety" (p. 194). And here our author seems to contradict himself when, upon the same page, he admits that "many structures are now of no direct use to their possessors, and may never have been of any use to their progenitors"—a subject which has been well discussed by the Duke of Argyll.*

The theory of natural selection implies that all changes are minute and gradual; and also that only useful structures are preserved and augmented. Prof. Mivart points out the difficulty of explaining the origin of the unsymmetrical form of the flounders, etc. (p. 37), of the limbs of animals which, in their earliest and minutest form, must have been mere buds or roughnesses, and thus rather impediments to the progress of our ancient aquatic progenitor (p. 39). Darwin further admits that "it is impossible to conceive by what steps the electric organs of fishes were produced (p. 184), also that the absence of imperfectly organized forms in the lowest strata of the earth's crust is inexplicable" (p. 292); and his explanation of the absence of the transitional forms which must have existed, according to his theory of "minute modifications in time," between such forms as the elephant, the giraffe, the galeopithecus, the bats, and the ordinary quadrupeds, is very unsatisfactory. His theory of rudimentary organs, also, is extremely imperfect. He accounts for all such from the *disuse of previous perfect organs* (p. 408); but he nowhere hints at the far more essential question as to how these original organs became perfect; for upon his own general hypothesis they must have been rudimentary in the beginning. With regret, and after the closest and most sincere examination of all his remarks upon this subject, we confess that we have rarely seen such an absolute lack of logical argument as is evinced in the section upon rudimentary and functionless structures. In fact, the immense amount of evidence which he has collected does not seem to us to bear upon the main point, the *origin of species*, at all, but only upon the *preservation of favorable individual variations*.

We have not space for further presentation of our own difficulties or those which others have urged against the theory of natural selection, and will simply quote the general grounds upon which Prof. Mivart has been led, with no prejudice against it, to regard that theory as playing only a subordinate part in the production of new species (p. 21):

"Natural selection is incompetent to account for the incipient stages of useful structures. It does not harmonize with the coexistence of closely similar structures of diverse origin."

"Certain fossil transitional forms are absent which might have been expected to be present; and some facts of geographical distribution supplement other difficulties. There are many remarkable phenomena in organic forms upon which natural selection throws no light whatever."

"Still other objections may be brought against the hypothesis of 'pangenesis'† which, professing as it does to explain great difficulties, seems to do so by presenting others not less great—almost to be the explanation of *obscurum per obscurius*."

These difficulties, which are set forth with equal cogency and fairness in the earlier chapters of the "Genesis of Species," have led its author to a view which he alludes to throughout his work, but presents in detail in the chapter entitled "Specific Genesis."

"According to this view, an internal law presides over the actions of every part of every individual, and of every organism as a unit, and of the entire organic world as a whole. It is believed that this conception of an internal innate force will ever remain necessary, however much its subordinate processes and actions may become explicable. That by such a force, from time to time, new species are manifested by ordinary generation, these new forms not being monstrosities, but consistent wholes. That these 'jumps' are considerable in comparison with the minute variations of 'natural selection'—are, in fact, sensible steps, such as discriminate species from species. That the latent tendency which exists to these sudden evolutions is determined to action by the stimulus of external condition."

The part assigned to natural selection is stated as follows:

"It rigorously destroys monstrosities, favors and develops useful variations, and removes the antecedent species rapidly when the new one evolved is more in harmony with surrounding conditions."

Professor Mivart has so frankly admitted the essential coincidence of the above view with the one expressed by Professor Owen in 1868,‡ that we do not hesitate to call his attention to the similar views previously advanced by Professor Parsons, of Harvard University, and by the anonymous author of "Vestiges of Creation;" believing that his own conclusions were reached in entire independence of all of them, as is said of Professor Owen's. The author of the "Vestiges" expresses himself as follows:*

"My idea is, that the simplest and most primitive type, under a law to which that of like-production is subordinate, gave birth to the type next above it, that this again produced the next higher, and so on to the very highest, the stages of advance being in all cases very small, namely, from one species only to another. . . . Yet, in another point of view, the phenomena are wonders of the highest kind, in as far as they are direct effects of an Almighty will, which had provided beforehand that everything should be very good."

Professor Parsons† writes as follows:

"Suppose the time to have come when there is to be a new creation, and it is to be a dog, or rather two dogs, which shall be the parents of all dogs. How shall they be created? . . . The fifth view is, they will be created by some influence of variation acting upon the ova of some animal nearest akin—a wolf, or a fox, or a jackal—and the brood will come forth puppies, and grow up dogs to become dogs."

Besides the above, several other authors (Gray,‡ Argyll,§ and Neale‖) had already hinted at the necessity of admitting the sudden production of new specific forms, in some cases at least; and Darwin himself, as we shall see hereafter, appears to have a dim idea that something of the kind might happen in defiance of natural selection.

Nothing like direct evidence can be given in support of this theory of "specific genesis;" but the question really is, as stated by Parsons, whether, as a provisional hypothesis, it is not, on the whole, less improbable than any other, and open to fewer objections. Those who, like Spencer, are unwilling to admit the action of any but known physical laws and agencies, may say, and truly, that the supposition of an "innate internal tendency" only removes the difficulties one step further back, and is at best merely restating the case in a general way; but little more can be said of the theory of gravitation.

TAYLOR'S FAUST.¶

EACH new translation of a great poem, whether or not it does anything else, at least is sure to remind us that the world seems never to have been able to make up its mind as to whether there be such a thing as real translation at all. If, as now and again happens, the translator himself does not accompany his work with an elaborate defence of some particular theory of translation, aiming to show that it is the only true theory, the critics, at any rate, on their part, greet his performance either with expositions of the utter impossibility of really translating poetry out of one tongue into another, or with arguments to prove that the translator has worked under a false theory, or, if so be he has chosen the right one, has worked badly under it, and failed to do anything deserving of the name of true translation. "Translation is travesty," the French critic says. "The French are in the right," says the English critic, "to name translation by our word 'traduction;' and the Germans did as well when they called translating 'oversetting.'" "Traduttore, traditore," say the Italian critics; and it may be doubted if most poets, not translators, would not confess themselves of the same mind as the critics. A man would not be over-bold who should say that there never will be translated poet who, however much pleased at the thought of a fame spread abroad in lands other than his own, will not feel a peculiar satisfaction and a peculiar pang in reading that colloquy which took place between Bottom and his friends, Snout and Quince, when they were all in the wood together:

Snout.—O Bottom! thou art changed. What do I see on thee?
Bottom.—What do you see? You see an ass-head of your own, do you?
Quince.—Bless thee, Bottom! bless thee! thou art translated.
Bottom.—I see their knavery: this is to make an ass of me. . . . But I will not stir from this place, do what they can.

Cary Miltonizes Dante; Newman makes of Homer a mere ballad-monger, and robs him of strength and noble simplicity; Lord Derby's "Iliad" shows care and scholarship, and has other good qualities, but the fire and nobility of the original—where are they? "A very pretty poem, but not Homer," is what Pope made; Tasso, in Wiffen's hands, is Tasso and a Quaker; Cowper Miltonizes and Thomsonizes Homer; Chapman makes of Homer an out-and-out Elizabethan—and it is a question, Mr. Lowell would say, if Chapman did not, at that, leave him more Homeric than any one else who ever attempted to take him out of the Greek; what becomes of the elegance of Virgil in Mr. Conington's octosyllables? would Mr. Longfellow, or

Dr. Parsons, or Mr. Rossetti, or Mr. Cayley say that they had truly translated Dante's poem? or would they say that they had done the best they could, and that they had succeeded about as well with the poem as the rest of the world did with the title when Divine Comedy was put for Divina Commedia?

These questions and assertions are all familiar as household words, and would seem to show with sufficient clearness that the world of poets and critics, whatever each poet may think of his own capacity to act as translator, has really decided that whether or not a true translation be a possible thing, it is at all events a thing that has never yet been done. And as for the probabilities that it may yet be done, if one asks among the poets and critics about the rules that should govern those who attempt translation, or about the ends he should have it in view to effect, one finds nothing as to which there is anything like common consent except the vague, imperfectly true, and almost perfectly useless maxim, that "it needs a poet to translate a poet." Doubtless this maxim is, in a way, and to some extent, true; this at least it does—it points to the fact that so very much of the charm of poetry consists in the most imponderable and intangible and subtle associations of thought and feeling and language, that only a soul disposed by nature to the discovery and keen enjoyment of such associations, and a mind skilled and habituated to fitting them with speech, can hope to have any success in the translation of most kinds of good poetry. But it is a maxim not calculated to be of service in the guidance of any translator's labors, and leaves altogether untouched nearly all those considerations which make translating the despair of the fraternity of poets, and the temptation of so many of them individually.

But despite all this, there will never be an end to translations, for the appearance of each new one, distinctly as it may remind us that the world of poets and critics believes that translation is of the nature of travesty, also bears witness to this other truth—that the world in general wants translations, and steadily demands them, and enjoys them without troubling itself at all about the really perfect translation, or caring much about the imperfectness of such as it gets. It is an unhappy insensibility—or a happy insensibility; but so long as people in general get what they regard as the essentials of a great poem—its greatness of thought and spirit and fineness of feeling—they do not much mind if they lose most of the prettinesses or even most of the lovely charm which is perhaps most surely of the essence of it, as a poem strictly so-called.

If, in addition to getting the great things, as they judge them to be, of this or that great man's message to the world, they get also more or less knowledge of him and of it, considered as a historical figure and a historical monument—if, for instance, they learn to know the Divine Comedy for its imaginative treatment of the spiritual world of the hereafter; for its wrath, terror, tenderness, subtlety, purity, intensity; for all of its Francesca and Ugolino, for a certain part of its Beatrice, and for its Dante as there revealed; for its noble literary style—if, in addition to getting this from it, the world in general get from the translated Divine Comedy some notion of what mediæval Christianity was; what were the admired forms of mediæval Italian poetry; what Italy and her politics were so many hundred years ago; something about this Dante whose name is one of the great names among men; why, the world in general is going to keep on getting translations made for it, and to give itself small concern either with the difficulties or the niceties that perplex the poets when in presence of this subject. It is not so puzzling, after all, as some have found it, that Mr. Emerson should have made that remark of his which has displeased and highly amused the accurate philological scholars, and consternated and horrified certain poetical minds. It was to the effect that it is labor lost to acquire languages for the sake of their literatures; that a man might as well cross the seas himself for such foreign articles as he should want instead of letting them be brought him by ordinary commerce; that everything necessary to us from foreign literatures can be got in translations. This would seem to be doubtless true in the case of a poetical mind of the quality of Mr. Emerson's, which may be said to hunger and thirst for the central and eternal truth of things, and to have too little appetite for what it perceives to be the adventitious and accidental; or what it thinks—or chooses to think—the adventitious and accidental. And these latter are terms which it would apply to much that not only the minor and false poets, but to much that the true poets would deem to be of the essence of poetry, and not of its trappings or coverings. And in another way it is doubtless true, for obvious reasons, that to people in general translations of poetry are, for obvious reasons, as good as the genuine poem dressed in all its beauties.

Mr. Taylor's translation of the "Faust" is prefaced by a plea for a version which shall retain the "form" of the original. This "form" consists in the metres and rhymes, he would seem to say, and a version which follows the metres of the original as closely as the relation between the English language and the German allows, will, he thinks, be a far better rendering of the poem than any literal version can be. He would seem to hold that a literal version is *ipso facto* prosaic, and that a metrical version is very likely, in virtue of its metres merely, to be a more poetical version than any version in prose. He is even at pains to talk at some considerable length of the conservatism of our literary standards, and of the underrated resources of English poetry in the matter of dactyls, and so on; as if dactyls and iambs and trocheés and all the rest of them had not figured for generations in English literature, and in the text-books that teach the art of English composition to boys and girls at school. No one would think of denying what Mr. Taylor is strenuous to assert—the necessary connection of rhythm with poetry; but there are always multitudes of people who, asserting this, and having no understanding of its meaning, afford proof the most conclusive that to any rhythms or rhymes, however elaborate, it is poetry alone that can give the least poetical value. "If you are literal in translating," Mr. Taylor would say, the "'form' vanishes, and 'no one familiar with rhythmical expression through the needs of his own nature' will say that the form of a poem is of secondary importance." To this the reply of the literalists would be, that the "form" of a poem cannot be said to reside exclusively in its metres, but may with far more truth be said to reside in such choice and such presentation of certain truths of nature and life as shall make them beautifully affecting, and so, instructive while delightful.

The objection, they would say, to trying to give the superficial form is that the difference in languages is such that you cannot at once make with two of them the same music and express the same thoughts; and the temptation is to sacrifice the thought to the music, while the best result of the attempt, except in some lucky instances of very rare occurrence, is to make the thought concede a little to the music, and the music a little to the thought, so that definiteness of meaning is sure to lose something, is likely to lose much, and so also are the sweetness and vagueness of suggestion sure to vanish away.

However, we did not intend to be led into any discussion of a question so long mooted and so incapable of settlement as we have already admitted the question of the best theory of translation to be. In the particular case of Mr. Taylor, the comparatively new phase of the controversy which he represents we thought it worth while to note. That a foreign poet should be so brought over to us that we may regard him as our own; that the translator should give us poetical equivalents rather than require us to transport ourselves over to the foreign poet and adopt his situation; but that the translator should as often as possible give us precisely the same thing that the foreign poet gives his native auditors, and not put us off with an English equivalent for the German or Italian or French original—this is one of the several accustomed views of the translator's duty, and as such may well be allowed to pass without more of fruitless challenging and colloquy. Not so, however, as we think, with Mr. Taylor's variation of the general term. This, it seems to us, it will be well for many of us to consider carefully. To us, ourselves, it seems to lay inordinate stress upon the mechanics of poetry, and to be capable of doing harm. To get men of our race and time to think enough about "form" is no doubt very difficult, and to accomplish it would, no doubt, be very well. But to let ourselves be bedevilled by intricacies of construction and then talk about "art" as some of us do, is as much like caring for "form" as cutting a tree into wooden Nuremberg toys is like saving it alive and working with spade and pruning-knife in assistance of the elemental forces which shape it in accordance with the natural law of its growth.

Mr. Taylor has spent much labor for some years on this rendering of the great poem of his choice, and to our mind he has had a better success than any metrical predecessor of his who has attempted the "Faust" as a whole. With Hayward's prose translation for the sense, and Mr. Taylor's for the metres, and for collateral light on numerous passages, the reader who knows no German may get as good an idea of the poem as is perhaps possible. That he really gets the poem *qua* poem, apart from its metres, more fully and surely by reason of Mr. Taylor's labors in verse than if that gentleman had put his translation into prose or had corrected Hayward, we do not think; in our opinion, the *poetical* translation of "Faust" Mr. Taylor has not brought essentially nearer. But the praise of skilful and patient labor certainly belongs to him, and of labor with unusually good result. As formerly, it is as poet that he fails, and his translation may without unfairness be described as a dilution of Goethe's poetry with poetry

of Mr. Taylor's, but still a good translation of the sense of the original. Judged by its author's intention, it will not be pronounced a success; but judged by the success of others it will be pronounced meritorious, though not of a superiority to give it unquestioned precedence.

Except for its inconvenient size, the volume is admirable so far as publishers and printers could make it so; and the translator's editorial work is accurate, full, and helpful. The "Helena" is to succeed the First Part of "Faust," which, so accompanied, will have a decided advantage over other editions in English.

GINX'S BABY.*

It is not surprising that a satire so admirably well conceived as this, and aimed at abuses so keenly felt and so wide spread, should have attained a remarkable popularity. Everybody can read it with pleasure for the sake of the keenness of its satirical hits and its admirable style, although the nature of the grievances discussed and the apparently hopeless insolubility of the problems presented are certainly not matters for other than the saddest reflections. The condition of the very poor in England—a country which produces more wealth in proportion to the number of its inhabitants than any European country, and yet in which two millions of people are said to be, in one way or another, dependent upon charity for the means of subsistence—is most vigorously depicted in the person of Ginx's baby. That unfortunate child is the thirteenth scion of the Ginx family—Ginx being a stout navvy, earning at the best of times eighteen or twenty shillings a week, and living in a couple of rooms, the larger of which is something under fourteen feet square. Even at the birth of the Baby's immediate predecessor, Ginx was beginning to find himself somewhat crowded for room, and to feel serious misgivings as to his ability to feed all the little Ginxes, and he advised his wife that, if she were so inconsiderate as to make another addition to a quiver already so inconveniently full, he should be obliged to drown it in the nearest water-butt. Undeterred by this consideration, number thirteen put in a rash appearance eighteen months after number twelve, and Ginx, as good as his word, laid instant hands upon his son, and started with him in the direction of Vauxhall Bridge, accompanied by a deprecating crowd of women and small children, and followed by his wife's lamentations. He is met a few yards from his own door by a philosopher of the Malthusian school, who has no practical suggestions to offer as to the disposition of the child, but who enquires with a sad gravity how Ginx could reconcile it with his conscience to become the father of "such a monstrous number of children as thirteen." The conundrum is too much for Ginx's limited intelligence, but the question is taken up by a stonemason who stands by—a sort of Methodist "local preacher," who puts very well the case of the ordinary instincts of humanity against the philosophy of repression. Ginx, meanwhile, delayed for a moment by the talk, goes on in the direction of the water until he is stopped by a "Sister of Misery," to whom he consigns the child on her promise never to return it to him. Thereupon the baby is taken to a convent, where its mother visits it twice a day for the purpose of nursing it, and where it becomes the pet and plaything of the nuns, who conceive the idea of bringing up the boy among them as a saint. Very soon, however, the religious scruples of the sisters, on the one side, and the obstinacy of that "low-class heretic," Mrs. Ginx, on the other, come into abrupt collision.

Will not heretical milk fatally prejudice the future sanctity of the child? is the question which occurs to the too scrupulous mind of Sister Pudicitia—and as a precaution she proposes that the mother shall be daily signed with a sacred sign before she is allowed to take her child. But Mrs. Ginx's creed, though a short one, is held with unflinching tenacity. As its primary article, she "believes in God, giver of bread, meat, money, and health," and, as corollaries, "in the Church of England, in heaven and hell," and hates "Popery, priests, and the devil." To the sign of the cross she objects that she "couldn't sleep with them things on her," and prefers to abandon all care of her child rather than submit to it. She spreads the story of her grievances, however, and it is not long before the "Protestant Detectoral Association," hearing of this new encroachment of "the beast with seven heads," sends an agent to Mrs. Ginx to get the full, true, and particular account of her wrongs. He has been told that "the child was carried off from his mother's bedside in broad daylight by a nun, accompanied by two priests and a large body of Irish;" and, though somewhat disappointed to find the case not precisely as represented, finds that it "looked bad enough, and might be made worse. It was the very case for the Protestant Detectoral Association." A writ of *habeas corpus* is obtained with some difficulty, and the baby is produced in court, enveloped in a blanket embroidered with little crosses and carried in Sister Pudicitia's arms. It is so clearly shown that the father gave away the child, and has no desire to reclaim it, that the nuns are allowed to carry it home in triumph. Their victory is a costly one, however. Their windows are broken by a mob, and, worse than all, their very souls are wrung by the irreverent way in which the baby himself, unmindful of all proprieties, ejects the "consecrated pap" on which they feed him over a chasuble in which they wrap him on the occasion of "laying him on the steps of the altar," in order that he may "assist" at the Mass offered for his preservation. They give him up, therefore, voluntarily, to the "Detectoral Association," and that body prints placards and calls monster meetings in order to decide what shall be done with the "Great Protestant Baby." A kind-hearted duchess provides fine linen for the child, and he is presented to the meeting assembled in "Philopragmon Hall," lying in a cradle, and with his six-weeks-old head resting, not too comfortably, we may suppose, on a Bible. His new friends are unable to come to a mutually satisfactory conclusion as to the disposition to be made of him. From the Baptist who thinks the first thing to be done is to "rebaptize him in a sufficient quantity of water," to the radical Mr. Ogle who thinks a good secular education should be provided for him, there is no intermediate shade of opinion which does not insist upon a hearing and a practical concession. The debate is long and stormy, and the baby gets hungry and cross. No member can be found who is willing to carry it home with him to his wife, and it is hurriedly handed over to a strange woman who volunteers "for love of the cause" to give it temporary shelter. Two or three hours afterward, the "Great Protestant Baby" is found by Policeman X. shivering on a doorstep, with only a copy of the *Times* by way of covering. It is presently recognized to be Ginx's baby, and the Detectorals are put as nearly to the blush as nature permits. They recover themselves, however, and the child is made again the subject of a public demonstration. Another Bible and more clothes are provided, thirteen hundred odd pounds are subscribed for his support, and during frequent meetings which are held in the course of the ensuing year—meetings whose expenses are paid out of the funds collected for the child—he is not only made to do duty as a great anti-Popery panacea, but it is pretty nearly unanimously decided that, when he is of an age to be taught, he shall receive a strictly secular education during school-hours, but that for the remainder of the day he shall be visited in turn by preachers of all sects, and instructed by them in their various and peculiar tenets.

But this is no sooner happily settled than a bill, presented by the person to whom the child has been in the interval assigned, so disturbs the harmony of the meetings that a quorum is never thereafter to be obtained, and both the cause and the baby suffer from neglect. The latter is discarded by his nurse and thrown upon the parish. The state of the poor-laws is severely satirized in the history of the fight between two adjoining parishes, each of which desires to get rid of the child and to foist it upon his neighbor. The baby, whose pedigree, as a half-wit in the alms-house remarks, "goes back for three hundred years," and "began with Poverty out o' Laziness in Queen Elizabeth's time," is wrangled over, neglected, and almost starved, until a lucky accident again discovers his parentage. He is at once restored to the unlucky Ginx, who, being on the point of emigration, is by no means pleased to see him, and who, on the eve of sailing, deposits him on the steps of the Radical Clubhouse and leaves him to his fate. Sir Charles Sterling, a kind-hearted but not over-practical philanthropist, brings him into the Club, where he furnishes the immediate topic of various talks on the subjects which he suggests. Among other things, Sir Charles proposes that Government should charge itself with the emigration of a million or two of its superfluous population, and asserts that "but for human selfishness we might hope for an Utopian era—when, while it should be ruled that, if a man would not work, neither should he eat; there should also be brought home to every man the poorer, or weaker, or less competent brother. I never expect to see that. I do hope to see the men of greatest ability pay more generously for the privileges they enjoy. The best policy for them, too. The better the condition of the general community, the better for themselves. You cannot alarm me with epithets. But these views are happily not essential to the support of the emigration policy." The baby, meanwhile, over whom so many people are perplexing themselves, grows up under the patronage of the Club; and, though taught nothing at all, is kept provided with food and clothes. Arrived at tolerably advanced boyhood, and growing tired of alternate petting and snubbing, he helps himself to some

* "Ginx's Baby. His Birth and other Misfortunes. A Satire." Second American from the sixth London edition. New York: George Routledge & Sons. 1871.

of the Club forks and spoons, and decamps at the very time when Lord Munnibagge, the political economist, has just established, in his place in Parliament, "that there is no necessity for the interference of Government in the case of Ginx's Baby or any other babies or persons. The lucid and decisive statement of the Secretary for the Accidental Accompaniments of the Empire has shown how impossible it was for the Imperial Government to take part in a great scheme of expatriation; how impolitic to endeavor to affect the ordinary laws of free movement to the colonies."

The after-history of Ginx's Baby is but brief. Leaving the shelter of the Radical Club at fifteen years old, he tries in vain to take care of himself. "Wherever he went, the world seemed terribly full." There was no room for him in the ranks of honest trade, "and even the thieves to whom he gravitated were jealous of his accession, because there were too many competitors already in their department."

Lounging one night on Vauxhall Bridge, the historian of his unfortunate career was startled by the sudden splash of a human body into the water. "I did not then know what form it was that swilled down below the glistening current. Had I known that it was Ginx's Baby, I should perhaps have thought: 'Society, which in the sacred names of Law and Charity forbade the father to throw his child over Vauxhall Bridge at a time when he was alike unconscious of life and death, has at last itself driven him over the parapet into the greedy waters.'

"Philosophers, philanthropists, politicians, Papists, and Protestants, poor-law ministers, and parish officers—while you have been theorizing and discussing, debating, wrangling, legislating, and administering—Good God! gentlemen, between you all, where has Ginx's Baby gone to?"

Recent Republications.—The honor of a fifth edition which has been bestowed on Prof. Pumpelly's "Across America and Asia" will not be thought unmerited by those who have read this entertaining book of travels. We trust, indeed, that the author is only beginning to find his audience, now that his work—with text unabridged and illustrations preserved—is issued by Messrs. Leypoldt & Holt in a cheaper dress, which is still good enough and handseme enough for all but the fastidious. As our review of it must be tolerably fresh in the minds of most of our readers, we need only call attention to the reduced price which now brings it within the reach of almost any one desirous of owning it. The same house confers another favor upon the reading public by its cheap edition of Taine's "Italy" (Rome and Naples, Florence and Venice—two volumes in one), a book of travel not surpassed of its kind, whether or not we wholly agree with the art-judgments of the author, or think it fortunate for the School of Fine Arts in Paris that it forced M. Viollet-le-Duc to yield his professorship to M. Taine. What every reader may, however, thoroughly enjoy is M. Taine's style, and his descriptions both of works of art and of scenery; and for a small sum one may now make of him a guide and companion in four of the most interesting cities in the world.

We spoke in our last volume of the merits and demerits of Rawlinson's "Manual of Ancient History," the former by far outweighing the latter. It is now reprinted by Messrs. Harper & Bros., and from its authority and its method will be found of great utility as a handbook of reference and as an aid to historical enquiry. Almost every page contains an enumeration of the best sources of information on the subject under notice, and this alone would be of the highest value to students, even if the outline which it supplements were less excellent than it is. The Harpers have added to their hitherto complete edition of Tennyson's "Poetical Works" his recent "Songs of the Wren," with Mr. Arthur Sullivan's musical accompaniment—the libretto, as in most cases, being a good deal inferior to the music. They have also issued the first volumes (The Gospels, 2 vols., and Acts of the Apostles) of the revised edition of "Barnes's Notes," on which the lamented author had been engaged nearly to the time of his death. The volumes are well printed and neatly bound, and illustrated with numerous woodcuts and maps. The remainder of the series is in press.

Messrs. D. Appleton & Co. republish, in a style resembling that of their uniform edition of Grace Aguilar's works, "The Heir of Redclyffe" and "Heartsease," each in two volumes; and we presume that they intend to follow it with other of Miss Yonge's tales, of which the first is perhaps the best known.

No one volume of the Hans Christian Andersen series which Messrs. Hurd & Houghton are publishing in their always clear and handsome manner will exceed in interest for the nursery the full duodecimo (532 pp.) called "Stories and Tales." It opens with the classic "Picture Book without Pictures," and then come nearly eighty stories of various lengths, and all of the quality which have made Andersen the favorite of both children and parents. Together with the "Wonder Stories told for Children" already issued, it embraces the whole of the author's shorter and lighter pieces.

The "Reign of Law," by the Duke of Argyll, has been reissued, we believe from the English plates, by Messrs. De Witt C. Lent & Co. It is, we need hardly say, an authoritative treatise, which every one must consult who is interested in the discussion of the origin and variation of species.

It is twenty-six years since Professor Longfellow, then a young man, published his "Poets and Poetry of Europe," when European literature was a locked treasure to most people, and translators were just beginning to fumble at the wards. The key turned slowly, and only to a favored few was revealed a glimpse of the riches within. We remember well what pleasure the book brought with its strange foreign flavor; how we "sucked at the flagon," and relished the change from plainer fare. The spirit and grace of the renderings, the skilful analyses of the introductions, combined to give it permanent value, and from that day to this it has held its place as a standard of reference and quotation. The revised edition just published by Messrs. Porter & Coates includes 137 pages of new matter carefully prepared. This supplement, whose only fault is in being a supplement and not an incorporation with the original book, opens with "The Hava Mal," a singular fragment of Icelandic verse. This "Sublime Discourse of Odin" is a series of wild rhythmical apothegms, full of barbarous wisdom:

> "Praise the day at eventide;
> The wife when she is dead;
> The sword when thou hast proved it;
> The maid when she is married;
> Ice when thou hast crossed it;
> Ale when thou hast drunken it.
>
> "In wind cut thou firewood,
> In wind sail the ocean,
> In darkness woo a maiden,
> For many eyes has daylight."
>
> "Small are the sand grains;
> Small are the water drops;
> Small, human thoughts:
> Yet are not these
> Each of them equal,
> *Every century bears but one man.*"

The next department, Danish poetry, contains the beautiful hymn, "Sorrow and Gladness," written by Kingo, and translated by Mrs. Howitt. A brief Swedish chapter follows, then the German, which is unusually rich and full; Brooks, Bayard Taylor, Leland, Dean Trench, and Catherine Winkworth being numbered among the translators. Here we find "The Cherubic Pilgrim," by Angelus Silesius, the mystic poet of the seventeenth century. Next in order comes the Dutch—represented by a single poem—"The National Song," by Hendrik Tollens; then the French, full of charming things, among which we note Mrs. Wistar's renderings of Alfred de Musset, and Cary's delightful version of Bellau's "April." The Italian portion opens with the quaint "Lover and Lady" of Ciullo d'Alcamo, written in the twelfth century, a dialogue after the fashion of our own "Nut-Brown Maid." The translation by Rossetti is admirable and graceful. Mr. Howells contributes some capital work to this department. The chapter on Spanish poetry gives portions of two of Calderon's dramas, and several beautiful versions by Mr. Bryant. A couple of Gil Vincenti's lovely songs from the Portuguese close the supplement and the book.

66 Nassau Street, New York.

NEW BOOKS.

I.

GOETHE'S FAUST.

Translated into English Verse by Bayard Taylor.

PART SECOND, COMPLETING THE WORK.

Uniform with Longfellow's Dante and Bryant's Homer.

1 vol. imperial 8vo, $5. The Poem complete, 2 vols., cloth, $10; half-calf, $20.

No translation of the Second Part of "Faust" has heretofore been published in the United States. The four or five English versions were produced before the German critics had discovered the true key to Goethe's meaning, and they therefore give a very inadequate representation of the original. None of them reproduce the great richness and variety of the German metres, or are accompanied with notes which satisfactorily explain the more difficult passages of the poem.

Mr. Taylor's translation is the only one which completely gives the form of the original, and which also contains those illustrations which the reader needs in order to follow Goethe's grand design. The Second Part has often been looked upon as a sealed book to most readers; but, since the true interpretation has been discovered and is generally accepted in Germany, the time has arrived when the stores of Beauty and of Wisdom contained in the work should be made accessible to all who appreciate the passion and pathos of the First Part.

II.

TOPICS OF THE TIME.

By JAMES PARTON.

1 vol. 12mo..... ....$2.

CONTENTS:

Uncle Sam's Treatment of his Servants, The Yankees at Home, Congressional Peccadilloes, International Copyright, Our Roman Catholic Brethren, How Congress wastes its Time, The Clothes Mania, Log-Rolling at Washington, Our Israelitish Brethren, Correspondence of Napoleon Bonaparte, The Government of the City of New York.

Many of the papers in this volume relate to some of the most important questions now claiming public attention, while all of them are of timely interest, and are treated with the fulness of research and the pungent force of statement characteristic of Mr. Parton.

III.

REGINALD ARCHER.

By the Author of "Emily Chester," "Opportunity," etc.

1 vol. 12mo, $2.

This new story, from one who has twice before enlisted the eager interest of the reading public, promises to attract unusual attention. It is characterized by the same intensity of power and purpose that so strongly mark the other writings of this gifted author.

IV.

THE SILENT PARTNER.

By Elizabeth Stuart Phelps, Author of "The Gates Ajar," "Hedged In," etc.

1 vol. 16mo .....$1 50.

Like the previous stories of Miss Phelps, "The Silent Partner" possesses a dramatic and absorbing interest for all readers, while its graphic and thoughtful presentation of some evils of the present labor system, as developed in the experience of factory operatives, gives it a deeper and more commanding claim to public attention.

JUST PUBLISHED BY

GOULD & LINCOLN,

59 WASHINGTON STREET, BOSTON,

THE

Annual of Scientific Discovery;

OR,

YEAR-BOOK OF FACTS IN SCIENCE AND ART, FOR 1871,

Exhibiting the most important Discoveries and Improvements in Mechanics, Useful Arts, Natural Philosophy, Chemistry, Astronomy, Meteorology, Biology, including Zoölogy, Physiology, and Botany—Mineralogy, Geology, Geography, Antiquities, etc., together with a list of recent Scientific Publications, Obituaries of eminent Scientific Men, etc. Edited by

JOHN TROWBRIDGE,

Professor of Physics in Harvard University, assisted by

W. R. NICHOLS,

Professor in the Massachusetts Institute of Technology, Boston.

12mo, cloth, price $2.

This volume embraces a record of a vast number of remarkable discoveries, important facts—curious, entertaining, and highly instructive—for the Farmer, the Mechanic, the Merchant, the Lawyer, the Physician, the Statesman, the Clergyman, the Scientific Man, the Artist, the Teacher. And no School, no Academy, no College, no Town, no State, nor *any* well-selected private library, should be without this work.

JUST PUBLISHED.

The Romance of the Charter Oak;

A PICTURE OF COLONIAL TIMES.

BY

WILLIAM SETON, ESQ.

Two vols. 12mo, cloth, bevelled, $4.

In the production of this work, Mr. Seton has at once taken his place in the front rank of American writers of fiction. "The Romance of the Charter Oak" is not only a charming novel, but it is, besides, a valuable contribution to history. His narrative fascinates by its very simplicity and naturalness. It is, we believe, the first of a series of Historic Novels, which, judging from the author's ability and research, will afford instruction and entertainment to a large number of readers.

P. O'SHEA, Publisher, 27 Barclay Street.

MACMILLAN & CO.'S

New Publications.

ON THE GENESIS OF SPECIES. By St. George Mivart, F.R.S. With Illustrations. $2.

"This work abounds in the fruits of extensive and accurate knowledge; the singular honesty of its reasonings and illustrations inspires the highest degree of confidence in his statements; and in his manly and generous appreciation of Mr. Darwin, even when he comments most severely on his ideas, he always shows himself 'a foeman worthy of his steel.'"—*New York Tribune.*

"In no work in the English language has this great controversy been treated at once with the same broad and vigorous gush of facts, and the same liberal and candid temper. The range and depth of Mr. Mivart's learning are as conspicuous as that unvarying courteousness of tone which we have by no means been used to meet with in most phases of the same stripe."—*Saturday Review.*

TALES OF OLD JAPAN. By A. B. Mitford, Second Secretary to the British Legation in Japan. With Illustrations drawn and cut on wood by Japanese Artists. 2 vols. crown 8vo, $5.

A DEFENCE OF HOLY ORDERS

IN THE CHURCH OF ENGLAND,

Including the Statutes, Documents, and other evidence attesting the validity of Anglican Orders. With a facsimile of the Record of Archbishop Parker's Consecration, Photozincographed. Printed in Latin and English. Edited by the Rev. T. J. Bailey. Folio, cloth, price $15.

"I know of no treatise on the Orders of the English Church that can at all take the place of Mr. Bailey's noble work. It is simply invaluable."—I. Williams, Bishop of Connecticut.

"This work is a luxury for the Library, and a most valuable supplement to all that has been written on the Orders of the Church of England."—A. Cleveland Coxe, Bishop Western New York.

"The 'Defence of Holy Orders in the Church of England' is a timely and valuable book."—Wm. Crosswell Doane, Bishop of Albany.

"A copy of this work should be in the hands of every Bishop, and in the Library of every Church, College, and Theological Seminary in our land."—George F. Seymour, Professor of Ecclesiastical History, General Theological Seminary, New York.

"Of this invaluable work, as an instrument of light and power in the advancement of the Catholic unity, we know not how to speak without seeming oversanguine. We bespeak for it a place in the library of every Bishop and Priest, College, and Seminary in the land."—Church Journal.

"Mr. Bailey has, with almost superabundant pains, given us not only the whole documentary account from the Lambeth Registers, both in Latin and English, but also a Photozincographic fac-simile of the documents themselves."—Saturday Review.

"We owe thanks to Mr. Bailey for this handsomely printed and great effort to lay the case fairly before Foreign Churches."—Guardian.

"The whole sum and substance of the controversy upon Anglican Orders is arranged with documentary proof in the sixty-five folio pages of the English portion of this beautiful Monogram."—Church Review.

POTT & AMERY,

COOPER UNION, FOURTH AVENUE, NEW YORK.

PRATT'S Astral OIL.

Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.

Oil House of Charles Pratt, Established 1770, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 30, 1871.

The Week.

Mr. Sumner delivered his expected speech on Monday before a crowded house. The speech was rather an attack on the Administration than a condemnation of the annexation as annexation; that is, was rather a condemnation of the means than of the end. He went over much of the ground traversed in his former speech, and showed conclusively, by extracts from official correspondence, and other testimony, that Baez is an adventurer, without any proper authority or color of authority to sell the Dominican territory; and that his antecedents are all of a nature to make him an object of suspicion, and prevent any government entering into any negotiations with him which *de facto* power simply on his part would not be sufficient to sustain, and negotiations for the cession of territory are certainly in this category; that his position at home is so insecure that he made repeated appeals for the armed support or "the moral support" of armed vessels of the United States, both against domestic revolution and foreign attacks; that this was afforded him freely before the annexation treaty was submitted to the Senate, and has been afforded him ever since; and that threats of a very violent kind, conveyed on one occasion, against all usage, through an admiral to the President personally, have been addressed to the Haytian Republic, to prevent its interfering with and molesting the Baez régime in Dominica, rendering the conclusion inevitable that if a state of war really exists between Dominica and Hayti, we have become parties to the quarrel. Mr. Sumner concluded with the very just observation that if President Grant "had bestowed on the state of the South one-half the zeal, will, personal attention, personal effort, and personal intercession which he has bestowed on his attempt to obtain half an island in the Caribbean Sea, the Southern Ku-klux would have existed in name only." There is a painfully large amount of truth in this. It has been said that Mr. Sumner should have waited the presentation of the Commissioners' Report before making his speech. This is an objection which may perhaps be made on grounds of taste, but hardly on grounds of justice. Nothing the Commissioners can say, or can have learnt, can shake the force of Mr. Sumner's criticisms of the course pursued by the Executive in trying to bring annexation about.

The Secretary of the Navy has been trying to do away with the effect of Captain Temple's letter to Senator Wade, announcing that there was a state of war between the United States and Hayti, first by throwing doubts on its authenticity and then by declaring that its inferences are not warranted by facts, and finally by citing Mr. Madison's occupation of West Florida, in 1811, as a precedent justifying the course of the Executive in San Domingo. We do not know what facts may be still concealed, but, on the facts now known, there is no manner of doubt that the relations the President has entered into with Dominica do amount, or would amount if he had the constitutional power to do what he has undertaken to do, not only to a defensive alliance with, but to a guarantee of, Baez's government, and do place the United States in hostile attitude towards Hayti as an enemy of Dominica, and would compel the United States forces to protect Baez against a rising of his own citizens. The Secretary's theory is that the United States, having entered into negotiations for the purchase of a "valuable acquisition," is bound to see to the security of "the acquisition" till the bargain is completed, which is simply, applied to the present case, a monstrous doctrine, because, in the present case, the title of the vendor is disputed. If A offers C a horse for sale very cheap, and B comes up during the negotiation and claims the horse, and offers to show that A stole it and is a noted horse-thief, the part of C, if an honest man, is certainly not to draw a pistol and offer to protect A against all comers till he can hand the animal over, but to stand aside and wait till the question of ownership is settled. If Baez be really a rogue, it is hardly becoming for the United States to act as his "pal." Besides which, Mr. Madison's occupation of West Florida was not a case in point. In that case, the United States claimed the territory under a treaty with France already concluded, and occupied it lest the other claimant, Spain, should do so. In this case, we have no title whatever to St. Dominica, or color of title, or any good reason, in law, morals, or usage, for protecting Baez either against home or foreign enemies.

The Republicans in the House are reported to have agreed upon the introduction of the bill known as Mr. Shellabarger's, for the enforcement of the Fourteenth Amendment and "other purposes," with a view to the suppression of Ku-klux outrages at the South. The first section gives any person who is deprived, under any color of law of any State, of his rights under the first section of the Amendment, the right to sue for redress in the United States courts. The second section provides that if two or more persons combine, in any State, to deprive anybody of his rights under the Constitution and laws of the United States, by acts which, in a place under Federal jurisdiction, would amount to murder, manslaughter, arson, assault, perjury, etc., they shall be held guilty of felony, and liable to $10,000 fine, or imprisonment, or both, at the discretion of the court. But here the legislators enter on more difficult navigation. The third section provides that wherever insurrection, or domestic violence, or unlawful combinations or conspiracies, shall so far obstruct or hinder the operation of the laws as to deprive any *portion* or class of people of any of their rights under the Constitution, etc., and the State authorities shall be unable, or fail, or refuse to protect them in their rights, the President shall employ the United States forces, or the militia, or such *other means as he may deem necessary*, in suppressing such combination. The fourth section provides that where such combinations shall overthrow or set at defiance the State authorities, or where these authorities connive at, or are in complicity with, the combinations, the President may, *in his discretion*, declare the State in rebellion, suspend the *habeas corpus*, and proclaim martial law.

When one reads Mr. Sumner's account, in the same paper in which we find the copy of this bill, of the usurpations, crimes, and misdemeanors committed by General Grant in the San Domingo matter, and remembers that the Republican party is hot from the impeachment of Grant's predecessor—whose accession to the presidential chair they hailed in the midst of their mourning over Mr. Lincoln as that of a staunch patriot—for other monstrous abuses of power, usurpations, conspiracies, and abuses of discretion, one reads this bill with perfect amazement. Considering, too, the vagueness of the terms in which the contingencies which are to call for the exercise of these extraordinary powers are described, and the wide latitude of construction of which they are capable, the facility with which evidence satisfactory to one man, hearing in secret, and not obliged to give any reason for his decisions, may be trumped up, we need have no hesitation in saying that if the party passes such an act as this, it will finish its career by a crowning stroke of folly, and will have put into the hands of the Democracy a terrible weapon, from which the negroes at the South will be the first to suffer. We beg the attention of our readers to this prediction, and ask that it may be remembered. We shall make one more, and that is, that neither this act nor any other piece of coercive legislation will pacify the South; that a year hence, if nothing better is attempted, the state of things will be very much what it is now; and that no matter how long coercive legislation is persisted in, and other means neglected, the same problem will still stare the American people in the face, aggravated by time and by the steady social and political demoralization and disorganization which a prolonged struggle between military force and discontent always brings with it. It would be cheaper to bring home every carpet-bagger and Northern man now engaged in Southern politics, and set him

in business here, than go on as is proposed; and it is the presence and activity of these men which is doing, and has done, most of the mischief.

A body of Republicans of high standing and character in Cincinnati have formed a society called the "Central Republican Association of Hamilton County," and have drawn up, signed, and published a declaration of principles which, whatever the fate of the Central Association may be, certainly expresses the opinions of a large, growing, and influential portion of the Republican party. Everything that wears, in the remotest degree, the appearance of an attempt to form a "third party," of course, is sure to call out a certain amount of abuse and derision, and we observe that the Cincinnati *Commercial*, though a warm friend of most of the ideas contained in the manifesto before us, is disposed to sneer at the movement as a mere work of doctrinaires, and unlikely to attract much popular attention. But we believe this might have been said in the beginning of every movement which has made much stir in politics since the dawn of civilization. The first man who raised his voice against eating prisoners of war had, we may be sure, a very small following, and must have often doubted whether he was not a fool for his pains. Ideas that "take the people by storm" and excite wild enthusiasm the first minute are almost always stupendous pieces of folly, of which everybody is heartily ashamed in three months or thereabouts. There is no "divine afflatus" in politics. The Ohio Republicans have got hold of one opinion, certainly, which has a world of strength in it, and that is, that the next party that is formed will have for its object the *purification* of this government—that is, the suppression of corruption by hook or by crook.

The "views and principles" of the Central Association include opposition to the further continuance of the policy of disfranchisement at the South as "incompatible with a proper regard for the fundamental principles of republican government and sound statesmanship;" the imposition of duties on imports for revenue only and no other purpose; hostility to the present protective system "as promotive of corruption in legislation and plunder in high places," besides other evils; civil-service reform, meaning by this the total withdrawal of the public service from the political arena. "We further believe," say the signers, "that party nominations should be made only when party principles are at stake, and that the custom of applying party or political tests to candidates for merely local offices degrades the standard of public morality, lowers the tone of political affairs, breeds corruption and inefficiency in office, and transfers the people's right to choose their own municipal rulers and representatives to the fraudulent lottery of caucuses and conventions, which, instead of facilitating, impede, clog, and obscure the expression of the popular will." The remaining section urges on the Republican party the duty of taking measures for a return to specie payments. Mr. Parke Godwin, in a letter to the *Evening Post*, advocates an addition to this platform, in the shape of a protest against the growing disposition of the General Government to interfere in State affairs.

The San Domingo Commissioners have got home, and it is said are going to report unanimously in favor of the annexation of that lovely island. They must have been astonished when they got to Washington by Mr. Sumner's speech, and they must have been gratified and confirmed in their opinion by the state of the South. The calm, peaceable, and highly prosperous condition of that region, and the entire absence of all trouble in the public mind concerning it, certainly leaves the Government plenty of time for the absorption of San Domingo, and indeed, for that matter, of the entire West Indies. We shall not be working up to our full power, and have half as much in our hands as we can manage, till we get all those interesting islands under our wing, and then, if the possession of San Domingo would clear off the National Debt, as General Grant says it will, the possession of the others would give us a surplus that would enable us to pay off all the national debts of all Europe without feeling it, and make the whole civilized world our debtor. There is enough in this prospect to make the coldest and most cynical weep tears of enthusiasm.

Governor Holden has been found guilty by the North Carolina Senate, but rather for the manner in which he carried out his measures of repression than for his resorting to them; that is, it is the conduct of his troops rather than his calling them out, which has brought him to grief. It is curious and highly illustrative of the unfortunate condition in which the public mind has got with regard to the government of the South, that it was gravely announced, after the verdict was rendered, that he had gone to Washington, and talked of "appealing to the courts." Whenever things do not go right with a Southern man nowadays, he is apt to say either that the Ku-klux have done it, or the horrid radicals; in either case, the Government at Washington is to set matters to rights.

The controversy between Mr. Field and General Barlow has ended in Mr. Field's announcing his willingness to meet his accuser before the Bar Association, as the tribunal best fitted to pass on the matters in dispute. This is perhaps the best termination the newspaper phase of the discussion could have had, and we have no doubt that the appeal to the public, even if it has no other result, will encourage the Bar Association to do its duty in the matter. There is, of course, a strong desire in some quarters to make it appear that the Association can do nothing in an affair of this kind, inasmuch as it has no legal authority; but this is a great mistake. It cannot expel a member from the bar, but it can inflict a penalty of the severest kind on any lawyer whom it finds guilty of misconduct; and we hope it will not shirk its work, and, in lieu of a clean-cut decision, treat us to general reflections on the defectiveness of human testimony, on the weakness of human nature, and the tendency of all human questions to have two sides. If it evades any of the responsibility which is fairly put upon it in this first case of importance which comes before it, it will consign itself to general ridicule and contempt. There is one thing which, we think, it is safe to assume, whatever be the merits of the Barlow-Field controversy, and that is, that the overhauling which the morals of the bench and bar are undergoing will make the business of "receiving" people's property, under "orders" from Barnard, a little less attractive than it has hitherto been. We think the Bar Association, or some association, could hardly do better work than employ counsel to watch the practice before this notorious functionary, and let the public know what is going on. It is not possible, perhaps, to put *him* to shame, but "manipulating" him ought to be made hot work for members of the bar, and, unless we are greatly mistaken, it will be hereafter.

We made some comments a fortnight ago on the Tweed monument project, in which we, excusably enough, did injustice to several respectable men whose names appeared to the address, or whatever the document was called, in which the proposal was made. It appears that their names were put to it without asking their leave—a practice which, we believe, is by no means uncommon in getting up petitions and addresses, and which is resorted to in the confidence that the victims will either dislike or not think it worth their while to come out with a disavowal. Nevertheless, we cannot help saying that any man who lets his name stand to a paper to a certain extent assumes the responsibility that is put upon him, or we should say so if the signing of papers, not binding one to pay money, had not ceased to have any significance or importance in many persons' eyes. It would not be by any means difficult to obtain a very respectable list of signatures in this city of the same persons, within a single week, to three papers; one a petition asking the Governor to pardon a convicted robber; another a recommendation to the President to give him a place of trust and profit in the Custom-house; and the third a letter to the criminal himself, asking him "to name a day when it would be convenient for him to receive his friends."

The week has been a quiet one in the great trade circles. The falling-off in the cotton receipts, which, however, still continue large, and the liberal exports to England, have kept the price from declining further. Breadstuffs continue firm, owing to the comparatively limited stocks on the coast; but the early opening of the canals and the

large accumulations in the interior justify the hope that supplies will soon increase and prices recede to the figures of last spring. Provisions of most kinds are lower, but butcher's meat, after the recent heavy fall, has not declined further, although the great decline has led to the failure of some of the oldest cattle-houses in the country. The magnitude of this trade may be judged by the fact that one firm is reported to have failed with liabilities exceeding one million of dollars. The general trade for domestic consumption has been active and encouraging, though both in cotton and woollen goods gradual reductions in price are the order of the day. There is nothing definite in the news from the coal regions, though there are plenty of rumors concerning arbitrations and settlements.

Money keeps easy and abundant. The bulls in the stock market are having everything their own way, putting up one stock after another in rapid succession, but without any good reason except that they have the power to do it. So dead, however, is the speculative element, that in spite of the great advance in prices the outside public holds aloof and gives the great speculative ring combinations but little opportunity to sell their stocks. Secretary Boutwell's conversions of the old six per cent. bonds into the new five per cents. have somewhat increased, but they are confined almost exclusively to the operations of some national banks. Wall Street is full of rumors concerning the Secretary's plans for the ensuing month in aid of this funding measure. From Europe so far the accounts are not favorable, no doubt influenced somewhat by the condition of affairs in France. The total amount of subscriptions is announced to be $42,000,000.

The crisis in Paris, in so far as it has any political character—that is, any motive beyond a desire to live without labor, and a dislike to pay rent—is a rising of the city against the country. The Assembly is undeniably the product of universal suffrage, but, as its political complexion is not agreeable to the artisans of the capital, they rise against it as remorselessly as they would against a despot; and, sooner than be governed by the majority of Frenchmen, would like to make Paris into a separate republic. Indeed, the present outbreak is strictly analogous to the outbreak of June, 1848, and was sure to come sooner or later. In 1848, the city Socialists had also found out that the National Assembly were reactionary and "traitors," so they revolted, as they are now doing, and fought desperately; but at that time the Assembly had Generals Cavaignac and Changarnier and 100,000 regular soldiers at its command. The late vote in Paris is, of course, a farce. No permanent government is possible in the capital, except under strong military protection, inasmuch as the Reds claim the right of always superintending in person the proceedings of their legislature, and turning it out of doors whenever it goes wrong. The appearance of our old friend Cluseret as "Minister of War" is one of the most comical incidents of this strange situation. The long delay of the Thiers government in taking any decisive action of course greatly helps the revolt and increases the chances of civil war extending over the whole country. All depends now on the success the Versailles government is achieving with its military organization. The talk of the Duc d'Aumale as a successor to Thiers is perhaps premature, but he is really the only man of character and ability in the foreground: and the disadvantage of his being a prince of the blood, and it *is* a great disadvantage at this crisis, may be lost sight of as the case grows more desperate, and property becomes more seriously alarmed. In the meantime, provisions must begin to be very scarce in Paris; and when "The People" gets hungry, there will be what the reporters call "lively times."

While the disorders in Paris culminated, on Wednesday the 22d, in a massacre, the Assembly, at Versailles, was deliberating in the most helpless condition. Most of the forts around Paris were occupied by the rebels; portions of the regular force openly fraternized with them; others could not be trusted; General Chanzy and others were kept as hostages in Montmartre; Lyons and Marseilles showed signs of a readiness to follow the example of Paris; and, to augment the perplexity, Bismarck, in a letter sent to Jules Favre, complained of infractions by the insurgents of some of the peace stipulations and threatened to treat Paris as an enemy should violations of the preliminaries continue to take place. In spite of all difficulties, however, the Assembly seemed disposed to reject all "compromise with the guilty," and Thiers, in repeated proclamations, assured the people of his determination to preserve the sovereignty of the nation intact. The loyal people of Paris, too, began gradually to awaken from their lethargy. At a meeting of mayors and deputy mayors, Admiral Saisset was appointed Commander-in-Chief of the National Guards of the city, with General Langlois as Chief of Staff, and Schoelcher as Chief of Artillery—all three deputies to the Assembly from the city of Paris—and the loyal Guards soon succeeded in occupying a number of important positions, and narrowing those of their adversaries. On Thursday, the Assembly adopted a plan proposed by the Government for the organization of volunteers, under the terms of which every department of France was ordered immediately to send a battalion to Versailles. The insurgents, on their part, made preparations for strenuous defence, and appointed Colonels Duval, Brunel, and Endes their generals, and Menotti Garibaldi—to his honor be it said, in his absence—their commander-in-chief. Alarms and arrests were frequent, and collisions seemed imminent.

Before, however, proceeding to extremities and "inaugurating the horrors of civil war in Paris," which, in fact, it could hardly yet contemplate in earnest, the National Assembly was entreated by the mayors, in a communication, to give them full powers to settle affairs. And whether these full powers were distinctly granted, conditionally or unconditionally, or not, negotiations were immediately entered into with the insurgents, which, on Friday, resulted in the leaving of the mayoralties in the hands of the occupants, on condition of their consenting to the holding of a communal election, as well as to the election by the National Guard of its commander-in-chief, and in a promise on the part of the insurrectionary Central Committee to disband their organization.

On Saturday the Central Committee, the Paris deputies to the Assembly, and the mayors and deputy mayors, issued a joint proclamation ordering the communal elections for the next day, and urging all citizens to vote, and "give the voting a serious character." The elections accordingly began on the morning of Sunday, the 26th, and passed off without disorder; and the Central Committee resigned its functions, "yielding to the newly-elected Municipal Government." The barricades were left standing, but the cannon were withdrawn or turned inward. Simultaneously, however, Admiral Saisset disbanded the battalions of loyal National Guards, and left for Versailles, preceded by General Chanzy, who had been released from prison. Flourens, in Paris, issued a manifesto, demanding the creation of an army composed only of National Guards, while at Versailles the members of "the Republican Left" resolved to stand by the Government "so long as it remains true to the Republic." And the unfortunate Government itself issued a proclamation to the prefects, assuring them that "order conquers disorder, and the Republic triumphs over anarchy." Anarchy, also, in the meanwhile had triumphed at Marseilles.

The result of the election was an overwhelming victory of the insurrectionists. The candidates of the Central Committee were elected in all the arrondissements except three, ond among the successful candidates were Blanqui, Flourens, and Pyat. The vote was, however, very light, more than a majority of the qualified electors abstaining from voting, under the pressure of a movement in which really insane men like "General" Lullier, and men of insane ambition and recklessness, like General Cluseret, played a conspicuous part. There were also insurgents in the Montmartre and Belleville districts, who abstained because they considered the doings, even of their Central Committee, as reactionary, and preferred keeping guard over their cannon, soon to be used against the new "free and autonomous" Republican municipality. The minister of War, Leflo, has resigned and General Faidherbe has been summoned to Versailles. The Germans have stopped their retrograde movements, and their outposts have been advanced to Vincennes.

AN ILLUSTRATION OF GOVERNMENT AT THE SOUTH.

We had a discussion last June with the Charleston (S. C.) *Daily Republican*, the official and leading Radical paper of the State, about the character of the State government. We said a great many unpleasant things about the State Legislature and the State officers. We accused them of gross ignorance and dishonesty, and made open proclamation of our belief that such a government as they were carrying on could not possibly last, and that it was in its very constitution an offence against civilization. We challenged the *Republican* to tell us how many of the State legislators could read the "Pilgrim's Progress" intelligently, it being, perhaps, the easiest reading in the English language, and they being the lawgivers of a large and wealthy commonwealth, beset by some of the gravest social and political problems. It did not dare to answer the question; but treated us, in reply, to one of the usual bursts of rhetoric about the negro members of the legislature (a majority, we believe) having had a progress of their own "quite similar to Bunyan's," and so on, and informed us that "dozens and dozens" of them could write far better articles about South Carolina politics than had ever appeared in the *Nation*.
